In this sense American public opinion has already made itself heard. Indeed the public opinion of the neutral world has but one judgment—and that a stern one—of the tearing up of the "scrap of paper," where Germany's name stood pledged to uphold the neutrality of Belgium, and of the sack of Louvain.

THE PARTITION OF THE PACIFIC

THE announcement that New Zealand has seized the German island of the Samoan group is not a mere incident of the war but a significant step in a movement which during the last thirty years has been gradually modifying the British imperial system. The oversea dominions are showing themselves true daughters of the mother country by manifesting a disposition to expand and acquire dependencies of their own. It was Australasia which sounded the alarm over the German invision of the Pacific and when Old England failed to awake to the emergency, the colonials, after their independent fashion, took matters into their own hands and began annexing islands for themselves.

Bismarck was at first opposed to the acquisition of dependencies, but the rapid growth of the German people and their transformation into a manufacturing and commercial nation forced a change of policy and in the early eighties the German Government began a systematic survey of the whole world to see what lands were still left unappropriated by the great powers. Between 1884 and 1899 Germany acquired territories having a total population of more than twelve million, and an area of more than a million square miles, five times the size of European Germany.

Tropical islands had been a drug on the market ever since the decline of the cane sugar industry thru the development of the sugar beet, but German chemists discovered a method of transmuting, by means of catalytic hydrogen, the evil-smelling coconut oil into an edible fat, a vegetable butter which has of late been displacing the product of the cow in European markets. This caused a boom in copra, rivalling that in rubber, and it is now realized everywhere—tho not yet thoroly appreciated in the United States—that tropical territory will henceforth be an important if not an essential asset of a commercial nation.

The German tramp steamer began to be seen in strange seas picking up unconsidered trifles along neglected coasts. German gunboats appeared as if by magic in any port where tenure of land seemed to be momentarily insecure. They were with Dewey in Manila Bay, hoping to catch the Philippines if the United States should let them drop. But we fortunately realized their value in time and held on to them, so Germany was obliged to content herself with the rest of Spain's possessions in the Pacific. From the Ladrone or Marianne islands we picked out the biggest, Guam, for a coaling and cable station, and the rest of the group together with the Caroline and Pelew islands were bought in by Germany for $4,200,000.

In 1884 Germany declared a "protectorate" over the eastern part of New Guinea, called "Kaiser Wilhelm's Land" and the New Britain Archipelago lying to the north. The islands were then rechristened to correspond to their new ownership; "New Britain" became *Neu Pommern;* "New Ireland" became *Neu Mecklenburg;* the "Duke of York" became *Neu Lauenburg* and the whole group the Bismarck Archipelago.

There was no Australian Commonwealth then, but the colony of Queensland, just across Torres Strait and only a hundred miles away from New Guinea, determined to checkmate the German plans and so sent in 1883 an expedition to take formal possession of the eastern half of the island. The London government disavowed the act, fearing it would lead to a conflict with Germany, but finding that the undaunted people of Queensland—there were only about 300,000 of them and unprepared for war—were resolved to fight the Germans, rather than surrender the land, the government arranged a compromise with Germany by which New Guinea was divided and the southeastern part of the island under the name of Papuo now belongs to the Australian Commonwealth, just as Alaska and the Philippines do to the United States.

The Australian constitution, unlike ours, makes express provision for acquiring and ruling such alien territory. Last year an Australian expedition to the Antarctic raised the flag of the Southern Cross over the adjacent coast of that continent which is supposed to contain coal beds. The Australians have been clamoring for Fiji, which we might once have had, but which is now British, and for some at least of the New Hebrides, now under the joint ownership of England and France.

Great Britain in 1901 transferred the Cook Islands to New Zealand, which now runs a steamer to the most important of the group, Rarotongo, over 1600 miles away. For the Samoan Islands there were three claimants, but in 1899 Great Britain conceded Savaii and Upolu to Germany and Tutuila and other islands to the United States. The acquisition of German Samoa will be gratifying to the New Zealanders not only because of its commercial importance, but because it brings under the British flag Vailima, the home and tomb of one of the foremost of modern English writers, Robert Louis Stevenson.

The London *Times* on August 9, 1914, gave this advice to the Pacific Commonwealths under the caption of "How the Dominions Can Help":

Australasia is obviously best situated to clear up the situation in the Pacific. Australia and New Zealand are perfectly capable of capturing all the German possessions in the Bismarck Archipelago and to the north of it, as well as to reduce Kiao-chau, which will otherwise become a nest of German commerce destroyers. In three months' time all these operations must be carried out, for the vast masses engaged in Europe preclude the idea of a very long campaign, and possession is nine points of the law.

Coming from the *Times* this is almost an official order. The Japanese, doubtless much to the disgust of the Australasians, have taken Kiao-chau in hand but we may expect to hear that Australia and New Zealand have gathered in the rest of the German holdings in the Pacific.

THE WORLD AT WAR

STARTING less than two months ago in that most inflammable region of Europe, the Balkans, the war has spread until now it involves three-fifths of the whole habitable world. Very curiously this ratio of war to peace comes out by almost the same, three to two, whether we measure by population or area.

The Germans and Austro-Hungarians are now fighting against odds of more than six to one if we count people or of more than eighteen to one if we count square miles. This is not a geographical fantasy but stern reality, for Germans and English are fighting in the heart of Africa and in the isles of the Pacific, while negroes have been called from Senegal and Sikhs from India to war on the battlefields of France.

THE SURVIVAL OF THE UNFIT

THE British Association for the Advancement of Science belongs this year to the Peripatetic School of Philosophers, going from city to city of Australia and —if the war had not interrupted the program—New Zealand; the discussion that is started in one capital being resumed at the next and doubtless also continued informally on the trains between. Last week we commented on the Mendelian theory of evolution as presented in the presidential address of the distinguished biologist, Professor Bateson at Melbourne. In the continued-in-our-next meeting at Sydney he past on to an even more interesting subject, the application of this new knowledge of heredity to human society.

The text of his eugenics sermon he took from Ecclesiasticus: "Desire not a multitude of unprofitable children." A declining birthrate, he argued, was not necessarily to be deplored. The rapid increase of population thruout the civilized world was due to a combination of exceptional conditions, such as the opening of new agricultural lands, the exploitation of coal fields and the progress in the science of medicine. But this increase cannot be kept up indefinitely. Already England has reached a point where under present conditions of distribution the pressure of population is so great as to reduce thousands to a state of semi-starvation and in a few generations when the attainable supply of coal is exhausted the decrease of available energy will compel a considerable reduction in the number of people capable of living on the British Isles. As the struggle between nations for free energy becomes fiercer the question will arise whether civilization can endure the increasing burden of the congenital defectives whom modern science saves from extinction and society permits to multiply.

The powers of science to preserve the defective are now enormous. Every year these powers increase. This course of action must reach a limit. To the deliberate intervention of civilization for the preservation of inferior strains there must sooner or later come an end, and before long nations will realize the responsibility they have assumed in multiplying these "cankers of a calm world and a long peace."

The definitely feeble-minded we may with propriety restrain, as we are beginning to do even in England, and we may safely prevent unions in which both parties are defective, for the evidence shows that as a rule such marriages, tho often prolific, commonly produce no normal children at all. The union of such social vermin we should no more permit than we would allow parasites to breed on our own bodies. Further than that in restraint of marriage we ought not to go, at least not yet.

Professor Bateson is not an extremist. He fears that any wholesale regulation of marriage in the interests of eugenics would breed a population of one dull uniform puritanic gray. He bids us remember that Beethoven's father was a drunkard and his mother a consumptive and that according to scripture "the fathers of such as dwell in tents and of all such as handle the harp or organ and the instructor of every artificer in brass and iron—the founders that is to say of the arts and sciences —came in direct descent from Cain and not in the posterity of the irreproachable Seth, who is to us, as he probably was also in the narrow circle of his contemporaries," a nonentity.

Professor Bateson's warning that evolution may go backward and that under modern conditions it may be the unfit who survive was given startling and unexpected emphasis by the events of the week. Very likely from among those who listened to him in the auditorium of the universities of Melbourne and Sydney some of the most active and able young men, the most healthy and energetic and self-sacrificing, are already on their way to die on French battlefields. This form of dysgenics we all know how to stop when we can make up our minds to it. But the other side of the question raised by this address, how to prevent the deterioration of the race without violation of the fairest fruits of evolution, our human sympathy and sense of equal rights, is the most difficult and most important of the problems to be solved by mankind.

HAVE YOU JOINED THE RED CROSS?

THE Red Cross (formerly the steamer Hamburg, of the Hamburg-American line) sailed on Tuesday for Europe bearing regularly organized units of surgeons and trained nurses fully equipped with surgical and medical supplies, destined for each of the warring countries.

Volunteers were not lacking for the expedition of mercy. The difficulty was not to find doctors and nurses who were willing to go, but to choose among those who offered themselves.

There is little enough that we in America can do to mitigate the horrors of the Great War. Here is one concrete opportunity.

The American Red Cross still needs funds to make this expedition and others which, it is hoped, will speedily follow, a success.

The Independent is authorized to receive and transmit contributions to the Red Cross Relief Fund. Anyone sending at least two dollars will receive a certificate of membership in the American Red Cross for the remainder of the current year, and a membership button in red and white enamel.

Do it now.

THE STORY OF THE WEEK

The Germans Approach Paris

This week records a more spectacular success of the Germans in France than any preceding. The German right continued its enveloping movement until it reached the outer fortifications of Paris, then turned eastward to the Marne River, which the German left, attacking from the east, had already attained. Apparently every fortified post between Belgium and Paris has been captured except Maubeuge, on the frontier, which still holds out against its besiegers, altho two of its five forts have fallen. What were supposed to be the strongest of the chain of fortresses protecting France on this side, Lille at the north end and Rheims at the south end, offered the least resistance. Both these cities were surrounded by seven detached forts, constituting what is known as an entrenched camp or fortress of the first class. Lille was evacuated several days before any enemy appeared. Its commander, General Alexandre Percin, is variously reported to have been removed or imprisoned for abandoning the city, altho the action is excused on the ground that the fortifications were antiquated.

Apparently Rheims was gained about as easily, for it surrendered to General Von Bülow without resistance on September 4, the same date on which it was taken over by the Germans as their headquarters forty-four years before. Twelve thousand prisoners and 410 guns fell into the hands of the Germans. This victory, of which no explanation has transpired, was a great surprise to the outside world, which had heard little of the progress of General von Bülow's army from Mézières in the direction of Rethel and Rheims.

Public attention has been concentrated upon the right wing of the German force, which has fought its way from Brussels straight toward Paris, a distance of about a hundred miles, in two weeks. After overcoming the last resistance of the French and English at Soissons and Compiegne, the way was cleared to Paris, and it was the expectation of lay strategists that an attack would soon be made upon the ring of forts surrounding the capital by the same methods which had been found so successful in reducing the northern strongholds. This apparently was also the expectation of the French, for the Government removed to Bordeaux and Paris prepared for a second siege. General Gallieni was made military governor and proclaimed his intention of holding the city to the last. Free trains were provided for all who wanted to leave, and passport requirements were suspended, so that the exodus should not be hindered by red tape. Big guns were brought from Dunkirk and Calais and new fortifications were thrown up. Houses and trees in the suburbs were razed so as to leave a zone of clear ground around the city thru which the enemy would have to advance, exposed to the fire of the encircling forts. Housekeepers laid in supplies of provisions in order not to be reduced to such short rations as in 1871.

THE GREAT WAR

September 1—British fight a losing battle at Compiègne. Russians defeated near Allenstein, East Prussia. St. Petersburg becomes Petrograd.

September 2—French Government removes from Paris to Bordeaux. Fighting at Montdidier and Anizy-le-Château, forty miles from Paris.

September 3—Austrian army in Galicia overwhelmingly defeated by the Russians, who occupy Lemberg and Halicz. Germans reach Senlis, twenty-five miles from Paris. Lille occupied by Germans.

September 4—Paris prepares for a siege, but the German right wing passes by to the Marne River on the east. Austrians meet reverses in Russian Poland.

September 5—Allies agree not to make peace separately. General von Bülow captures Rheims. Germans take Tormonde near Antwerp.

September 6—German forces from Lorraine effect junction near Chalons-sur-Marne with German left, which went from Belgium to Paris.

September 7—The British cruiser "Pathfinder" blown up by a mine in the North Sea. Austrians occupy Styri, south of Lemberg, and attack Przemysl, chief stronghold in Galicia. Russian Government announces annexation of Galicia.

Bain

WILL THE FRENCH CAPTURE MORE?

The first German flag, belonging to one of the Bavarian regiments, to be captured by the French, was brought to Paris and hung in a window of the Ministry of War. Despite the progress of events the French are sanguine there will be many more.

Russians Advance in Galicia

Russia is conducting two distinct campaigns; one to the north of Russian Poland toward Berlin, the other to the south of Russian Poland toward Vienna. In both cases the Russian forces have been victorious. In the northern campaign they have driven back the Germans as far as Königsberg, the first fortified city of East Prussia, which they have besieged. In the southern campaign they have driven back the Austro-Hungarians as far as Lemberg, the capital of Galicia, which they have captured. Of the two movements the latter is the most important, not so much because of the loss of Lemberg, for this is an unfortified city, but because of the very severe defeat to the Austro-Hungarian army in the field.

Galicia is the largest and most northerly of the Austrian crownlands with a population of about eight millions, mostly Slavs, about equally divided between Roman Catholic Poles and Greek Catholic Ruthenians. The Ruthenians, mostly peasants, resent the political and financial supremacy of the Poles and have of late shown a desire to unite with their Little Russian brethren under Russian rule.

Recent prosecutions at Lemberg and in Hungary have disclosed the existence of a pro-Russian propaganda in a religious guise, apparently instigated from St. Petersburg. (See The Independent of April 6, 1914.) So the Russian occupation of this region is doubtless welcomed by a considerable part of the population.

Galicia, lying beyond the Carpathian Mountains, has no natural defenses against Russia on its frontier, and the chief obstacle to the

THE CAMPAIGN IN THE EAST

The Russians have invaded East Prussia as far as Königsberg and Galicia as far as Przemysl. The Austrians who had invaded Poland nearly to Radom, Ivangorod and Lublin have been driven back

Russian invasion from the east consisted of the numerous tributaries to the Dniester River and the forts at the bridges. The main Austrian army was engaged in the west, where it had invaded Russia down the valley of the Vistula River and appeared before Radom. The Russians opposed this movement with sufficient force to keep the Austrian army away from Lublin, Ivangorod and Kholm while they concentrated their chief efforts on the valley of the Dneister in eastern Galicia. The Austrians tried to protect Lemberg by holding a line stretching north and south from Kamionka on the Bug River to Halicz on the Dniester, but were routed in a hard-fought engagement of several days ending on September 3 in the capture of Halicz. The Austrian army is reported to have lost 25,000 men, killed and wounded, and the Russians to have taken 70,000 prisoners and 300 guns. The defeated army rallied back of Lemberg and is holding the lake region about Grodek. The chief defense of Galicia, however, is the fortress of Przemysl (pronounced Pshem'-yzl), which the Russians are already attacking. On entering Lemberg the Russians telephoned their arrival to Vienna and announced that the name of the city had been changed to Lvov.

The Russians occupied without resistance Czernowitz, the capital of Bukowina, an Austrian duchy, east of Galicia.

On account of the gallantry displayed by Jewish soldiers before Lemberg the Russian Government has made many of them officers, a thing until now forbidden in the Russian army, and has announced that Jews will be admitted to political rights and official positions.

The Fighting in Belgium

The British are apparently collecting troops at Ostend for an attack in force on the Germans occupying Belgium. The Canadian contingent and the Sikhs brought from India via Canada are said to have been landed there and also, it is reported, Russian troops from Archangel. No hint of this maneuver has appeared in the cablegrams, but Americans from London arriving in New York by recent steamers state that 70,000 Cossacks were transported from Archangel on the Arctic Ocean to Aberdeen, sent by rail at night to the south of England and thence across the Channel.

The English cannot ship troops directly to Antwerp without violation of Dutch neutrality, for the delta of the Scheldt is in Holland. Access to Antwerp may, however, be obtained from Ostend, only sixty miles away, by way of Bruges and Ghent. In order to cut this line of communications the Germans attacked Termonde on the Scheldt, twenty miles from Antwerp. Then the Belgians cut the dykes and so forced them to retire, leaving some of their big guns stuck in the mud and some of their soldiers in trees. According to Belgian reports a thousand Germans were killed and three thousand wounded in this engagement. But finally the Germans captured and burnt Termonde and then advanced to the ramparts of Antwerp.

Accounts of German brutality in Belgium with convincing detail continue to accumulate. On the other hand, five American newspaper correspondents including Irvin S. Cobb and John T. McCutcheon report that they have not been able to find any evidence of the mistreatment of prisoners or non-combatants in the Belgian or French territory conquered by the Germans.

At Louvain it appears that the church of Saint Pierre, dating from the fifteenth century, and the University which occupied the warehouse of the clothmakers' gild, were burnt, but the town hall of the same date, the chief architectural monument of the place, was saved.

Dinant, a Belgian town south of Namur, has been demolished like Louvain on the ground that German troops were fired upon by civilians.

Sir John French, commander-in-chief of the British forces, reports the loss of 15,000 officers and men

International News

HOW ANTWERP REMEMBERS A ZEPPELIN

On the night of August 25, a Zeppelin bombarded the city of Antwerp, and on other nights following there have been similar visits. More than 700 houses have been damaged

during the fighting in France and Belgium from August 23 to September 2. This is probably about one-tenth of the entire British force engaged.

The losses of the Germans, since they were charging fortified posts, is doubtless very much greater in proportion and is conservatively estimated as over two hundred thousand.

Japanese Attack Kiao-chau

At the opening of the Diet on September 5, the Minister of Foreign Affairs, Baron Kato, gave as the reasons for Japan's entrance into the war that the British Government had early in August asked Japan for assistance in accordance with the terms of the Anglo-Japanese agreement, and that the possession by Germany of a fortified naval base at Kiao-chau threatened the commerce of the Pacific and the peace of the Far East.

The Japanese on August 27 blockaded Tsing-tao, the seaport of the Kiao-chau territory, and also landed a force on the Shan-tung peninsula which completely isolated the German port from the outside world. Two Japanese fleets have shelled the town and two hydro-aeroplanes launched from a warship past over it and dropt bombs on the wireless station.

The Chinese Government has protested in vain to the world against the violation of her neutrality by the Japanese in landing troops on the Shan-tung peninsular for the attack on the German enclave of Kiao-chau.

FRANCE'S FAMOUS TURCOS ON THE WAY TO THE FRONT

The Turcos, who come from Algeria, are famous as horsemen and for their marksmanship. They are trained to fight from childhood. The dispatches have already told of their brilliance and ardor against the Germans

Paul Thompson

NOT A SUFFRAGE DREAM, BUT A FACT

Women now conduct nearly all the business of Paris and Berlin. They act as car conductors, mail carriers, delivery servants, and perform all the duties which formerly fell to men

The Entente Becomes an Alliance

On September 5 the representatives of the three allied powers in London, Sir Edward Grey, the British Secretary for Foreign Affairs; M. Paul Cambon, the French Ambassador, and Count Beckendorff, the Russian Ambassador, signed a protocol containing the following agreement:

> The British, French and Russian Governments mutually engage not to conclude peace separately during the present war. The three Governments agree that when the terms of peace come to be discussed no one of the allies will demand conditions of peace without the previous agreement of each of the other allies.

This is designed to prevent what was said by German writers before the war would be the German policy, that is, to conquer France first and then by offering generous terms win her support in attacking Russia and Great Britain.

The New Pope

The College of Cardinals met in the Sistine Chapel on August 31 for the election of a successor to the late Pope Pius X. There were fifty-seven cardinals present, among them Cardinal Farley of New York, who was already in Europe. Cardinal Gibbons of Baltimore and Cardinal O'Connell of Boston arrived just after the election. The conclave began its session on Monday evening, and at eleven o'clock on Friday morning Cardinal della Chiesa of Bologna received the necessary two-thirds vote. Following the traditional ceremony the canopies above the thrones of all of the other cardinals were lowered and he was asked what name he had chosen. He replied Benedict XV.

Then, the new Pope drest in a flowing white robe and red slippers, with a red stole and the "Fisherman's ring," received the homage of the cardinals, who approaching one by one kissed his feet and hands and were given the papal benediction. After this he appeared in the basilica of St. Peter's and on the balcony to bless the crowds assembled there.

Pope Pius X was of peasant origin but the new Pope comes like Pope Leo XIII from the Italian nobility. He is the son of the Marchese della Chiesa, and was born at Pegli, near Genoa, November 21, 1854. He was appointed Archbishop of Bologna in 1907 and was created cardinal only last May.

The new Pope is not one of those whose names have been prominently mentioned and he is not well known in this country. The fact that shortly after his ordination to the priesthood in 1878 he was selected by Cardinal Rampolla as his secretary and was associated with him for many years, first at Madrid

and afterwards at Rome, is taken as an indication that the new Pope will be inclined to follow the policies which Cardinal Rampolla, as Secretary of State under Leo XIII was carrying out. It was expected that Cardinal Rampolla would succeed Pope Leo but Austria intervened by the exercise of the historic Spanish veto. Pope Benedict has appointed Cardinal Dominic Ferrata, formerly Nuncio at Paris, as his Secretary of State.

The Senate Passes the Clayton Bill

Altho changed considerably since its passage in the House the Clayton bill supplementing the Sherman act, and the second number of the Administration's anti-trust program, on Wednesday past the Senate by the almost overwhelming vote of forty-six to sixteen. Seven Republicans and the Senate's lone Progressive—Mr. Poindexter, of Washington—voted for the bill. Of the wing known as the progressive Republicans only Senator Borah voted against it.

As amended, the bill provides fines and imprisonments for officers of corporations convicted of offenses against the trust laws, while in competing corporations with a capital of more than $1,000,000, after two years all interlocking directorates are forbidden. Railroad directors also are forbidden membership on boards of corporations dealing in securities, railroad supplies or contracts. All exclusive or tying contracts which restrict the independence of purchasers are forbidden as well as the formation of holding companies whose purposes are to lessen competition or create monopoly. Under an amendment of Senator Cummins' providing that "the labor of human beings is neither a commodity or article of commerce," labor unions, it is thought, will be exempt from the statute.

Bain

FANCY OR FACT?

Without knowing the occasion, this picture might be startling to some, plainly showing as it does, General Joffre, the Commander-in-Chief of the French armies, in an attitude of surrender to Emperor William. It was made, however, at the Swiss maneuvers, when France and Germany were still friends

On Friday, September 4, President Wilson appeared before both houses of Congress to urge the passage of an emergency tax to make up for the losses in revenue sustained by the Government as a result of the European war. Compared with the month of August last year, there has been a falling off of more than $10,000,000 in customs revenue, a state of things, said the President, that it would be unwise to allow to continue. The Treasury, he said, was sufficiently strong to meet any demands that might be made upon it, but in the present unsettled business situation the $75,000,000 or $100,000,000 additional revenue needed could not be withdrawn from the banks without the possibility of serious consequences.

Following the President's address, the Ways and Means Committee was summoned by Chairman Underwood and a tentative bill drafted. Luxuries, according to the present sense of the committee, such as amusement tickets, cigars, chewing gum, as well as beer, whiskey and many soft drinks, motion picture films, will be levied upon to raise the larger portion of the war tax.

Our New Treaty with Panama

In line with the Administration's apparent policy of composing all the troubles of Latin-American states by treaties is the new agreement arranged with the Republic of Panama by the American Minister, William Jennings Price, and signed by representatives of the two Governments, September 2.

Under the new treaty, which replaces the Davis agreement of 1904, the United States gains control of the waters of Colon and Ancon, together with certain other rights, while a large tract of land known as "The Savannahs" which will place the city of Panama in direct physical communication with the rest of the country hitherto cut off by the Canal Zone, is ceded to the republic. No railway, however, is to be built across this connecting territory except with the consent of the United States, and it is expressly stipulated that for the purpose of defending the Canal or any of its approaches it may be retaken and reoccupied at will.

The two harbors of Colon and Ancon, which pass under the absolute control of the United States, are to be fortified and used as places of operation and defense. The piers on the Colon waterfront, estimated to have cost approximately $2,500,000, also pass under the control of the American Government. The treaty,

BEARING AMERICAN AID TO WARRING EUROPE

The steamship "Red Cross," fitted up by the American Red Cross Society and carrying surgeons and nurses, and thousands of pounds of bandages, gauzes, absorbent cotton, medical and surgical supplies, sailed from New York on Tuesday, September 8. She carries seven units of the Relief Corps; two will be landed in England, two in France, and one each for Germany, Russia and Belgium

which now goes before both the Panaman and American Senates for ratification, has been under negotiation for four years, but until now it has been impossible to get Panama to give a full agreement.

Peace in Santo Domingo

The pacification plan submitted to the warring factions in Santo Domingo by the commissioners whom President Wilson sent to the island was accepted with little delay. It had the support of a regiment of marines who had been ordered to the island on a naval transport, and there were six United States warships in Dominican or Haytian waters. The plan involved the retirement of President Bordas, who has been called "the Huerta of Santo Domingo," to make way for a provisional President, named by the several candidates for the Presidency.

Bordas retired, and Congress elected Dr. Ramon Baez. Troops on both sides had been disarmed, and political prisoners released. The new President is to order an election, and the agreement provides that he shall not be a candidate. This election will be held, it is understood, under rules laid down by Mr. Wilson's commission, and is to be supervised by Americans. At the time of his election, Dr. Baez was President of Santo Domingo's National Board of Health. The son of Buenaventura Baez who held the Presidency for five terms, he is said to be a man of refinement and broad views, who has been identified with no faction.

Fear New Mexican Revolution

The prospects for an agreement with Zapata and Villa, assuring an early peace in Mexico, which last week seemed promising, have again been dashed thru the failure to arrange an acceptable settlement with Zapata, and thru the continuance of the new revolt in southern Mexico.

Carranza has definitely refused to accede to Zapata's demands which were made to him by Gen. Antonio Villareal and Luis Cabrera, when they visited the rebel chieftain in Morelos to arrange a compromise. In the statement which was given out at the Presidential office in the National Palace on September 6, General Carranza says that to accept Zapata's terms would be for him to abandon his leadership of the Constitutionalists and the plan of Guadalupe. Instead he invites Zapata and his fellow-chieftains to show their sincerity in desiring reforms by attending the convention called for the first of October to discuss a program.

More than 12,000 Constitutionalists under the command of General Jesus Carranza have been cut off on the Isthmus of Tehuantepec near Tierra Blanca by ex-Federals under the command of Generals Rodriguez and Tellez. Unless reinforcements are sent to relieve the beleaguered Constitutionalists their position will be critical.

Practically the first official recognition by the Constitutionalists of the occupation of Vera Cruz by the United States came in a decree published on September 1, regulating customs entering Mexico by way of Vera Cruz. Under the new order merchandise which has already paid duties at Vera Cruz is exempted from payment at Orizaba, when the Mexicans established a customs house after the American occupation. The decree says that no document issued by the Vera Cruz customs house will be accepted as evidence of payment of duties there, as "the legal validity" of the de facto customs house at Vera Cruz "is not recognized." Opinion in Washington varies as to the meaning of the decree. In some quarters it is believed to be an effort to deflect commerce naturally passing by way of Vera Cruz to other Mexican ports when the Constitutionalists can collect the revenue of which they are sorely in need. The chief embarrassment caused by the Carranza order will be in the oil shipments from Tampico for the use of the railroads.

A DAY OF PRAYER FOR THE NATION

PROCLAMATION OF THE PRESIDENT OF THE UNITED STATES.

Whereas, great nations of the world have taken up arms against one another and war now draws millions of men into battle whom the counsel of statesmen have not been able to save from the terrible sacrifice; and

Whereas, in this as in all things it is our privilege and duty to seek counsel and succor of Almighty God, humbling ourselves before Him, confessing our weakness and our lack of any wisdom equal to these things; and

Whereas, it is the especial wish and longing of the people of the United States, in prayer and counsel and all friendliness, to serve the cause of peace;

Therefore, I, Woodrow Wilson, President of the United States of America, do designate Sunday, the fourth day of October next, a day of prayer and supplication, and do request all God-fearing persons to repair on that day to their places of worship, there to unite their petitions to Almighty God, that overruling the counsel of men, setting straight the things they cannot govern or alter, taking pity on the nations now in the throes of conflict, in His mercy and goodness showing a way where men can see none, He vouchsafe His children to heal again and restore once more that concord among men and nations without which there can be neither happiness nor true friendship nor any wholesome fruit of toil or thought in the world; praying also to this end that He forgive us our sins, our ignorance of His holy will, our wilfulness and many errors, and lead us in the paths of obedience to places of vision and to thoughts and counsels that purge and make wise.

The Burgomaster of Ghent Cables an Appeal to the American Nation

Our special representative at the seat of war, Major Louis Livingston Seaman, cables to us, thru the American Consul at Ostend, the following message to the American President and people from the Burgomaster of Ghent. No city could present a stronger appeal to American sympathies, for it was at Ghent, on December 24, 1814, that was signed the treaty of peace between Great Britain and the United States which put an end to the second—and we confidently hope—the last war between English-speaking peoples. For a hundred years this treaty has remained unbroken and every cause of disagreement has been settled by amicable negotiation or arbitration. It would be peculiarly distressing to Americans and English alike that the city thus dedicated a century ago to the cause of peace should be crushed under the iron heel of the invader.—THE EDITOR.

Office of the Burgomaster,
City of Ghent, September 3, 1914

MONSIEUR—I have read with emotion and at the same time with great satisfaction the generous and powerful appeal that you have addressed to the President of the United States of America. I am deeply grateful to you and, in the name of my fellow citizens, I thank you with all my heart.

I am also glad to learn that you have interested yourself in our Ghent ambulances and our asylums for refugees.

I add my voice to your appeal and I beg you to urge the President of the United States to exert all of his efforts in order that we may soon see an end of the war and that the inhumanity of the conflict here may be lessened.

The City of Ghent, in which was concluded the Treaty of Peace of 1814, puts itself confidently under the high protection of the American nation.

Pray accept, Monsieur, assurances of my distinguished consideration.

E. BRAUN
Burgomaster of Ghent

Monsieur Louis Livingston Seaman

ENGLAND'S RED CROSS PREPARATIONS

BY MAJOR LOUIS LIVINGSTON SEAMAN

SPECIAL REPRESENTATIVE OF THE INDEPENDENT AT THE FRONT

ON the eve of a tragedy that may prove the most momentous in history, that threatens to convert Europe into a shamble and temporarily turn its civilization back to barbarism, it may be of interest to your readers to know what England is doing for the care of her soldiers who go forth to guard her honor and protect her traditions. Will there be in this struggle a repetition of the experiences of the Crimea where 50,000 men were sacrificed to preventable diseases and only 2000 died from battle casualties? Or as in the Boer war, where the proportion of those killed in action to those who perished from disease was as one to ten? Or as in the Spanish-American war, where the victims of preventable disease were thirteen times more than those who fell in battle? Or will rational sanitation and proper dietary be substituted for traditional incompetency and neglect, thereby reversing these monstrous proportions, and by so doing saving the army for the legitimate purpose of smashing its enemy instead of allowing it to become a peripatetic hospital incapable of either offense or defense? That is the question upon whose answer may depend victory or defeat in the tragedy now convulsing Europe.

I arrived in Liverpool five days ago. In the Mersey a troop ship swarming with soldiers was outbound for the French coast to join the British expeditionary forces already there. The city was alive with military preparation, and in the various hospitals thousands of beds had already been assigned for the sick and wounded in anticipation of their arrival from the front. In the beautiful old city of Chester the race course with its extensive buildings had been utilized as a temporary Red Cross headquarters and mobilization camp. In Worcester I found a local Red Cross Society had been organized and fully equipped, and many private residences were being placed at the disposal of the Government to be used for the reception of the sick and wounded. The University of Birmingham has been transformed into a military hospital; 1000 beds are ready for use and a full staff of surgeons and trained nurses appointed. In Oxford and Rugby additional preparations are being made, and in the London hospitals thousands of beds have been placed at the disposal of the military authorities.

The headquarters of the Red Cross Society is in Devonshire House. This great organization is being admirably equipped in every county in England to work in harmony with the military and naval officials. It has the support of the Royal Family and many of rank are volunteering their services, among whom I saw Queen Amelie of Portugal herself a graduate of medicine. The society proposes, with the approval of the War Office and Admiralty, to fit out hospital ships and to furnish trained nurses for duty at home and abroad.

There I met Sir Frederick Treves busily engaged organizing Queen Alexandra's special nurses, fifty of whom leave for the Continent daily.

The work of the society will be ably supplemented by voluntary aid from other sources than England. Under the efficient management of the American Ladies in England, presided over by Her Grace, the Duchess of Marlboro, there will soon be established near the Channel coast a hospital for surgical cases, with 250 beds and fully equipped with medical, surgical and nursing staffs. An ambulance ship with two floating motor ambulances, and others for land purposes, will transport the wounded from the French and Belgium shores.

The Boy Scouts have proved an invaluable auxiliary to the service as errand boys, messengers and in innumerable ways. Over 60,000 Germans were in England at the outbreak of the war, among them many spies. Thru the activity and vigilance of the Boy Scouts a large number of them were arrested and imprisoned.

It was most fortunate for Great Britain that her fleet was not disbanded after the recent naval review, but was held on waiting orders. At the critical moment every ship was fully manned and in position for Channel work.

The greatest secrecy is being maintained by the Government. Even the expeditionary force had no idea of its destination until its arrival in Belgium and France. Its transfer was accomplished with dispatch and without a single casualty.

At Wandsworth Common a large school has been requisitioned and made ready with 400 beds and other hospital equipment in anticipation of a possible German invasion or raid, and all the hospitals of England have assigned a certain number of beds for the sick and wounded. Many noblemen have offered their country houses on the east coast for hospitals, including Dunrobin Castle in Scotland, the seat of the Duke of Sutherland, and Kenwood, Hemstead, the beautiful home of the Grand Duke Michael of Russia, and medical, surgical and nursing staffs assigned to them.

Such in brief covers the preliminary preparations for the care of the soldier. What methods have been adopted for his protection in the long campaign abroad, where impure water, auto-intoxication, microbic infection and contagious diseases claim the highest mortality, can only be told as the war progresses. All troops and others connected with the service have been immunized against typhoid fever, and if the excellent advice of Lord Kitchener to his men is strictly followed—advice that is even better than that given by Polonius to his son—the honor of England may well be trusted to the honor and courage of her defenders.

Ghent, Belgium

KITCHENER'S COUNSEL TO THE BRITISH SOLDIER

You are ordered abroad as a soldier of the King to help our French comrades against the invasion of a common enemy.

You have to perform a task which will need your courage, your energy and your patience.

Remember that the honor of the British army depends on your individual conduct.

It will be your duty not only to set an example of discipline and perfect steadiness under fire, but also to maintain the most friendly relations with those whom you are helping in this struggle.

The operations in which you will be engaged will for the most part take place in a friendly country and you can do your own country no better service than in showing yourself in France and Belgium in the true character of a British soldier by being invariably courteous, considerate and kind.

Never do anything likely to injure or destroy property and always look upon rioting as a disgraceful act.

You are sure to meet with a welcome and to be trusted. Your conduct must justify that welcome and that trust.

Your duty cannot be done unless your health is sound, so keep constantly on your guard against any excesses.

In this new experience you may find temptation both in wine and women. You must entirely resist both temptations and while treating all women with perfect courtesy you should avoid any intimacy.

Do your duty bravely. Fear God and honor the King.

THE FIRST NAVAL ACTION

BY ONE WHO TOOK PART IN IT

Printed by Special Arrangement with the New York World

AS to our fight off Heligoland, I think I can say that the papers are magnifying what was really but an affair of outposts. We destroyers went in and lured the enemy out, and had lots of excitement. The big fellows then came up and did some excellent target practise, and we were very glad to see them come; but they ought not to consider that we had a fight, because it was a massacre, not a fight. It was superb generalship, having overwhelming forces on the spot; but there really was nothing for them to do except shoot the enemy, even as pa shoots pheasants.

The fight did us of the destroyers more good than it did our big fellows; for my humble opinion, based on limited observation, is that no ship is really herself until she has been under fire. The second time she goes into action you may judge her character. She is not likely to do normally well the first time. We all need to be stiffened, and then given a week or two to take it all in. After that we are set. A ship will always do better in her second action.

A DIFFERENCE IN THE POINT OF VIEW

To see the old "Fearless" charging around the field of fight in her second engagement, seeking fresh foes, was most inspiriting. Till the "big brothers" came up she was absolutely all in all to us, and she has no bigger guns than we have. I also learn that there is all the difference in the world between a four-inch gun in a cruiser and a four-inch gun in a destroyer. I would regard a cruiser armed with a three-inch as about a match for a destroyer with a four-inch; but, then, I have personally only looked at it from the destroyer point of view; but it must be more unpleasant to have half a dozen shots plumped accurately and together at you, with well-arranged fire control guiding them, watching their fall and applying corrections to range scientifically and dispassionately, rather than to have isolated shots banged off from a vibrating, pulsing destroyer, turning this way and that, with no one to look where the shot falls except perhaps the captain, who has a lot of other things to attend to. We have no spare personnel, no range finder, no masts to look down from. No destroyer today will ever engage a cruiser, even of the lightest, by daylight, save at a very great disadvantage and with very great risk to herself.

Have you ever noticed a dog rush in on a flock of sheep and scatter them? He goes for the nearest and barks, and goes so much faster than the flock that it bunches up with its companions. The dog then barks at another, and the sheep spread out fan-wise. So all around in front of the dog there is a semicircle of sheep, and behind him none. That was much what we did at seven a. m. on the 28th. The sheep were the German torpedo craft, who fell back just on the limits of the range and tried to lure us within the fire of the Heligoland forts; but a cruiser came out and engaged our "Arethusa." They had a real heart-to-heart talk while we looked on, and a few of us tried to shoot at the enemy, too, tho it was beyond our distance.

We were getting nearer and nearer Heligoland all the time. There was a thick mist, and I expected every minute to find the forts on the island bombarding us. So the "Arethusa" presently drew off, after landing at least one good shell on the enemy. The enemy gave every bit as good as he got there. We then reformed, but a strong destroyer belonging to the submarines got chased and the "Arethusa" and "Fearless" went back to look after her, and we presently heard a hot action astern. So the captain in command of the flotilla turned us around, and we went back to help, but they had driven the enemy off, and on our arrival told us to form up on the "Arethusa."

A COVEY OF STEEL PARTRIDGES

When we had partly formed and were very much bunched together, a fine target, suddenly out of the everywhere arrived five or six shells, not 150 yards away. We gazed at whence they came, and again five or six stabs of fire pierced the mist. and we made out a four-funneled cruiser of the "Breslau" class. Those five stabs were her guns going off. We waited fifteen seconds, and shots and the noise of guns arrived pretty well simultaneously, fifty yards away. Her next salvo went over us, and I personally ducked as they whirred overhead like a covey of fast partridges. You would suppose the captain had done this sort of thing all his life. He went full speed ahead at once at the first salvo to string the bunch out and thus offer less target, and the commodore from the "Arethusa" made a signal to us to attack with torpedoes.

So we swung round at right angles and charged full speed at the enemy, like a hussar attack. We got away at the start magnificently and led the field, so all the enemy's firing was aimed at us for the next ten minutes. When we got so close that the debris of their shells fell on board we altered our course and so threw them out in their reckoning of our speed, and they had all their work to do over again. Humanly speaking, the captain, by twisting and turning at the psychological moment, saved us; actually, I feel that we were in God's keeping those days.

After ten minutes we got near enough to fire our torpedo, and then turned back to the "Arethusa." Next our follower arrived just where we had been and fired his torpedo, and, of course, the enemy fired at him instead of at us; what a blest relief! After the destroyers came the "Fearless," and she stayed on the scene. Soon we found that she was engaging a three-funneler, the "Mainz"; so off we started again, now for the "Mainz," the situation being that the crippled "Arethusa" was too tubby to do anything but be defended by us, her children.

THE CRUISERS COME UP

Scarcely, however, had we started when from out the mist and across our front, in furious pursuit, came the first cruiser squadron—the town class, "Birmingham," etc.—each unit a match for three "Mainzes"; and as we looked and reduced speed they opened fire, and the clear "bang-bang!" of their guns was just a cooling drink. To see a real big four-funneler spouting flame — which flame denoted shells starting, and those shells not at us, but for us—was the most cheerful thing possible.

Once we were in safety I hated it. We had just been having our own imaginations stimulated on the subject of shells striking; now, a few minutes later, to see another ship, not three miles away, reduced to a piteous mass of unrecognizability, wreathed in black fumes from which flared out angry gouts of fire, like Vesuvius in eruption, as an unending stream of hundred-pound shells burst on board it, just pointed the moral and showed us what might have been.

The "Mainz" was immensely gallant. The last I saw of her, absolutely wrecked alow and aloft, her whole midships a fuming inferno, she had one gun forward and one aft still spitting forth fury and defiance like a wildcat mad with wounds.

Our own four-funnel friend re-

commenced at this juncture with a couple of salvos, but rather half-heartedly, and we really did not care a d—, for there, straight ahead of us, in lordly procession, like elephants walking thru a pack of dogs, came the "Lion," "Queen Mary," "Invincible" and "New Zealand," our battle cruisers, great and grim and uncouth as some antediluvian monsters. How solid they looked! How utterly earthquaking! We pointed out our latest aggressor to them, whom they could not see from where they were. They past down the field of battle, with the little destroyers at their left, and destroyers on their right, and we went west, while they went east. Just a little later we heard the thunder of their guns for a space, and then all was silence, and we knew that was all.

A JULES VERNE RESCUE

Then occurred the most romantic, dramatic and piquant episode that modern war can ever show. The "Defender," having sunk an enemy, lowered a whaler to pick up her swimming survivors. Before the whaler got back an enemy's cruiser came up and chased the "Defender," and thus she abandoned her whaler. Imagine their feelings, alone in an open boat, without food, twenty-five miles from the nearest land, and that land the enemy's fortress, with nothing but fog and foes around them. Suddenly a swirl alongside, and up, if you please, pops His Britannic Majesty's submarine E-4, opens his conning-tower, takes them all on board, shuts up again, dives, and brings them home, 250 miles. Is not that magnificent? No novel would dare face the critics with an episode like that to it, except perhaps Jules Verne's; and all true.

ANOTHER DAY

BY RICHARDSON WRIGHT

THE sun, a lusty giant, gripped the edge of the eastern hills, and slowly dragged himself over their crests. For a moment he rested on a rock and glanced around the four corners of the horizon as tho to get his bearings. Then, feeling his way between the trees, he crost snow-sheeted fields, clambered over frost-silvered fences, and striking the road, strode down the valley toward the town.

Past farmhouse and barn he went; cattle thumped in their stalls and lowed; from the chimney of the house smoke rose straight like a ramrod. A man with two slopping pails of water came from the house and entered the barn.

The houses began to huddle together. A street of them: old houses with Colonial doorways and blinds drawn behind their tiny window panes. A white church with its weathered grey lock sticking straight above its head; its windows shuttered. A store at the fork of the road was also tightly locked. Along an avenue of gaunt trees the sun past to the outskirts of the village where, in the pen, behind high walls, the animals were kept.

The keeper at the gate saw him coming, and with a yawn pulled himself from the easy chair by the fire. Crossing the room, he unlocked a little closet and drew down a lever. Simultaneously the clusters of arc lights at the four corners of the pen sputtered and went out.

But the sun heeded not the inhospitable greyness. With measured steps, he scaled the wall stone by stone and dropt into the pen where, save for one exception, the animals were still asleep.

"Four o'clock and al-l-l's wel-l-l!" greeted his ears as he crept along the first row of cages.

"Four o'clock and al-l-l's wel-l-l!" a voice in another alley answered. Then up and down the cement walks between the tiers, the hour was announced by drowsy men in blue with heavy truncheons dangling from their wrists.

Inquisitively the sun peeped between the bars of the first row of pens. They were singularly alike in size and shape and fittings—little boxes with grated doors; within, a bunk, a bench and two buckets. As they lay there inert, the animals also looked singularly alike. Only when he touched them and they rolled on their backs could the sun see the difference. Tho each face was coarse and set, each bore a different brand. One was "Thug," another "Gambler," another "Thief," another "Forger."

He came finally to a row of cages apart and remote. Before them paced a man in blue who now and again pushed back the wicket of a gate and peered within. The sun glanced over his shoulder to see what manner of pedigreed animal this was that should be so closely guarded. The beast was not asleep. He sat on the edge of his bunk staring straight ahead with fixed eyes. He was branded "Murderer."

The sun fled the place only to find himself in a gaunt room from whose floor sprouted a gallows tree. He withdrew quickly and went into the recreation yard.

Thence from building to building he past, from rope mill to mess hall, from mess hall to chapel, from chapel to the farther wall that he began to scale, as he had the first.

"Five o'clock and al-l-l's wel-l-l!" a voice called. Round and round the tiers of cages it reverberated. A gong clattered. The animals hearing it yawned and stretched in their bunks.

"Thank God! Another day's gone!" murmured an animal branded "Forger." Slipping his hand beneath the mattress, he drew out a pencil and a small book in which he wrote, whispering his figures, "The 3120th day. That leaves me ninety to go."

It was only the 3119th day, to be exact, but this animal counted each new day dead at its birth.

Meantime the sun had been slowly climbing the farther wall stone by stone and had pulled himself over the coping. For a moment he sat there, then, leaping the road, reached his arm over the sill of an open casement window of a cottage. On a bed across the room a woman was lying, her greying hair massed on the pillow behind, a lock of it down across the eyes. One hand had strayed over the covers.

With the tips of his slender fingers the sun touched her brow.

"Is that you, dear heart?" she murmured. Then, half opening her eyes, she brushed aside the lock and laughed softly to herself.

Her eyes opened wide now. They traveled around the room. She sighed. A hand stole out to the clothes piled on the chair beside the bed and pulled away two stockings. A wriggle beneath the covers. A jump, and she stood hurriedly drawing on a purple kimono.

As she reached out a white arm to shut the casement, she fluttered her hand prisonward, stood for a moment gazing at the grim grey walls, then almost reluctantly closed the window.

"Thank God! Another day's gone!" she said, scoring heavily a calendar beside the window. "The 3120th day. That leaves me ninety to wait."

She also counted the new day dead at its birth.

GERMANS IMPROVISE BOATS TO CROSS THE MEUSE

The Meuse forms a natural fortification to France and Belgium, which the Germans were able to cross only after great difficulty. As the bridges had all been destroyed, pontoon bridges were built, and when time was an essential, boats, as in the picture, were constructed from canvas and the lances of the German lancers

THE STRATEGY OF THE GREAT WAR

THE WAR ON THE SEA

BY PARK BENJAMIN

Those who were readers of The Independent during the Spanish-American war will remember that the series of articles contributed to our columns by Park Benjamin were quoted more extensively than those of almost any other writer on the subject. After the war he continued his contributions in The Independent and they played a not inconsiderable part in upbuilding and increasing the efficiency of the American navy. Mr. Benjamin was graduated from the United States Naval Academy in 1867 and after two years in the service resigned to devote himself to applied science and the legal aspects of invention. He was editor of the "Scientific American" to 1878 and is the author of "Early History of Electricity" and "The History of the United States Naval Academy." He has always taken an active and intense interest in naval affairs and has acted upon the official board of visitors of the Naval Academy. Mr. Benjamin is one of the very few naval experts in America who, being free from official restrictions, is able to discuss freely the naval aspects of the Great War, and we are fortunate in being able to add him to our staff as naval editor during the coming months.—THE EDITOR.

ANY effort intelligently to estimate the naval situation in Europe is hampered by a censorship of singular imbecility, by consequent floods of fake dispatches and by a continuous stream of explanations more ingenious than ingenuous from official sources. The resulting fog not only makes it difficult to deal with events as they occur, but compels a certain amount of delay for verification. Even then, if one really desires to be neutral and impartial and at the same time to take due heed of technical accuracy, he quickly finds himself invoking the readers' forbearance at almost every turn and in the end to borrow Hazlitt's epigram on Coleridge's table-talk, begging to be allowed to start with no premises and come to no conclusion.

On July 21, twenty-two miles of British warships in double column past in review before the King—463 vessels in all including sixty battleships and twelve battle-cruisers "fit to lie in the line," besides fifty-four cruisers of lighter build and armament. Ten days later and four days before England's declaration of war this mighty armada disappeared. Its destination has been kept a profound secret. It is supposed to be in the North Sea, and it is assumed that while one part is guarding the entrances the other part is bottling the German fleet.

By persons who expected and desired an instant fight of colossal proportions, this state of affairs is unsatisfactory, and the British fleet is meeting much animadversion for not forthwith dragging the reluctant Teutons from their hiding places. But up to the present writing, neither criticism nor the persistent hearing of heavy guns in the vicinity of the "Dogger Bank" has precipitated a general action.

All that is known to have happened is that a largely preponderating force of British battle-cruisers and destroyers went after some eight German cruisers lurking behind Heligoland, and in eight hours' conflict sank three of them and two destroyers. The remark of Commodore Preble when under somewhat similar circumstances Decatur reported his capture of some Tripolitan ships seems apposite here:

"And why did you not get more of them, sir?"

On these slender premises, some deductions may be ventured. The British Home Fleet is fulfilling its whole function because (1) it has made German over-sea commerce for the time being impossible; (2) it has prevented any German naval attack upon the northern and western coasts of France; (3) it has interposed a steel wall between the German ships and the English Channel and so rendered it safe to transport troops across the strait despite the existence of a hostile fleet in being.

The non-arrival of battleships or battle-cruisers to support the eight German vessels in the recent encounter seems to show that the main German fleet is in the Baltic rather than in the North Sea. For the British battle squadrons to follow it there thru the narrow sounds between Denmark and Sweden and thru waters almost certainly mined would involve great peril and besides offer to Germany the advantage of fighting in the immediate neighborhood of its own harbors and dockyards.

With the enemy's fleet thus interned the resumption of traffic by the regular English steamer lines indicates that the ocean is sufficiently free from German cruisers. But how long this condition can be maintained is another matter. The "Mainz," sunk in the recent action, was a twenty-eight knot ship. Germany has several others like her. One or two of them escaping, say in a fog, could speedily paralyze transatlantic traffic and incidentally wipe out *seriatim* the lightly armed auxiliary craft which are now patrolling between Halifax and Bermuda and hungrily hoping for prizes as fat as the "Vaterland," now tied up in New York. Evidently it was to discourage these light-heeled German gentry, to whom such quarry as the "Olympic" or the "Adriatic" or the "Lusitania" was becoming altogether too attractive, that Admiral Beatty undertook his recent raid.

Bottling an enemy's fleet, however, is an operation by no means always in favor of the bottler. The North Sea is amiable enough in July and August, but when the winter winds begin to blow and the heavy fogs come down it is anything but a pleasant cruising ground. The Germans snug in Kiel and behind Heligoland or in their own well-fortified Baltic harbors are in far more comfortable circumstances than the British ships which are forced to keep the open sea and wear themselves out against wind and weather and under constant nerve-racking strain. It is a new thing to see so great a fleet essay so great a task. Whether there be force or not in the German contention that it cannot be accomplished, one can now appreciate the apparent indifference with which the second navy in the world submits, for the time being, to be imprisoned by the first. Persons who are arguing that the German fleet is quiescent because it was built "only for coast protection" do protest too much; the old firm of Neptune and Æolus, which will soon be working in its behalf, can furnish a much more conclusive reason.

To all intents and purposes the French navy has also vanished. It has thirteen battleships, six armored cruisers, seventy submarines and eighty-three destroyers somewhere in the Mediterranean, presumably at Toulon. And they have been there since before the war began. Mean-

while the Austrian fleet has been parading around the Adriatic with its four battleships. And these four battleships continue to remain afloat!

Exactly, in these circumstances, what the French navy is for is a mystery. If Italy should take arms against Austria the precise utility of the "Dante" or the "Leonardo da Vinci" or the "Giulio Cesare" or of the four other battleships of the Italian second squadron will admit of no doubt whatever. The defeat at Lissa rankles in the Italian breast as deeply as it did forty-five years ago, and there will be no room in the Adriatic for both an Italian and an Austrian navy. And the work of the Italian navy during the Tripolitan war was a splendid showing of preparedness and efficiency.

The episode of the German battle-cruiser "Goeben" is the greatest naval surprize of the war. This is a new and very powerful ship, completed in 1912, having a speed of 28.6 knots, of 22,400 tons displacement and mounting in her main battery ten eleven-inch guns. At the outbreak of hostilities she was in the Mediterranean. So also was the French navy, which she did not seem to interest. So also was the British second battle-cruiser squadron (three ships of the "Inflexible" class) and the four ships of the first cruiser squadron. The "Goeben" could probably manage any one of the English battle-cruisers and any two of the ordinary cruisers, despite the fact that the "Inflexible" has eight twelve-inch guns. She started in by valorously destroying two French bases on the coast of Algeria. Then it was reported that she intended to fight and that her commander in view thereof had entrusted his silver, papers, will, etc., to the German consul at Naples. But the struggle did not occur.

The whereabouts of the "Goeben" became as hazily elusive as that of Cervera before he fetched up in Santiago. One day she was in the Straits of Messina; the next day she was reported to be snuggling up to the Austrian fleet evidently suffering from lonesomeness. Then she was sighted in the Grecian Archipelago; and thence came the report that she was rushing to meet somebody or something on the other side of the Dardanelles. And lastly, just when her guns had begun to thunder in all the newspaper offices, an expectant world staggered in astonishment at the news that the "Goeben's" people had taken the 3:30 thru train from Constantinople for Germany—superior restaurant cars included serving *dejeuner* at fixed prices—and that the ship had been sold at a satisfactory figure to the unspeakable Turk! For the Turk has needed her badly since the acquirement of our "Idaho" and "Mississippi" by the Greeks, and the confiscation by Great Britain of his two just finished battleships owing to his unfortunate lack of foresight in having them built in British shipyards.

There have been cases where warships have heroically cut their way out of traps even when opposed by much superior forces, but this, I believe, is the first time any war vessel has got out of such a difficulty on a strictly cash basis. Whether admirals will hereafter delay going into action until they are advised by wireless messages whether their ships have been sold or not remains to be seen.

Of course, it is mere sentiment, but some persons may perceive in this novel procedure a passing of the days when the naval commander placed his duty to his country and to himself above his duty to his Government and risked his life on the outcome of his judgment. Obedience is a necessary and a beautiful thing and perhaps it may be wrong to assume upon the "Goeben" precedent that there will be no German Nelson to gaze at signals with his blind eye, no German Farragut to drive past the torpedoes with paralyzing instructions in the pocket of his aid, and no German Worden to anchor another "Monitor" exactly where he was told not to place her in order to meet a "Merrimac" in the morning.

But it may be safely believed that there is not, never has been and never will be an Anglo-Saxon captain who would not have fought that ship, sale or no sale, and have gone down gladly and gloriously taking as many of the enemy as possible along with him. It is not the business of a naval commander to refuse battle on the chance of defeat, but to seek it on the chance of victory. His only motto is not "thrift, thrift, Horatio," but everywhere, always and under all conditions "DON'T GIVE UP THE SHIP!"

New York City

TWO HUNDRED MILES OF BATTLE

THE STRATEGY OF THE CAMPAIGN IN BELGIUM AND FRANCE

LET us turn for the moment from the ethical and distressing aspects of the present conflict and consider it as we do the wars of the past and as the military historian will this war in the future, that is, as a problem in strategy. The study of history in the making is not so easy as the reading of what has been worked out for us in advance, but it is more interesting, and this will compensate for the scantiness and obscurity of the material. We Americans are among the few peoples who are fortunate enough to be able to view the Great War from the standpoint of a spectator. As such we can "see both sides of the game" in so far as we can glimpse the battlefields thru the rifts in the censorship. It is, indeed, the most fascinating of games to watch when we forget—as we do quite too easily—that every move on the map means the slaughter of thousands of able-bodied young men and the devastation of as many homes. It was the Germans who devised that form of indoor warfare known as *Kriegspiel* and we may assume that they are now putting in practise many of the schemes they have learned in the mimic game as they played it in the casern while their English enemies were, in spite of the warnings of Kipling and Wells, spending their time watching cricket and racing.

Now as it happens this war is being fought on ground as familiar as a chessboard to the student of history or military science. Over this terrain the great soldiers from Cæsar and Charlemagne to Napoleon and von Moltke have conducted their campaigns, and the war which has suddenly come upon us has so long been regarded as inevitable that its strategy has been the topic of innumerable books and articles ranging from official reports to fantastic romances. As the war develops it is surprizing to see how closely some of these writers forecast its possibilities and also how little change has been made in the fundamental principles of military science by the modern inventions and the lapse of time. In the battles now being fought in France the number of men engaged is ten times as great as forty-four years ago and the arms are vastly more destructive, yet the progress of the German invasion has

[illegible] points of resemblance to those of the first Franco-German war as to tempt one to faith in that seductive fallacy, "history repeats itself." The Germans invaded France on August 4, 1870, and by September 19 they had invested Paris, which capitulated January 28, 1871. This time the Germans attacked Liège on the same date but on account of the heroic resistance of the Belgians did not invade France until August 24. The Germans this time have made more rapid progress thru France in spite of stronger defense and they have until October 7 to begin the siege of Paris and until February 17, 1915, to take it if they would equal their former record.

Actually, however, the resemblance between the two wars is superficial and does justice to neither party. The situation is paradoxical. The Germans have accomplished a vastly greater military achievement than in 1870 and yet are much farther from reaching their aim, the conquest of France. The French have suffered continuous defeat, yet are vastly more able to resist the invader than they were forty-four years ago. At that time three of their armies in succession were surrounded and captured, one in Metz, one at Sedan and one in Paris. The Germans held at one time half a million French prisoners. The French, with this lesson in mind, have so far foiled every attempt of the Germans to envelop any part of their troops. Whenever they found themselves overpowered at the front the French have withdrawn on lines converging toward Paris, even at the sacrifice of their best fortresses. In this way they have kept their army intact, except for its serious losses, and are in a position to deliver a flank attack, doubtless in conjunction with the English and perhaps the Russians on the side of the sea, against the constantly extending German line of invasion.

Notwithstanding the meagerness and unreliability of our news from the seat of war we know in general what has happened tho we can only guess how it happened. The main results of the campaign in western Europe may be summed up in two sentences:

The French attacked the German left and were repulsed.

The Germans attacked the French left and were successful.

The French invasion of Alsace-Lorraine from Belfort and Nancy in the direction of Strassburg was apparently instigated by political rather than military reasons. Nothing could be better calculated to arouse the enthusiasm of the French people than messages from the front announcing the reoccupation of the lost provinces. The Place de la Concorde was filled with jubilant crowds as the president of the Alsatian Society tore the mourning weeds from the statue of the City of Strassburg and kissed her marble lips.

But the attempt of the French to carry the war into the enemy's country, however useful psychologically, availed them nothing territorially, for they were soon driven back to the frontier on the south while on the north the Germans pushed forward irresistibly along a line from Brussels to Paris, continually outflanking the left of the allied forces where the English contingent was stationed. The battle line, with one end hinging at Sedan and the other swinging around toward Paris, extended a hundred miles or more and along this front the fighting has been hard and continuous for three weeks. It is impossible to divide a modern war into discrete battles of definite time and place, but in so far as we can judge from the fragmentary reports received the decisive engagement of the campaign up to the present occurred at the Belgian frontier, August 22 to 26, when the French and English were driven back from Mons and Charleroi to Maubeuge and Cambrai.

The astonishing thing about the advance of the Germans is the swiftness with which they swept over the fortifications of France and Belgium that were designed expressly for the purpose of preventing such an invasion. The appliances of modern warfare, concealed batteries, bomb-proof shelters, disappearing guns, barbed wire entanglements charged with high potential currents, search lights, smokeless powder, range finders, mined approaches, and the like, have contributed greatly to the strength of established defenses. These new scientifically constructed

THE GERMAN INVASION OF BELGIUM AND FRANCE

The arrow-headed lines show in a general way the advance of the German right, center and left, but do not imply that any particular armies followed such a line of march. The movements indicated here have in the last few days been carried further. The German left has past thru Rethel to Rheims and the right has swung eastward between Paris and Rheims. Fortified points are represented by stars. The dates give the days when the towns are reported surrendered to the Germans

fortresses did not, indeed, claim to be "impregnable," still they were expected to hold out for a long time against a field army. But the German advance has not yet been checked by a Port Arthur, a Skutari or an Adrianople. The first surprize came when Liège was entered four days after it was attacked, but this was followed by equally surprizing reports of the hasty fall of the strongholds of Namur, La Fère, Peronne, Montmedy and Rheims, and the inexplicable surrender of the first class fortress of Lille without a shot. On the other hand, the second class fortress of Longwy put up a stout resistance, twenty-four days according to French reports, fourteen days according to German, and Maubeuge is still holding out. The big siege guns of the Germans are brought into position with unprecedented celerity and are proving unexpectedly effective. The system of fortification devised by the French engineers since long range artillery came into use, that is, a ring of separate but mutually supporting forts on hills about a city, does not justify the confidence put in it, for the Germans by concentrating fire upon two of the ring forts place them *hors de combat* and thus gain entrance to the city regardless of the other forts. This chief weapon in the reduction of the fortifications is presumably their eleven-inch howitzers, which weigh twenty tons and can throw a 760-pound shell filled with explosives a distance of six miles.

The French have always been inclined to depend more upon fortifications than the Germans have thought wise. A Prussian authority on strategy, Blume, puts the point in language which seems almost prophetic of the present:

> Persuade a people that the center of a gravity of a country's defense is to be found behind the ramparts of its fortresses and long before the necessity arises, you will see the army recruited from this people fleeing to these defenses. And if there is not then found behind these walls the anticipated security—if, as has already often been seen, the improvements in the technical branch of the military art give the adversary the means of sweeping away, in a manner as rapid as it is unexpected, the protection which the walls and ramparts were designed to afford—the fate of that country will soon be decided.

Napoleon was of the same opinion, for he said: "It is upon the open field of battle that the fate of fortresses and of empires is decided." It is in accordance with these principles that the French have chosen to retire their army rather than to immure it behind ramparts and that the Germans have ignored Paris and sought the enemy in the field.

THE WAR AGAINST GERMANY

BY ARTHUR SHERBOURNE HARDY

Mr. Hardy has represented the United States abroad as Minister to Persia, Greece, Rumania, Servia, Switzerland and Spain. Apart from his diplomatic service he had achieved distinction in the widely diverse fields of mathematics and fiction. He is a graduate of the United States Military Academy and has served as a lieutenant in the artillery in 1869 and 1870.—THE EDITOR.

NEUTRALITY, in the sense of the President's proclamation, is a legal term applying to the conduct of those not parties to the war. Neutrality, in the sense of his later appeal to the American people, counseling the repression of opinions, is another matter. As a measure of prudence, addrest to violent partizanship, it is timely, and should be taken to heart by the German press of this country, whose bitter assault on the expression of sober judgment in other journals is the most injudicious and inflammatory disregard of the President's advice yet in evidence. The strictest observance of the laws of neutrality cannot prevent the formation of that verdict which is called public opinion.

In calmer days to come historians will determine the true sequence of events and unmask unflinchingly the hidden causes, if such there be, of the crime now being committed against civilization. Their researches will in all probability raise the question whether the boasted civilization of Europe has not rested primarily on force rather than equity—a principle which, inevitable in the earlier stages of social evolution, is radically inconsistent with real social progress. Meanwhile, in spite of conflicting claims, certain facts are indisputable.

It seems clear, for example, from the documentary evidence of the German White Paper that the Kaiser approved of the Austrian ultimatum to Servia. This, however, need not be insisted upon, for, conceding that Austria took this momentous step without the knowledge of her German ally, which is intrinsically improbable, both the Austrian ultimatum and the reply of Servia were known to the German Government at least as early as it was known to the world at large. What action did the Kaiser's Government take at this crisis?

The Servian reply was a complete submission. It breathed no defiance. The two questions on which it felt compelled as a sovereign state to dissent, it offered to refer to The Hague. Impartial observers ask why, at this critical moment, when Austria was about to reject the Servian reply and declare war, her powerful ally did not peremptorily disavow such action. Germany is not prone to deal gently with critical situations. If the Kaiser was at heart a man of peace, if German armaments were not aggressive, but purely defensive, if the fear of a Slav invasion was an honest fear, why was Austria permitted to pursue a course which would in all probability, as in matter of fact it did, banish the hope of peace and precipitate the interference on behalf of Servia of her great Slav protector?

Russia would have had no *casus belli* if Austria had been restrained. Austria would never have declared war on Servia, certain as that act was to involve her with Russia, if Germany had refused in forceful terms to support her. Russian mobilization is alleged in vain by Germany as an excuse. It came after Austria's declaration of war and was its inevitable consequence. In the absence of all documentary evidence, such as is afforded by the British White Paper, no amount of special pleading can convince the world that the influence of Austria's mighty ally was strenuously exerted in the cause of peace. On the other hand, the presentation of the British case rests securely on documents which prove beyond all dispute the earnest effort of Sir Edward Grey to hold the dogs of war in leash.

Which of the Great Powers desired war? Not Italy, for Italy took advantage of the terms of her pact with Germany and Austria to declare her neutrality. Had she desired war she would have adopted her ally's contention, untenable tho it is, that Russia was the aggressor. Not England, for the publication of the White

Paper establishes beyond cavil her [illegible] and desire for peace. Not France, whose diplomatic history since 1870 has been one long story of self-restraint, not to say fear of her overbearing neighbor, whose purely defensive preparations have been determined by the most elementary principles of self-preservation, and whose conduct up to the German declaration of war shows that she did not fully realize the gravity of the hour. There remains Russia. But Russian mobilization was not ordered till after Austria, unrestrained if not supported by her German ally, had declared war on Servia.

What are the chief contentions of the German case? First, that she was threatened by Russia. But not till after she had failed to repudiate Austrian policy, a policy sure to result in Russian intervention. Is it claimed that Austria would not listen to advice? Is it credible that she would have provoked that intervention if Germany had peremptorily informed her that she must abide unassisted the results of her ultimatum? Second, that Western Europe was in peril of a Slav invasion. The average intellect is not convinced that the rational defense of Western Europe against a Slav invasion, admitting that danger to exist, is first the defeat of the two great western powers, England and France.

Let us follow the chain of events which began with the Franco-Prussian war of 1870, events which are now history. The first link in that chain is the dismemberment of France and the imposition of the two hundred million sterling indemnity. By these two measures Bismarck thought to make France weak. He made her strong. At no time since 1870 has Alsace-Lorraine been less French than today. He weaned France from dreams of glory and gave her dignity and self-possession for watchwords. She has ignored the cry for revenge, but, naturally, she has not forgotten.

The next link in the chain was the formation of the Triple Alliance. By this step Bismarck thought to make Europe subservient to Germany. He made her rebellious, for what was the logical sequel to the Triple Alliance? The Triple Entente. German foreign policy had been sedulously directed to the encouragement of the colonial enterprises of France, in order to embroil her with Italy and England. She almost succeeded. France went to Tunis and Tonquin to their annoyance, and finally, at Fashoda, nearly came to blows with England. Fortunately there were men wise enough to see that this was playing into Germany's hands. The result was that two great powers, Russia and France, were driven into the arms of their hereditary enemy, England. What one sows one reaps. Astonishment is out of place.

Again, Germany headed that hybrid combination which deprived Japan of the legitimate results of the Chinese-Japanese war, and Japan in turn is driven into the arms of England. Again, one reaps what one sows. Why protest?

We come now to the violation of Belgian neutrality. Here we tread on firm ground. By the official admission of the German Foreign Office the violation of Belgian neutrality is declared to be a "military necessity." In brief, having failed to restrain Austria, having by that failure precipitated Russian action, Germany declares war on France, and the situation thus self-created is given as the reason for disowning treaty obligations!

And now follows the astonishing arrogance of the German Foreign Office. Amazement that England will not consent to a bargain involving the desertion of her French ally on the promise of German respect for French continental, but not colonial, territory. Amazement, and then fury, that England will not trust to the promises of a Foreign Office which has just declared its solemn pact with Belgium "a scrap of paper." Germany need not advance the flimsy excuse for the violation of Belgian neutrality that French aeroplanes had flown over the boundary. She needs no such excuses. The military necessity, which the instant invasion of Belgium proves to have been long foreseen and deliberately provided for, is enough.

And what is the proposition made to Belgium? That she shall quietly permit the Juggernaut car of war to pass over her prostrate body or "take the consequences." That she shall trust to the good faith of a power that had already made its treaty obligations secondary to its interests to indemnify her at the end of the war. England was under no necessity to rest her rejection of the German bargain on her treaty obligations. The obvious danger to her own security created by the German advance thru Belgium to the Channel was justification enough.

The truth is this wonderful war machine perfected by Germany during the last forty years is the terror of Europe. Herein is the secret of all those defensive burdens assumed by her neighbors. The world is not alarmed over a Slav or Yellow Peril. It is in mortal fear of this aggressive, insolent military spirit which creates distrust, tears up treaties and rejects every proposal for proportional disarmament or curtailment of war expenditures. The sympathy of the United States in the struggle now going on rests on two fundamental facts. We are, in the first place, irrevocably committed against a system which determines alliances by dynastic interests, which determines boundaries by the necessities of these dynastic interests irrespective of race, religion, language and the preferences of the chattel populations. We are hoping for the end of militarism as personified today in men who claim to act for Deity against those who are defending their homes and their existence.

And in the second place, apart from all considerations which constrain our sympathy with the democratic constitutions and ideals of England and France, we can find nothing either in the German Foreign Office statements or in those of the German representative in this country to justify the present war. There is absolutely no proof that Germany brought its enormous influence or the weight of its military predominance against it. There is, on the other hand, strong presumption and much evidence to the contrary. We have been asked to believe the incredible. We have been given excuses and special pleadings instead of documents and facts.

One final word to our advocates of peace. It has been asserted that the argument that armaments make for peace has been finally disposed of by the present war. No sensible man has ever contended that they make for peace. They make for *safety*. When dynastic interests are not supreme in international affairs, when War Lords disappear, when race and religious antagonisms inherited from the centuries are no more, when international commercial rivalries are subject to the same restraints as those of internal origin, and not till then will disarmament be possible.

Arguments for peace are a waste of words. We are convinced already. Take rather the advice given by President Eliot in his report to the Carnegie Endowment for International Peace: "Recognize frankly the present necessity of maintaining armed forces for protective duty against aggression from without or disintegration from within." Rest your objections to two battleships or any other proposed armament on what you deem required for that protection, and abandon with equal frankness the claim that we can order our house as if there were no War Lords at the door.

THE BELGIANS AND FRENCH MAKE THE GERMANS SWIM THE RIVERS OR BUILD NEW BRIDGES

International News

RAILROADS DESTROYED BY THE BELGIANS DELAY THE GERMAN ADVANCE

As the Belgians and the Allies in turn have retreated before the German advance they have destroyed railroads, dynamited bridges and tunnels, wiping out in a few hours the fruits of years of patient industry and toil. Villages and the crops thus far have been spared, and to that extent at least, the Great War has not yet equaled Sherman's famous march to the sea

THE NEW BOOKS

SCIENTIFIC SLAUGHTER

SOME idea of the awful carnage which modern weapons of warfare are inflicting on Europe may be gained from Professor Octave Laurent's *La Guerre en Bulgarie et en Turquie* (Paris, 1914), which is the distinguished Belgian surgeon's account of his eleven months of campaigning with the Bulgarian army. As an account of his experiences it was designed for the benefit of his surgical colleagues in the armies of the world, and was not meant in any sense to be anti-militarist or purposefully an advocate of peace. The sights which came under his observation, however, are so appalling, and illustrated by the hundreds of photographs meant for his surgical colleagues, brings home so powerfully the awful horrors of modern warfare, which have now so unhappily devastated the author's own native land.

From a population of some 4,300,000 Bulgaria raised an army of 500,000 men, from which, in the first war, some 53,000 were wounded and 30,000 killed. In the second war 78,000 more were killed or wounded. Altogether the Bulgarians lost about 150,000 in killed and wounded, or one-third of their entire effective force. Out of every four hit by a missile there was one death. At least one in three of the wounded were crippled for life, while one out of every four were made dependent on a pension or help from others. From the ravages of disease about 22,500 soldiers died during the war quite apart from those killed and wounded by bullets.

Most of the wounds were inflicted by the infantry rifles, while the majority of the deaths were occasioned by artillery fire. Comparatively a small number of the wounded had suffered from the artillery. The fatal wounds were inflicted, fifty-five per cent thru the head, thirty-five to forty per cent thru the trunk and the remainder, scarcely five per cent, in the limbs. Many of the shots fired are fortunately over the heads of the enemy and even military training has not yet made for fatal efficiency in the use of weapons. A zero should be added to each of the figures provided by the Balkan War, Professor Laurent declares, in order to give some idea of the losses if two armies of nations of the first rank were to be set in arms against each other, a prediction that has been more than verified by the dispatches from the present war. Instead of 150,000 killed and wounded then in the course of a month, the losses would more nearly be 1,500,000 men in a corresponding period. A battle that lasted from three days to a week would almost surely deprive the armies of the services of an average of over 100,000 men a day.

A DOUBTFUL HISTORY

A peculiarly timely book has just been issued purporting to reveal many of *The Secrets of the German War Office.* Dr. Armgaard Karl Graves, the author, claims to have been for about ten years (1903-1912) an agent in the employ of the German Secret Service. His antecedents are cloaked in tantalizing mystery. "There are three persons alive," he says, "who know who I am. One of the three is the greatest ruler in the world." Can this be other than the Kaiser? He is exactly the kind of man needed for Secret Service work and—more especially for the story. His tales of adventure in securing information about foreign armaments, plans, government policies and intrigues are generally in accord with the main facts of recent history, but the results of his secret machinations have little significance, and if any reader takes the book seriously he will often wonder why an emperor should resort to such devious and extravagant methods to get unimportant information or that which lay freely open to others. "Dr. Graves" has, however, worked up some spicy material, bringing into his scenes Mlle. Anna Pavlowa, Winston S. Churchill, Sir Edward Grey, and, of course, the Kaiser. The last named he tells of meeting just before the "Panther" sailed for Agadir in 1911, in an underground chamber of the Foreign Office, where he is directed to commit to memory a message to the commander of that ship in the Kaiser's own handwriting, which is afterward burnt over a candle in the approved way of melodrama. In one particular the "Doctor" shows the veritable stamp of his detective work. He lies impartially to all comers! those to whom he is sent as a spy, those by whom he is employed, and—the conclusion is irresistible—his readers. The volume is full of blunders and absurdities. It does not inspire confidence in the author to find that he confuses Belgrade with Bucharest, ascribes King Alexander of Servia to the wrong dynasty, fills balloons with "inflammable dioxygen" and does not know the name of Foreign Minister von Kiderlen-Waechter and Botho von Wedel with whom he claims intimate relations.

McBride, Nast & Co. $1.50 net.

WHAT WAR MEANS

Did peoples in times of peace apprehend the destruction and horrors of war, such precautions would doubtless be taken as would ensure the continuance of peaceful relations. It was to arouse more pronounced efforts toward this goal that Mr. W. Douglas Newton wrote his vivid and realistic portrayal of *War.* It is an account of what one man saw and experienced during the invasion and conquest of his native country. There is no array of dry statistics, no massing of widely separated events, but merely the narrative of incidents and the description of scenes and feelings falling within the experience of a single observer who is driven from place to place. While the story is purely imaginary, the picture is essentially that which every war presents in its fearful devastation, cruel suffering and brutalizing effects. From it one may get a good notion of what has happened in Belgium and that is now happening in nearly every country of Europe. Alas that people awake to the awful realities too late! How eloquent this unveiling of the horror stricken countryman's eyes:

> Brun was wrung with agony. "My God!" he said, "but I never guessed it was like this. Nobody ever told me it was like this."
>
> The medical officer laughed bitterly. "Ay, they never told you. It wasn't nice. It wasn't good form. The horrors are too revolting to put before comfortable, domestic people. You mustn't be shocked. All the same the horrors *are.* They always are, they always have been, they always will be. And you never know. It would be bad taste to shock you. Bah—you precious, comfortable sit-at-home hypocrites make me sick. You never know, you don't try to know, and so you don't care. It's because you didn't care that they've happened. You're the cause of all this—you—*you.* Why didn't you find out all about it and try to prevent it happening to you?"

Dodd, Mead & Co. $1.20.

THE MAKING OF A DIPLOMAT

Among the American diplomats who have been rendering valuable service in European centers since the Great War began, none has been placed in a more dangerous or trying

situation than our Minister to Belgium, Hon. Brand Whitlock. His work in Brussels both before and after its evacuation by the Belgian forces has received high approval in every quarter. The story of his life and experience in political affairs is very interestingly told in his autobiographical volume entitled *Forty Years of It.*

Forty Years of It. Appleton's, $1.50.

E. P. POWELL AS A POET

It is a very daring attempt which our valued contributor, Mr. E. P. Powell, has made to put into dramatic form a series of poems of the life and teachings of Jesus. Mr. Powell is a man of wider interests than his delightful papers on rural life or those on education would indicate. In his younger and middle life he was pastor of important churches, and a reverent and even religious spirit has characterized all his writings. The book is "dedicated lovingly to Jesus, whose mission was peace, whose gospel was love," and the poems illustrate the modernness of the mind which in the ninth decade keeps touch with the eternal freshness of the words of Him whose teachings were peace and love. These verses were worth the writing and are worth the reading.

Sherman, French. $1.

ENEMIES OF THE FARMER

The *Manual of Fruit Insects* is one of those admirable and complete books that came to us from the College of Agriculture at Cornell University, and is by the late Prof. M. B. Slingerland and Cyrus R. Crosby. When we find seventy-five different kinds of insects described that prey on the apple, and fifteen more hardly worth describing, we begin to wonder that any apples reach the market. We are told that the depredations of these insects cost us $66,000,000 a year. The volume figures these insects and gives directions for their control, not for apples alone, but for pears, quinces, plums, peaches, cherries, berries and grapes as well, and is to be commended as trustworthy.

Macmillan. $2.

THRU ORIENTAL EYES

Eager intensity, vivid imagination and unique reactions make the little Greek girl of Demetra Voka's autobiography, *A Child of the Orient*, a delightful personality to follow thru the mazes of Turkish life, thru harems and brigand-infested forests. In spite of an inherited hatred of the Turk and a passionate love of all things Greek, the point of view is not lacking in sympathy.

Houghton Mifflin. $1.25.

BIRDS OF THE ANTARCTIC

Dr. G. Murray Levick, R. N., has written a delightful little treatise on *Antarctic Penguins* which is profusely illustrated from excellent photographs taken by the writer, who accompanied the Scott Antarctic Expedition as zoologist. In detail and with humorous appreciation, Dr. Levick describes the odd customs and habits of these quaint birds, about whom so little has, until recently, been known. Young people especially will find much enjoyment in the book

McBride, Nast. $1.50.

DIRECTORS: Miss Helen Fairman Cooke, A.B., Wellesley
Miss Marion F. E. Cooke, A.B., Wellesley
School Year—September 24, 1914—June 17, 1915

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore.
To make her happy and useful.

EQUIPMENT
Colonial house — atmosphere of simplicity — open-air sleeping and dining porches—open-air school-room—unstinted sunshine—a garden for every girl—space for play—woods and fields—experienced, understanding, motherly teachers.

METHODS
Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY
An enriched high school course—general, special and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture—no evening study.

PLAY
Tennis — basket-ball — tramping — coasting — skating — snow-shoeing — Dancing — singing — games — story-telling — play-acting.

References given and required.

Address MISS HELEN FAIRMAN COOKE
The Brookfield School **North Brookfield, Mass.**

WORD PICTURES OF THE WAR

From behind the censorship veil have come only the barest bulletins and the most meager details as to the life-and-death struggle now being fought, on which hangs so much of the fate of Europe. Only from the returning wounded and the refugees from the stricken districts is it possible to get any conception of its varying fortunes, of the ghastliness of its details, and above all, of the grim humor with which the human being seems to be capable of endowing any situation. Below are a few of these word pictures of the war:

HEROISM OF THE LIÈGE DEFENDERS

Of acts of heroism there have been no dearth in the armies of both the Allies and the Germans, but few rise to the hight of the sacrifice of General Leman, the heroic commander of Liège. A German officer pays him this tribute:

"General Leman's defense of Liège was noble but tragic. During the early attack General Leman's legs were crushed by the fall of a piece of concrete. Undaunted, he continued to direct his campaign, visiting the forts in an automobile ambulance.

"The commander of one of the forts, at the moment when the bombardment was heaviest, went mad and began shooting his own men. He was disarmed and bound. The cupola of one of the forts was destroyed by a bomb from a Zeppelin. Fort Chaudfontaine was blown into oblivion by a German shell which dropt into the magazine.

"Finally General Leman decided to make his last stand in Fort Loncin. When the end became inevitable he destroyed the last gun and burnt up the plans, maps, papers and food supplies. He was about to order all the men to the trenches when a shell buried him beneath a pile of debris. He was unconscious when the fort surrendered."

GERMAN UNIFORMS HARD TO SEE

"The blue-gray unforms of the Germans are hard to see at a distance," said a Yorkshire light infantryman among the wounded returning from France to a correspondent of the London *Standard*, "and for concealing movements are more effective than our khaki, but it is surprizing how quickly you learn to pick out such things as buttons, badges, armlets, and even peaks of caps or spikes of helmets in the sun and tell by them of the moving men you cannot see otherwise.

"Aim at a button a mile off and you hit a German in the stomach, is what we say, and it's near enough to the truth. The Germans are such sticklers for rules that I have seen their artillery keep firing away at a position of ours after it had been occupied by their own men, and at the hospitals they find quite a number of Germans hit by their own rifle fire."

AMERICAN CORRESPONDENTS ARRESTED

All the American correspondents in Belgium have been arrested by the Belgians, the French and the Germans, and ordered out of the country, some of

them after having had close calls from the Germans in being taken for English spies. Richard Harding Davis, himself taken prisoner and held while for four days the Germans pondered over his fate, relates this story of the arrest of Captain Granville Fortescue, another of the New York *Tribune's* war correspondents:

"The American correspondent who first scored an arrest was Captain Granville Fortescue, who lives in Washington, and who, during President Roosevelt's administration, was military aide at the White House. When the present war started, Fortescue and his family were in Brussels. He was the first man to see any fighting and get his stories back to New York.

"With the Belgian army he was very popular and, banking on this, when the French arrived at Namur Captain Fortescue walked to meet the French general, saying genially to him: 'Welcome to our city.' To this the French general answered: 'Who the devil are you?' And, not being satisfied with Fortescue's reply, the general, in accordance with the rules that the French War Office has laid down, ordered him to Paris under arrest.

"Fortescue protested that all his clothes were in his apartments in Brussels, and asked that he be permitted to return to that city, giving his word of honor to send out no information concerning what he had seen. At the expression, 'word of honor,' the French general injudiciously sniffed. Even more injudiciously Fortescue then told him that he wanted him to know that his word of honor was as good as that of any general in France.

"But the last word went to the general It was, 'You are under arrest.' Fortescue replied, 'You are on Belgian territory and cannot arrest me.' 'Then,' said the general, 'I will arrest you on French territory.' And surrounded by French bayonets Fortescue was marched across the border."

THE OTHER FRANCO-PRUSSIAN WAR

From The Independent, September 15, 1870

It is no evidence of popular fickleness that the American people are now rapidly withdrawing their sympathy from Prussia, and bestowing it on France. There is just reason for the change. On the declaration of war by Napoleon against King William—a war without cause, a war wholly inexcusable and wanton, a war which immediately brought upon its author the opprobrium of the civilized world—the American people joined with the rest of mankind in praying that the aggressor might be punished, and that a peaceful government which was thus rudely warred against would deal back upon its enemy two blows for one. This wish arose from no ill-will in the American heart toward the French people. But, if any European monarch was ever justly hated in America, it was Napoleon III —invader of Mexico and intermeddler between the American Republic and its neighbors

RECENT BOOKS OF MERIT

Halleck's New English Literature - - - $1.30

By **Reuben Post Halleck,** M. A., LL. D., author of History of American Literature.

A new and enlarged book, which is both scholarly and teachable, and preserves the qualities of suggestiveness, clearness, organic unity, interest, and power to awaken thought which distinguished the previous volume.

Coulter's Plant Life and Plant Uses - - - $1.20

By **John Gaylord Coulter,** Ph. D.

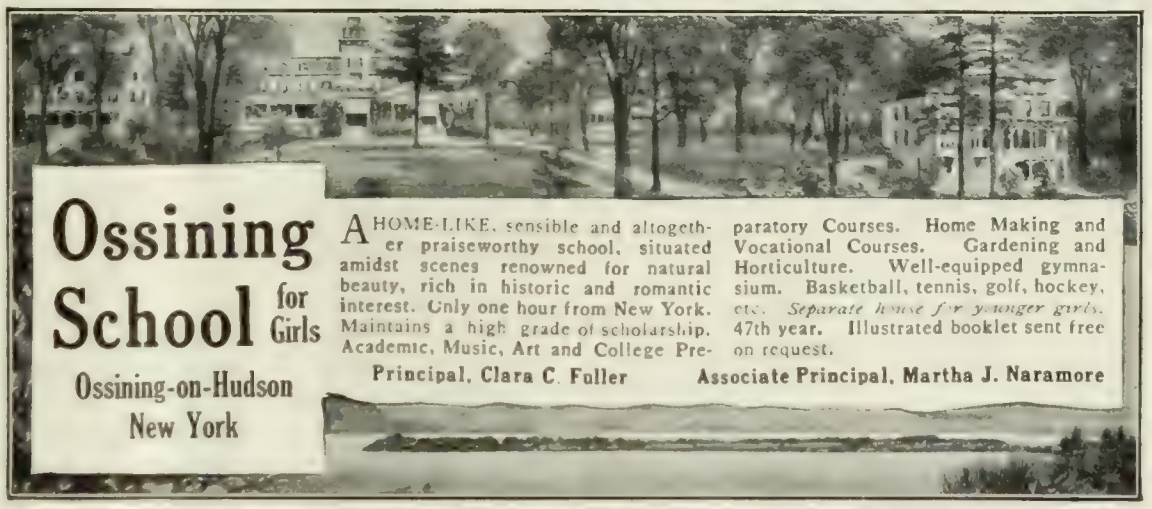
A simple, practical, and interesting book on the fundamentals of plant life and the relations between plants and man. It prepares for the further study of botany, of agriculture, or of domestic science.

Harding's New Medieval and Modern History - $1.50

By **Samuel Bannister Harding,** Ph. D., Professor of European History, Indiana University.

Though based on the author's previous book, the plan has been reorganized, the scope extended, and the matter largely rewritten. The emphasis on social, industrial, and cultural topics has been increased.

Hoadley's Essentials of Physics $1.25



By **George A. Hoadley,** C. E., Sc. D., Professor of Physics, Swarthmore College.

THE MARKET PLACE

AN AMERICAN OPPORTUNITY

BY CARL VON PUSTAU

AS a first result of the war both our import and export business has come more or less to a standstill. Unfortunately, thru our banking methods for foreign trade, very large sums of money were owing by us to Europe, particularly to London, for what is generally called letter credit business.

For generations, it has been the custom, and a very profitable one to English bankers, that foreign merchandise, no matter what its source of origin, had to be financed via London. If a man in Hong Kong, Shanghai or Rio de Janeiro made a shipment to New York he would draw for the amount of his invoice to reimburse himself, at ninety days or four months' sight on London bankers, who at the expiration of such drafts, looked to their customers in the United States to provide for these acceptances, plus a commission of from one-half to one per cent.

As our importations of coffee alone amount to nearly 8,000,000 bags a year, at an average cost of $15 per bag, this makes over $120,000,000 which we have to pay to London for this commodity alone.

When by the end of July, both England and France suddenly withdrew their credit balances here and we had to ship during one week over twenty millions of gold, our merchants found themselves in the most unpleasant position, for they had to pay for bills falling due in London, instead of $4.86 to $4.88 per pound sterling, from $5 to $7.

If a moratorium of four weeks had not been granted in London in early August for all bills maturing in August, many houses here would have failed.

Since then, exchange has gone back to $5, but even this is quite a loss to the importer.

It is owing partly to this condition of exchange, partly to the question of freighting and chartering vessels, and insurance for war risk, that our export business has received such a momentous check, and our import business with Europe and Asia has practically been stopped.

Fortunately, ways and means have been found to finance the shipments coming from the Argentine Republic and Brazil.

It is remarkable and shows the great sagacity of the London bankers that they have been able for so many years to monopolize the financing of not only the business of the United States, but practically of the whole world.

As the importations into this country for the last ten years have exceeded $1,000,000,000, it is a conservative estimate that year after year, at least drafts exceeding $600,000,000 have been financed by London, netting the acceptors of these drafts at least $3,000,000 commission, of which perhaps one-fourth or one-fifth has been returned to their representatives in the United States as their share.

The great inducement for the latter has been that the English banker would assume the credit risks, and that the agent here merely pocketed his commission without any risk at all. But experience had taught the English banker how extremely small the percentage of failures in this country has been.

With the beginning of the war exchange rose here to the fantastic figure of $7 and over, and in effect reduced our gold dollar to a value of about sixty-six cents. This occurrence has opened our eyes and already steps are being taken to transfer the financing of our import business from London to New York, where it should have domiciled long ago.

Is it not ridiculous that one of the richest, if not the richest, countries in the world, the United States, should buy its goods all over the world in English money, instead of in our own dollars and cents; that importers here should have to provide letters credit on London, when under normal conditions our money market here rules in the neighborhood of two to two and one-half per cent interest per annum?

The result has been that some of our prominent banking houses which heretofore have had their share of this business thru their branches in London, have sent a circular letter to their clients stating that owing to the disturbed conditions in Europe letters credit on London cannot be financed any more, but that they are prepared to issue to their merchant friends letters credit on importations from the Far East and South American countries in dollars and cents on New York.

Thus, long before the British got a chance to fire the first shot, a shot has been fired from our midst into the breastworks of the English banking system, which is nothing else but a notice that hereafter we will strive to do our own financing. And if this can be accomplished we indeed will be able to say that this war in Europe, which is hurting us in a business way just as severely as it can hurt anybody, holds a promise of wonderful business advancement for our country, and will probably bring us before long to the position which should have been ours long ago and which will not only allow us to get our full share, but more than our share in all the big finance operations of the world.

NATIONAL REVENUE

There are indications that the additional revenue recommended by President Wilson will be obtained by increasing the tax on beer and by such stamp taxes as were imposed during the war with Spain. It is said that an addition to the whisky tax might yield but little, as a reduction of output in several distilleries was recently ordered, and that there should be no higher tax on tobacco, because the growers are losing something on account of the war. The French Government has been accustomed to buy a considerable part of the crop in Maryland, Virginia and North Carolina, but has ceased to buy.

In the Treasury there is an unincumbered working balance of $57,000,000, with the amounts in national banks and pledged for moving the crops excluded. And there are $241,000,000 of unissued Panama Canal bonds which can be used. The situation does not demand an immediate decision. Congress may be in session thruout the year, with only a short recess. If conditions permit, the imposition of new taxes should be avoided.

Petroleum in large quantities has been found in Alberta, where the Canadian Pacific owns 3,000,000 acres containing coal and supplies of natural gas.

Reports from Washington say that the State Department has spent $250,000 in making inquiries by cable concerning the safety of Americans in Europe.

Nearly thirty-six per cent of the domestic supply of cotton was consumed in 1913 by our own mills, and the exports of cotton goods ($53,743,977) were larger than in any previous year.

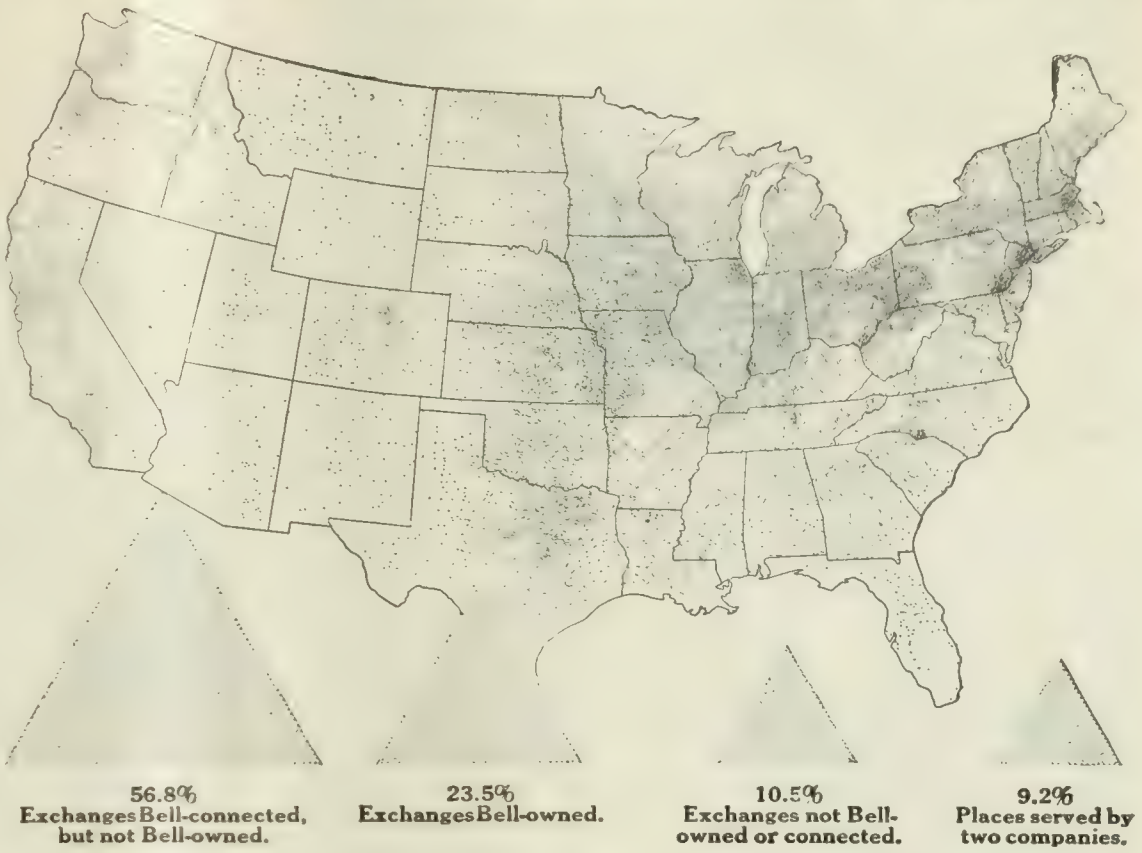
In March the exports of motion picture films were 23,000,000 linear feet, against only 3,000,000 in March of last year, and the quantity exported in the nine months which ended with March was 146,000,000 feet.

The Federal Reserve Board has begun to hear the protests of banks that were misplaced in the arrangement of districts. It should transfer the banks of Jersey City and other towns in the northern part of New Jersey from the Philadelphia district to the district whose financial center is New York.

About 100,000,000 bushels of the exportable surplus of our new crop of wheat has been sold abroad, but only 30,000,000 bushels had been shipped when the war blockade began. Europe's wheat crop is less by 304,000,000 bushels than her crop last year. Of the nations now at war, Russia is the only one that produces more wheat than is needed for home consumption.

The following dividends are announced:

American Can Company, preferred, quarterly, 1¾ per cent, payable October 1.



American Car and Foundry Company, preferred, 1¾ per cent, common, ½ per cent, both payable October 1.

American Tobacco Company, preferred, 1½ per cent, payable October 1.

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable October 1.

Metropolitan Laundry Company, quarterly, 4% per cent, extra, one half of one per cent, payable September 30.

What the Telephone Map Shows

56.8% Exchanges Bell-connected, but not Bell-owned.

23.5% Exchanges Bell-owned.

10.5% Exchanges not Bell-owned or connected.

9.2% Places served by two companies.

EVERY dot on the map marks a town where there is a telephone exchange, the same sized dot being used for a large city as for a small village. Some of these exchanges are owned by the Associated Bell companies and some by independent companies. Where joined together in one system they meet the needs of each community and, with their suburban lines, reach 70,000 places and over 8,000,000 subscribers.

The pyramids show that only a minority of the exchanges are Bell-owned, and that the greater majority of the exchanges are owned by independent companies and connected with the Bell System.

At comparatively few points are there two telephone companies, and there are comparatively few exchanges, chiefly rural, which do not have outside connections.

The recent agreement between the Attorney General of the United States and the Bell System will facilitate connections between all telephone subscribers regardless of who owns the exchanges.

Over 8,000 different telephone companies have already connected their exchanges to provide universal service for the whole country.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

SAVINGS BANK LIFE INSURANCE

Savings bank life insurance in Massachusetts is now seven years old. In that time four banks have established insurance departments: Whitman Savings Bank, Whitman; People's Savings Bank, Brockton; Berkshire County Savings Bank, Pittsfield; City Savings Bank, Pittsfield. Other banks and trust companies variously located, and about two hundred manufacturers, maintain agencies of these four banks for the convenience of the working population. We note in an announcement recently made by the secretary of the trustees of the General Insurance Guaranty Fund, that there are now 9026 policies in force, representing $3,518,132 of insurance.

As we have observed on various occasions in the past in connection with this particular subject and others collaterally related, the interests of economy are best served when the users of insurance deal directly with the insurers. In this, as in many other lines of business, the middleman is expensive. Massachusetts is affording the wage-earners of that state an opportunity to save this expense, and yet the figures quoted do not indicate that it is appreciated. We do not regard the existence of 9000 policies, representing some $3,500,000 of insurance, as a satisfactory showing in seven years. The results should be very much larger. The system is a meritorious one and should receive much greater support than it does.

But the cause is not in doubt. The scheme assumes the active presence of something in human nature that does not exist: a determination to have and to maintain insurance on one's life. Few men in this age either deny the necessity or depreciate the benefits of life insurance. But these sentiments are wholly passive with ninety-nine per cent of mankind. The recognition of this truth is the foundation upon which the immense superstructure of American insurance rests. The people would not come to Insurance in the numbers they should and, therefore, Insurance, in this country, became militant and went to the people. It is more expensive to the buyers to get it that way, but it is immeasurably better for them and the country that they pay a little more for it and have it, than pay nothing and lose its benefits.

FEDERAL SUPERVISION

In an interview which the editor of this department recently had with President Kingsley of the New York Life Insurance Company, who leads the movement for the submission of an amendment to the Constitution which would result in placing the supervision of insurance companies transacting an inter-state business under the jurisdiction of the Federal Government, we learned that the fraternal life insurance orders were almost unanimously in favor of the proposition.

The executive managements of these orders are in close touch with the masses which comprise them, and it is reasonable to assume that on this and other important questions they fairly represent their wishes. If we are correct in this conclusion, then it would appear that the proposed amendment has the support of a large body of substantial citizens, those of a class who wield an unusual amount of influence with local legislators. This is significant in view of the fact that if Congress submits the amendment, its ratification rests with the legislatures of the states.

As we understand the matter, the managements of the old-line life insurance companies are now engaged in gathering the opinions of their policy-holders on the subject and it will be interesting, when the returns have been received and tabulated, to note in what degree the rank and file of these two systems of life insurance accord with or differ from each other.

PRESBYTERIAN MINISTERS' FUND

A friend of this writer who is deeply interested in the history of American life insurance and believes—an opinion in which we heartily concur—that the record should be kept as free of inaccuracies as possible, calls our attention to a probable false impression that might result from the article recently appearing in this department about the Presbyterian Ministers' Fund of Philadelphia. Our commentator observes that the company is beyond criticism, but that it is erroneous to assume that it has been a life insurance company for 150 years. We have no means of ascertaining just when the company commenced issuing regular life insurance policies at a fixed premium, but the investigations made by our informant places the time at about the middle of the nineteenth century or later.

Prior to that time, it seems the Presbyterian Ministers' Fund was simply a church benevolent society, receiving contributions from ministers, their friends and philanthropic persons generally, using the funds thus donated for the relief of the widows and orphans of deceased clergymen, without regard to the source from which the contributions came. In many cases the children of ministers who had contributed nothing to the fund received benefits; while, on the other hand, many persons contributed to it who had no expectation of receiving anything from it, and did not

This statement probably describes the matter correctly. Doubtless the exact facts are to be found in the company's

Weis Office Devices
Offer Greatest Variety in Capacities, Designs and Prices

You have the choice of Card Index and other Standard Size Files ranging in capacity from a few hundred cards or papers to the unlimited capacity of large, Sectional Outfits. Prices to suit your every requirement.

The Semi-Centennial METROPOLITAN LIFE INSURANCE COMPANY, [illegible] will give advice as to the return [illegible]

records; and the management can, if it cares to take the trouble, enrich life insurance history by making public its transactions from the time it commenced its good work to the time it began issuing regular policies, providing specific benefits, at fixed premiums.

A POOR REMEDY

Here is a copy of the bill introduced in the lower house of Congress prohibiting the use of the mails to insurance companies which attempt to do business with the citizens of states in which such companies are not admitted by their several insurance departments:

"Be it enacted, etc., That no company, corporation, association, partnership, or organization, nor any officer, agent, or representative thereof, or other person shall use or shall be permitted to use the mails, or the mail service, or any branch or part thereof for the purpose of procuring or effecting a policy of insurance upon persons or property situated in any state or territory of the United States when or where, by the laws of the said state or territory in which the said persons or property are situated, such company, corporation, association, partnership, or organization is prohibited from transacting an insurance business in such state or territory."

The penalties for violation are $500 fine or imprisonment for one year, or both.

As a citizen of the United States the writer is against that proposition on its face. It is probably unconstitutional in its effects. Section 2, of Article IV, of the Federal Constitution provides that "The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states," and among these is the right, on our own initiative and responsibility, to buy where we please.

We have here an example of the attitude of the average legislator toward the business of insurance. Can any one explain why insurance is selected as the object of such an embargo? Nothing of this sort is leveled against any other branch of legitimate business. This measure would have the effect of placing such of the insurance companies as were not admitted to all the states and territories in the same category with the numerous real-estate, bond and stock swindles that prey upon the public thru the mails.

The object of the bill is obvious: It is designed as a means of compelling companies to enter states in which they are not now licensed, failing which they will be barred from communicating or doing business with the citizens thereof. From the state's side, it is a revenue matter—license fees, taxes, etc.

It must be admitted that companies which do enter a state and pay taxes to it for the privilege of writing insurance within its borders, are discriminated against when an unadmitted company located in another state may accept orders thru the mails and be free of all tax burdens. But the bill under consideration is not the remedy for this inequality.

Speak Softly!

"Not so loud, dearie. Speak Softly—I can hear now as well as you."

"Why, mumsie! You have been deaf ever since I was a baby."

"True, but my hearing has been entirely restored as if by magic. I am using a wonderful new seientific invention for the deaf. I can hear every kind of sound—even conversation in an ordinary tone with my

NEW 8-TONE
Mears Ear Phone

—the final triumph of the inventor of the first successful multi-tone ear phone. **Eight Tones!** Eight different adjustments to suit every condition of the ear. Sufferers from deafness everywhere welcomed the Mears **Four-Tone** as the first **perfected** hearing device. It was a scientific marvel. But all its wonderful powers have been **Doubled** in the amazing new ***Eight-Tone*** Mears—**just out!** The new Eight-Tone ear phone makes every kind and "shade" of sound as distinct to the deaf as shades of color are distinct to the perfect eyes.

THE OFFER

In order to give our patrons the *personal service* that is possible only when we know them and deal with them **direct,** we have discontinued all our American agencies. Our New 8-Tone model ear phone can be had only direct from our New York office. To advertise our new direct selling plan and to introduce the perfected Mears 8-Tone, we are making a **Special Limited Offer** for a short time only. *Mail the free coupon at once for full particulars.*

In The Hollow of Your Hand

FREE TRIAL In Your Own Home

The Mears Ear Phone is only sold on trial. Test it and prove its power to do for you what it is doing for others. Make the test at our expense. Try it for 15 days in your own home, under every condition of actual service. If it does not please you, send it back, and the trial will cost you nothing. Remember, the Mears Eight Tone Ear Phone *is not an experiment.* It is merely an improvement upon our already famous Single-Tone instrument.

If you live in or near New York, please visit our offices for free demonstration.

Booklet on Request

This coupon is printed for your convenience. Fill it out and mail it to us. We will send you promptly the Mears Ear Phone Book. This book explains the causes of deafness, tells how to check the progress of the malady and how to treat it. Mail the coupon today for this book and special introductory offer. Do it now.

"The ANGELUS is the most artistic and delightful Player I have ever heard or used"

—Lydia Lopoukowa.

NO severer test of the wonderful possibilities of the Angelus Player-Piano can be imagined than its use in connection with interpretations of classic dances. The thousand instantaneous variations of tempo and rhythm which must be met; the necessity for following every mood and movement of the Danseuse, require a degree of responsiveness only possible with the Angelus. It is best expressed in the words of the artist herself:

"You wish my opinion of the Angelus. I gladly give it, inasmuch as I use it for my work in rehearsing my dances.

The control of the tempo, the shading, what I call 'nuances,' is almost beyond belief.

The different parts that you call the Phrasing Lever, the Melodant and the Diaphragm Pneumatics, all help to make the Angelus the most artistic and delightful player-piano I have ever heard or used.

Yours very truly,
Lydia Lopoukowa."

Three of the world's most famous exponents of the classic dance, Lopoukowa, Kyasht and Pavlowa, unite in proclaiming the superiority of the Angelus.

Its marvelous response to every nuance—by means of the Phrasing Lever; its exquisite delicacy of touch, through the Diaphragm Pneumatics, and its unrivalled control of melodic accentuation through the Melodant (all exclusive Angelus features) proclaim it the premier player of the world.

A love of music is all you need to play the Angelus.

Finger skill is not necessary—The Angelus will supply you with technical ability. By means of its simple expression devices you can play any music and play it well. You have not realized one of life's sweetest joys until you have had this pleasure.

Knabe-Angelus—Grands and Uprights.
Emerson-Angelus—Grands and Uprights.
Lindeman & Sons-Angelus—Uprights.
Angelus Piano—An Upright made expressly for the Angelus
In Canada The **Gourlay-Angelus and Angelus Piano.**
Any of these instruments can be played by hand in the usual manner.

JUST A WORD

THANK YOU!

The following is an editorial which appeared in the New York *Evening Mail* of September 4. We greatly appreciate this cordial commendation:

The current number of The Independent reflects the alert and aggressive spirit with which that enterprising weekly is now covering the whole field of human interest. Major Louis L. Seaman, whose denunciation of the Zeppelin assaults on Antwerp is now the subject of consideration at Washington, has cabled a detailed story of that eventful night in Belgium's historic seaport, while Count Bernstorff, Germany's Ambassador, contributes an article entitled "Why Germany Went to War." Sydney Brooks, The Independent's London correspondent, writes on "England Silent and Determined." These interesting and informing articles on the war make The Independent an especially attractive magazine to those who desire to follow the broader lines of Europe's great conflict.

IN TIME OF WAR, PREPARE FOR PEACE

Just now, when the Great War is raging all around the world, is the best possible time for instructing the young how peace may be maintained. Never before has there been—and we hope never again will there be—such an impressive example of what war really is and how nation after nation may be drawn against their will into a life and death conflict with people against whom they have no natural enmity. Never before has there been a better example of how peace may be preserved between two nations with many conflicting interests and separated only by the imaginary line of three thousand miles which forms their common boundary.

Many a time in the last hundred years controversies have arisen between Great Britain and the United States which might easily have led to war, if it had not been for the fixed determination of the English and American people to settle their quarrels by arbitration instead of arms.

The story of how this has been done will be told in a series of eight brief and graphic articles published weekly in The Independent beginning in January, 1915. You cannot keep young people from being absorbed in the war now raging. The best way to prevent their being carried away by the prevalent spirit of belligerency is to prove to them that war is unnecessary by interesting them in the triumphs of peace as exemplified by history of relations between Great Britain and the United States since the signing of the Treaty of Ghent in 1814.

In order to encourage young people in the study of this subject The Independent offers a Medal to any Elementary or Secondary School in the country, to be awarded to the student who writes the best essay on the Hundred Years of Peace, the only conditions being that each Competing School shall have at least Ten Contestants, and that the essays shall be based on these essays in The Independent. Full particulars on application.

CALENDAR

A tuberculosis census of the churches of the country will be taken in *September* and *October* under the direction of The National Association for the Study and Prevention of Tuberculosis.

The Society of American Indians, the largest organization of native Americans in the United States, will hold its annual conference at Madison, Wisconsin, from *October 6* to *11*.

The United Typothetæ and Franklin Clubs of America will hold their twenty-eighth annual convention in New York *October 6, 7* and *8*.

The ninth International Dry Farming Congress and International Soil Products Exposition will be held at Wichita, Kansas, *October 7-17*.

Brown University, at Providence, Rhode Island, celebrates in the week beginning *October 11* the 150th anniversary of its incorporation.

The annual convention of the American Bankers' Association will be held in Richmond, Virginia, *October 12* to *17*.

The American Bar Association will hold its annual meeting on *October 20, 21* and *22*, at Washington. There will be addresses by William Howard Taft, president of the association; Senator Root, the Ambassador from Argentina, and Sir Charles Fitzpatrick, Chief Justice of Canada.

VOLUME 79 | MONDAY, SEPTEMBER 21, 1914 | NUMBER 3432

THE RAILWAY CRISIS

THE railways of the United States are facing a crisis. It is a crisis not brought on by the Great War, but rendered immeasurably more acute by it. It is more than a crisis for the railways, it is a crisis for the American people as a whole.

In the words of President Wilson, "The interest of the producer, the shipper, the merchant, the investor, the financier and the whole public in the proper maintenance and complete efficiency of the railways is . . . manifest. They are indispensable to our whole economic life."

In the prosperity of the railways we all share. In their ill fortune we all suffer.

For ten years the prosperity of the railways has been slowly but inexorably decreasing. During the past six years the downward movement has been alarmingly accelerated.

The cause is simple. For the railways, as for all the rest of us, the cost of living has been steadily rising. In the case of the railways, as in the case of many of us, the cost of living has gone up too fast for income to keep pace with it.

The railways' gross revenues from traffic have steadily increased; but their operating expenses and the taxes which they must pay have gone up steadily and even more rapidly. While the net income of the railways decreased $122,000,000 in the fiscal year 1913-14 taxes on railway property increased $13,000,000 during the same period. It is computed that while taxes on all property in the United States have increased sixty-three per cent in twelve years, taxes on the property of the railways have increased 161 per cent during that time. Wages have gone up, the cost of materials has gone up, taxes have gone up, the price of money has gone up.

The costliness of railway operation has been further increased as a result of the more and more stringent regulation imposed not only by the Interstate Commerce Commission but also by the railway commissions of forty-eight states acting independently. The cost of doing business is steadily increasing on account of governmental requirements, as for example, elimination of grade crossings, full crew laws, hours of service laws, and similar demands that in the aggregate exceed the increased cost of labor. As Mr. Trumbull said in his statement to the President, "No criticism is here made of the general theory of governmental regulation, but, on the other hand, no ingenuity can relieve the carriers of the burden of expense created thereby."

The result has been a constantly shrinking net operating income—that significant item from which must be paid interest on borrowed capital and dividends.

A year ago last May the eastern railways appealed to the Interstate Commerce Commission for leave to make a five per cent increase in freight rates. On July 29 of this year, when the eyes of the whole country were fixed upon the gathering war clouds, the Commission rendered its decision, granting the prayer of the railways only partially. In the opinion of railway operators and of many unprejudiced observers, among them The Independent, the relief granted was far from sufficient.

Now the war has put an even graver aspect upon the plight of the railways. This aspect is convincingly set forth in the statement made to the President last week by a group of representative railway men. This statement we print on another page, together with the reply of President Wilson, which shows how serious he considers the case to be.

The memorandum of Mr. Frank Trumbull, chairman of the Executive Board of the Chesapeake and Ohio Railroad Company, spokesman for the railway operators, is declared by President Wilson to be "a lucid statement of plain truths."

Among the "plain truths" are these:

First, the vast increase in unproductive railway expenditures in recent years, largely made necessary by the growing demands of government regulation, both federal and state.

Second, the serious depletion of revenues which war conditions will inevitably bring about.

Third, that the maintenance of the credit of the railways (and, to use Mr. Trumbull's words, "the credit of the railways establishes the standard for all industrial enterprises") depends upon their ability to increase their net earnings.

Fourth, that the breakdown of general credit conditions brought about by the Great War has increased interest rates to an unprecedented degree, far above the level of the present net earnings return upon the railway property of the United States; so that the task of the railways of obtaining the new capital which they need every year—to an amount exceeding half a billion dollars—will prove well nigh insuperable.

Fifth, that when the New York Stock Exchange opens again—and it must open some time—a large portion of the three to five million dollars of American railway securities held in Europe will be dumped upon the American market by desperate foreign investors, to the further damaging of the already impaired railway credit.

The President has recognized the force of these statements. The whole country should be quick to follow him in recognizing them.

The danger which they set forth is a danger not only

to the general welfare but to the welfare of hundreds of thousands—even millions—of individuals as well. It has been estimated that there are today in the United States four million bona fide investors in American railway securities. The plight of the railways is of direct importance to every one of the four million.

The five leading life insurance companies have more than a billion dollars of their reserve funds invested in American railway securities. The crisis that confronts the railways is of direct importance to every policy holder in an American insurance company.

The reserves of savings banks and trust companies are largely invested in American railway securities. The danger that threatens the railways threatens the depositors in savings banks and trust companies thruout the land.

The basic public service of our whole industrial and commercial system faces a danger which in threatening it, threatens us all. It is a time for concerted action on behalf of the common welfare. National public opinion should rouse itself and bring its force to bear upon those governmental agencies whose activities have direct bearing upon the great public service of railway transportation.

It is a national crisis. It is no time for Congress to proceed with any legislation, no matter how fundamentally sound or how salutary it might prove in the long run, whose first and immediate effect would be to throw additional burdens upon the railway systems of the country.

It *is* a time for the Interstate Commerce Commission to consider gravely whether it shall not reopen the just decided rate case and, in its reconsideration, give the railways the benefit of every doubt on behalf of their plea for increased revenue.

It is emphatically a time when, in the words of President Wilson, "we must all stand as one to see justice done and all fair assistance rendered, and rendered ungrudgingly."

PEACE WITHOUT VENGEANCE

SHALL the Great War end now before either side has suffered defeat, or shall it be a fight to the finish, with the civilization of both victors and vanquished reduced to ashes? This is the question of the hour.

If only a durable peace can be assured, then no sacrifices or compromises can be too great to stop hostilities now.

President Wilson, therefore, has done right in sounding the belligerents again to see if they are ready for mediation.

Tho no official replies have yet been received at Washington, it is generally understood that England will not consider mediation until Belgium is indemnified, the German fleet dismantled and Prussian militarism crushed. France will not cease warring till every German soldier is driven from French soil and Alsace and Lorraine are regained. Russia will fight until the Polish provinces of Prussia and Austria are hers.

There is also much talk of large indemnities to be levied by the allies, if victorious. They of course are pledged to act in unison when the time of settlement comes.

Now that the tide of war seems to have turned against Germany, there is some evidence that she is ready to consider peace. Be this as it may, Germany is sure to gain better terms now than if she resists to the end and is defeated.

If Germany then is ready for mediation, are the preliminary demands of the allies reasonable?

Little Belgium, of course should be indemnified. There is every reason in international law and morals why she should receive reparation for the wanton attack made upon her. Alsace and Lorraine should be returned to France unless their inhabitants prefer to become neutral states. The people of German and Austrian Poland should have a similar option.

If the allies are victorious they should be great enough to impose no indemnities or reprisals on prostrate Germany to their own advantage. They have no quarrel with the great German people, but only with the German military autocracy. Depose the autocracy if they will, abolish the army and navy, blow up the Krupps' plant, but demand no great sum of money for themselves from the stricken people or seize the Sistine Madonna at Dresden because Louvain was razed. The aggressors may deserve punishment, but the allies owe it to themselves and to civilization not to wreak vengeance. History shows that the punishment of nation by nation or race by race or class by class does the strong more harm than the weak.

GERMANISM, GOOD AND BAD

WE Americans, fixed by fortunate circumstance out of range of the guns of the Great War, and as little involved in the present conflict as it is possible for any country in this world to be, should regard it as our peculiar privilege and duty to study the situation from an objective standpoint and try to get a clear view of the factors involved. We can criticize certain traits, we can denounce specific acts with the more force, if we avoid the condemnation of any people in mass.

It is with the purpose of assisting in this task of interpretation that we have been publishing, since the beginning of the war, a series of editorials on the national characteristics of the countries involved. Some of our attentive readers have seen in these an apparent inconsistency. We do not deny the inconsistency, but it is an inconsistency in the facts themselves, not in our treatment of them. The only way to avoid inconsistencies in depicting a people is to shut one eye and so exclude all points irreconcilable with the preconceived theory. One traveler will go thru Russia with an eye on the mir and write a book on "The Land of Democracy"; another, with his eye on the Czar, will produce "The Land of Autocracy."

Take, for instance, the religious aspect. The High Church party in England favors England's participation in the war because it seems to them that Germany's downfall means the final overthrow of Protestantism. "In the present European struggle Prussian Protestantism is out against all elements of Catholicism that the world still preserves." The organ of Anglican Catholicism, *The Church Times*, says editorially, in the issue of August 28, 1914: "Without any doubt Russia is the most Christian country in Europe and Prussia the least."

On the other hand, German Christians regard their country as engaged in a fight for life against Slavic

superstition on the East and French atheism on the West. Harnack and Eucken appeal to the Christian world to support their cause. At the head of the French Government is Premier Viviani, whose anti-clerical speech containing the famous boast, "We have extinguished in heaven those lights that men shall never light again," was posted by order of the Government all over France. The Kaiser, however, never forgets his motto, *Gott mit uns*. In a recent dispatch of congratulation he alludes in most flattering terms to "the splendid support" given to his army in the engagement by his divine ally. Obviously the Kaiser and his troopers draw their inspiration rather from the Old Testament than the New, but our Puritan ancestors were accused of the same fault. However un-Christian their conduct in the conquered territory may seem, we should be in error to denounce them as hypocrites. In spite of the inroads of materialism, rationalism, Nietzscheism and socialism, many of the Germans doubtless marched to war in the same spirit as in 1870, when Bismarck's wife sent him a Bible because she said he might not be able to find one in France, first marking Psalms i:6, "The way of the ungodly shall perish."

Incongruities such as these coexist in every nation, as indeed they do in every individual. We cannot strike the trial balance of a character for either a people or a person. The opposing virtues and vices never neutralize one another in this life, and no human being is competent to solve the problem by the simple process of cancellation. To know modern Germany we must recognize in it all its elements: its Nietzsche and its Eucken, its "Berlin night life" and its model towns, its militarism and its manufactories, its ridiculous officialdom and its undeniable efficiency. The charge that the German is brutal to his enemies cannot be refuted by saying that he is kind to his family. Those of our readers who think we have shown partiality in denouncing German cruelty in Belgium may console themselves by turning to The Independent of a few years back and seeing what we said about the cruelty of the Belgians in the Kongo, and in our denunciation of the Belgian atrocities we were not more outspoken than Emile Vandervelde, who, in defiance of King Leopold, pled the cause of the oppressed African in the Belgian parliament. This bold criticism of his fellow countrymen gives him the best of credentials for his present mission to this country.

We call the Germans wasteful of human life and we are right. They call us so and they are not wrong. When the Prussian Minister of Commerce visited the United States some years ago he reported that we were "very careless about the life and health of the working classes; in the largest works the precautions against accident are of the most primitive kind." We must remember that the reason why the German Government is now able to sacrifice men and money so lavishly in war is because this same government has for fifty years devoted itself so assiduously to the upbuilding of a rich and populous nation. A country much smaller than Texas and with few natural advantages has been brought into the foremost rank of world powers in commerce and industry, in science and arts. It would suit our republican proclivities if we could call the nobility parasites and the bureaucracy a burden, but unfortunately we cannot dispose of them so easily. Andrew Carnegie once published a book full of eloquent statistics of American progress called *Triumphant Democracy*. But this can be matched by such a book as Elmer Roberts's *Monarchical Socialism in Germany* or Dawson's *The Evolution of Modern Germany*, showing how even more remarkable results have been achieved by most undemocratic methods.

The nearest we can come to a solution of the paradox of Germany is to say that it is a medieval system energized by modern science. It is the best example of the application to a state of what business men nowadays call "scientific management" that the world has so far seen. Yet indistinguishably entangled with this political efficiency are vestiges of antiquated institutions which we regard as irrational and tyrannical. Whether it is possible to decapitate the country of its Kaiserism without killing it may shortly have to be determined.

HOW WE CAN ALL HELP

ON another page we acknowledge, by printing the names of the givers, the contributions which we have received for the Red Cross Relief Fund. The readers of The Independent have responded generously to our appeal. But the need is grievous still.

The good ship Red Cross has sailed after being delayed a week by technicalities of neutrality. It bears to the stricken peoples of Europe American aid, American sympathy, American skill in medicine and nursing.

There is not much that we in the United States can do to assuage the suffering caused by the Great War. But that little we should do gladly, proudly and swiftly. Every dollar that is given will be spent by the American Red Cross intelligently and to the best advantage.

Send at least Two Dollars to The Independent and receive a certificate of membership in the American Red Cross for the current year and a Red Cross button in red and white enamel. The money will be promptly turned over by us to the treasurer of the Red Cross.

A Macedonian cry from the battlefields of Europe resounds in our ears. Let our response be prompt and ungrudging.

A NATIONAL FAST DAY

WE are familiar with state and national thanksgiving days, and, within a late period, state fast days are remembered. Connecticut always had hers on Good Friday, but that of Massachusetts was, like Thanksgiving Day, on Thursday.

President Wilson does not ask the citizens to fast on the day of prayer he has designated, but from old times a day of special prayer was in name associated with fasting and called a fast day. Nobody will fast on this national fast day, but many, we hope, will pray in their churches for peace, as the President directs, whether they fast or feast. Indeed, Sunday is a feast day.

There is one very unusual, if not unique, note in this national day of prayer. It is this, that it is not for the nation which appoints and observes it, but the petitions are for other nations, of another hemisphere, which are at war among themselves. We have had days of fasting and prayer in times of colonial scarcity, in general recognition of social and national sins: even, during our Civil War, after disaster and defeat.

true in all these cases the prayers were for ourselves, and the confessions were also equally national. Now we shall pray only incidentally for our own nation, and there is no national sin of our own involved in this case. For other nations we pray, and our confessions of sin are equally vicarious. We shall pray that Austria and Germany and France and Russia and Great Britain may speedily come to righteous terms of peace, and that this unparalleled and criminal slaughter may end. We shall with all humiliation lament that Christian people should thus dishonor the Prince of Peace whom they claim to serve.

How shall we pray? Germans and British are praying in their churches right against each other, each that the other's knavish tricks and politics may be thwarted. We will wisely pray that the war may come to a speedy end and in such a way as shall conduce to the rule of justice and liberty. We will insult neither side in our prayers, and will leave judgment to God, but no more than the British and the Germans can we help having our own ideas as to which side deserves the victory; and if we do not in our prayers vocally inform the wise Lord God which side we wish should win, he will know our thoughts and will answer our prayers in his own wise way.

But we have the right to hold to a high faith that the end will be a tremendous overturning of militancy among all the nations, and a long reign of peace among the nations, which will have learned that war is the foolishest and shamefullest and wickedest way of settling the differences that arise between them.

We may well make this day of prayer a day of thanksgiving that we among the nations are enjoying all the blessings of peace.

A REPUBLIC OF PIGS

IN a notable passage in "The Republic" Plato allows the discussion between Socrates and his hearers to consider the origin of a state, assumed to begin in the simple life which provides for the physical necessity of food and shelter, supplied by husbandmen, artizans, merchants, who provide corn, wine, shoes, clothes, houses, and such luxuries as olives and cheese, figs, peas and beans, roasted myrtle-berries and acorns, who drink in moderation, live in peace and health to a good old age, wear garlands and praise the gods, and bequeath a similar life to their children. Then Glaucus bursts out with the question, "Yes, Socrates, but if you were providing for a republic of pigs, is not that just what you would do?"

Provision for food and shelter is very important for men; it is also very important for pigs. A man is more particular about his food and shelter than a pig is, but substantially and essentially these wants are the same for both. Now what more is there that a man wants than a pig wants? How should a republic of men be superior to a republic of pigs?

In those things in which a man differs essentially from a pig; and that is not in his digestion nor in his sensitiveness to heat and cold. It is in his brain and mind, in his power of knowing the true and the false, the good and the bad. Government and education should be interested in food and shelter for men have wants in common with pigs, but both government and education should be quite as earnest to provide for the culture of those higher faculties in which men differ from pigs.

For example, Congress imposes or reduces or abolishes a tariff on food-stuffs or wearing apparel. That is well, good pig politics. In its concern for the physical health of our people we have sanitary laws, so many cubic feet of air for bedrooms, sheets eight feet long for hotels, fire escapes, good streets, laws of traffic, speed of automobiles, hours and wages of labor, all very important, but all developed out of necessities of the piggery. But these are not the only interests that concern our legislatures. It is evident as never before that the questions of justice between man and man rank higher still with them, or those of good faith between nation and nation. So Mr. Asquith defended the course of Great Britain in declaring war: "It was to fulfil a solemn international obligation not only of law but of honor, which no self-respecting man could possibly have repudiated. It was also to vindicate the principle that small nationalities are not to be crushed, in defiance of international good faith, by the arbitrary will of a strong and overmastering Power." This is far above the politics of the piggery.

So education also has its pig department, a very important one. It is the bread and butter side of education, that by which the pupil is expected to make his living, that is, to earn his food and shelter and satisfy his animal wants in a comfortable and decent way. It gives a man his vocation, and we call it vocational teaching. The more a state thinks of the animal side of its citizens the more stress it will put on the pig side of education. It must not be neglected, for we must eat and be clothed and sheltered; but men are much more than pigs and we should educate our children to be men, not superior beasts.

If men are more than pigs, and if their superiority consists in their power of knowing the true and the false, the good and the bad, a human education, one for men, should lay the bread-and-butter foundations broad and deep, to provide for the wants common to man and beast, but should build upon them the temple of knowledge, wisdom and justice which the old Socratic philosophy knew was the glory of the state. It would forebode a sad future for the republic if our universities and our high-schools should come to exalt the arts above the sciences, practical education above pure knowledge.

AMERICAN BARBARISM

THAT this is a barbarous country, in spots, is undeniable when we learn that in 1913 as many as seventy-nine colored men and women were killed by mobs, lynched without trial. The crimes charged against them were various, some serious, others trivial. Some of the victims were doubtless innocent. The figures prove a shocking degree of barbarism to exist with us; and the only relief we find is that there is a pretty steady decrease in the number. In 1892 there were 155 lynched, and 154 the next year. At this rate of decrease we may be quite civilized twenty years from now. There have been only twenty-two lynchings in the first six months of the present year.

THE STORY OF THE WEEK

Germans Defeated on the Marne

In France the tide of battle has turned and the invaders are being driven back. The Fabian policy of the allies is proving justified by events. By continually withdrawing from points they could not hope to hold they have kept their armies intact except for battle losses, and they were ready to retaliate just as soon as the energy of the German onsweep had slackened thru the exhaustion of their troops, their enormous losses and the withdrawal of large contingents to the Russian frontier. The high water mark of the German invasion was reached about September 5, when they occupied points as far south as Provins by their right and Revigny by their center. Along the convex front of the Germans for a hundred and fifty miles from Verdun to Compiègne the battle raged for five days, with the general result that their right was crumpled up and their center driven back from the Marne.

The right suffered most severely, for as soon as General Kluck turned aside from Paris and moved southeast to join the German armies which had entered France from Luxemburg he w s immediately attacked on flank and rear by French and English from the Paris side. The allies recaptured in rapid succession Compiègne, Meaux, Chateaux Thierry, Sézannes and Montmirail.

By this movement General Kluck gained a more direct channel of supplies with Germany from the east, but he sacrificed the long line of communication along the path by which he had advanced thru Belgium and northern France. Trains of ammunition and supplies on their way to the front by this route thus fell into the hands of the French. At Crépy-en-Valois, south of Compiègne, an ammunition column more than four miles long was captured by a cavalry detachment sent out for that purpose by General Pau. The German soldiers who are taken prisoner are reported to be in a state of complete exhaustion from the hard marching, constant fighting and lack of food. The Germans lost many of their heavy guns during the retreat because of the rainy weather and swampy country.

The German center resting upon the Marne at Revigny has been forced back northward, but holds the forest of Argonne, between Rheims and Verdun. The German left, which had long been engaged in an attack upon Nancy, is said to have withdrawn with heavy losses, and the French have reoccupied Lunéville, on the Lorraine frontier.

Maubeuge, the first of the French fortresses to be attacked by the Germans as they crost the Belgian frontier, held out the longest. On September 9, about a fortnight after it was besieged, the Germans reported that it had been captured, and that 40,000 men and four hundred guns had fallen in their hands. The report lacks confirmation from the side of the allies. Maubeuge was a town of 21,000 inhabitants and a fortress of the first class.

The Germans are now turning their attention to the chain of fortresses defending the frontier on the side of Alsace and Lorraine. Verdun, the most northerly, is closely invested, and it is reported that some of its southerly outposts have been taken.

GOVERNOR OF BELGIUM FOR A SEASON

Field Marshal Baron von der Goltz, military governor of the Belgian territory conquered by the Germans, which has been annexed for the time being to Germany

THE GREAT WAR

September 8—French and English begin to drive back the German right wing. Battle of Meaux. Fortress of Maubeuge on Belgian frontier reported taken.

September 9—French attack the German center along the Marne River. British and Germans fighting on Lake Nyassa in Africa.

September 10—Germans retreat over the Aisne River between Soissons and Compiègne. British on the Marne capture 1500 men, four great guns, six machine guns and sixty wagons. Serbs capture Semlin. Turkey repudiates the capitulations.

September 11—Germans defeated at Vitry-le-François. Lunéville retaken by the French. Austrians routed in Russian Poland. Serbs and Montenegrins invade Bosnia.

September 12—Germans attack Verdun forts. Complete victory for the French and English in the five-day battle of the Marne. Australian navy seizes Bismarck Archipelago. Russians retire before Germans in East Prussia.

September 13—Belgians harassing German lines of communications. Austrians routed in Russian Poland. Russians claim 280,000 Austrian prisoners.

September 14—German armies retreat back of Rheims. Austrians at Rava-ruska, northwest of Lemberg, defeated by Russian forces.

The War in Belgium

When the storm center swept on into France, Belgium was left desolate but not disheartened. Every opportunity to harass the enemy was utilized, and as the force occupying Belgium became weaker the raids from Antwerp became bolder, until now there is even talk of recovering Brussels. Belgium was rapidly drained of German troops because these were more urgently needed in France and in Poland. Those remaining were mostly the older reservists reinforced by 10,000 marines from the German navy, which is taking no active part in the war.

The Germans did not undertake the siege of Antwerp, but pushed their raids to its ramparts. Termonde, Maline, Aerschot, St. Nicolas and Lierre, towns lying south of Antwerp and within twenty miles, were captured and burnt. Ghent escaped this fate thru the tact of the burgomaster and the interposition of the American consul. The German commander agreed not to enter the city on condition of receiving specified supplies of gasoline, food and fodder to the value of $400,000. The goods demanded were collected ready for delivery when the Belgian Government prevented it by reoccupying the city. The Belgian troops, under the personal leadership of King Albert, have extended their radius of action as far as Louvain,

WHIMSICAL WAR PERFORMING ELEPHANTS COMMANDEERED FOR SERVICE

Lockhart's performing troupe was in France when war broke up the vaudeville circuits and were seized for transport service in England. They are being taken down Fleet street in London

retiring to the protection of the Antwerp fortifications when too hardly prest. It is generally believed in this country, altho still officially denied in England, that the Belgians have been reinforced by Russians transported from Archangel by way of Scotland.

The British Empire The British dominions beyond the seas are responding promptly to the suggestion that they clean up the German possessions in their own vicinity. The Australian navy paid a visit to the Bismarck Archipelago, a group of islands northeast of Australia and southeast of the Philippines, once known—and perhaps to be known again—as the New Britain Archipelago. The naval landing party met with a stout resistance from the little garrison at Herbertshöhe, on the island of Neu Pommern, for the road was mined and the wireless station protected by entrenchments. The Australians lost three men and the Germans some twenty in the eighteen-hour fight.

The capture of the island of Upolu, in German Samoa, was effected by a New Zealand expedition of 1500 men on August 29 without bloodshed. The German officials in charge at Apia had put the wireless out of commission and conveyed the Government and private funds to Pago Pago, on the American island.

In Africa, a British gunboat on Lake Nyassa shelled the German station at Langenburg, German East Africa, and a German expedition of 400 which had invaded British Nyassaland was defeated by the British. German East Africa is the only obstacle in the way of the fulfillment of Cecil Rhodes's dream of an all-British railroad from Cairo to the Cape.

The Senate and Assembly of the Union of South Africa past a resolution approving of the action of the British Government, "taken in defense of the principles of liberty and justice and of the integrity and sanctity of international obligations." It is proposed to send to Earl Kitchener a corps of British and Dutch Africander scouts, under General De Wet, the Boer commander who proved nearly a match for General Kitchener in the South African war.

Naval Movements The German dreadnought "Goeben" and cruiser "Breslau," which after a narrow escape from destruction in the Mediterranean, were sold to the Ottoman Government, have been repaired in the Gulf of Ismid, near Constantinople, and are said to be still in the hands of the German officers and crew. They are reported to have attacked the British cruiser "Warrior" in the Bosphorus and left her stranded. The rumor that German officers and men have been secretly sent to Constantinople, presumably to man the Turkish navy, is taken as evidence that Turkey intends shortly to take part in the war on the side of Germany and Austria-Hungary. If so Turkey might either invade Russia to the north, Egypt to the south or the Balkans to the west.

The French fleet has bombarded the fortifications of Cattaro, the Austrian seaport on the Adriatic next to Montenegro.

The British light cruiser "Pathfinder" was blown up by a mine in the North Sea on September 7. The "Pathfinder" was of 2940 tons, carrying 268 men and nine four-inch guns. It will be recalled that the "Amphion" was lost in the same way just a month before. These two are all the losses of the British navy, while the German has lost four cruisers, one auxiliary cruiser, and several destroyers and submarines, besides the forced sale of the dreadnought and cruiser to Turkey. One Austrian cruiser has been sunk.

The British Admiralty rightly congratulates itself on having swept the seas clear of German commerce and having transported over 300,000 troops from all parts of the world to the seat of war without the loss of a man.

Winston Spencer Churchill, First Lord of the Admiralty, announces the formation of one marine and

THE BATTLE OF THE MARNE

The engagement which took place during the week of September 7-14 is certainly one of the greatest and may prove to be one of the decisive battles of world history. The light dotted line marks the limit of the German invasion of France; the heavy dotted line their position after the battle. They have since retired from Chalons and Rheims

two naval brigades, comprising 15,000 men, all trained and equipped for service. These are composed of men not needed at present on the fleet.

The Admiralty has ordered the North Sea closed to navigation and announced that " all aids to navigation on the east coasts of England and Scotland may be removed at any time without further warning." The Germans have captured fifteen English fishing boats and the German floating mines have caused the loss of at least nine neutral merchant vessels; five Danish, two Dutch, one Norwegian and one Swedish.

AN ENGLISH WELCOME FOR THE WOUNDED

The British soldiers who were so warmly received in Belgium and France find an equally enthusiastic greeting when they are carried back to London by the fortunes of war

Serbs Invade Hungary

The first hostile act of the Great War was the bombardment of Belgrade by the Austro-Hungarian artillery from Semlin on the opposite bank of the Save River and from monitors on the Danube. That bombardment has continued more or less actively from July 29 to September 10, when Semlin was captured. The city was taken by two Servian divisions, which crossed the Save and Danube Rivers by pontoons in the night and attacked unexpectedly from the hills in the rear, using heavy artillery that they had brought with them. According to reports from Nish, the Servian capital *pro tempore*, the Austrians lost 10,000 men, killed and wounded.

The victorious army proposes next to attack Peterwardein, forty miles up the Danube on the way to Budapest. The Serbs, in conjunction with the Montenegrins, have also begun the invasion of Bosnia, which they desire to annex. The Montenegrins have captured Focha, just over the border from the Sanjak of Novibazar and less than forty miles from Sarajevo, the capital of Bosnia, where the Austrian Archduke Francis Ferdinand was assassinated June 29.

At the beginning of the war Austria threw a force said to number 200,000 men across the Save and Drina Rivers into Servia, but these were attacked with fierce energy by the Serbs and suffered a disastrous defeat at Shabatz on August 19. The Serbs claim that 10,000 Austrians were shot or drowned and 30,000 wounded. The rest fled back across the bridges they had constructed or were captured by the Serbs, so Servian soil is now freed from the invaders.

THE HERO OF THE BRITISH RETREAT

General Sir Horace Smith-Dorrien, of whom Field Marshal Sir John French wrote that in the dreadful days of the left wing of the army under my command on the morning of the 26th could never have been accomplished unless a commander of rare and special coolness, intrepidity and determination had been present to personally conduct the operations"

Turkey Renounces the Capitulations

The Turkish Ambassador at Washington announced, on September 10, that the Ottoman Government had abrogated, as from the 1st of October next, the conventions known as the Capitulations restricting the sovereignty of Turkey in her relations with certain powers. All privileges and immunities accessory to these conventions or issuing therefrom are equally repealed. It is evident from this that Turkey intends to take advantage of the situation to get rid of those restrictions upon its independence of action, which the powers have since the eleventh century imposed upon it. Foreigners residing in Turkey at the present time are not amenable to the Turkish courts except by consent of their own consuls or diplomatic representatives, and the tariff duties of the Ottoman Government are under the control of foreign powers. Similar extraterritorial rights were formerly enjoyed by foreign residents in Japan, but were abrogated a few years ago by mutual consent of the powers. Ever since a constitutional regime has been established in Turkey, the Young Turks have been anxious to secure the abolition of these extraterritorial privileges, which they regarded as derogatory to a civilized state. This arbitrary action by Turkey will cause great disturbance in business and apprehension for the future thruout the world, for it places the churches, schools and hospitals of the missionaries at the mercy of Turkish officials, and upsets the system of Turkish loans, which is largely based upon the customs. A hundred per cent increase in the rates levied upon American goods imported into Turkey has been already announced. Our Government will protest against this on the ground that it is a violation of the treaty provision giving the United States equal commercial privileges with other nations. The Pope, Benedict XV, will also raise objections because of the religious interests imperiled. It is surmised that this action has been taken at the instigation of Germany, which would be glad to see Turkey involved in the European war. English and

BETTER THAN NEUTRALITY: IMPARTIAL SERVICE TO ALL BELLIGERENTS

American nurses and surgeons to the number of 154 who sailed on the "Red Cross" to carry relief to the wounded of all the armies

French papers have suggested that the United States should dispatch warships to Turkish ports in order to prevent the massacre of the Christians. This elicited from the Turkish Ambassador to the United States, A. Rustem Bey, an outburst of indignation exprest in the following very undiplomatic language:

> Since a large number of American papers are siding with Great Britain and France in this affair, I will permit myself to say that the thought of the lynchings which occur daily in the United States and the memory of the "water cures" in the Philippines should make them chary of attacking Turkey in connection with acts of savagery committed by her under provocation compared with which the economic competition of an Italian, or the sniping of a Filipino, or even the outrage of a negro, are as nothing.
>
> Supposing, for the sake of argument, what in reality could never happen, that the negroes were discovered to be engaged in a conspiracy with the Japanese to facilitate the invasion of the United States by the latter, how many of them would be left alive to tell the tale?
>
> Great Britain and France have embarked upon a new campaign of provocation against Turkey, secretly hoping that as a result of it something untoward may happen in that country to confirm their sinister predictions, so that the United States will be finally prevailed upon to dispatch warships to the Levant, and thus get mixt in the European fray on the Allies' side; but I believe the Administration is too sagacious to fall into such a vulgar trap.

Peace Movements

Rumors of peace have been rife during the week, but so far no definite outcome is apparent. Oscar S. Straus, American member of The Hague tribunal and former Ambassador to Turkey, was in England when the war broke out and was in close touch with the British Foreign Minister, Sir Edward Grey. Since his return he has acted as an unofficial intermediary and has had frequent interviews with the German and French ambassadors and Mr. Wilson and Mr. Bryan. On September 7 the Secretary of State is said to have cabled to Berlin to inquire if proposals of American mediation would be acceptable at this stage. No reply has been made public. The allies seem to be determined, so far as may be judged from unofficial utterances, to continue the war until Germany is thoroly crushed.

On September 4 Emperor William addrest a complaint to President Wilson that the allies were using dumdum bullets. He asserted that such bullets had been found in the French fort at Longwy in thousands, and on French and English soldiers, and further:

> I solemnly protest to you against the way in which this war is being waged by our opponents, whose methods are making it one of the most barbarous in history. Besides the use of these awful weapons, the Belgian Government has openly incited the civil population to participate in the fighting, and has for a long time carefully organized their resistance.
>
> The cruelties practised in this guerrilla warfare, even by women and priests, toward wounded and doctors and hospital nurses were such that eventually my generals were compelled to adopt the strongest measures to punish the guilty and frighten the bloodthirsty population from continuing their shameful deeds. Some villages and even the old town of Louvain, with the exception of its beautiful town hall, had to be destroyed for the protection of my troops.
>
> WILHELM I. R.

President Poincaré replied by denying the charge and declaring that "Germany ever since the beginning of the war has used dumdum bullets and violated daily the law of nations."

Meeting the War Deficit

Ways of raising revenue to meet the deficit created by the falling off of the customs receipts are now occupying the attention of the Ways and Means Committee of the House. This deficit President Wilson, in his address to Congress last week, estimated at $100,000,000.

In a tentative measure the committee proposed to fall back on the income tax, raising the rate for certain classes and lowering the amount of exemption, to provide a large part of the needed income with increased internal revenue taxes on beer and whisky and taxes on such newer forms of luxury as motion picture shows and automobiles. As it finally emerges from committee the income tax feature, owing to the President's objections, has been eliminated, and beer, wine and freight bills are made to bear the bigger burden.

By taxing freight bills, the committee hopes to raise $65,000,000 annually. On all bills of lading a 3 per cent tax is to be levied, to be collected by the railroads, of which 1 per cent is to be retained by them to cover its costs. The Democrats point out in defense that a similar measure was resorted to by the Republicans in 1898.

From The Independent's Special Correspondent

A FATE INTENDED FOR THE PALACE

This house, about a block from the palace, where the Queen of Belgium and her children were sleeping, was wrecked by the Zeppelin bombs thrown into Antwerp on August 24

Chairman Underwood, in a statement made public on Thursday, points out that to have depended upon an income tax provision or the raising of internal revenue rates would have been to postpone the immediate collection of the tax, and thus would not have aided the Government's purpose not to draw on its cash reserves carried in the country's banks.

As the bill now stands it provides an additional tax of 50 cents a barrel on beer and 20 cents a gallon on wine, which, together with the

freight bill provision, will produce a total revenue of $107,000,000, or $7,000,000 more than President Wilson asked for.

The second veto that President Wilson has had to resort to in his administration was forwarded to Congress on Friday, when the bill amending the Postal Savings Bank act was returned without presidential approval. The bill provided that the limit of individual deposits in the postal banks be raised to $1,000 and that the funds of the banks might be placed by the Government in state and other banks which are not now members of the new Federal Reserve banking system.

It was to this latter provision that President Wilson objected. In his opinion it was unwise to give banks not members of the new system equal privilege with those that are directly responsible to the Government. The President suggests that an additional twelve months be given the non-member banks in which to surrender Government deposits. It is probable that the bill will be re-enacted after it has been amended to meet the President's objections.

Carranza Reports Mexico Peaceful

Despite the reports of gathering force to the new revolution on the Isthmus of Tehuantepec and the failure of the Constitutionalists to put down the revolt in Oaxaca, Carranza telegraphed to Washington on Saturday, September 12, that "peace and the best of harmony now prevail thruout the zone controlled by the Constitutionalists, which virtually covers the entire republic."

Carranza denies the reported shooting of policemen in Mexico City, or that ex-Federal officers have been put to death. He belittles the activities of Zapata, and cites his promotion of Villa to be a general of division on September 8, as a denial of the reported breach between the two revolutionist chiefs.

That Villa and Carranza had reached a basis of agreement became known in Washington thru the disclosure of the fact that General Obregon, the personal friend and closest adviser of General Carranza, had signed the proposals of General Villa for an electoral program. These proposals were laid before Paul Fuller, the President's representative in Mexico, and are known to have the approval of the Administration. The program is briefly this:

That a convention of the delegates of the army be called to arrange the date of the election for Congress, President and Vice President.

That no military man be a candidate for President or Vice President or Governor of any state.

That a civilian take charge of the Provisional Government to hold elections.

That a general amnesty be declared, except as to those who committed the crime or participated in the assassination of Madero and Suarez.

That the officers of the old Federal Army who can show clean records shall be taken into the new national army.

That all reforms be put thru in an energetic manner, but on a legal and constitutional basis.

While progress toward peace is thus being made in one direction, new disturbances are apparently gathering headway in another. The Zapatista bands have grown increasingly daring. Last week they cut off the water supply of Mexico City, and under the cover of night even entered the capital, succeeding in making their escape before troops could be mustered. On the Isthmus of Tehuantepec General Aguilar has captured three railway trains to aid in the advance of his revolutionary troops.

By orders from Washington the embargo on the importation of arms into Mexico was lifted on September 9. As a result the shipments being held at Vera Cruz and at El Paso have been released. The lifting of the embargo was hailed by the Constitutionalists as tantamount to a virtual recognition of Mexico's new government.

Results of September Primaries

Outstanding in the primary contests which mark the opening of the fall campaign was the nomination of Roger Sullivan, long known as the Democratic "boss" of Illinois, as the party's candidate for United States Senator. Sullivan defeated Congressman Lawrence B. Stringer, his nearest opponent, by a plurality of more than 50,000. The victory was especially notable because of the bitterness of the campaign and the formidable forces lined up against Sullivan, including no less than Governor Dunne, United States Senator James Hamilton Lewis and Mayor Harrison, of Chicago. Secretary of State William J. Bryan had also condemned the Sullivan candidacy. For the Republican Senatorial nomination Senator Lawrence Y. Sherman, who is seeking to be returned, was successful over William E. Mason, ex-United States Senator. The Progressive nomination went without opposition to Raymond Robbins.

Elsewhere in Illinois the Republican "Old Guard" reported victories in the nominations of former Speaker Joseph G. Cannon, former Congressmen Rodenberg and McKinley. "Uncle Joe" Cannon was opposed by Dr. Elmer B. Coolley, a wealthy physician, also of Danville, and won by more than 3000 votes.

In Colorado the Democrats chose former Senator Thomas M. Patterson as their candidate for Governor, while the nomination of Senator Thomas was unopposed.

The Republicans of Vermont nominated W. P. Dillingham for Senator and State Highway Commissioner Charles W. Gates for Governor.

BELGIUM'S APPEAL TO AMERICA

BY EMILE VANDERVELDE

BELGIAN CABINET MINISTER AND INTERNATIONAL SOCIALIST LEADER

M. Vandervelde is a member of the Coalition Cabinet formed of men of all parties to defend Belgium in the time of invasion and spoliation. Only under such circumstances of urgent national need would a good Socialist feel himself justified in joining his political opponents in official position. M. Vandervelde is one of the five members of the High Commission sent by Belgium to lay that country's case before the Government and the people of the United States. The commission landed in New York on Thursday the tenth, and before proceeding to Washington M. Vandervelde wrote for The Independent the following statement of Belgium's case and of the Socialist view of the Great War, which has been translated by André Tridon.—THE EDITOR.

THE International has always found itself since its reorganization in 1889 in unanimous accord on questions of general policy. That accord still prevailed on the eve of the present war. Even after Austria had begun hostilities against Servia, the delegates to the International Socialist Bureau in Brussels were fully agreed that, in the interest of peace, Germany should exert pressure on Austria, and France and England on Russia. Their efforts, however, proved unavailing; war became general and all of a sudden the Socialist proletariat found itself divided into two hostile camps.

What made our situation the more tragic was the conviction held on both sides that this war was one of defense, one in which it was the Socialist's duty to join hands with all other classes and parties.

That Belgians or Frenchmen should hold that belief is most natural; for they were attacked. They are acting in legitimate defense. But the Germans, too, consider themselves in jeopardy; they invoke the Slav peril as an excuse for their attitude. They pretend to be the victims of an aggression and we have seen the Social Democrats casting their votes with the other parties in the Reichstag in favor of the war appropriations.

Far be it from us to berate them for their action. We fully realize how terribly difficult, nay, agonizing, their situation must have been. I have no doubt that at the beginning of the war the Imperial German Government tried to influence public opinion by spreading false news. But even leaving that aside our German comrades found themselves upon the horns of a dilemma. To vote against the war credits meant to deliver their country into the hands of the Russian invader; to vote for them meant to supply their Government with arms against England, France and Belgium, in a word against the democracy of Western Europe.

Of the two evils they chose that which appeared to be the least. In their hatred of Czarism they voted for the war credits, thus solving the redoubtable problem of conscience which confronted them.

I repeat that I cannot blame them; we are glad to think, however, in spite of the trials our country is undergoing, that the Belgian Socialists, like the French Socialists, never had to hesitate for a second as to what policy they were to adopt.

Indeed, our duties coincided entirely with our principles. By opposing German militarism we were not only fighting for our independence, but for the freedom and the civilization of Europe.

As far as Belgium is especially concerned, there was not one single Socialist who from the first minute did not agree with this view. By the very pronouncement of the powers Belgium was and should have remained neutral. Her neutrality was guaranteed by Germany as much as by the other great nations. Its violation by Germany constituted, as Chancellor von Bethmann-Hollweg admitted in the Reichstag, a breach of the right of nations. If we had submitted to that act, we Belgians would have dishonored ourselves; we would have shirked our most elementary duty.

And now, because we defended ourselves, because our resistance retarded the German advance, and perhaps decided the final outcome of the war, Germany is waging against us a war of conquest and revenge.

The world might have understood (without, however, excusing such a step) why the Germans in their march against France should force Belgium to let them pass. They were not satisfied, however, with a violation of our territory. They have occupied it. They pretend to make our country a German province, and in order to assure their domination they have established a reign of terror.

Among the documents which we have submitted to the President of the United States and which the public will read in their entirety, there is ample evidence that since the invasion of Belgium began the German commanders have committed, ordered or countenanced acts which are not only crimes against mankind, but flagrant violations of international law and of The Hague's war regulations. Women have been assaulted. Peaceful citizens, harmless noncombatants have been either taken into captivity or put to death. Villages have been burnt to the ground. Louvain with its churches,

THE BELGIAN HIGH COMMISSION TO PROTEST AGAINST GERMANY'S METHODS OF WAR

Sent by King Albert to President Wilson with a report on German atrocities—Count Louis de Lichtervelde, secretary; Paul Hymans, Henri Carton de Wiart, Minister of Justice and head of the commission; Louis de Sadeleer; and Emile Vandervelde, author of this article

its art treasures, the famous library of its university, Visé and Termonde have been destroyed.

If such acts did not call forth the world over an irresistible wave of indignation and reprobation nothing would remain of the international statutes which, in the course of the past fifty years, the public conscience has formulated and codified.

It was the glory of the United States to be the first nation to incorporate those principles in its instructions to armies in the field. This country also took the initiative in calling together the Second Peace Conference. That conference set down rules for the conduct of warfare: The Hague regulations of 1907.

To those rules Germany subscribed. Before the assembly of nations she engaged not to forfeit them. For the breaking of that engagement she is answerable to the opinion of the world.

It is to the opinion of the world that we address ourselves, but we wish to direct a special appeal to the Socialists.

Our party comrades in Germany and those residing in this country who share their opinions may not agree with us as to the causes of this war and as to the responsibility for it. They may feel that in this conflict their duty is to rally to the defense of Germany. We ask them, nevertheless, to protest with us against acts which cast on warfare the stigma of shame. We beg them to take cognizance of the facts which we are now denouncing before the tribunal of public opinion. We are convinced that they will then join us in our disapproval and our condemnation of them.

THE PITIFUL ARMY OF BELGIAN REFUGEES

BY MAJOR LOUIS LIVINGSTON SEAMAN

A CABLE MESSAGE FROM THE INDEPENDENT'S SPECIAL REPRESENTATIVE

AMONG the war charities none is more deserving than the Double White Cross, organized at Ostend principally, but also at Aurel, Batonyi and other towns. Americans, in the name of charity and neutrality, purpose the relief of destitute refugees from the sacked and burned Belgian towns and villages. Over 140,000 past thru Antwerp during my stay there. All these have been shipped to localities along Ostend railway line, in anticipation of the siege of Antwerp. More than 15,000 poured into Ghent; Bruges is also overcrowded.

The terminal of the railway is Ostend, from which port communication with England is still open. This is also crowded with refugees. Some have been shipped to England, but as passage is refused to children under fifteen Ostend is over-congested. More than 800, the victims of inhuman cruelty, are now housed in bath cabins brought up from the beach and placed in gardens of the Royal Villa. Some came from the siege of Louvain and the vicinity of Malines and Tirlemont, all being absolutely destitute. In several cabins I saw mothers with from five to eight children. They are strong and well now, but starvation is their fate unless succor is forthcoming.

I beg that help may be promptly sent, for they will soon be hungry and winter is near. The American consul at Ostend, H. A. Johnson, has agreed to receive funds and remit to authorized persons. Please ask the help of the Associated Press, that the need may be given wide publicity.

I was with the Burgomaster of Ghent yesterday when the German forces were approaching the city. I believe that the admirable work of the American consul and his representative van Hee at Ghent, and of our Peace Committee, was a powerful factor in saving Ghent from submitting to humiliating terms and from possible destruction, in spite of the wounding of two German soldiers by Belgian soldiers in front of the American consulate.

HUNGRY AND HOMELESS, BY GRACE OF THE WAR LORDS

Refugees by thousands are thronging into the Belgian ports, whither they have fled from devastated villages. Sixty thousand are expected in England shortly. The dog, it appears, is useful not only for artillery service

THE RISE OF RUSSIA

BY JAMES DAVENPORT WHELPLEY

Mr. Whelpley is one of the leading American writers on international commerce and emigration. In his most recent book, "The Trade of the World," he explains how the United States can extend its foreign trade. In the following timely article he describes from personal observation the forces that are raising Russia to a dominant position in world politics, whatever may be the outcome of the war.—THE EDITOR.

RUSSIA is the most prolific field in the world for the seeker after literary thrills. One of England's best known and most widely read publicists recently said that his audience had been so thoroly well trained to expectation of the melodramatic in anything about Russia that any one writing of practical affairs in connection with that country was either accused of being a paid agent of the Russian Government, or else lost his audience thru its disappointment or boredom. There is a great deal of truth in this, and yet there is a Russia, and a Russian people, all too little known to other nations, considering the enormous part in the history of the world this country is now playing.

Russia has now a population of about one hundred and seventy million. At the present rate of increase there will be about two hundred million within ten years. These one hundred and seventy million people live in a land nearly nine million square miles in extent, or almost three times as large as the United States. Of the population, about fifteen million are Mohammedans, Buddhists, or other non-Christians, about five million are of Jewish faith, and over one hundred and ten million are of the various sects of the Christian religion The great land in which these people live has nearly two million square miles of forest, an area greater than half of Canada. The greatest system of waterways on the earth's surface furnishes at present the main trade channels of the empire. Six of these wonderful rivers alone have a total length of sixteen thousand miles. There are forty-five thousand miles of railway, or more than in any other country except the United States, Germany coming next with seven thousand miles less.

These are facts demonstrated by figures which might be dull but for the vastness of the panorama they stand for. They are in a way necessary to the mental picture of a country of such tremendous proportions and such vast potentialities. The land, the forests and the rivers have been there always. From the dawn of history they have been utilized to a certain extent by human beings, but it is only within the past thirty years that they have become the foundation of a vast system of orderly industrial development by a people whose intellectual growth is proceeding on parallel lines. In fifty years the increase of population in Russian cities has averaged over 300 per cent, and in that same period the population of Moscow, the industrial heart of Russia, has increased from 359,000 to 1,620,000, or nearly 500 per cent, and the character of its industries has changed from the small shop for hand-workers to modern factories employing in single instances as many as ten thousand people. Russia is now the second largest cotton consuming country in Europe, and the third largest in the world.

Figures issued by the Government at Washington credit Russia with less than $30,000,000 worth of imports from the United States, whereas owing to the fact that the larger part of the trade is indirect, the total is at least five times that amount. Over $50,000,000 worth of American cotton now goes to Russia each year, and it will not be long before $100,000,000 worth will be needed. Harvesting machinery of American design and manufacture is sold in Russia to the amount of over $25,000,000 annually. American life insurance companies are carrying over $100,000,000 insurance in Russia, as shown by the $25,000,000 kept on deposit in Russian banks to guarantee these policies. American steel and iron products, shoes, machinery of all kinds, and in fact, something in every line that goes toward modernizing the life of a country, make up the total of the Russian imports. These are nearly all goods that can be obtained elsewhere, but "made in America" has been, until the recent misunderstanding between the two nations over the passport question, a supreme recommendation to the Russian buyer.

No such progress and stirring of new life could come to any country, no matter how rich in natural resources, unless it arose from an awakening of the people. The Duma has finally become an actual working force in the national government, one which ministers take into serious account in all governmental projects. The fiftieth anniversary of the establishment of the Zemstvos, the Russian form of popular local government, was celebrated last year. The greatest work of the Zemstvos has been in the improvement of roads, the assistance of agriculture, the establishment of agricultural credits and farm loans, and the introduction of machinery.

In no phase of social development have greater changes taken place than in the domain of the education of the people. There are now over six million children at school, or nearly half as many as attend the public schools of the United States. The universities have been thrown open to women and nearly six thousand are enrolled at the St. Petersburg University alone, in the classes of history, mathematics and law. The expenditure of the general Government for educational purposes this year will amount to nearly $100,000,000. There are now four thousand Russian agricultural societies, fifteen thousand pupils in the agricultural schools, and last year three hundred thousand farmers attended lectures given for the benefit of those who till the land. Over five thousand agricultural specialists are employed by the Government to assist the farmer. There are many defects in these educational facilities, and in proportion to the population they are limited, but that they exist at all is in sharp contrast to past conditions.

For five years the Government has carried on a great work in the settlement of Siberia, and a minimum of two hundred and fifty thousand people is being moved each year from congested districts in western Russia to the free lands farther east. Communal ownership is being done away with, and fifty-four million acres of farms have now come under individual workings. The Government has spent over ten million dollars the last five years in this work of agricultural land organization. Over $65,000,000 has been spent during the same period in assisting Russian immigration into southern Siberia, and the single great transcontinental railroad to the Far East is blocked during the summer months with the hundreds of immigrant trains, each swarming with men, women and children on their way to the open. Siberia to the Russian of Europe now stands for what America did to the alien land-seekers of the eighties and nineties.

In the effort to increase the yield of cotton within the empire, ambitious plans have been made to irrigate over eight million acres of land in Turkestan, at a cost of $80,000,000, and a notable beginning has been made on this work. In 1900 Russia produced thirty-one per cent of the oil of the world, but owing to the recent slackening of the Baku

output this percentage has decreased. This decrease, however, has stimulated development of coal mining, for which there is a practically unlimited field. The building of new railroads and the improvement of river navigation are two items in the national expenditure which, by themselves, equal the entire disbursement of many smaller countries.

Far more significant than the actual figures of the spread of educational facilities in Russia is the undoubted rapid awakening of the mentality of the mass of the people. The comparatively new and more or less sudden demand for reading matter has led to keen competition in the publishing world, and there can certainly be no complaint of the amount at least of the reading matter which the subscriber can get for his money. For instance, *The Niva*, the Russian *Family Herald*, which costs $3.75 a year, gives away to each subscriber twenty-five volumes of the works of Korolenko, the complete works of Rostand, the complete works of Maikoff, and many occasional feature supplements of the journal itself. *The Little Lark*, published at $2.50 a year, gives fifty illustrated volumes, and in addition many "works of art" in the shape of chromos. *The Messenger of Knowledge*, published at $4.50 a year, among other things presents its readers with Buckle's *History of Civilization*, Haeckel's *Theory of the Universe*, Draper's *Evolution of Europe*, books by Tolstoi and Rousseau, a *History of Science*, Lubbock's *How to Live*, and others too numerous to catalog. The cheapness of printing and the profit from advertisements are the only possible explanation of this remarkable "money's worth" which is offered to subscribers.

It requires a nice mental balance to estimate values in the present state of the Russian people, and to give proper proportion to the strange anomalies witnessed in the conduct of Russian affairs. One important thing should be especially borne in mind, and that is the close mental alliance between the Slav and the Oriental. The Slav is on the borderland of Western civilization not only in material, but in spiritual things as well. It is not so long ago that the serfs were made free; it is but a few years since the education of the people was first attempted to any degree, and it is within the last twenty-five years or less that Western ideas have had even restricted access to the minds of the mass of the Russian people. For generations a bureaucracy and a priesthood held autocratic sway, and none questioned the supremacy of their right. Both bureaucracy and priesthood are yielding perforce to the progressive movement, but there are still thousands of communities in the vast hinterland of Russia practically untouched by the forces of modern life.

No matter how wise or progressive a Government might prevail in St. Petersburg, the great machine of the office-holders possesses a certain immutability which renders all effort vain to bring about vital and immediate change in methods and point of view. The task of government in Russia is herculean in proportion as compared with that in other countries. The old struggling with the new, great questions of ways and means, enormous diversity of race, religion and prejudice, all to be considered and dealt with as may best serve the peaceful purposes of state. Those who have watched with intelligence and personal knowledge the evolution of life in Russia during the ten years past are aware of marvelous changes for the better which have come to pass, and, great in themselves as they may be, these same changes are even more significant in the promise they hold for what is to happen in the ten years now to come.

There is one thing, however, upon which there can be no difference of opinion, and that is as to the part Russia is to play in economic history in the near future. As a food-producing area the country will, as it develops, keep prices down to a reasonable level the world over. The wood of her forests will take the place of the lessening output elsewhere. As a market for products of the labor of all the Western nations, Russia stands supreme as the greatest potential buyer. The Russian peasant is a simple, honest and industrious man. Tremendous in his physique, virile in his stock, and peaceful in his life and intentions. The country itself is largely agricultural and will always remain so Over ninety per cent of the population at the present time owes its living to the land.

Such a country as this has its destiny written clear in these days, when the struggle for bread in urban communities of the West dominates national political policies thru the vital shortages. A score of recent events can be and will be instanced to prove that Russia is still in hopeless bondage to medieval things. The only way, however, to give these their true value in the life of the nation is to judge the forces at work as a whole, and in this true perspective the vision loses many of its most somber tints.

London, England

ABRAHAM LINCOLN WALKS AT MIDNIGHT

BY VACHEL LINDSAY

It is portentous, and a thing of state
  That here at midnight, in our little town
A mourning figure walks, and will not rest
  Near the old court-house pacing up and down,

Or by his homestead, or the shadowed yards
  He lingers where his children used to play,
Or thru the market, on the well-worn stones
  He stalks until the dawn-stars burn away.

A bronzed, lank man! His suit of ancient black,
  A famous high top-hat and plain worn shawl
Make him the quaint great figure that men love,
  The prairie-lawyer, master of us all.

He cannot sleep upon his hillside now.
  He is among us, as in times before!
And we who toss and lie awake for long
  Breathe deep, and start, to see him pass the door.

His head is bowed. He thinks on men and kings.
  Yea, when the sick world cries, how can he sleep?
Too many peasants fight, they know not why,
  Too many homesteads in black terror weep.

The sins of all the war-lords burn his heart.
  He sees the dreadnoughts scouring every main.
He carries on his shawl-wrapt shoulders now
  The bitterness, the folly and the pain.

He cannot rest until a spirit-dawn
  Shall come;—the shining hope of Europe free;
The league of sober folk, the Workers' Earth
  Bringing long peace to Cornland, Alp and Sea.

It breaks his heart that kings must murder still,
  That all his hours of travail here for men
Seem yet in vain. And who will bring white peace
  That he may sleep upon his hill again?

BUT THERE ARE TIMES WHEN THERE IS NO CHEERING

Reservists leaving for the front to fill up the gaps where the flower of the Kaiser's forces have been cut to pieces. The mobilization has proceeded to the point where but one class remains to be called out

THE STRATEGY OF THE GREAT WAR

THE RUSSIAN CONQUEST OF POLAND

THE SIGNIFICANCE OF THE CAMPAIGN AGAINST GERMANY AND AUSTRIA

JUST a hundred years ago this September six monarchs and the leading diplomats of Europe met in Vienna and in the intervals of a round of festivities costing $50,000 a day, occupied themselves with putting together the map of Europe which Napoleon had dissected. Under the skillful hands of such men as Austrian Metternich, French Talleyrand and English Castlereagh boundaries were shifted back and forth and kings moved here and there until the map assumed an orderly appearance—on paper, that is, for naturally no attention was paid to the wishes of the peoples represented by the parti-colored patches.

The most bothersome of the countries was Poland, which had been three times partitioned between Russia, Austria and Prussia, but not for long. The partition effected by the Congress of Vienna has been maintained until now. The Czar got for his share six-sevenths of Poland, promising to treat it as an independent kingdom with an army of its own, a liberal constitution, freedom of the press, etc. How well the Czar has kept these promises is another story which the reader does not need to be told. The remainder of Poland was about equally divided between Prussia and Austria; Prussia getting what is now called Posen and West Prussia, and Austria getting Galicia. Prussia was also given the Rhenish provinces and so became the guardian of both the eastern and the western frontiers of Germany, a gift that opened the way to her future greatness and is the source of her present distress. And finally the Congress of Vienna, in order to prevent the aggrandized Russia from threatening western Europe, deprived her of two coveted strongholds, placed at strategic points where the Vistula river enters and leaves her Polish provinces, Cracow on the southwest and Thorn on the northwest.

With this bit of history in mind it is easy to see what is happening in eastern Europe. Russia is trying to undo the work of the Congress of Vienna just a century ago. She has simultaneously invaded West Prussia to the north and Galicia to the south. She is striving to capture Thorn from Prussia and Cracow from Austria. In the north she has been checked; in the south she has been successful.

We are not in doubt about what the Germans intended to do. Their plan of campaign has been discussed openly, even semi-officially, with what some call brutal cynicism and others courageous frankness. General von Bernhardi in his latest book, *Unsere Zukunft,* published two years ago, assumes that in the war which is soon to come Germany will be attacked by Russia, France and Great Britain all together, but not necessarily simultaneously, because, as he explains, Russia will be slow to mobilize, and England is not likely to send an expeditionary force to the continent at the outset. Berlin, which will be the center of attack, is not far from the eastern frontier and is not easily defended against an attack by Russia from this quarter. On this account it would seem advisable to attack Russia before France.

But, on the other hand, General von Bernhardi argues, France is the most redoubtable of Germany's enemies and a victory over her would count for more than a victory over Russia. For Germany to invade Russia would only incense France and rouse her to greater exertions, while a successful invasion of France would seriously discourage the allies.

The inevitable war, in General von Bernhardi's opinion, was most likely to arise from the relations between Austria and Servia and in case of a conflict here it would be the duty of Germany to support Austria in the Balkans, keep Russia out of Constantinople and say "Hands off!" to England and France. France is more eager for the fight than formerly because she believes that the Balkan war has disclosed weaknesses in the German artillery and tactics. The United States is too closely connected with England to give any encouragement for hope from that quarter. Great Britain ought naturally, he says, to be the friend and ally of Germany and perhaps some time will be. But at present all efforts to win her over are in vain because of her deep rooted enmity and jealousy of German progress. The only way is to treat her like Austria in 1866; first cross swords and then make friends with her.

This was mere prophecy. But with a change of tense would read fairly well as history, as far as we have gone. It is already apparent, however, that there are certain errors, perhaps fatal errors, in his *a priori* reasoning. Both England and Russia were more prompt than was anticipated. England did send troops to the continent at the outset, surprizingly soon after the declaration of war with Germany. Then, too, the Germans did not get the start of their enemies as they expected to, for the Russians were half mobilized before the Germans began. So they lost the chance to carry out their favorite tactics of the brusque attack and were thrown upon the defensive in the east before they had crost the French frontier on the west.

To meet this Russian attack there were stationed in East Prussia in the beginning of the war apparently three army corps, less than 150,000 men altogether. These made such resistance as they could against the overpowering force of the enemy but were defeated at Gumbinnen, August 20, and driven back until the Russians within a week had gained control of the greater part of the province of East Prussia, Königsberg, a university city of about 250,000 inhabitants, and the only fortress of the first class in this region, was invested by the Russians and is still under siege. Attacks were also made on fortresses on the Vistula River near the Russian border, Thorn and Graudenz.

The advance of the Russians in the Baltic provinces and the more serious reverses of the Austrians in Galicia endangered Berlin and compelled an immediate diversion of troops from the western to the eastern frontier of Germany. This was a hard blow to German hopes, for Paris was almost in sight when they had to halt their advance in France and weaken their forces by the withdrawal of troops for service against Russia. Conquered territory in Belgium and France was almost denuded of soldiers, towns that had been taken at the sacrifice of thousands were left with a corporal's guard. The German right having completed its triumphal march from Brussels to Paris turned aside from its goal and moving eastward consolidated with the armies from Lorraine and Luxemburg. The allies, reinforced with fresh levies and encouraged by the slackening of the German vigor, attacked the center from the south

and inflicted severe blows upon the retiring right flank. All along the line the Germans were forced back toward the northeast.

Leaving affairs in this unsatisfactory situation in France, the Germans turned their attention to the Russian frontier, where the arrival of the reinforcements effected an immediate change in the situation. The Russians were defeated at Allenstein and Osterode, south of Königsberg. There are said to be now twelve army corps of German troops in East Prussia and the Russians have been driven out of the Masur lake region back into their own country.

At the same time the Germans came to the rescue of their Austrian allies, who were in danger of utter destruction by the overwhelming forces of Russia. The campaign in this region took the form of a double invasion. An Austrian army invaded Russian Poland from the south and almost simultaneously a Russian army invaded Austrian Galicia from the east. The Austrian army, under General Dankl, advanced from Cracow toward the center of Poland and got half way to Warsaw before it received a serious check. Radom was occupied and Lublin was attacked, tho not captured. When the Austrians found that they could not penetrate further into the interior they entrenched themselves on the eastern side of the Vistula and waited for a German force to come to their aid.

The Germans entered Russian Poland from the southwest and marched thru Lodz and Kielce toward the Vistula River. The Russians crost the Vistula and so prevented them from reaching the Austrians in time. Consequently the Austrians were driven from their position south of Lublin and retreated along the eastern side of the Vistula back toward Galicia. During this retreat the Russians harassed them from the rear and also bombarded their western flank with artillery from across the Vistula. The retreat became a rout and the Austrians lost heavily in men and guns. According to Russian reports over 60,000 prisoners were taken. At Tomaszow, near the frontier, a stand was made, but here again the Austrians were defeated.

The success of the Russians in Galicia has been still more striking. Their army under General Ruzsky crost the border from the east and fought their way up the valley of the Dniester in a series of battles lasting seventeen days which are said to have cost his opponent, the Archduke Frederick, 120,000 men, or a quarter of his entire force. Lemberg, the capital of Galicia, being unfortified, was hastily evacuated, and a new line of defense formed to the westward stretching from Ravaruska, on the Russian frontier, to Grodek, south of Lemberg. But the chief reliance of the Austrians is the fortress of Przemysl, the only important stronghold in Galicia except Cracow. The occupation of Stryi, on the northern slope of the Carpathians, south of Lemberg, gives the Russians entrance to one of the passes in the mountain barrier of Hungary.

THE RUSSIAN CAMPAIGNS

In the south the Russians have gained the eastern half of Galicia and driven back the Austrians who invaded Poland. On the north the Germans have freed the greater part of East Prussia from the Russian invaders. The shaded part indicates territory occupied by the Russians

In Germany the Prussian Government has for many years been making the most energetic efforts to Germanize the Polish province, but in vain. The attempts to suppress the language resulted in petty persecutions of school children arousing bitter resentment. The plan of compulsory expropriation of Polish estates and colonization by German settlers has proved an expensive failure. In Posen and West Prussia the Poles form twelve per cent of the population and in some districts as much as ninety per cent. Their attitude toward the governing race may be inferred from the following quotations from Polish papers:

> Can our people, tortured and martyred as we are, feel the slightest spark of loyalty and allegiance? Is there one Pole in Prussia who can say, hand on heart, that we can be loyal to the Prussian Government?
>
> We are neither faithful nor loyal and bear not a single good wish toward the Government in our hearts.

The Poles in the days of their independence were never so united as they are today when they live under three different governments. They are hoping that thru the defeat of Austria and Germany there may somehow arise a Polish kingdom or republic. The outside world may well doubt whether they would be any better off, but that does not alter the fact that the Poles want it.

WHEN ENGLISHMEN RETREAT

SIR JOHN FRENCH'S REPORT OF BRITISH HEROISM THRUOUT A TRYING WEEK

IN all the stories of great wars there are few episodes more dramatic than the sweeping onrush of the Germans to the very gates of Paris, with the Allies stubbornly and coolly retreating before them, and the sudden reverse which threw the invaders back sixty-five miles in six days. The part played by the British army which held the post of most danger on the left wing has been vividly told by General Sir John French in his official report on the fighting of the first week.

The landing of the troops in France was accomplished in the best order and concentration was practically completed on August 21. After mentioning the rumors of a German attack in force on the position at Mons, General French continues, speaking of the events of the 23d:

In the meantime, about five in the afternoon, I received a most unexpected message from General Joffre by telegraph, telling me that at least three German corps were moving on my position in front, and that a second corps was engaged in a turning movement from the direction of Tournai. He also informed me that the two reserve French divisions and the Fifth French Army Corps on my right were retiring, the Germans having on the previous day gained possession of the passage of the Sambre, between Charleroi and Namur. . . .

When the news of the retirement of the French and the heavy German threatening on my front reached me, I endeavored to confirm it by aeroplane reconnaissance, and as a result of this I determined to effect a retirement to the Maubeuge position at daybreak on the 24th.

At nightfall a position was occupied by the Second Corps to the west of Bavay, the First Corps to the right. The right was protected by the fortress of Maubeuge, the left by the Nineteenth Brigade, in position between Jenlain and Bruay, and cavalry on the outer flank. The French were still retiring, and I had no support except such as was afforded by the fortress of Maubeuge, and determined efforts of the enemy to get around my flank assured me that it was his intention to hem me against that place and surround me.

I felt that not a moment must be lost in retiring to another position. I had every reason to believe that the enemy's forces were somewhat exhausted, and I knew that they had suffered heavy losses. I hoped, therefore, that his pursuit would not be too vigorous to prevent my effecting my object. The operation, however, was full of danger and difficulty, not only owing to the very superior forces in my front, but also to the exhaustion of the troops. . . .

Having regard to the continued retirement of the French on my right, my exposed left flank, the tendency of the enemy's western corps to envelop me, and more than all the exhausted condition of the troops, I determined to make a great effort to continue the retreat till I could put some substantial obstacle, such as the Somme or the Oise, between my troops and the enemy and afford the former some opportunity for rest and reorganization.

Orders were therefore sent to the corps commanders to continue their retreat as soon as they possibly could toward the general line of Vermand, St. Quentin and Ribémont, and the cavalry, under General Allenby, were ordered to cover the retirement. Thruout the 25th, and far into the evening, the First Corps continued to march on Landrecies, following the road along the eastern border of the forest of Mormal and arrived at Landrecies about ten o'clock. I had intended that the corps should come further west so as to fill up the gap between Le Cateau and Landrecies, but the men were exhausted and could not get further in without a rest.

The enemy, however, would not allow them this rest, and about 9:30 that evening the report was received that the Fourth Guards Brigade, in Landrecies, was heavily attacked by troops of the Ninth German Army Corps, who were coming thru the forest to the north of the town. This brigade fought most gallantly and caused the enemy to suffer a tremendous loss in issuing from the forest into the narrow streets of the town. . . .

At the same time, information reached me from Sir Douglas Haig that his first division was also heavily engaged south and east of Marilles. I sent urgent messages to the commander of two French reserve divisions on my right to come up to the assistance of the First Corps, which they eventually did. Partly owing to this assistance, but mainly to the skilful manner in which Sir Douglas Haig extricated his corps from an exceptionally difficult position in the darkness of night they were able at dawn to resume their march toward Wassigny and Guise. . . .

On my way back from Bavay, which was my *poste de commandement* during the fighting of the 23d and the 24th, I visited General Sordet and earnestly requested his coöperation and support. He promised to obtain sanction from his army commander to act on my left flank, but said that his horses were too tired to move before the next day. Altho he rendered me valuable assistance later on in the course of the retirement, he was unable, for the reasons given, to afford me any support on the most critical day of all, namely, the 26th. . . .

At daybreak it became apparent that the enemy was throwing the bulk of his strength against the left of the position occupied by the Second Corps and the Fourth Division. At this time the guns of four German army corps were in position against them and Sir Horace Smith-Dorrien reported to me that he judged it impossible to continue his retirement at daybreak, as ordered, in the face of such an attack. . . .

There had been no time to intrench the position properly, but the troops showed a magnificent front to the terrible fire which confronted them. The artillery, altho outmatched by at least four to one, made a splendid fight and inflicted heavy losses on their opponents.

At length it became apparent that if complete annihilation was to be avoided retirement must be attempted, and the order was given to commence it about 3:30 o'clock in the afternoon. The movement was covered with most devoted intrepidity and determination by the artillery, which had itself suffered heavily, and the fine work done by the cavalry in the further retreat from the position assisted materially the final completion of this most difficult and dangerous operation. Fortunately, the enemy had himself suffered too heavily to engage in an energetic pursuit. . . .

The retreat was continued far into the night of the 26th and thru the 27th and 28th, on which date the troops halted on the line from Noyon Chauny and La Fère, having then thrown off the weight of the enemy's pursuit. . . .

This closed the period covering the heavy fighting which commenced at Mons on Sunday afternoon, August 23, and which really constituted a four days' battle. At this point, therefore, I propose to close the present dispatch. . . .

I deeply deplore the very serious losses which the British forces suffered in this great battle, but they were inevitable, in view of the fact that the British army—only a few days after concentration by rail—was called upon to withstand the vigorous attack of five German army corps. . . .

It is impossible for me to speak too highly of the skill evinced by the two general officers commanding army corps, the self-sacrificing and devoted exertions of their staffs, the direction of troops by the divisional brigade, and regimental leaders, the command of small units by their officers, and the magnificent fighting spirit displayed by the non-commissioned officers and men.

THE SERVICE OF THE WOMEN'S FRATERNITIES

BY SARAH GERTRUDE POMEROY

EDITOR OF THE ARROW OF PI BETA PHI

GATLINBURG, Tennessee, is a lonely mountain hamlet sixteen miles from a railroad and infinitely removed from the comfortable chapter houses of American college fraternity girls. But on the hillside is a settlement school and well-fitted cottage where the four teachers live who try to make it a model mountain home and who give their help freely to the sick and afflicted thruout the rugged country. They are there as the accredited representatives of a national woman's fraternity, supported by its alumnæ under the care of a general committee. The fraternity women who attended the dedication of the new modern school building last July and saw the eager throng of American highlanders who had walked five, seven and even ten miles to be present on that occasion felt that this effort of their organization had been truly worth while, and when the proposed hospital is a reality the plant will be a still more striking evidence of the spirit of the Greek letter societies.

It is largely from scattered alumnæ of Pi Beta Phi that the contributions come for this settlement, for those who are grouped in local clubs are, in common with most fraternity alumnæ, busy with their own local service.

Definitely organized philanthropic work is a part of the program of most of these fraternity associations. Several help in flower missions or have furnished and maintained rooms in hospitals, free kindergartens and "homes" of various descriptions. Instances of civic work include the founding and maintaining of libraries in small towns, the conduct of working girls' clubs and, in suffrage states, organized efforts to influence legislation.

Chi Omega is foremost among the fraternities laying stress on civic work and the activities of her alumnæ in public service have been recognized in various cities. For some years this fraternity has had a department in its quarterly journal devoted to Education and Social and Civic Service. It has also legislated that each of its chapters offer annually a prize to the women of the college where it is represented for the best essay, article or thesis on a subject related to social service work. The upperclassmen of each chapter are required to be identified with some form of civic or social work.

Realizing that the choice of a life-work is becoming a more and more complex problem for the college girl who is preparing to earn her own living, the fraternities are all endeavoring to aid her in its solution. Delta Delta Delta has an employment bureau and a department in charge of a competent woman of broad experience for the express purpose of advising them how to "train for service." The secretary of the Tenement House Committee in New York City is a member of Alpha Phi and she with other specially trained members stands ever ready to launch young college women in the vital movements of the day. For the past five years, the majority of the fraternity magazines have been issuing vocational numbers devoted to articles written by experienced women. The avowed purpose of this editorial policy is "to show the younger girls possibilities other than teaching after leaving college."

It is significant that while all the national fraternities have records of many kinds of altruistic work done by their undergraduate members purely for the joy of service, only two of them declare that they require any work of this kind. Yet the majority of college chapters maintain certain definite philanthropic work and generally coöperate with local charitable organizations, so as to make their efforts effective.

But if this vigorous participation in service outside the college is the most picturesque part of the woman's fraternity program, service within the walls is no less important. College fraternities for women were founded for mutual help in the days when a college education for women was regarded as an experiment. Then the brave girls who coveted a degree needed all possible incentives which coöperation and mutual understanding could furnish. Now when a college education is too often considered a fashion rather than a privilege, the college fraternity has become a defender of the old traditions of scholarship, and recent statistics concerning the scholastic records of fraternity girls prove that the combined efforts of local and national scholarship committees are bringing excellent results.

The earlier fraternities were founded in the West and South and the organizations are now particularly strong in the great state universities; but many chapters numbering several thousand members are located in the East. National fraternities for women have never existed at Vassar, Smith, Mt. Holyoke or Wellesley and whatever Greek letter societies exist or have existed at those colleges are subject only to local conditions. Many of the national fraternities antedate these colleges by several years and had carried on their own individual work for more than thirty years before the National Pan-Hellenic Congress was formed. At present this congress is composed of eighteen fraternities representing a combined membership of 50,000 women, about 8000 of whom are undergraduates in ninety different colleges and universities. This organization is a clearing house for ideas in the fraternity world and is regarded as a legislative body of authority on college standards. The Biennial Conference of Deans of Women has three times invited the congress to send delegates to one of its sessions and has put itself on record as being in sympathy with its work. Those women deans who have been in closest touch with the Pan-Hellenic Congress since its founding declare that its investigations have covered many fields, have uncovered many interesting conditions and that its methods have been scientific and of a scholarly character.

There are numerous instances where local scholarships or money prizes are furnished by individual chapters for the benefit of all the women in the college where they are located. Alpha Xi Delta and Sigma Kappa in particular have offered money prizes for scholarship in two colleges where the recipients are chosen by the faculty, irrespective of fraternity affiliation. Special incentives also are offered for graduate study. Pi Beta Phi for three years maintained from its national funds two undergraduate and one graduate scholarship, but for the past five years has substituted a graduate fellowship with a value of $500. This is open to any Pi Phi who has received her bachelor's degree and may be used at any university either in this country or in Europe. Kappa Alpha Theta has a fund designed for a traveling fellowship which will soon be available and the Pan-Hellenic Congress, realizing the value of the Collegiate Bureaus of Occupations, which aim to help college girls to find their places in the economic world, has been giving financial support to the Chicago Bureau during its pioneer period. And, by the way, the popular fallacy that fraternity membership is possible only to the girl in prosperous circumstances is dispelled

by the fact that fully half of the organizations comprising the Pan-Hellenic Congress have found it necessary to establish student aid funds. These funds are available to those members who need special loans to help them finish their college course.

Unique among the scholarships offered by the national organizations is the Alpha Chi Omega Studio in the artists' colony at Peterborough, New Hampshire, where, under the rules and regulations of the McDowell Memorial Association, the fraternity furnishes free a workroom for an artist in ideal surroundings for creative work.

"There are colleges," the Cleveland *Plain Dealer* declares, "where fraternities are adroitly used as a spur to scholarship and right living," but "it all depends on the attitude and tact of the faculty." This incident is illustrative. The women students in a certain coeducational university showed a general disregard of true college spirit by abusing their privileges and breaking rules. The dean confided this condition of affairs to the visiting delegate of a national fraternity who endeavored to influence the girls to institute a reform. Almost immediately there was a change in student sentiment. The spirit of the whole student body improved as the majority followed the leadership of the few. Months later the dean again welcomed the visiting delegate, saying: "I am glad of this opportunity to thank you personally. Sometimes blessings come from unexpected quarters and certainly we never expected ours to come from a fraternity, but you have been a blessing and a benefit to us."

The fraternities have always stood ready to lend their enthusiasm and aid to stem any financial crisis which an individual college might be facing. Two years ago all the chapters of Alpha Phi voluntarily contributed toward the endowment of Goucher College, Baltimore, which was in special need. This is only one instance which shows how this principle has become ingrained in the minds of undergraduates.

Of the more personal service of the fraternities to their members it is not the purpose of this article to treat. The facts are familiar. The training in executive responsibility afforded by the fraternity offices, the guidance which the upperclassmen exert, the social discipline involved in the numerous hospitalities of the fraternity house, the strong bonds between colleges and between alumnæ and their own college, are keenly appreciated by the eight thousand undergraduate members. But if the privileges of fraternity life were only those which attract the average undergraduate it would be strange that thousands of older women—and the fraternity alumna is as a rule a woman of affairs whose time is well filled—should find time to attend alumnæ clubs and national conventions and share the administrative responsibilities. The leading workers in all the national organizations are mature women. What is the bond which holds them?

Simply stated, it is this: The fraternity idea today spells opportunity. The combination of Greek letters on her symbolic pin is a constant reminder to the fraternity woman of a social privilege, broadly defined. She recognizes in the fraternity a power in her own development which she can make influential in the lives of the present and coming generations of college women, and thru which she may apply her own energy in the upbuilding of the community.

Worcester, Massachusetts

THE SUN CURE

BY WILLIAM BRADY, M.D.

IT is common knowledge that exposure to the sun is good for the health if the exposure is not excessive. But it is not sufficiently taught that sun baths should be, and in actual practise are, a curative measure for many serious diseases.

In Leysin, Switzerland, Dr. Rollier has demonstrated the wonderful healing virtues of sunlight for several years past, and just at present the idea is being taken up with enthusiasm in this country. Not only are modern homes being planned with a view of getting more direct sunlight in all the rooms, but special rooms or porches are being built into the houses to give the occupants the benefit of sun baths. Numerous up-to-date hospitals and sanitariums are installing sun-rooms for the use of patients.

One of the first noticeable effects of exposure to direct sunlight is an increase in hemoglobin. The average increase noted in invalids in the course of the first three days of sun bathing is ten per cent. We doubt if any other remedy in the materia medica could produce such prompt and positive effect.

At Leysin, where the high elevation assures a larger volume of sun rays than at lower level, the patients are exposed on open porches by gradual degrees. The first day only the legs are exposed for ten minutes. The second day the legs and thighs for twenty minutes, and the thighs alone for ten minutes. In this manner the entire body is finally exposed for ten minutes, then longer and longer each day, till two or three full baths of from an hour to two or more hours can be taken. The purpose is to avoid severe *erythema solare*, alias sunburn.

We must remember that even in midwinter when the ground is snow covered the temperature in direct sunlight in Leysin may be from 90 to 120 degrees F. This is comfortable for patients in the open air with no clothing.

Now what do they cure with the sun baths, and how long does the cure require? Every form of tuberculosis, both surgical and pulmonary, responds to sun baths. Some of the results attained in children with hip disease and Pott's disease of the spine are admitted by the world's best surgeons to be superior to anything surgery has offered in such cases. And while improvement is marked and steady in the majority of instances after the first few days, the full course of baths extends to many months or in bad cases two or three years. However, the ordinary sanitarium treatment of tuberculosis is commonly a matter of years, so this is no great obstacle, when we consider the wonderful results obtained without mutilation.

At sea level the sunlight is diluted or weakened by the interposition of fog, dust, smoke. Hence it requires longer exposures and a longer course of treatment. Nevertheless, the same sun shines upon us all. At Sea Breeze they are using the sun baths with gratifying success. In California sun bathing has become almost a popular fad for all sorts of ills.

The chemico-physiological or biological effect of sunlight on the body is too mysterious for understanding. We know it is the greatest activator of general metabolism. We know it produces as definite effects upon blood pressure, sleep, digestion, respiration and circulation as any agents at our command. We almost dare say sun baths would cure every ill except *erythema solare*. We even know sunlight has cured skin cancer (epithelioma).

Under ordinary conditions it is difficult or impossible for one to enjoy home-grown sun baths. But the invalid who would gain every advantage nature offers toward recovery should leave nothing undone which will give even a limited opportunity to bathe in the healing rays.

THE NEW BOOKS

MYSTERIOUS RUSSIA

MANY of the Germans have proclaimed that the present war is at bottom a part of the struggle between the Teuton and the Slav for the supremacy of Europe. The comparatively swift movement of the Russian armies into Austrian and German territory has been one of the surprizes of the war and has kindled all sorts of expectations and inquiries in regard to the empire of the Czar. A most interesting description of the many-sided life of this great people is found in *Russia of the Russians*, a recent volume contributed to the "Countries and Peoples' Series," by Dr. Harold Whitmore Williams.

There is a short sketch of Russia's growth from the foundation of the state of Kiev in the ninth century down to the present era of constitutional government. A thousand years of expansion and consolidation have made Russia the greatest of modern continental empires. This historical account is followed by several illuminating chapters on the bureaucracy, the press, the intelligentsia, the Church, literature, music, etc. From all this one gets the impression that here is a huge, backward nation struggling in the throes of a mighty effort for self-expression in modern forms, and half-blindly seeking for recognition in the world of politics, industry, thought and art.

Russia's possibilities are almost unlimited. The wisdom necessary to guide the people in their aspirations and strugles has not been conspicuously present in recent years, and one can only hope that this great war may develop practical statesmen as well as soldiers. All accounts seem to bear out the claim of the author that in spite of governmental forms the masses of the people of Russia are the most democratic in temper of any in Europe. But real democracy can rest only on intelligent self-control, and Russian leaders have an enormous task to perform before the people are able to bear the responsibility of stable government.

Quite a different Russia is that presented by Madame N. Jarintzoff in her big volume, *Russia: the Land of Extremes*.

"Russia is like a woman; one never knows what she will do next," says Madame Jarintzoff, who being both a woman and a Russian must be supposed to know both factors of the comparison.

A curious mixture of curiosities, chapters dealing with history, biography, education, social customs and religion is her account, thrown together without order and told in a naive style, and containing many interesting things that would be hard to find elsewhere. About half the book is occupied with sketches of revolutionists and their doings—a side of Russian life that has been overdone in English tho rarely treated with such intimate knowledge. More novel to us are the sidelights on Russian life and character in the contrasts drawn between England and Russia and illustrated with anecdotes.

The author tells, for instance, of a "free gymnasium" or private school for girls, where an attempt was made to give education of the modern type. One morning a government school inspector appeared without warning and entered a biology class taught by a former university professor.

"What are you teaching here?" he demanded.

"Biology," was the reply.

"Such a subject does not exist," the inspector declared, as he struck out the name of the unlucky science from the time table with his finger nail. Then he ordered the class to say the after lesson thanksgiving prayer according to the custom in the government schools. The girls did not know it.

"I shall come again later in the day. You must know it then and say it. Where is the book of daily marks?"

"We have no system of daily marks," answered the headmistress.

"You will introduce it tomorrow. Where is your time table of daily work?"

It was shown to him. "Hardly anything but nonsense," and again the dictatorial nail scored condemnation across the whole page.

Russia of the Russians, by Harold Whitmore Williams. New York: Charles Scribner's Sons. $1.50.
Russia: the Land of Extremes, by N. Jarintzoff. New York: Henry Holt & Co. $4.

OLD SALEM DAYS

In *Narratives of the Witchcraft Cases* in the American colonies Prof. George L. Burr, of Cornell University, has prepared a full volume containing not only accounts of trials and executions, but the old documents such as Increase Mather's "Remarkable Providences" (1684); Richard Chamberlain's "The Stone-Throwing Devil" (1698); "Memorable Providences," by Cotton Mather (1689), and various other contemporary accounts. Cotton Mather's "A Brand Pluck'd from the Burning" is here reprinted for the first time. It is worth mentioning that in Germany during the witchcraft craze 150 witches a year were burnt, while here none were burnt, but a few were hanged, while others escaped with their lives on confession of guilt. This will be the standard volume on the subject.

Scribner's. $3.

ADVICE TO THE YOUNG

Homer H. Cooper, superintendent of Spiceland Academy, Spiceland, Indiana, conceived the idea of writing to a list of the most distinguished leaders of thought and action in the United States, asking them to write him very brief letters designed to help young students in solving the problems of life. These he has just published in a book of 276 pages. The eighty-seven contributors include statesmen, clergymen, authors, professors and editors, and they deal with almost every conceivable subject. The book, unlike many of its ilk, will interest young people—and older ones too.

A. C. McClurg. $1.

A POET'S ESSAYS

A volume to please the lover of pure literature, and no less the lover of good bookmaking, is the beautifully printed new collection of *Essays* by Alice Meynell, an English poetess who writes with much grace and charm of style in prose as well as verse. These nervous yet delicate little papers on a multiplicity of topics conserve the true spirit and flavor of the English essay at its best—stimulating the reader to fresh thought, or leading him into beckoning by-ways of individual reflection, or luring him to a land of delightful dreams.

Scribner's. $1.

JOSEPH CONRAD AT HIS BEST

A vivid and moving depiction of how man with his frail strength yet holds up against the tyrannous buffetings of the sea is Joseph Conrad's forecastle tale of *The Nigger of the Narcissus*, which was brought out in America some years ago as *Children of the Sea*, and is republished now under its original title. This is the book, says Mr. Conrad in a prefatory note addrest to his American readers, "by which, not as a novelist perhaps, but as an artist striving for the utmost sincerity of expression, I am willing to stand or fall."

Doubleday. $1.20.

A GUIDE TO THE BOOK SHELVES

An introductory manual and bibliographical guide to the materials and methods of three types of related special libraries is provided for by *Law, Legislative and Municipal Reference Libraries*, by John Boynton Kaiser, librarian of the Tacoma Public Library. The book should be of valuable aid to lawyers, legislators and those interested in municipal government.

Boston Book Co. $4.

INDEPENDENT OPINIONS

ABOUT THE GREAT WAR

In handling the subject of the war we have pursued our long established custom of giving space to statements of the case from both sides and at the same time giving in "The Story of the Week" as accurate and impartial an account as we can of the events and expressing in the editorial department as forcibly and clearly as we can our own views of the situation. As usual we get criticism on all three of these points. To those who object to our publishing articles which they do not like or which contradict other articles or editorials we can only reply that we believe this to be the best policy and do not propose to change. To those who point out textual errors or minor misstatements we are grateful, altho it is usually too late to do anything about it except to promise not to make the same mistake again. But to those who pass on to the "higher criticism" and throw the light of further information or new arguments upon the discussion, we feel a greater gratitude. Such communications may not always effect the immediate reversal of our opinions that the writers sometimes seem to expect, but they are not without their influence and are always read with interest and sometimes past on to our readers in this department. This time we have so many letters that we have been obliged to quote mere fragments of them and we have omitted our usual interlarded comments on the correspondence as we have already discussed most of the points raised.

A READER OBJECTS TO PRO-GERMAN ARTICLE

I very much regret to note that you intend to publish an article from the German Ambassador. Already we have too much protestation against anti-German sympathy, due to the untiring activities of our great beer-drinking German Alliances. I hope you will speedily correct as far as possible any false impression left by the article in question.

CHARLES MICHAEL
South Bend, Indiana

A DISTINGUISHED SCHOLAR'S OPINION

I wish The Independent had seen fit to state that the distinction made between the Kaiser and his people was a fiction, and that the reports that the Emperor had had 103 Socialists, including Liebknecht, shot, are offset by the fact that the 110 Socialists of the Reichstag voted to a man for the war appropriation on the ground of the Russian menace.

I hope The Independent may look over the White Book again and read that on August 1 the British Ambassador was asked a second time whether

England would remain neutral in case Germany respected the neutrality of Belgium and guaranteed the integrity of France and also her colonies. Here England again said she must be free to act.

And, if the letter of the staff correspondent of the New York *Evening Post* in London is to be accepted for the statement that Lord Kitchener was in Belgium two weeks before the war began "to make dispositions for English troops"—was not Belgian neutrality broken in principle?

An American student just returned tells me that he saw two trains of prisoners and wounded passing thru Marburg the first days of the siege of Liège and Frenchmen were mingled with the Belgians, having been there before the declaration of war.

I was intensely adverse to Germany at first, threw up my hat when England declared war, but I have changed my mind. Mr. Carnegie's second dispatch to the London *Times* is in the right direction. At most Germany, in my judgment, is equally guilty with England, but the burden of guilt on England is increasing with her calling in of the Japanese and her use of Sikhs. If only England, instead of trying to make Germany responsible for Austria's demand, had said, "We will stand with you against Russia!" It should at least be worth prominent mention that for a number of years the Kaiser and literary men in Germany have been making a serious effort to placate England. As it is the two great Protestant countries of Europe are in conflict. For the good of generations to come, it seems to me we ought to pray that it will be a drawn battle.

I congratulate you upon printing the opinion of Graf von Bernstorff, whose father was not only a diplomat but one of the most eminent Christian laymen of Germany—president of the German Evangelical Alliance.

Is it not worth The Independent's while, in the interest of high thinking, to refer to the notices in the London *Times* of the organized efforts of British merchants already being made to "capture the trade of Germany which England lost in time of peace." The words are the *Times'*. The collocation is mine, for the sake of brevity. Which is the worse—worshipping Mammon or Mars?

DAVID S. SCHAFF, D.D.
Allegheny, Pennsylvania

THE NEMESIS OF ARMAMENTS

I desire to thank you for publishing Dr. Jefferson's splendid article on "The Nemesis of Armaments." It is one of the finest peace arguments I have ever read. How I wish it could be printed in pamphlet form and distributed thruout Europe and America! America leads the world in many ways. God grant it may lead the world in righteousness, and prove to other nations that patriotism—Christian patriotism—means love of one's country, not hatred of foreign countries.

A New Departure in Education

IN introducing The Independent into schools thruout the land we have met with only one real difficulty. Teachers generally admit the desirability of some use of current literature and recognize the suitability of The Independent for that purpose, but they do not always know how to go about it. To introduce such an unconventional method of instruction into an established curriculum is not always easy, so it is no wonder that teachers sometimes prefer to wait until convenient methods for use have been worked out elsewhere.

Realizing the need of such practical experience, we have watched with especial interest the experiment which has been tried in the use of The Independent on a large scale in the Julia Richman High School in this city, and we have asked one of the instructors in that school to prepare a detailed account of his methods and results, which we are publishing for free distribution in order that other teachers may get the benefit.

Other literature on this new departure in education has been prepared and will be sent on request to any teacher or school official.

Pamphlet No. 1 of our series of aides to the use of periodical literature in the class room contains an address entitled, "The Editor as Schoolmaster," given by Hamilton Holt, Editor of The Independent, before the recent National Conference of Newspaper Men held under the auspices of the University of Kansas, at Lawrence, Kansas.

Pamphlet No. 2 gives the experience of teachers who are using The Independent in college and high school classes in connection with their courses in English, Oral Composition, Public Speaking, Journalism, International Law, Economics, Current History, American Politics and Civil Government.

The Independent

119 WEST FORTIETH STREET
NEW YORK

sia they entertain the fear that normally unites all western Europe; and the news of Muscovite victories in Prussia fills them with a secret approval more than tempered by dread foreboding. Their attitude is not pro-French or pro-English, least of all pro-Russian; it is anti-German. It is not directed toward the German people here or there, nor toward the success of German trade, nor toward the world of busy researchers, too busy with their test-tubes to know or care how their country is governed, nor against the person of the Kaiser, a gifted, clean and energetic monarch. It is directed against that something which we do not want on our Canadian boundary, now unfortified for thousands of miles; that something that has appeared at Samoa, in Manila Bay, when we were at war with Spain, when we were in fear of Japan, when we were holding back from Vera Cruz, and after we had entered it. It is the Prussian military class and its principles, plans and practices. With this element we have never had anything in common. Certainly on our side there has never been any dream of confidence or coöperation with it. In it there exists an unmistakable antipathy for our institutions, in spite of the official optimism with which it has chosen to appear to rely upon our support. The German people may be surprized at our attitude; but both the German war office and the American reader knows that it is neither sudden, treacherous nor inexplicable.

W. H. WORRELL
Hartford, Connecticut

THE SPIRIT OF MILITARISM

The greatest indictment of militarism—the German ideal—lies in the blind and brutal materialism which is its product. The destruction of Louvain was no untoward incident—but rather the most perfect expression of the German spirit in the war—"shattering to reach and shattering what it reaches." It is not inconceivable that some day the German people themselves will be glad of the smashing of that infernal thing—the great "war machine"—and turn away from the Kaiser's pagan idea of God, altho it may be that so far as Germany is concerned the breakdown of militarism will immediately be followed by a general skepticism rather than an immediate turning to the Christ-idea of God and humanity.

The gratitude of your readers is warranted by reason of the high value and authoritativeness of your contributed articles as well as the editorials.

You certainly have "risen to the great occasion."

HENRY A. REED
Methodist Episcopal Church, Eden, New York

A JOLTED READER

The confidence which I have hitherto entertained in your "objectivity" and unbiassed pursuit of truth received several jolts when reading the August 10 number.

Jolt No. 1 was received when you put the words "The Aggressor" under a portrait of Emperor William II. It is to say the least premature to give him that title. It may belong to Emperor Nicholas II, the self-styled and selfish protector of all the Slavs, or to Emperor Francis Joseph (or his government) with his very bold and, I think, unjust Balkan policy.

Jolt No. 2. "Austria . . . now declares war just for the purpose of com-

pelling Servia to give up a goodly portion of her territory." Did not Austria explicitly declare that she will take no territory and that her purpose is quite a different one? Does not the "casus belli," the nature of Servia, the race of the people, etc., tend to elicit our faith in that declaration?

Jolt No. 3 in "The Story of the Week" where you credit to an altogether unconfirmed rumor that Austria "had consented to refer the case of Servia to a neutral power," and again "the Kaiser invaded France" before a declaration of war, and "violated international precedents." Who invaded first, France or Germany? And is an ultimatum after expiration not tantamount to a declaration of war?

However, you make some amends for these editorial mistakes and want of fairness by the insertion of the article "Teuton Against Slav," by Professor Sloane, which is a model of fairness and good judgment and goes to the very root of the matter.

In the last analysis this war, as so many previous ones, will be found to be one of dynasties and commercial expansion as much as of racial antagonism. I hope that it will lead mankind to a better understanding of the forces that drive us—"economic determinism," etc.—often to our destruction. Will we ever learn to control them?

ARNOLD WEYMAN

St. Joseph's College, Collegeville, Indiana

THE ATTITUDE OF THE ENGLISH

Recent reports from England represent Sir Edward Grey as having deceived the English people in regard to communications with Germany. Why did Morley and Burns retire? Why did Carnegie say he believed the Kaiser had been more sinned against than sinning? Read the indictment against England by Bernard Shaw. Read the resignation of Charles Trevelyan as Under-Secretary for Education.

Is it a question of democracy, then why were five men alone of all the Republic of France entitled to know the conditions and obligations of the entente? Is it a war on militarism? Then why not on English navalism, too, or is it a greater wrong to have a large army than to have a large navy?

If England went to war on account of Belgium's neutrality, why does she allow Japan, who entered the war at England's request, to violate the neutrality of China?

A READER OF THE INDEPENDENT

AMERICAN CHILDISHNESS

I am deeply shocked at the aggressive editorials against Germany. It puzzles me that so many Americans are so hostile as you are against a country attacked by so many enemies and therefore at a great disadvantage in this dreadful life and death struggle. I find the answer in the fact that America has no thoughts of her own. All her thoughts are manufactured for her by England. Altho politically independent of her motherland, she is still the obedient child she was before the Revolutionary war. So the people do not see the apparent incongruity that lies in the fact that they, republicans as they feel proud they are, are taking sides with Russia. Their literature is English, their science is European, their music is German, their art is French. Can they be expected to take an independent view in this matter? No, they cannot; they are children in thought and must be considered thus. H. C. STEVEN

I Make It Easy to Try

Since I began offering these cigars—my private Havana leaf, put up under my monogram band—I have found thousands of men with tastes like mine. Men who took no enjoyment in strong, heavy cigars—who wanted a mild, sweet smoke, with a delicate aroma and exquisite flavor.

But I know there are many more who would enjoy this smoke, if they knew of it. So I am extending my offer. Here it is:

Five Cigars FREE

If you will send me 10 cents—just to show your sincerity—I will mail you trial cigars. Smoke five with me—convince yourself. The price is $5 per hundred, $2.60 for 50—all charges prepaid. *Use your letterhead, please — stating your position — or your business card, when you write.*

A MILLIONAIRE'S CIGAR

I list among my patrons many men of standing and wealth. They can afford cigars of any price. So they must buy my cigars purely for the satisfaction and delight they get out of them. I believe you'll enjoy them too. If you wish to try them, write me today. The coupon is for your convenience.

J. ROGERS WARNER
904 Lockwood Bldg., Buffalo, N. Y.

Enclosed please find 10c. I should like to smoke five of your cigars.

"A LUCID STATEMENT OF PLAIN TRUTHS"

THE RAILWAYS' APPEAL TO THE PRESIDENT

This statement of the railroad situation was presented to President Wilson on September 9 by a committee headed by Frank Trumbull, chairman of the Board of Directors of the Chesapeake & Ohio, and representing all the principal systems of the country.—THE EDITOR.

THE purpose of this conference is to lay before the President in brief terms the present situation of the railroads of the United States—250,000 miles of great national highways. That the case of the railroads deserves sympathetic treatment arises from the fact that, altho privately owned, their property is devoted to public service. The industrial health of the country depends upon an adequate railroad service; such service cannot be rendered and proper response to public needs cannot be made unless the financial soundness of the railroads is maintained.

The credit of the railroads, seriously impaired, as we believe, before the war started, is now confronted by an emergency of a magnitude without parallel in history. To understand the full import of the existing crisis it is necessary to consider briefly the antecedent conditions.

The purpose here is not to complain, but to point out the one paramount fact that by reason of legislation and regulation by the Federal Government and the forty-eight states, acting independently of each other, as well as thru the action of a strong public opinion, railroad expenses in recent years have vastly increased. No criticism is here made of the general theory of Governmental regulation, but, on the other hand, no ingenuity can relieve the carriers of the burdens of expense created thereby. However desirable may have been the expenditures which have been forced upon the railroads, no adequate provision has been made to pay the bill.

This great increase in expenses now coincides with seriously depleted revenues, with no corresponding ability of the railroads to reduce their costs in proportion. Governments can proceed with expenditures of all kinds by taxation, but railroads cannot. While the effect of the European war upon railroad earnings may vary in different sections, it is painfully evident that there will be serious decreases in the total because of the unprecedented difficulty in the marketing of cotton, the great decrease in imports and the general dislocation of trade and industry.

Even prior to the existing emergency and to meet the antecedent situation, railroad expenditures generally had been reduced to absolute necessities. The difficulty of further contraction is enhanced by existing wage agreements and, in so far as the western railroads are concerned, by the possibilities involved in the arbitration proceedings to which they have recently agreed.

The net operating income of the railroads of the United States for the year ended June 30, 1914, was $120,000,000 less than for the previous year, or about fifteen per cent. The gross earnings for the year were $44,000,000 less than for 1913; expenses and taxes were $76,000,000 more.

The maintenance of the credit of the railroads (and the credit of the railroads establishes the standard for all industrial enterprises) depends upon their ability to increase their net earnings. The railroads may have the most perfectly appointed plants in the world, but if the net earnings are not adequate, new capital cannot be attracted.

In the important eastern rate case the Interstate Commerce Commission unanimously found that the railroads in the richest section of the country needed more revenue. That finding was based upon the situation prior to the first of July, this year; indeed upon conditions of a year previous.

No emphasis need at this time be put upon the new railroad capital which has heretofore been required to provide for normal development, but this has been from $400,000,000 to $500,000,000 per annum, and railroads should not only be able to keep abreast of the time, but in this emergency should be in position to anticipate the demands of an expanding commerce.

Simultaneously with the great impairment of earnings, general credit conditions have broken down, and the absolute and immediate necessities of both public and private borrowers of money here and abroad have already increased interest rates to a level

"WE MUST ALL STAND AS ONE"

THE PRESIDENT'S REPLY TO THE RAILWAYS

SINCE you read it to me yesterday I have read again the statement you made on behalf of the Committee of Railroad Presidents whom I had the pleasure of meeting and conferring with at my office. It is a lucid statement of plain truths.

You asked me to call the attention of the country to the imperative need that railway credits be sustained and the railroads helped in every possible way, whether by private coöperative effort or by the action, wherever feasible, of Government agencies, and I am glad to do so, because I think the need very real.

I cannot say that I entertain any deep anxiety about the matter, except, of course, the general anxiety caused by the unprecedented situation of the money markets of the world, because the interest of the producer, the shipper, the merchant, the investor, the financier, and the whole public in the proper maintenance and complete efficiency of the railways is too manifest. They are indispensable to our whole economic life, and railway securities are at the very heart of most investments, large and small, public and private, by individuals and by institutions.

I am confident that there will be active and earnest coöperation in this matter, perhaps the one common interest of our whole industrial life. Undoubtedly, men both in and out of official position will appreciate what is involved and lend their aid heartily wherever it is possible for them to lend it.

But the emergency is in fact extraordinary, and where there is manifest common interest we ought all of us to speak out in its behalf, and I am glad to join you in calling attention to it. This is a time for all to stand together in united effort to comprehend every interest and serve and sustain it in every legitimate way.

The laws must speak plainly and effectively against whatever is wrong or against the public interest, and these laws must be observed; for the rest and within the sphere of legitimate enterprise we must all stand as one to see justice done and all fair assistance rendered, and rendered ungrudgingly.

Cordially and sincerely yours,
WOODROW WILSON.

unthought of a few months ago—rates much higher than present net earnings return upon the railroad property of the United States.

This emergency was not contemplated when the Interstate Commerce Commission rendered its decision in the eastern rate case, yet the problems now confronting the railroads greatly transcend the seriousness of those which existed then. The menace is now not only to railroad credit, but to the transportation service itself, and efficient transportation is inseparably connected with the welfare of our people.

Securities of United States railroads held abroad are computed at from three to five billion dollars. It is a certainty that bond and note obligations of the railroads maturing before the end of next year aggregate over $520,000,000. In the highest public interest, it is imperative that these obligations shall be met. Yet it is evident that for a long time Europe will not be a lender of money to America. On the contrary, the war will create such enormous debts and involve such a general dislocation of industry and commerce that Europe must realize largely on its holding of American securities regardless of the price obtainable.

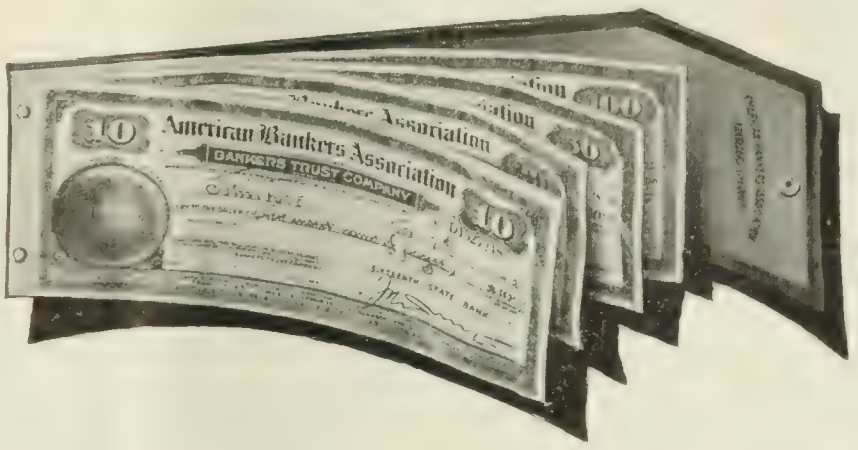
The New York Stock Exchange has now been closed for a longer period than at any time in its history. There is no present market for railroad securities, old or new. The United States is in a condition of financial isolation. If the Stock Exchange were to open (and it must open some time) the pressure of selling would inevitably be greatest against railroad securities. If they go down, industrial issues will fall still more seriously. The public necessity to stem this tide of selling and to reduce to the utmost its destructive effect is one that calls for the exercize of every resource of statesmanship.

Our respectful requests are:

First, that the President will call the attention of the country to the pressing necessity for support of railroad credit by the coöperative and sympathetic effort of the public and of all Governmental authorities and that the railroads be relieved as far as possible from immediate burdens involving additional expense.

Second, that the President will urge a practical recognition of the fact that an emergency is upon the railroads which requires, in the public interest, that they have additional revenue and that the appropriate Governmental agencies seek a way by which such additional revenue may be properly and promptly raised.

The following dividends are announced:



American Braze Rod and Foundry Company, preferred, quarterly, 2 per cent. common, quarterly 1½ per cent. both payable September 30.

The Manila Electric Railroad and Lighting Corporation, quarterly, 1¼ per cent, payable October 1.

Remington Typewriter Company, first preferred, quarterly, 1¾ per cent; second preferred, quarterly, 2 per cent, both payable October 1.

Coast Box Machinery Corporation, preferred quarterly, 1¾ per cent. common, 2 per cent, each payable October 5.

Utah Copper Company, quarterly, 75 cents per share, payable September 30.

"A.B.A" American Bankers Association Cheques

The sale of "A. B. A." Cheques *for use throughout the United States continues as usual*, and the cheques are affording to travelers in "the States" their customary service of protection and convenience in respect to money matters.

The sale of "A. B. A." Cheques *for foreign use has been discontinued temporarily*, it being impossible to give positive assurance to tourists that travelers' credits will be uniformly honored abroad at all places under conditions which change from day to day.

Through the co-operation of the Officers of the United States Government, Committees of Bankers in New York, London and Paris were enabled in a very short time to perfect arrangements for protecting all forms of travelers' credits issued by American institutions and firms; and holders of travelers' cheques and letters of credit have been by this means relieved from the serious consequences of the sudden paralysis of customary banking facilities abroad.

As soon as conditions warrant, the sale of "A. B. A." Cheques *for use abroad* will be resumed,

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

FOREIGN COMPANIES AND THE GREAT WAR

Isolated instances of competition, using the war in Europe as a factor in possibly depreciating the security offered American policyholders by the foreign companies transacting business here, make it desirable that we reaffirm the statements and opinions appearing in this department on that subject in our issue of August 31. There is not the slightest cause for apprehension. The funds of foreign companies, guaranteeing their American policies, are all here in the hands of resident trustees or on deposit in our state treasuries. These funds cannot be withdrawn without the consent of the insurance commissioners within whose jurisdictions they are held.

As already pointed out, the status of the American branches of these companies does not differ in respect of financial security from that of the domestic companies. All of them have deposits with one or other of the states, corresponding to the stock capitals of American companies, but with this difference: the cash capital of a domestic company is an asset, opposite which there is a liability in the shape of stock; while the deposit of the foreign company is free of any such claim. It is pure surplus. In so far as the policyholders' interests are affected, the same thing is true in the domestic company, for their claims are paramount over those of stockholders.

While studying this subject recently, we undertook to compile the statistics of the United States branches of the foreign companies for the purpose of ascertaining their exact financial condition. The work has not been completed as a whole, but we have gone far enough with that portion of it on which we commenced—the British fire insurance companies—to present some conclusions of value. All the figures used are taken from the report of the New York Insurance Department for 1914.

The most important piece of information desired is, What do these companies owe? After that, what have they with which to pay their debts?

We find that there are twenty-two British fire insurance companies (including two Canadian) doing business here. All the funds we are about to record are in the custody of American trustees and, except the interest earnings, no portion of them can be removed without the consent of the Superintendent of Insurance. Now what are the liabilities of these companies? We have classified them under three principal heads: unpaid losses, unearned premiums, miscellaneous. We find the amounts to be as follows on the 31st of December, 1913:

Unpaid losses, 22 companies	$4,532,267
Unearned premiums, 22 companies	52,342,481
Miscellaneous liabilities, 22 companies	1,940,472
Total	$58,815,220

The twenty-two British fire insurance companies doing business in the United States were under obligations to their American customers on January 1, last, to the extent of $58,815,220. What amount of funds did they hold against these debts? The aggregate sum was $92,173,973. It therefore appears that they were in possession of a surplus beyond all liabilities amounting to $33,358,753. The ratio of assets to liabilities was $156.70 to $100; that is to say that for every dollar they owed, they held in securities approved by the Insurance Department $1.57. Figuring it in another way, the net surplus—the clear money on hand—was equal to 36 per cent of the assets.

This is a matter of importance to the companies under consideration, and of more importance to their policyholders. It is just as desirable for the latter that they should know there is no cause to worry as that justice to the former requires that the sufficiency of the security they provide is made public.

As all the assets of the American branches of foreign companies are invested and held here and, as in the illustration just presented, they are ample to cover all possible emergencies, it is difficult to discover in just what way their fortunes could be adversely affected by the European war; and if they could be, what element of fortune would operate to exempt our own domestic companies from similar results. So far as we are able to judge of future happenings, the war will have little effect on either class.

ANSWERS TO QUERIES

P. A. T., El Paso, Texas.—Yes, there is a life company of that name located at Denver, Colorado. It was organized in 1909; has a capital of $236,360; assets of $384,637 and net surplus of $13,269. The men in control of the management are capable life underwriters of experience.

F. K., St. Louis, Missouri.—The New York Insurance Department figures, December 31, 1913, of the three companies are: Admitted assets, New York Life, $778,617,506; Mutual Life, $607,110,071; Equitable Life, $525,412,981. The total amount of insurance in force at the end of the year 1913 in each company was: New York Life, 1,101,655 policies for $2,273,099,212; Mutual Life, 712,527 policies for $1,598,466,078; Equitable Life, 590,888 policies for $1,471,093,575.

THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION.

The Board of Directors of The Manila Electric Railroad and Lighting Corporation has declared a regular quarterly dividend of ONE AND THREE-QUARTERS PER CENT. (1¾%) on the Capital Stock of the Corporation, payable Thursday, October 1, 1914, to stockholders of record at the close of business on Friday, September 18, 1914. T. W. MOFFAT, Secretary.

MERGENTHALER LINOTYPE CO.

New York, August 31, 1914.

A regular quarterly dividend of 2½ PER CENT. and an extra dividend of ONE-HALF OF ONE PER CENT on the capital stock of Mergenthaler Linotype Company will be paid on September 30, 1914, to the stockholders of record as they appear at the close of business on September 5, 1914. The Transfer Books will not be closed.

FRED'K J. WARBURTON, Treasurer.

THE NEW YORK CENTRAL & HUDSON RIVER RAILROAD COMPANY.

New York, September 9, 1914.

A quarterly dividend of One and One-quarter per cent. (1¼%) on the capital stock of this Company has been declared payable October 15, 1914, at the office of the treasurer, to stockholders of record at the close of business September 21, 1914.

EDWARD L. ROSSITER, Treasurer.

REMINGTON TYPEWRITER COMPANY.

New York, September 19, 1914.

A quarterly dividend of one and three-quarters per cent. (1¾%) on the First Preferred stock, and a quarterly dividend of two per cent. (2%) on the Second Preferred stock, has this day been declared payable October 1 1914, to stockholders of record at the close of business September 19, 1914. GEORGE K. GILLILY, Secretary.

UNITED FRUIT COMPANY.
Dividend No. 61.

A quarterly dividend of TWO PER CENT on the capital stock of this Company has been declared, payable October 15 1914 at the office of the Treasurer 131 State street, Boston, Mass., to stockholders of record at the close of business, September 26 1914.

CHARLES A. HUBBARD, Treasurer.

UNITED SHOE MACHINERY CORPORATION

The Directors of this corporation have declared a quarterly dividend of 1¾% (1¼% per share) on the Preferred capital stock and a dividend of 2% (50c per share) on the Common capital stock, both payable October 5th, 1914, to stockholders of record at the close of business September 15th, 1914.

L. A. COOLIDGE, Treasurer.

NEW RED CROSS MEMBERS

On behalf of the American Red Cross The Independent expresses its appreciation of contributions received from the following, who have thus become members of the Red Cross for the current year. The contributions, with the names of the givers, have been forwarded to Hon. Jacob H. Schiff, treasurer of the New York Department.

Julia E. Twichell, Andover, Mass.; G. D. Wardrop, New York City; Mrs. T. O. Seaver, Woodstock, Vt.; Mrs T. S. Winslow, White Plains, N. Y.; Mrs. Albert E. Fletcher, Farmington, Conn.; Mrs. Edward D. Jenner, Farmington, Conn.; Dr. Isaac M. Taylor, Morgantown, N. C.; Miss Margaret A. Robinson, Wakefield, R. I.; Miss Mary M. Carnachan, Meadville, Penn.; Mr. C. I. McDonald, Haden, Penn.; Miss Margaret B. Jakway, Binghamton, N. Y.; Miss Emma Dunning, Newark, N. J.; Mr. A. C. Harrington, North Adams, Mass.; Major T. Worcester Worrell, Frankford, Penn.; Mrs. S. M. Butterfield, Penn Yan, N. Y.; Dr. M. S. Gabriel, New York; Mr. S. E. Gardner-Magill, New York; Mr. Alexander Gaertner, M.D., Fenway, Mass.; Mr. F. J. Steele, Coldwater, Mich.; Mr. George M. Atwood, Haverhill, Mass.; Mrs. J. C. Caflisch, Union City, Penn.; Mr. R. M. Pfaender, New Ulm, Minn.; Mr. H. F. Huse, Springvale, Maine; Mr. J. M. Purinton, East Liverpool, Ohio; Mr. Richard Wightman, Saybrook, Conn.; Mrs. von Pustau, New York City; Miss Mary L. Robinson, Wakefield, R. I.; Dr. W. W. Tompkins, Charleston, W. Va.; Mr. Gephas Guillet, Westfield, Mass.; Miss Elizabeth S. Hammond, Evanston, Ill.; Mr. Francis G. Benedict, Boston, Mass.; Miss Sarah A. Newcomb, Mr. Frederick S. Newcomb, New London, Conn.; Mr. A. H. Halladay, Spring Valley, Ill.; Mr. H. W. Tracy, East Smithfield, Penn.; Mr. J. H. Boyd, St. Paul, Minn.; Miss Mary L. (This list will be continued in The Independent next week.)

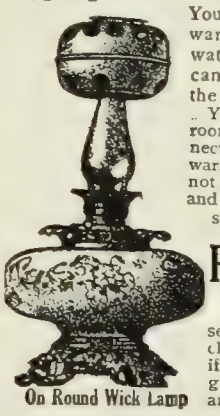
Giant Heater



Will Make a Stove of your round wick lamp, gas-jet or mantle burner. Requires no more gas or oil than for light; does not lessen the volume of light; utilizes the waste heat. Heat and light at one cost.

On Gas-Jet

Will Heat Ordinary Room Comfortably in Zero Weather

A river will run mills by concentrating its power—your lamp or gas-jet will heat a room by concentrating, intensifying and radiating the waste heat with a **GIANT HEATER.** This heater causes a circulation of the air, giving a uniform heat. No odor, dust, ashes or trouble.

On Round Wick Lamp

You can heat any room, office or den; warm baby's food or your shaving water; make tea or coffee, and you can do these things **quickly** for the heat is intense.

You know how hard it is to heat a room from a stove or radiator in a connecting room. The cold air drives the warm air back. The giant Heater will not only heat the cold room, but will mix and circulate the air in the two rooms, securing uniform heat in both.

Price Black Iron - - - $1.00
Polished Brass - - $1.50
Nickel Plated on Brass $2.00

Send today for a heater—we will send it by first mail or express, all charges prepaid. Use it in your room; if not satisfied return it in 10 days and get money back. Send for free book anyway.

Giant Heater Co., 667 Temple Street Springfield, Mass.

DAVIS DELICACIES
From Ocean, Farm and Orchard

The best fish in the world are brought into Gloucester. We get the first selection and deliver them to you fresh from the boats, in keepable packages with the sea flavor retained.

The best vegetables in the world are brought to our dock, after being packed, according to our standard, where they grow, in order to assure proper freshness.

The best fruits in the world are unloaded at our wharf from Native Orchards, the South, the Pacific Coast and Across the Seas.

No matter where you live, we guarantee to bring to your door Nature's choicest products from Ocean, Farm and Orchard, ***packed as they grew and packed to keep.***

We sell direct to you—never through dealers

DAVIS COMPANY DELICACIES

Express free on $3.00 orders east of Kansas

OUR SEA FOODS range from the Mackerel (fresh or salted), Codfish (fresh or salted), Salmon, Lobsters, Crabs, Clams and Shrimp of our native waters, to the specialties of Italy, France, Portugal and the North Sea Ports.

OUR FARM PRODUCTS include all the good things that grow in and near the ground, special cures of bacon, dried meats, pork-and-beans and other New England goodies.

OUR ORCHARD SPECIALTIES are gathered from the selected crops of American and more Tropical Climes.

All are of a quality rarely found even in the best markets.

We are glad to send, upon request, our descriptive price list telling of the many specialties we have to offer and how best to enjoy them. Our free *Book of Receipts* is an authority. Fill out coupon today and begin to get your share of these unusual delicacies.

Cadillac
Standard of the World

An Eight Cylinder Cadillac

The matchless mode of motoring reserved to only a few privileged persons in the Old World (at an almost prohibitive price) developed by the Cadillac Company for American Motorists!

Serious minded motor car manufacturers have sought the ideal power principle for fifteen years.

The Cadillac Company has never relaxed for a month, a week, or a day, its patient pursuit of that underlying principle which would prove to be ultimate and final.

In the course of that long journey toward perfection, the Cadillac Company has given serious consideration to every reputable type of motor--endeavoring to scrutinize with scientific impartiality the virtues and the limitations of each and every one alike.

Building and experimenting in turn, with every type from the single cylinder to the six, and from the poppet to the rotary and to the sliding valve, we have been carried forward irresistibly, by the impetus of our own research, to the highest form of frequent-impulse motor—the V Type Eight Cylinder.

It is admitted, we believe, that this Company produced in the four cylinder field, a succession of cars which earned the title "Standard of the World."

Beyond that, loomed for us only one hope and possibility—the promise of a motor in which there would be *no* lapse, *no* pause, *no* hesitation between impulses, but an overlapping of strokes so complete as to produce a flow of power almost literally liquid in its continuity.

We sought the medium by which the Cadillac would be endowed, not with *approximate* freedom from gear shifting, or *approximate* hill-climbing ability on high, or *approximately* swift acceleration, but with the *highest possible form* of these three characteristics.

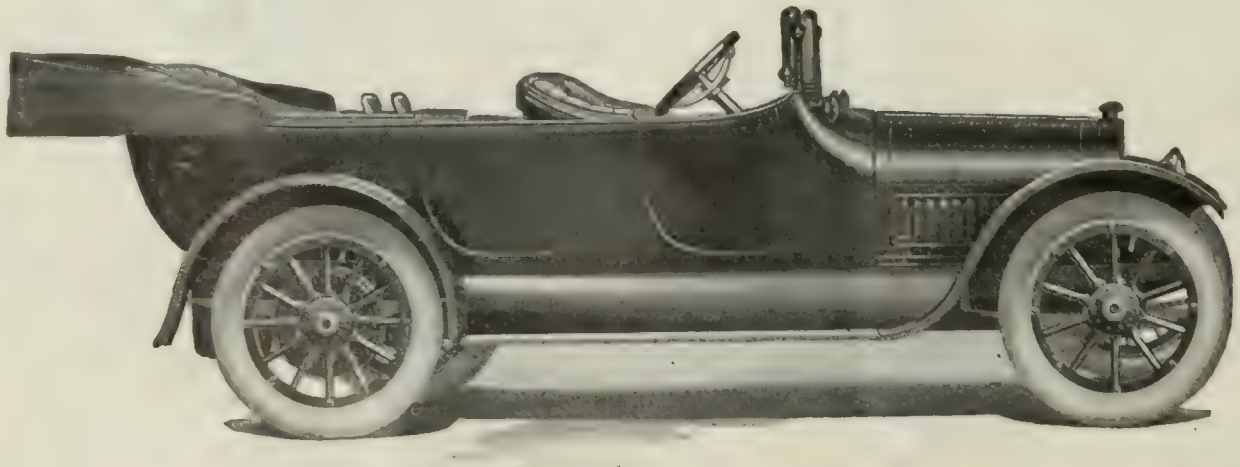
The Cadillac already possessed those qualifications in an extraordinary measure, but we wanted them developed to a point *beyond which it was not possible to go.*

This requirement pointed straight to an Eight Cylinder Cadillac with four power impulses during every revolution of the flywheel.

How fully these luxuries of travel have been achieved, nothing but your first memorable ride in the new Cadillac can reveal.

As the Cadillac softly speeds along under the almost magic influence of this new power principle, you become oblivious to the wonderful mechanism which gives you motion. The sensation is as unique as though you had never motored before—the sense of floating through space comes to you as it never came to you before.

It is useless to try to depict in words, thrills which you have never felt—or to portray a degree of ease which you have never experienced.



Good roads yield up a velvet quality of travel undreamed of.

Bad roads lose much of their terror, and hills seem almost to flatten out before you—so easily, so quietly, and with so little effort does the car surmount them.

In operation, you enjoy the extreme of flexibility—from less than three miles an hour in crowded city streets and congested traffic to more than sixty miles an hour on the open highway, without change of gears.

Comfort is subserved in the highest degree by the absence of vibration and the pronounced flexibility—and, again, by the yielding springs; the ease with which the car is handled and controlled; the smoothness of the worm bevel driving gears, the soft clutch action and the exceptional sense of rest and relaxation.

The supreme motoring experience of your life awaits you when you take your first ride in this truly remarkable car.

Seven Passenger Touring Car illustrated with Eight Cylinder V Type Engine.
Observe that the Power Plant does not demand a hood of abnormal proportions.

Styles and Prices

Standard Seven Passenger and Five passenger cars, Four passenger Salon and Roadster, $1975. Landaulet Coupe, $2500. Five passenger Inside Drive Limousine $2800. Seven passenger Standard Limousine $3150. Berline type Limousine $3600. Prices F.O.B. Detroit.

Dealers will have demonstrating cars in the near future

JUST A WORD

Announcements are invited of Red Cross benefits of any kind, including the name and address of the chairman or secretary.

A dozen copies of the End of the War Circular, which has been lately issued by The Independent will be sent to any address on application. It is an attractive chance to introduce new readers.

The rapid growth in the circulation of The Independent is a welcome indication of the regard in which it is held by readers. The cash receipts for subscriptions in the month of August were two hundred and twenty-eight per cent in excess of the receipts for August a year ago. Increased orders from newsdealers are illustrated by the following: A Los Angeles dealer increases his order from 25 copies to 70 copies a week; one at Columbus, Ohio, from 25 to 80; one at Pittsburgh, Pennsylvania, from 25 to 150; one at Cleveland, Ohio, from 10 to 60; one at Richmond, Virginia, from 10 to 70; one at Nashville, Tennessee, from 10 to 50; one at Tampa, Florida, from 5 to 20.

The letter printed below expresses appreciation which is multiplied many times in our daily mail. The Independent is counted by its readers as one of the most effective periodicals in its continued Story of the Great War:

Your reports of the Mexican situation and the conference at Niagara were so fair and comprehensive that I was fully prepared and not disappointed in the way you are handling the momentous European news. In fact, Dr. C. and I have decided, as busy people, to merely skim the daily headlines—which are usually contradicted that afternoon—and to wait for The Independent to tell us what really happened and why. For while you are undoubtedly a "forward looking" magazine, somebody in your office has done a lot of "looking backward" to be able to give such convincing reasons for this conflict.—K. H. C., Selma, Alabama.

THE OTHER FRANCO-PRUSSIAN WAR

From The Independent, September 29, 1870

If Count Bismarck is sincere in offering peace on condition of the surrender of Metz and Strasbourg, and such other indemnities as are named, then we have only to say that no conqueror was ever more moderate.

The great events occurring around Paris have drawn the attention of the world in a great measure from the amazing fact of the occupation of Rome by the Italian troops and the virtual downfall of the Pope as a temporal prince. . . . The gigantic operations carrying in France, the immense scale of the military demonstrations, the enormous carnage of the battle-fields, the frightful extent of the misery and desolation that marks the path of the victorious invaders, naturally enough dwarf the almost unresisted entrance of the Italian army into the Eternal City.

CALENDAR

The Disciples of Christ hold their national convention in Atlanta, Georgia, *October 7* to *14*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The annual meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at the University of Virginia *October 22* and *23*.

The seven hundredth anniversary of the birth of Roger Bacon will be observed at Columbia with commemorative exercizes and the publication of a volume of studies. A great pageant of the culture of the thirteenth century will be given on *November 5, 6,* and *7*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 29*.

The twelfth annual Philadelphia Water Color exhibition will be held at the Philadelphia Academy of the Fine Arts, *November 8* to *December 13*.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

A business efficiency exposition will be held under the auspices of the Cleveland Chapter, American Institute of Banking, from *November 14* to *21*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

The fifth International Congress of the American Republics will hold its opening session on *November 29* at Santiago, Chile. It will be in session for several weeks, adjourning about New Year's, 1915.

VOLUME 79 MONDAY, SEPTEMBER 28, 1914 NUMBER 3433

THE WAY TO DISARM: A PRACTICAL PROPOSAL

BY HAMILTON HOLT

IN his famous essay, *Perpetual Peace,* published in 1795, Emmanuel Kant, perhaps the greatest intellect the world has ever produced, declared that we never can have universal peace until the world is politically organized and it will never be possible to organize the world politically until the people, not the kings, rule.

If this be the true philosophy of peace, then when the Great War is over, and the stricken sobered peoples set about to rear a new civilization on the ashes of the old, they cannot hope to banish war from the earth unless they are prepared to extend democracy everywhere, and to organize the international realm on a basis of law rather than force.

The question of the extension of democracy is a domestic one. It can hardly be settled by joint action of the nations. World organization and disarmament, however, can be provided for in the terms of peace or by international agreement thereafter. As the United States seems destined to play an important part in the great reconstruction at the end of the war, this is perhaps the most important question now before American statesmanship.

LAW OR WAR

THE only two powers that ever have governed or ever can govern human beings are reason and force—law and war. If we do not have the one we must have the other.

The peace movement is the process of substituting law for war. Peace follows justice, justice follows law, law follows political organization. The world has already achieved peace, thru justice, law and political organization in hamlets, towns, cities, states and even in the forty-six sovereign civilized nations of the world. But in that international realm over and above each nation, in which each nation is equally sovereign, the only way for a nation to secure its rights is by the use of force. Force, therefore—or war as it is called when exerted by a nation against another nation—is at present the only legal and final method of settling international differences. In other words, the nations are in that state of civilization today where, without a qualm, they claim the right to settle their disputes in a manner which they would actually put their own subjects to death for imitating. The peace problem, then, is nothing but the problem of finding ways and means of doing *between* the nations what has already been done *within* the nations. International law follows private law. The "United Nations" follow the United States.

At present international law has reached the same state of development that private law reached in the tenth century. Professor T. J. Lawrence (in his essay *The Evolution of Peace*) distinguishes four stages in the evolution of private law:

1. Kinship is the sole bond; revenge and retaliation are unchecked, there being no authority whatever.
2. Organization is found an advantage and tribes under a chief subdue undisciplined hordes. The right of private vengeance within the tribe is regulated but not forbidden.
3. Courts of justice exist side by side with a limited right of vengeance.
4. Private war is abolished, all disputes being settled by the courts.

It is evident that in international relations we are entering into the third stage, because the nations have already created an international tribunal which exists side by side with the right of self-redress or war.

LIKE THE AMERICAN CONFEDERATION

FURTHERMORE, a careful study of the formation of the thirteen American colonies from separate states into our present compact Union discloses the fact that the nations today are in the same stage of development that the American colonies were about the time of their first confederation. As the United States came into existence by the establishment of the Articles of Confederation and the Continental Congress, so the "United Nations" will come into existence thru the development of The Hague Court and the recurring Hague Conferences; The Hague Court being the promise of the Supreme Court of the world and The Hague Conferences being the prophecy of the parliament of man. We may look with confidence, therefore, to a future in which the world will have an established court with jurisdiction over all questions, self-governing conferences with power to legislate on all affairs of common concern, and an executive power of some form to carry out the decrees of both. To deny this is to ignore all the analogies of private law and the whole trend of the world's political history since the Declaration of Independence. As Secretary of State Knox said not long ago:

We have reached a point when it is evident that the future holds in store a time when war shall cease, when

the nations of the world shall realize a federation as real and vital as that now subsisting between the component parts of a single state.

It would be difficult to recall a more far-visioned statement than this emanating from the chancellery of a great state. It means nothing less than that the age-long dreams of the poets, the prophets and the philosophers have at last entered the realms of practical statesmanship.

But now the Great War has come upon us. "When the storm is spent and the desolation is complete; when the flower of the manhood of Europe has past into eternal night; when famine and pestilence have taken their tithe of childhood and age," will then the exhausted and beggared that live on be able to undertake the task of establishing that World Government which the historian Freeman has called "the most finished and the most artificial production of political ingenuity"?

THE HAGUE OR THE LEAGUE OF PEACE

IF it can be done at all it can only be done in one of two ways.

First. By building on the foundations already laid at The Hague the Federation of the World.

Second. By establishing a Great Confederation or League of Peace, composed of those few nations who thru political evolution or the suffering of war have at last seen the light and are ready here and now to disarm.

It is obvious that the time is scarcely ripe for voluntary and universal disarmament by joint agreement. There are too many medieval-minded nations still in existence. The Federation of the World must still be a dream for many years to come. It must be developed slowly, step by step.

The immediate establishment of a League of Peace, however, would in fact constitute a first step toward world federation and does not offer insuperable difficulties. The idea of a League of Peace is not novel. All federal governments and confederations of governments, both ancient and modern, are essentially leagues of peace, even tho they may have functions to perform which often lead directly to war.

The ancient Achaian League of Greece, the Confederation of Swiss Cantons, the United Provinces of The Netherlands, the United States of America, and the Commonwealth of Australia are the most nearly perfect systems of federated governments known to history. Less significant, but none the less interesting to students of government, are the Latin League of thirty cities, the Hanseatic League, the Holy Alliance, and in modern times, the German Confederation. Even the recent Concert of Europe was a more or less inchoate League of Peace. The ancient leagues as well as the modern confederations have generally been unions of offense and defense. They stood ready, if they did not actually propose, to use their common forces to compel outside states to obey their will. Thus they were as frequently leagues of oppression as leagues of peace.

THE PROBLEM OF FORCE

THE problem of the League of Peace is therefore the problem of the use of force. Force internationally exprest is measured in armaments. The chief discussion which has been waged for the past decade between the pacifists and militarists has been over the question of armaments. The militarists claim that armaments insure national safety. The pacifists declare they inevitably lead to war. Both disputants insist that the present war furnishes irrefutable proof of their contentions.

As is usual in cases of this kind the shield has two sides. The confusion has arisen from a failure to recognize the threefold function of force:

1. Force used for the maintenance of order—police force.
2. Force used for attack—aggression.
3. Force used to neutralize aggression—defense.

Police force is almost wholly good.

Offense is almost wholly bad.

Defense is a necessary evil, and exists simply to neutralize force employed for aggression.

The problem of the peace movement is how to abolish the use of force for aggression, and yet to maintain it for police purposes. Force for defense will of course automatically cease when force for aggression is abolished.

The chief problem then of a League of Peace is this: Shall the members of the League "not only keep the peace themselves, but prevent by force if necessary its being broken by others," as ex-President Roosevelt suggested in his Nobel Peace Address delivered at Christiania, May 5, 1910? Or shall its force be exercized only within its membership and thus be on the side of law and order and never on the side of arbitrary will or tyranny? Or shall it never be used at all? Whichever one of these conceptions finally prevails the Great War has conclusively demonstrated that as long as War Lords exist defensive force must be maintained. Hence the League must be prepared to use force against any nations which will not forswear force. Nevertheless a formula must be devised for disarmament. For unless it is a law of nature that war is to consume all the fruits of progress disarmament some how and some way must take place. How then can the maintenance of a force for defense and police power be reconciled with the theory of disarmament?

THE CONSTITUTION OF THE LEAGUE

IN this way: Let the League of Peace be formed on the following five principles:

First. The nations of the League shall mutually agree to respect the territory and sovereignty of each other.

Second. All questions that cannot be settled by diplomacy shall be arbitrated.

Third. The nations of the League shall provide a periodical assembly to make all rules to become law unless vetoed by a nation within a stated period.

Fourth. The nations shall disarm to the point where the combined forces of the League shall be a certain per cent higher than those of the most heavily armed nation or alliance outside the League. Detailed rules for this pro rata disarmament shall be formulated by the Assembly.

Fifth. Any member of the League shall have the right to withdraw on due notice, or may be expelled by the unanimous vote of the others.

The advantages that a nation would gain in becoming a member of such a league are manifest. The risk of war would be eliminated within the League. Obviously the only things that are vital to a nation are its land and its independence. Since each nation in the League will have pledged itself to respect the territory and the sovereignty of every other, a refusal to do so will logically lead to expulsion from the League. Thus every vital question will be automatically reserved from both war and arbitration. All other questions are of secondary importance and can readily be arbitrated.

By the establishment of a periodical assembly a

method would be devised whereby the members of the League could develop their common intercourse and interests as far and as fast as they could unanimously agree upon ways and means. As any law could be vetoed by a single nation, no nation could have any fear that it would be coerced against its will by a majority vote of the other nations. By such an assembly the League might in time agree to reduce tariffs and postal rates and in a thousand other ways promote commerce and comity among its members.

As a final safeguard against coercion by the other members of the League, each member will have the right of secession on due notice. This would prevent civil war within the League. The right of expulsion by the majority will prevent one nation by its veto power indefinitely blocking all progress of the League.

THE SCRAP OF PAPER

BUT it will be said that all these agreements will have no binding effect in a crisis. A covenant is a mere "scrap of paper" whose provisions will be violated by the first nation which fancies it is its interest to do so. In order to show that their faith is backed up by deeds, however, the nations on entering the League agree to disarm to a little above the danger point, and put all their defensive power under a federal authority. This is the real proof of their conversion to the peace idea.

Thus the nations which join the League will enjoy all the economic and political advantages which come from mutual coöperation and the extension of international friendship and at the same time will be protected by an adequate force against the aggressive force of the greatest nation or alliance outside the League. The League therefore reconciles the demand of the pacifists for the limitation of armaments and eventual disarmament and the demand of the militarists for the protection that armament affords. Above all the establishment of such a league will give the liberal parties in the nations outside the League an issue on which they can attack their governments so as sooner or later to force them to apply to the League for membership. As each one enters there will be another pro rata reduction of the military forces of the League down to the armament of the next most powerful nation or alliance outside it; until finally the whole world is federated in a brotherhood of universal peace and armies and navies are reduced to an international police force.

This is the plan for a League of Peace. Is the hour about to strike when it can be realized? If only the United States, France, and England would lead in its formation, Belgium, Holland, Switzerland, Denmark, Norway, Sweden, Argentina, Brazil, Chile and others might perhaps join. Even if Russia and Germany and Japan and Italy stayed out, the League would still be powerful and large enough to begin with every auspicious hope of success.

THE DESTINY OF THE UNITED STATES

IT would seem to be the manifest destiny of the United States to lead in the establishment of such a league. The United States is the world in miniature. The United States is the greatest league of peace known to history. The United States is a demonstration to the world that all the races and peoples of the earth can live in peace under one form of government, and its chief value to civilization is a demonstration of what this form of government is.

Prior to the formation "of a more perfect union" our original thirteen states were united in a confederacy strikingly similar to that now proposed on an international scale. They were obliged by the articles of this confederacy to respect each other's territory and sovereignty, to arbitrate all questions among themselves, to assist each other against any foreign foe, not to engage in war unless called upon by the confederation to do so or actually invaded by a foreign foe, and not to maintain armed forces in excess of the strength fixed for each state by all the states in congress assembled.

It is notable that security against aggression from states inside or outside the American Union accompanied the agreement to limit armaments. Thus danger of war and size of armaments were decreased contemporaneously.

It is also notable that from the birth of the Republic to this hour every President of the United States has advocated peace thru justice. From the first great Virginian to the last, all have abhorred what Thomas Jefferson called "the greatest scourge of mankind."

When the Great War is over and the United States is called upon to lead the nations in reconstructing a new order of civilization, why might not Woodrow Wilson do on a world scale something similar to what George Washington did on a continental scale?

Stranger things than this have happened in history. Let us add to the Declaration of Independence a Declaration of Interdependence.

TO THE PEACE PALACE AT THE HAGUE

BY ROBERT UNDERWOOD JOHNSON

Builded of Love and Joy and Faith and Hope,
Thou standest firm beyond the tides of war
That dash in gloom and fear and tempest-roar,
Beacon of Europe!—tho wise pilots grope
Where trusted lights are lost; tho the dread scope
Of storm is wider, deadlier than before;
Ay, tho the very floods that strew the shore
Seem to obey some power turned misanthrope.

For thou art witness to a world's desire,
And when—oh, happiest of days!—shall cease
The throes by which our Age doth bring to birth
The fairest of her daughters, heavenly Peace,
When Man's red folly has been purged in fire,
Thou shalt be Capitol of all the Earth.

ON NOT BELIEVING WHAT FOLKS SAY OF THEMSELVES

THE Kaiser made two mistakes. He believed that Great Britain was on the brink of civil war. He thought the French army was inefficient and unprepared. In both cases he had the highest official authority for his assumption.

Had not the Opposition repeatedly proclaimed in Parliament their intention of resisting by force the imposition of Home Rule on Ulster? Had not the Premier openly admitted the danger of civil war? Had not members of Parliament and retired officers raised an army of a hundred thousand men and organized a provisional government for the rebellious province? Had not officers in the service announced their intention to disobey orders rather than to coerce Ulster? Was not the rest of Ireland as ready and nearly as well prepared to fight in case the Home Rule bill failed to pass? And who should know this better than the Kaiser, since his factory had furnished the arms with which the Ulsterites proposed to fight the Government?

Yet no sooner was war declared than John Redmond and Sir Edward Carson were standing shoulder to shoulder and Ireland, north and south, was sending more than its quota of volunteers to the continent.

In the case of France the evidence on which the Kaiser based his opinion was equally conclusive—and equally wrong. Shortly before the war a commission appointed by the Government for the purpose of investigating the condition of the army, brought in its report. This was, to use our American political language, a "muck-raking," not a "white-washing," report. One would naturally infer from reading it that the French army was in a deplorable condition, the officers incompetent, the men ill-trained, the artillery antiquated, the supplies inadequate, the fortifications insufficient. How much truth there was in their criticism cannot now be determined. We can only say that any one who took the findings of the commission literally must have been very much surprized at the efficiency manifested by the French troops in the last two months.

The theory has been advanced that this pessimistic report was purposely contrived to deceive the Kaiser and induce him to make war upon a power in the pink of condition. But it is well to be skeptical of all such ascriptions of Machiavelian astuteness. Probably we Americans, familiar with the political methods of a republic, could interpret the report better than the Kaiser. A "scare-story" of this sort always come out when a bill for an increased appropriation for armament is up.

It is interesting, however, to note that in the face of this condemnation of their equipment the French troops have given a far better account of themselves than they did in 1870, when they set out for Berlin on the assurance of the Minister of War that the army was ready "to the last gaiter button." Perhaps the gaiter buttons were all there, but other things more needful were not. Ammunition, guns, maps, food, horses and clothing were not to be found, at least where they were wanted. Premier Ollivier announced that war was declared "with a light heart"—and up to the time of his death a year ago he was trying vainly to explain and to prove by citations of lexicographers and standard authors that his unhappily chosen phrase, *un cœur léger*, meant not "carelessly" or "gladly," but "courageously" and "innocently."

But this time the French went forth to war—we will not say "with a heavy heart," for that, too, may be ambiguous—but with a full realization of the strength of their foe and a calm determination to do the best they could to protect their country from conquest.

THE WAY OF SOCIAL SELECTION

WHETHER the obstetrical methods developed at Freiburg im Baden by Dr. Bernhardt Krönig and Dr. Karl Gauss shall fulfil, or not, all the promise that their enthusiastic advocates see in them, it is certain that the limit of progress in diminishing the pains and dangers of childbirth has not been reached.

In no other department of surgery and medicine have greater marvels already been accomplished, if we compare present day experience with the state of facts less than a hundred years ago. The so-called *Dämmerschlaf*, or twilight sleep, as utilized at Freiburg, is a state of partial inhibition of mental processes, particularly memory, with practical unconsciousness of pain, stopping short, however, of the deep unconsciousness produced by ether or chloroform. It is induced by doses of scopolamin and morphium. It is claimed for this partial anesthesia that it does not check natural labor pains, and that no injurious after consequences have ever developed in mother or child in the thousands of cases in which the method has been tried. It is not for us to pass judgment upon this practise. We mention it only as indicative, and as substantiating our main contention, that there is every reason to expect that childbirth will become among civilized people what it is among savages, a simple and easy matter, practically free from dread, pain and fatality.

How great a part the dread of childbirth has played in the diminishing birth rate of the well-to-do and educated classes, in the Protestant population of western Europe and the United States, it is not possible to say, except that it has admittedly been large. Another large factor has been the ravages of the sexual diseases, and a third has been, and is, the worthy desire to raise the standard of living. This last factor will continue to check in a measure any tendency to such disastrous over-population as we associate with the doctrines of Malthus; but it is noticeable that a strong and healthy opinion is developing now among the most intelligent people, that the rearing of reasonably large and sturdy families is both a duty and a privilege. Also a large influence of the new and wholesome public education on the subject of vice and its physical dangers is already evident. When, therefore, we add to these encouraging reactions the definite and well-grounded expectation of relatively safe and easy childbirth, it becomes reasonable to predict a marked change in the character of the heredity selection that has been going on for two or three generations.

This selection, as every well-informed person knows, has been adverse and was becoming portentous. The ignorant, the superstitious and the irresponsible have bred to the limit. The provident and ambitious, the educated and the well-to-do, have been rearing smaller and smaller families. So far, indeed, has this perilous tendency gone, that some of our most thoughtful statisticians have not hesitated to predict the extinction, first of the Puritan stock in America, and later, but not remotely, of the Anglo-Saxon stock in the world. It has looked as if the future of the human race belonged to the black and yellow peoples, and to that part of the white population which is amenable to the authority and discipline of the Roman Catholic Church.

Those who have clung to a hope of better things have based their confidence chiefly upon a selective death rate, offsetting the adverse birth rate. They have made as much as possible out of the fact that the educated and prosperous parents of small families lose fewer children by death than the ignorant, the superstitious and the poor inevitably do. Unhappily, while the selective death rate has undoubtedly helped the educated groups to some extent, it has by no means offset their declining birth rate. If, however, a reasonably high birth rate should again appear in these classes, their relatively low death rate would begin to count tremendously, and in course of time the actual selection would be, as it was in former generations, in favor of the intelligent and well-to-do.

That it is not excessive optimism to expect this profoundly important change of tendency in the near future we think the best informed students of our social evolution will agree. And if the change occurs, the dangers which now threaten the intellectual life of mankind will be averted. To speak very plainly, and without presenting an indictment of any teaching or ecclesiastical policy, it is too obvious for need of demonstration that a social selection which proceeds thru the birth rate chiefly plays into the hands of those who believe in keeping the masses in ignorance and obedience; while a social selection that proceeds chiefly thru the death rate plays as certainly into the hands of those who believe in experimental science and therefore, necessarily, in the broadest secular education and intellectual liberty. Death rates are held down by knowledge and sanitation, not by incantations, miracles, or other Middle Age methods.

THE "BREATHING SPELL" TREATIES

PEACE treaties of the type invented by Mr. Bryan have just been signed at Washington with four nations, Great Britain, France, Spain and China. Similar treaties are already in force with Italy and seventeen of the smaller nations of the world. Germany, Russia, Japan, Turkey and Greece have exprest their approval of the principle involved in these instruments. These agreements provide for the referment of all disputes between their signatories to a permanent commission for investigation, and for the suspension of the beginning of hostilities for one year while any such dispute is being investigated.

The outbreak of the Great War has led many a sceptic to fleer at every kind of peace treaty. But the circumstances attending its beginning gave a powerful object lesson of the value of such "breathing-spell" treaties as these.

A study of the diplomatic correspondence which past with feverish speed among the great nations of Europe in the last days of July, as set forth in the British and German White Papers, discloses the significant part which haste and the pressure of cumulating events played in the bringing on of war.

Who, after reading those papers, can doubt that a "breathing-spell" might have saved the world the cataclysm of the Great War? Indeed, the British Ambassador at Vienna, Sir Maurice de Bunsen, has declared, in an official communication to his Government, that "a few days' delay might in all probability have saved Europe from one of the greatest calamities in history."

The Bryan treaties are a substantial step in the direction of peace. Indeed, they are the most advanced peace pacts on the international statute books. One more step is indispensable. It will probably not be so easy to take.

A treaty, no matter how excellent its terms, is of value only so long as it is kept. Once broken, it becomes indeed a mere "scrap of paper."

The nations of the world must not only make treaties of peace. They must find some way to compel each nation to keep the solemn agreements to which it has pledged its faith.

But each treaty like those already signed by this country and twenty-two other nations adds to a growing body of international public opinion which in the long run will create a powerful sanction for the keeping of treaty faith and establish an impresssive penalty for the breaking of solemn promises.

THE TRICK OF TURKEY

TURKEY has taken the wrong time and the wrong way to rid herself of her treaty obligations in regard to foreigners residing within her territory, and in regard to her foreign trade.

It is the wrong time because she has attempted to take advantage of the preoccupation imposed upon the powers by the Great War to do what she would not have dared to do in time of peace.

It is the wrong way because Turkey has no right to put a summary end to the capitulations without consulting the other parties to them.

The State Department has sent to the Turkish Government a dignified but unqualified refusal to concur in Turkey's action. The department declares unconditionally that the American Government "does not acquiesce in the endeavor of the Imperial Government to set aside the capitulations," and furthermore that it "does not recognize that the Ottoman Government has a right to abrogate the capitulations, or that its action to this effect, being unilateral, can have any effect upon the rights and privileges enjoyed under the capitulatory conventions."

The capitulations affect the United States mainly as to the protection given to our missions and schools in Turkey, for our commercial relations with the country are inconsiderable. These missions are conducted mainly by the American Board of Foreign Missions and by the Presbyterian Board in Beirut and the vicinity. The interests of Great Britain, France, Italy and Germany are mainly commercial and are important. Under the capitu-

[illegible] cannot increase her taxes on exports or imports without permission from the other powers. Of course this is humiliating, as is also the very serious fact that the powers do not trust the Turkish courts, and insist that trials of foreigners for any offense shall be conducted by their consuls in consular courts.

The first of the capitulations to be put into effect—that with France—is almost four centuries old. Our own agreement with Turkey dates from an early period in the history of the United States.

The capitulations with Turkey ought to be kept in force only so long as the interests of foreigners in the country need such a safeguard. The principle of extraterritoriality is not one which one civilized country should insist upon applying in the case of another civilized country. It is just because Turkey has not shown herself civilized in her treatment of foreigners within her borders that it has been justifiable for the powers to maintain the capitulations till now. It is doubtless humiliating for Turkey. But it is a humiliation brought upon her by her own incapacity and lack of the self-restraint of civilization.

The United States has shown in the case of Japan that it will not demand extraterritoriality for its citizens a day longer than is really necessary. The capitulations with Japan were abrogated, by mutual consent, in 1899.

But the action was only taken by us when the persons and privileges of Americans in Japan had become secure thru the action of the Japanese Government.

It is perfectly safe to say that so far as the United States is concerned the capitulations will not remain in force with Turkey a day after American citizens have become as safe there as they are in Japan. It is equally safe to say that we shall not allow Turkey to rid herself prematurely of her capitulatory obligations by sharp practise.

HOME RULE FOR IRELAND

THE Irish Home Rule bill has at last become law, but its operation, by the action of the Government majority in the House of Commons, has been suspended for one year. A bill postponing the coming into effect of the new law as well as of the Welsh Disestablishment Act was introduced by the Premier and adopted by both houses without opposition. Not only did the Irish Nationalist members loyally and gladly support the Government in this action, which means a deferring once more of the long-cherished hope which they had seen so near fulfilment, but their leader, Mr. Redmond, invited Mr. Asquith to come to Dublin with him and call for Irish recruits. He promised to stand beside him and pledged that the response would be a striking testimony to the desire of all Irishmen to stand shoulder to shoulder with the British in carrying on the righteous war in which the empire is engaged.

In striking contrast with Mr. Redmond's speech was the action of the Opposition leader, Mr. Bonar Law. He charged the Government with a breach of faith in insisting on proceeding with the Home Rule bill at this time, and pledged the Unionist party, without conditions, to support Ulster by every means in resisting Home Rule whenever it should be attempted to impose it on her by coercion. He then rose and led the body of Unionists from the House of Commons as a protest against the action of the Government.

Mr. Asquith thereupon made the contrast more impressive by declaring that the coercion of Ulster was unthinkable, and asserting that "so far as I and my colleagues are concerned, this is a thing we shall never countenance or consider."

The Unionist party, especially under its present leadership, has a fine capacity for blundering and for displaying a spirit of petty partizanship. A critical time for the empire like this was no time for the leader of the Opposition and his followers to behave in so childish and mean-spirited a manner.

If during the year to come they will only attempt to meet the Government in the fine spirit of conciliation and fair-mindedness in which Mr. Asquith and Mr. Redmond will continue to approach them, the problem of Home Rule and Ulster will be solved without any further threat of civil war and without injustice to either part of the people of Ireland. But in order to bring about this devoutly desirable consummation the Unionists must put aside partizanship and political maneuvering and approach the question with an eye single to the welfare of all concerned.

THE ARMY TO LEAVE VERA CRUZ

THE American forces are to leave Vera Cruz. The order has been issued by the President for their withdrawal at the earliest possible moment.

The decision of the Administration to take this action rests on two complementary grounds. Mexico is at peace under the Constitutionalist régime; and the continued presence of American forces at the republic's principal seaport is irritating to the Mexican people and an embarrassment to General Carranza in the carrying out of his by no means easy task.

The expedition to Vera Cruz did its work well, with a minimum of bloodshed and a maximum of patience, moderation and helpfulness. The President as commander-in-chief of the American army and navy may well be proud of their record in Mexico. As head of the American Government he may be no less proud of the growing success of his often maligned but high-minded and statesmanlike policy of "watchful waiting."

A RIGHTEOUS FILIBUSTER

FILIBUSTERING is a vicious legislative practise. Probably no one could be found to defend it—except when it is being used to harass the other party.

But vicious methods are sometimes used for laudable ends. If there is ever a time when filibustering is to be justified, it is surely in the case of such ill-timed legislation as the pending Rivers and Harbors bill.

From time immemorial the Rivers and Harbors bill has been recognized as one of the two "pork-barrel" bills with which congressmen and senators purchased popularity at the polls. To appropriate sixty-five million dollars in such a bill exactly at the time when the country is being asked to submit to a hundred million dollars of war taxes, was an indefensible performance. It is a blot on the admirable record thus far of the Democratic majority in Congress.

Senator Burton's sturdy filibuster has apparently brought the Democrats to their senses. It is a pity it should have been needed.

THE STORY OF THE WEEK

General Survey of the Fighing in France

In modern warfare the fighting is so continuous and extends over such a large area that it is impossible to divide it into distinct engagements of a definite time and place according to the usage of military history. Even such divisions as exist cannot be distinguished by us now when we have to piece together the story from fragmentary, inadequate and often purposely misleading information. But, for convenience in following the campaign, we may provisionally divide the fighting of the last fortnight into two periods and call the first week, September 5-12, the Battle of the Marne, and the second week, September 12-19, the Battle of the Aisne, for these two rivers respectively protected the center of the German line and formed the main object of attack on the part of the Allies. The Marne and the Aisne both have their origin in the Argonne hills, which form the watershed between the Seine and the Rhine basins, and they flow mainly westward and roughly parallel; the Marne emptying into the Seine near Paris, the Aisne into the Oise near Compiègne. In the region of the conflict the Marne lies twenty to thirty miles south of the Aisne.

The net result of these engagements may be summed up by saying that the Germans were defeated on the Marne and fell back to the Aisne, which they still hold. The Germans call this a "strategical retreat" and explain that by this movement they concentrate their forces, shorten their lines of communications with their base of supplies and secure a more defensible position. This is what the Allies called their retirement from the Belgian border to the Marne, and in both cases the justification is not without reason. Obviously neither party gave ground until it had to, but in both cases the retreat has been so well managed as to keep the army intact. The outstanding fact is that after many battles bigger than Waterloo, neither army has met with a decisive defeat. All attempts to outflank or cut off a wing of either army or to smash thru the center have been frustrated. No large bodies of the troops have been surrounded and captured; there has been no *debâcle* or rout on a large scale. Both sides have suffered enormous losses, the Germans doubtless more than the Allies, but neither apparently has become altogether exhausted or lost its courage. Thus far there has been no Sedan.

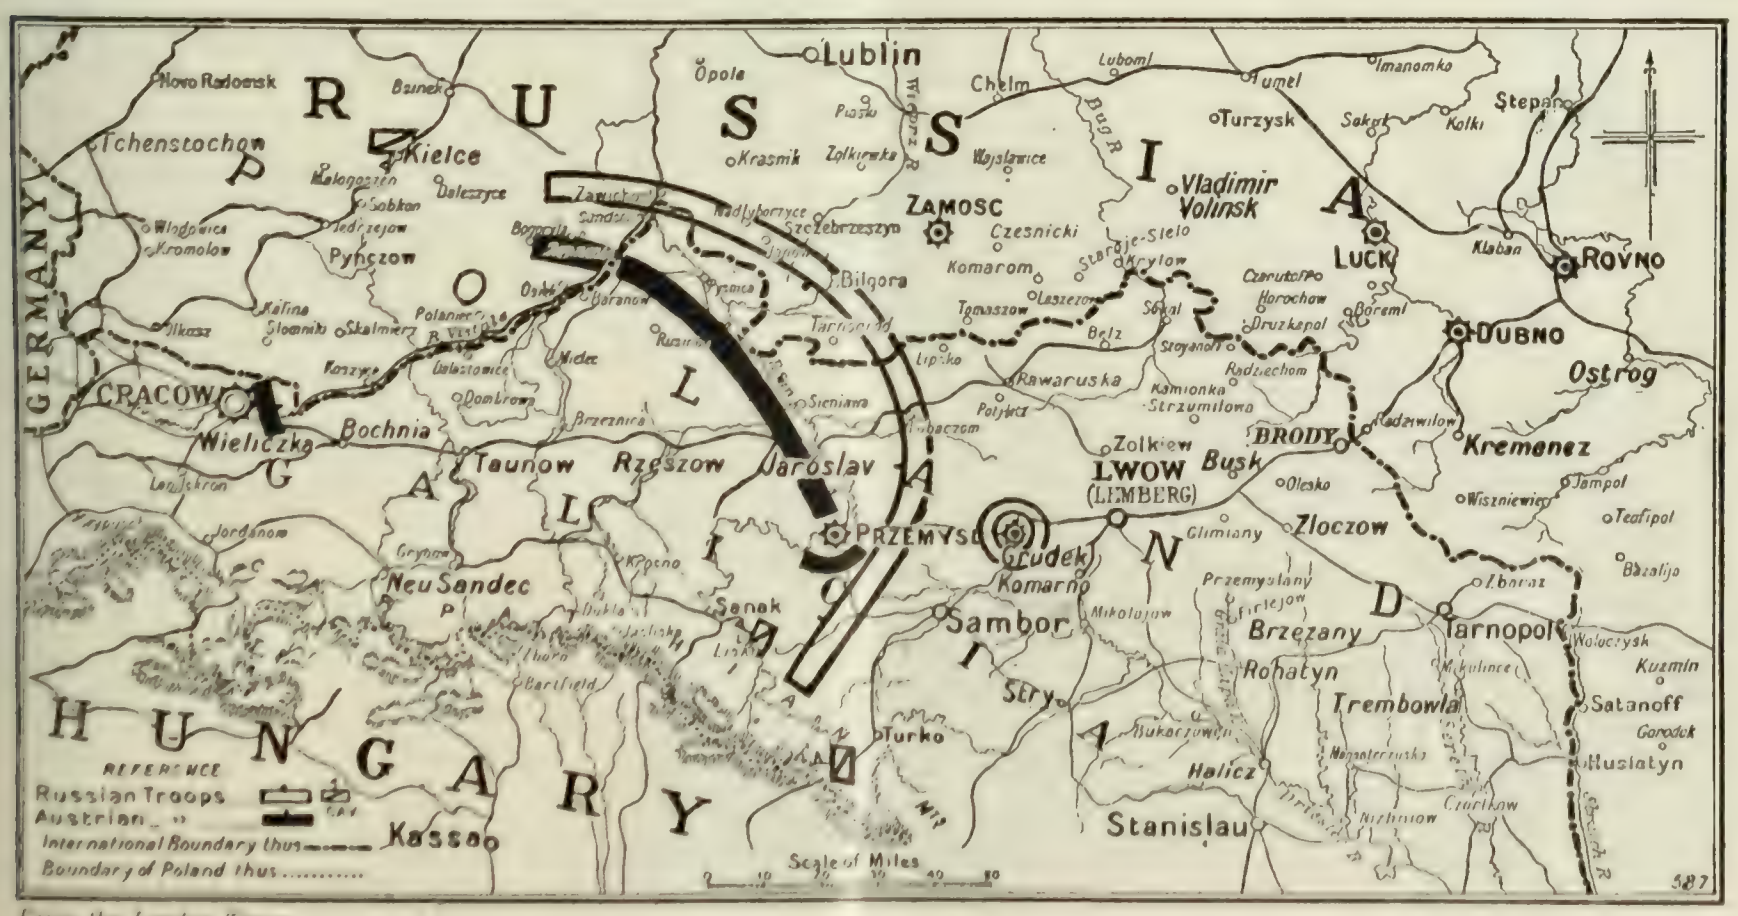
THE GREAT WAR

September 15—Germans retreating from the Marne toward the Aisne. Russians corner Austrians between San and Vistula.

September 16—General Hindenburg invades Russian Poland. The French attempt to break thru the German center in the Argonne forest. Belgian commissioners present evidence of German atrocities to President Wilson.

September 17—Continuous fighting all along the line from Chalons on the Marne to Noyon on the Oise River. Austrians invade Servia.

September 18—Germans begin the bombardment of Rheims. Japanese defeat Germans north of Kiao-chau. Irish Home Rule bill and Welsh Disestablishment bill signed, but suspended for one year.



September 19—Allies endeavoring to turn flank of General Kluck at Noyon. Germans storm Beaumont. Russians bombarding Przemysl. Rheims Cathedral shelled and burnt.

September 20—Russian cavalry raid on the San west of Przemysl. German cruiser "Konigsberg" sinks British cruiser "Pegasus" at Zanzibar.

September 21—Austrians evacuate Jaroslav. Servians approaching Sarajevo, capital of Bosnia. French gain in forest of Argonne and on the Oise.

The Battle of the Aisne

From this general view let us now turn to the consideration of some of the details. We must picture to ourselves a hilly and wooded country, full of vineyards, for it is the champagne region and the caves are stored with the ripening bottles of one of France's most lucrative exports. The country is traversed by

From the London Times

THE RUSSIAN ADVANCE IN GALICIA

The Austrians having lost Lemberg, the capital of the province of Galicia, retired behind the San river. Their right is protected by the strong fortress of Przemysl. Their left rests on the Vistula river. The Russians are bombarding the fortress and trying to get around either wing. Grudek, where the Austrians made their first stand after evacuating Lemberg, was taken by the Russians. There is a German force near Kielce to protect Cracow

THE BADLY BEATEN AUSTRIAN

General von Auffenberg, whose army in Galicia was for a considerable period, according to Petrograd dispatches, annihilated almost daily by the Russians. He seems, however, to have survived and to have withdrawn his army, with German aid, to a place where resistance is still possible

many rivers, streams and canals which serve for internal traffic and water power. These are now swollen by the heavy rains of the past ten days and the weather is chilly. The Crown Prince has telegraphed to his father for winter socks and underclothing for his troops. The rain fills the trenches which the men have to dig whenever they occupy a point in order to protect themselves against the hail of shrapnel. It is essentially an artillery duel, heavier guns, more of them, quicker firing and more accurate than ever were brought before into the battle line. The batteries may be one mile away or five, and cunningly concealed behind rocks and trees or screens of brush like Birnam woods. The smokeless powder does not betray them and even the aeroplane soaring overhead cannot always discover them. It is a game of hide and seek. Some of the French still have on their old red-legged uniforms, but the Germans, in misty gray khaki with never a glint of brass or gold, are as nearly invisible as men can be. There are probably more than a million men on each side actively engaged in this 150-mile battle line extending from the Moselle to the Sambre, from the Swiss to the Belgian border.

In general the Germans have been retiring ever since September 5, tho in many places the line has fluctuated and some points have changed hands several times. The water courses have mostly determined the lines of defense. The Germans would first entrench themselves on the hights along the southern bank of the river, it might be the Marne, the Vesle, the Oise or the Aisne. Driven from this position they would cross the river and from the hills on the northern side rain shot and shell on their pursuers, who were forced to construct pontoon bridges to take the place of the stone or steel bridges destroyed. On account of muddy ground the Germans in retreating were sometimes obliged to leave their heavy guns behind, and to throw their unused ammunition into the river. The question formerly raised as to whether troops could carry an entrenched position in the face of the murderous fire of modern machine guns has now been answered. They can and they will. The Germans attack in close ranks and actually come on faster than they can be shot down. The more open formation of the French is also effective and with less loss to the attacking party. The bayonet—once supposed to be an antiquated weapon for these days of long range fighting—has been used by the English soldiers, who claim that the Germans are more afraid of cold steel than anything else. An attack is made by alternate rushes and entrenching by detachments, the men scurrying up the slope of a hill like rabbits and then digging into the ground like moles.

THE HOMECOMING

After the armies have past and the fires are burned out and the newspapers are filled with new outrages the desolation still remains to be faced and overcome. Here are peasant women searching for their belongings in the ruins of their home at Melle, burned by the Germans

The Bombardment of Rheims

The Germans occupied Rheims for ten days. On September 3 they entered the city and on the 13th they were driven out by the French and retreated to the northeast in the direction of Rethel. A proclamation was issued by order of the German authorities warning the people of Rheims that if they attacked the German soldiers or interfered with their operations in any way the city would be burnt and the eighty-one prominent citizens who had been seized as hostages would be hanged.

On September 18 the Germans, having been reinforced, resumed the offensive and began the bombardment of the city from the dismantled forts on the wooded hills three miles north. The city was soon set on fire in many different places and the famous cathedral was partially demolished. The inhabitants mostly sought refuge in cellars and champagne vaults, but 400 civilians are said to have been killed. We quote from the vivid description of the London *Evening News* correspondent, almost the only first hand report of a battle by a competent journalist. He viewed the bombardment

from a tower of the Cathedral on Friday:

Directly the shells began to hit the cathedral in the morning, some German wounded were brought in from the hospital near by and laid on straw in the nave, while Abbe Andrieux and a Red Cross soldier pluckily went up to the tower and hung out two Geneva flags.

I believe a shell which hit the building while I was there was a stray shot, for the German gunners could hardly miss so huge a mass, towering as it does above the town, if they really wished to reach it.

Once one of them, screaming abominably, crashed thru the transept roof of the other end of the cathedral. I shall never forget the note of horrified surprize and indignation that burst from the old sacristan as a shell smashed a hole in a tall house before our eyes. "That's my house," he shouted, as if for the German gunners three miles away to hear his protest. Then his voice dropt to a key of bitter grief. "Ah, the misery of it!" was all he said, and his face remained unmoved, for none of the little group of priests and cathedral officials showed either fear or emotion.

"You must remember we have had three days of this," said one of them.

Meanwhile, the courtesy and good nature shown to the German wounded left in the city was astonishing. While shells were falling around the temporary hospital in the nave I found French officers talking to them, bringing wine and giving them every consideration. There was only one subject the Germans wanted to talk about. Was it not possible, they asked, to get a bigger Red Cross flag to put on the tower?

The bombardment was continued for several days after this. One of the towers of the cathedral was struck, the rose window broken and all the woodwork burnt. President Poincaré and the Pope have published protests against such an act of vandalism.

GUARDED AGAINST THE TERROR BY NIGHT

The Thames Embankment, London, with searchlights sweeping the sky to detect the approach of the long-threatened Zeppelins

The Campaign in Galicia

It would be impossible to accept all the reports of Russian victories which come to us from Petrograd (*née* St. Petersburg), for the sum of the Austrians stated to have been killed and captured amounts to more than the total army of the Dual Monarchy. If so, the Russians could march on Cracow without any opposition. As a matter of fact the Russians have been defeated in north Poland and have made little progress in the south, altho they have inflicted serious blows upon the retreating Austrian army. General Dankl's army invading Poland was not cut off and destroyed as was reported by Petrograd. It doubtless suffered heavy losses, but the bulk of it succeeded in crossing the border into Galicia and uniting with the rest of the Austrian forces to the west of the River San.

Here the Austrians have established their new position, with their left resting on the Vistula on the Polish border and their right protected by Przemysl, the only first-class fortress in Galicia except Cracow. The Austrian front is sheltered by the San, whose bridges were destroyed by the Austrians in their retreat. Przemysl is a town of 54,000 inhabitants encircled by a ring of forty-one forts connected by railroad tracks and armed with a thousand guns. The garrison comprises 60,000 men. Also on the left bank of the San and twenty-two miles to the north is Jaroslav, a town of about half the size and not so well fortified. Both these strongholds were bombarded from the eastern side of the river and the latter has been evacuated by the Austrians.

At the same time the Russians are trying to turn either flank of the Austrian position in order to invest these two strongholds in the rear. To the north of Jaroslav the Russians claim to have gained the left bank of the San, but if they attempt to make their way up the Vistula to Cracow they will come between the Austrian forces at Jaroslav and the Germans who are on the north side of the Vistula. No decisive defeat seems to have been inflicted upon the Germans in this region and they presumably still hold that corner of Russian Poland from Tchenstochow to Kielce. The Russians claim to have destroyed the German army corps under General von Treyza at Sandomir near the junction of the Vistula and the San and also to have captured an artillery train including thirty-six howitzers sent from Breslau into Poland.

A conservative estimate places the Austrian losses in Galicia at 300,000, nearly a third of their forces. They are also said to have lost a thousand guns, two-thirds of their artillery.

German Invasion of Northern Poland

General Hindenburg, who has charge of the German campaign in the north, has driven the Russians out of East Prussia, and, presumably, relieved Königsberg. Collecting all the available men from the garrisons of the fortresses of West Prussia and combining them with the forces sent from Belgium and France, he attacked the Russians under General Rennenkampf, who were entrenched on a north and south line a little

WHILE THE GREAT WAR IS RAGING: SIGNING FOUR PEACE TREATIES

The roll of nations with which the United States now has "breathing spell" treaties, requiring the investigation by a commission of all subjects of dispute and the suspension of hostilities meanwhile, is now twenty-six. Treaties with France, England, Spain and China were signed on September 15. Seated at the table with Secretary Bryan and Mrs. Bryan are (from the left) the Ambassadors, Señor Don Juan Riano y Gayangos, from Spain; M. J. J. Jusserand, from France; Sir Cecil Arthur Spring-Rice, from Great Britain, and Mr. Kai Fu Shah, from China

east of Königsberg. The Russian right toward the Baltic was protected by marshes and forests and the left by the Masure lakes. The Russian forces, according to the German official account, were composed of the Second, Third, Fourth, and Twentieth Corps, two reserve divisions, and five cavalry divisions.

General Hindenburg, unexpectedly to his adversary, plunged into the labyrinth of lakes, streams and swamps of the Masure district and succeeded in outflanking the Russian position and on September 10, after three days' fighting, General Rennenkampf withdrew his troops in good order into Russia.

General Hindenburg then carried the war into the enemy's country and is said to have got as far as the River Robr on his way toward the fortress of Osowiec in Russian Poland.

War Taxes in Peace

With the Republicans in both Houses of Congress firmly lined up against the emergency revenue bill, and asserting that economy would make it unnecessary, the Ways and Means Committee presented to the House on the 21st a bill to raise $105,000,000 by special taxes.

Before the caucus on the 15th, which committed the House Democrats in principle to the bill, the proposal for a three per cent tax on freight charges had been abandoned in the face of general opposition. As reported the schedule carried the greater part of the Spanish War stamp taxes, which are expected to produce $35,000,000; increased duties on beer and wines, to bring in $32,500,000; two cents per gallon on gasoline, to raise $20,000,000; a tax on brokers and bankers, to raise $5,800,000; a tobacco dealers' license, $4,000,000; and a tax on theaters in towns of more than 15,000, circuses and other shows, public billiard rooms and bowling alleys. Checks, drafts, foreign bills of exchange and letters of credit, and leases of land or tenements are exempted from the stamp tax. The stamp taxes will no longer be levied after December 31, 1915, the others run until repealed.

Filibustering for Economy

While the House waited for its emergency revenue bill the Senate was restrained from voting for river and harbor projects $53,000,000—more than half the estimated deficit in national revenues—by the vigorous opposition of the Republican minority, with some Democratic help.

As reported by the Commerce Committee, the bill appropriating that amount was bitterly attacked as "pork barrel" legislation, and the committee was driven to accept a horizontal reduction of $18,000,000. This did not satisfy the opposition, which demanded that certain items of questionable value be eliminated, and a filibuster was begun. On the 18th a compromise plan limiting the appropriation to $20,000,000, the sum necessary to complete projects already approved by Congress, failed only because of the determination of the Senators whose constituents were thus threatened with disappointment to push the bill thru to passage, keeping the Senate in continuous session till it was accomplished.

Senator Burton then proceeded to talk against the bill all night. With some aid he held the floor until four o'clock Saturday afternoon. He was then relieved by Senator Sterling, and with Senator Norris and Senator Weeks ready to take up his task, and Senator Borah hurrying back from a campaign tour to "speak indefinitely," Senator Simmons, sponsor for the bill, gave up the attempt to secure its passage before adjournment, which was taken at six o'clock Saturday. There were conflicting reports on the President's attitude, and the fortunes of the bill fluctuated with them. On Monday, however, the disaffection of Democratic Senators and the opposition of the President, which became definitely known, made it impossible to force the bill to passage, and a motion to send it back to committee, introduced for the third time, was carried. This will probably result in the elimination of all appropriations for new projects, which will cut the total to twelve or thirteen millions.

Troops to Leave Vera Cruz

So far as surface indications go the end of the Mexican incident which nearly plunged the United States into war is rapidly approaching. On September 15 President Wilson issued orders for the withdrawal of the force—now 3974 regulars and 2937 marines—which has held Vera Cruz since its occupation on April 21. It is expected that the Constitutionalist provisional government will be recognized early in October.

The news was cabled to Mexico City in time to be presented to the people at the Independence Day celebration on the evening of the 15th. It was received with enthusiasm, and the official orator of the following day's festivities was fervent in his tribute to "Professor Woodrow Wil-

ALMOST AS GOOD AS TREATIES: AN EMBASSY OF GIRL STUDENTS

This is the first time that girls have shared the privilege of study in America as beneficiaries of the American Indemnity Fund. These young women, being entertained by the secretary of the National Board for Foreign Students' Work, won their trips by a competitive examination in Peking. They will spend a year in preparatory school to gain familiarity with American customs before going to college

son, President of North America," whom he saluted in the name of all the Mexican heroes from Hidalgo to Madero, professing the conviction that "the occupation of Vera Cruz has not revealed any perfidy or any ulterior or malicious intention."

In Vera Cruz the news created great anxiety. Terrifying rumors as to Constitutionalist intentions were received, and refugees who had been connected in any way with the Huerta government and Mexicans who had served the Americans in the military administration of the city confidently expected death.

General Funston requested that the troops be allowed to remain until October 10, which would give more time to transfer authority and wind up the affairs of the custom house. This would permit the escape of many refugess.

The New Régime

The program of the Constitutionalist leaders for the establishment of a permanent government, which evidently meets with President Wilson's approval, involves the temporary withdrawal of General Carranza from official control. A Constitutionalist convention of military leaders on October 1 will name a provisional president to whom Carranza will turn over the government. This leaves him free to become a candidate for the presidency at the elections which are to be held before the end of the year.

As soon as the provisional government is organized the United States will be asked to recognize it. Steps toward the resumption of normal diplomatic relations have already been taken; the Mexican embassy in Washington has been turned over to Juan F. Urquidi, Carranza's representative, and the Constitutionalist agency will be housed there from now on.

The Mexican Government owns a majority of the stock of the National Railways, and Carranza has taken control, replacing the officials of the roads by Constitutionalists. His agents assert that the Government will turn back the property to the corporation as soon as a new board of directors can be elected.

Is Mexico at Peace?

In spite of protestations by Rafael Zubaran Campany that "peace followed more tranquilly and speedily on the triumph of the Constitutionalists' cause than even its most sanguine supporters had ever dared to expect," rumors of plots, mutinies and reprisals continue. Of these the most interesting is the story which comes from El Paso that Villa has sent troops to support José Maytorena, the insurgent governor of Sonora, and declaring himself Dictator of the North, has repulsed and virtually imprisoned General Obregon, sent by Carranza to protest. At the capital Villa was expected, with delegates representing his forces, to take part in the military convention. Zapata, however, is at the present moment conciliatory.

The most sweeping criticism of President Wilson's determination to release Mexico from pressure came from Sir Lionel Carden, the retiring British Minister to Mexico, who is under appointment to the embassy in Brazil. In an interview given three New York newspapermen he said:

> There is no law and order in Mexico now. The whole country is in a state of anarchy and when the American troops are withdrawn the thousands of Americans still there will be in a desperate plight. . . . It is a desperate shame that the United States forces are to be taken away.

The British Ambassador at Washington, Sir Cecil Spring-Rice, promptly declared the statement "unauthoritative." The Department of State has made formal inquiry of Great Britain whether the interview was accurate.

To End the Colorado Strike

President Wilson has called upon the miners and the operators of the southern Colorado coal mines, where Federal troops have been doing police duty since the end of April, to adopt a three-year truce.

The plan now proposed by the President is a working program for the resumption of peaceful operation of the mines and provides machinery for mediation when grievances arise. The principal provisions of the agreement are these:

1. The mining and labor laws of the state are to be enforced.
2. Strikers who have not been convicted of lawbreaking shall be reemployed.
3. Intimidation of non-union or union men is prohibited.
4. Wage scales, rules and regulations are to be printed and posted in each mine.
5. Each mine is to have a grievance committee elected by the miners.

This committee is to act on all grievances which application to the appropriate mine official has failed to adjust. If the committee cannot come to an agreement with the officials the point at issue shall be referred to a permanent commission of three, representing both sides, appointed by the President of the United States, and whose decisions are to be binding.

The miners in convention at Trinidad voted to enter into such an agreement, following similar action by the national union officers. The operators, however, had not given an answer when this went to press.

FROM AIX TO RETHEL

EXTRACTS FROM THE UNWRITTEN DIARY OF A PRUSSIAN OFFICER

BY ARTHUR SHERBURNE HARDY

AUTHOR OF "PASSE ROSE," "BUT YET A WOMAN," ETC.

THE following extracts from the diary letter of a Prussian officer in the field may be of interest to the public:

"*Aix, Aug. 3d.* War at last! 'The propitious moment' has been our nightly toast at the mess these weary years, and now a Servian nobody lights the match. Is the moment propitious? We think so. England is on the brink of civil war. One of those '*crimes passionels*' which delight the Boulevards is sapping the energy of France. St. Petersburg is in the throes of social revolt. Truly God is with us. It is not conceivable that Austria should tamely accept the cowardly assault upon the House of Hapsburg. Her ultimatum was a matter of course. It is equally incredible that we should be false to our treaty obligations to our ally. You will doubtless ask what pigeon-hole is to furnish the plan of campaign. Do not worry about that. Everything is foreseen and prepared. We recognize the strength of the Verdun-Epinal, Toul-Belfort lines. Frontal assaults on the east would be a waste of effort. We are not so foolish as to endeavor to push before us that mountain of sand. The trap is too evident. To assault such a line, even if it were carried, would result only in forcing the first line on its reserves and present the enemy with the advantage of interior lines and strategic railways of communication. It will be sufficient to hold the eastern front with forces sufficient to prevent an aggressive movement, to contain there an important fraction of the active French army. The blow will fall elsewhere, on the north, and it will fall before the Russian bear is on his legs. But, you say, the neutrality of Belgium! My dear friend, what do guarantees of neutrality amount to! Does Switzerland, with her neat little army of half a million and her defenses on the Italian frontier, believe in them? Why has Belgium fortified the valley of the Meuse and converted Antwerp into a fortress of the first class? Because she knows that war follows the line of least resistance and that a scrap of paper is no barrier to military necessity. You will see a vast enveloping movement pivoted on Verdun. I predict this with confidence, for the best troops of the first line are already disposed to this end. Watch the Guards, as the Spanish say of the bull! Will Belgium resist? The supposition is absurd. We are ten to one. A nation of market-gardeners! Moreover, we offer them incorporation into the great German federation we are planning for. Do you begin to see? Imagine Belgium overrun, Antwerp a German naval base, the channel ports of Boulogne, Calais, Dunkirk in our hands. Krupp has long since forged the sixteen-inch guns for these points. But England, you say again. My friend, England is always too late. We shall command at last the Silver Streak. It is for this that we are conserving the fleet. The French army will be enveloped. It will have the choice either of investment in Paris, another Metz, or, if it keeps the field, of being shut up in an iron ring between the armies of the east and those interposed between it and the south. With France crushed and the Low Countries in our possession it will then be the turn of England. Do not believe that our animosity against France is great. It is this insolent island that boasts the command of the sea, that stands in the path of our commercial supremacy, this nation of shopkeepers and little wars, which annoys us. The indemnity we shall exact from France will put an end to future naval competition, and German culture, backed by German iron and blood, will bring peace to this poor Europe of ours.

"*Namur, Aug. 15.* The incredible has happened. Belgium resists. So much the worse for Belgium. They were duly warned. There has been some bloody and obstinate work, at Liège, at Diest, and elsewhere. Naturally we are everywhere victorious. Brussels is occupied. It has cost us some losses, and also valuable time. Unfortunately, too, there have been some excesses. There are always in every army men who get out of hand, and there are also ignorant peasants who mix foolishly in things which do not concern them. Our Emperor's heart bleeds for these misguided people. Some of our men have been overzealous. I deplore the dropping of those bombs in Antwerp. No siege guns were in position, the place was not invested. I greatly fear the moral effect of those bombs on the world will exceed that produced on the enemy. But think of the provocation! of our legitimate exasperation! to lose days, and even weeks, when hours were important! But no matter. The Landwehr and Landsturm are being already poured over the border.

"As you know, an English expeditionary force has been landed on the Continent. The anger and astonishment of the army is enormous. The Emperor has torn every English decoration from his breast. It seems that this dull Islander has at last opened his eyes. The plan was for England to wait, to sleep a little longer, till France was under heel and Herr Krupp on the Channel. That plan, delayed, will nevertheless be executed. India is in revolt, Egypt will be lost, and Tommy Atkins will learn the difference between Prussian artillery and the spears of an Arab mob.

"*Mons, Sept. 5.* Our victorious army is at the gates of Paris. Apparently the French decline to shut themselves up within its walls. So much the better. Armies, not fortresses, are our objective. They choose to keep the field, and our right wing has already cut their communications. The iron ring is about to close. We concede the good resistance of the British troops. The long retreat without disorganization before superior numbers, under constant attack, was well conducted. It was, however, a retreat. Only their aeroplane service prevented it from becoming a rout. These "buts" are unavoidable in warfare. Beyond dropping a few bombs in Antwerp and some circulars in Paris, the Zeppelin has been a disappointment. Five have already been destroyed. We hear that India remains quiet, and that the English have had the audacity to order German consuls from Egypt.

"*Rethel, Sept. 15.* Some uneasiness is felt for our lines of communication. It is certainly singular that his name is French, and that man Kitchener begins to annoy me. We have taken up a strong defensive position on the Aisne. It is barely possible that we regarded Belgium too lightly. England certainly has deceived us. Perfidious Albion! It is possible also that we underestimated the military power and mobility of Russia, and overestimated that of Austria. And Italy—*et tu, Brute*—has broken her solemn engagements! There is, however, another plan in our pigeon-holes. My personal opinion is that a defensive campaign on the Rhine and the Vistula would have been better. We trust yet awhile in God. But oh! if Bismarck had been alive!"

Woodstock, Connecticut

AN APPEAL FROM EUCKEN AND HAECKEL

CHRISTIAN AND MONIST UNITE IN A PROTEST AGAINST THE MISJUDGMENT OF GERMANY

Professor Rudolf Eucken has personally addrest to one of the editors of The Independent the following remarkable document in which he joins with his colleague of Jena University in a defense of Germany's attitude. The fact that these two men, lifelong opponents, representing the most antagonistic views in religion and philosophy, come into agreement on the issues of the war shows that we may take the statement as representing the consensus of opinion of the learned world of Germany. The translation is made by Prof. Henry C. Wood, of Johns Hopkins.

Both men are among the recognized leaders of modern thought and have a large following in the United States. Professor Eucken, first introduced to the American reader in 1880 by President Noah Porter of Yale, became better known after he received the Nobel Prize for idealistic literature in 1908. "Christianity and the New Idealism," "The Truth of Religion," "The Life of the Spirit" and his other works have now all been translated into English and have had a wide sale. His doctrine of the spiritual life as it manifests itself in the course of history and in the individual soul has met with a ready response in religious circles the world over.

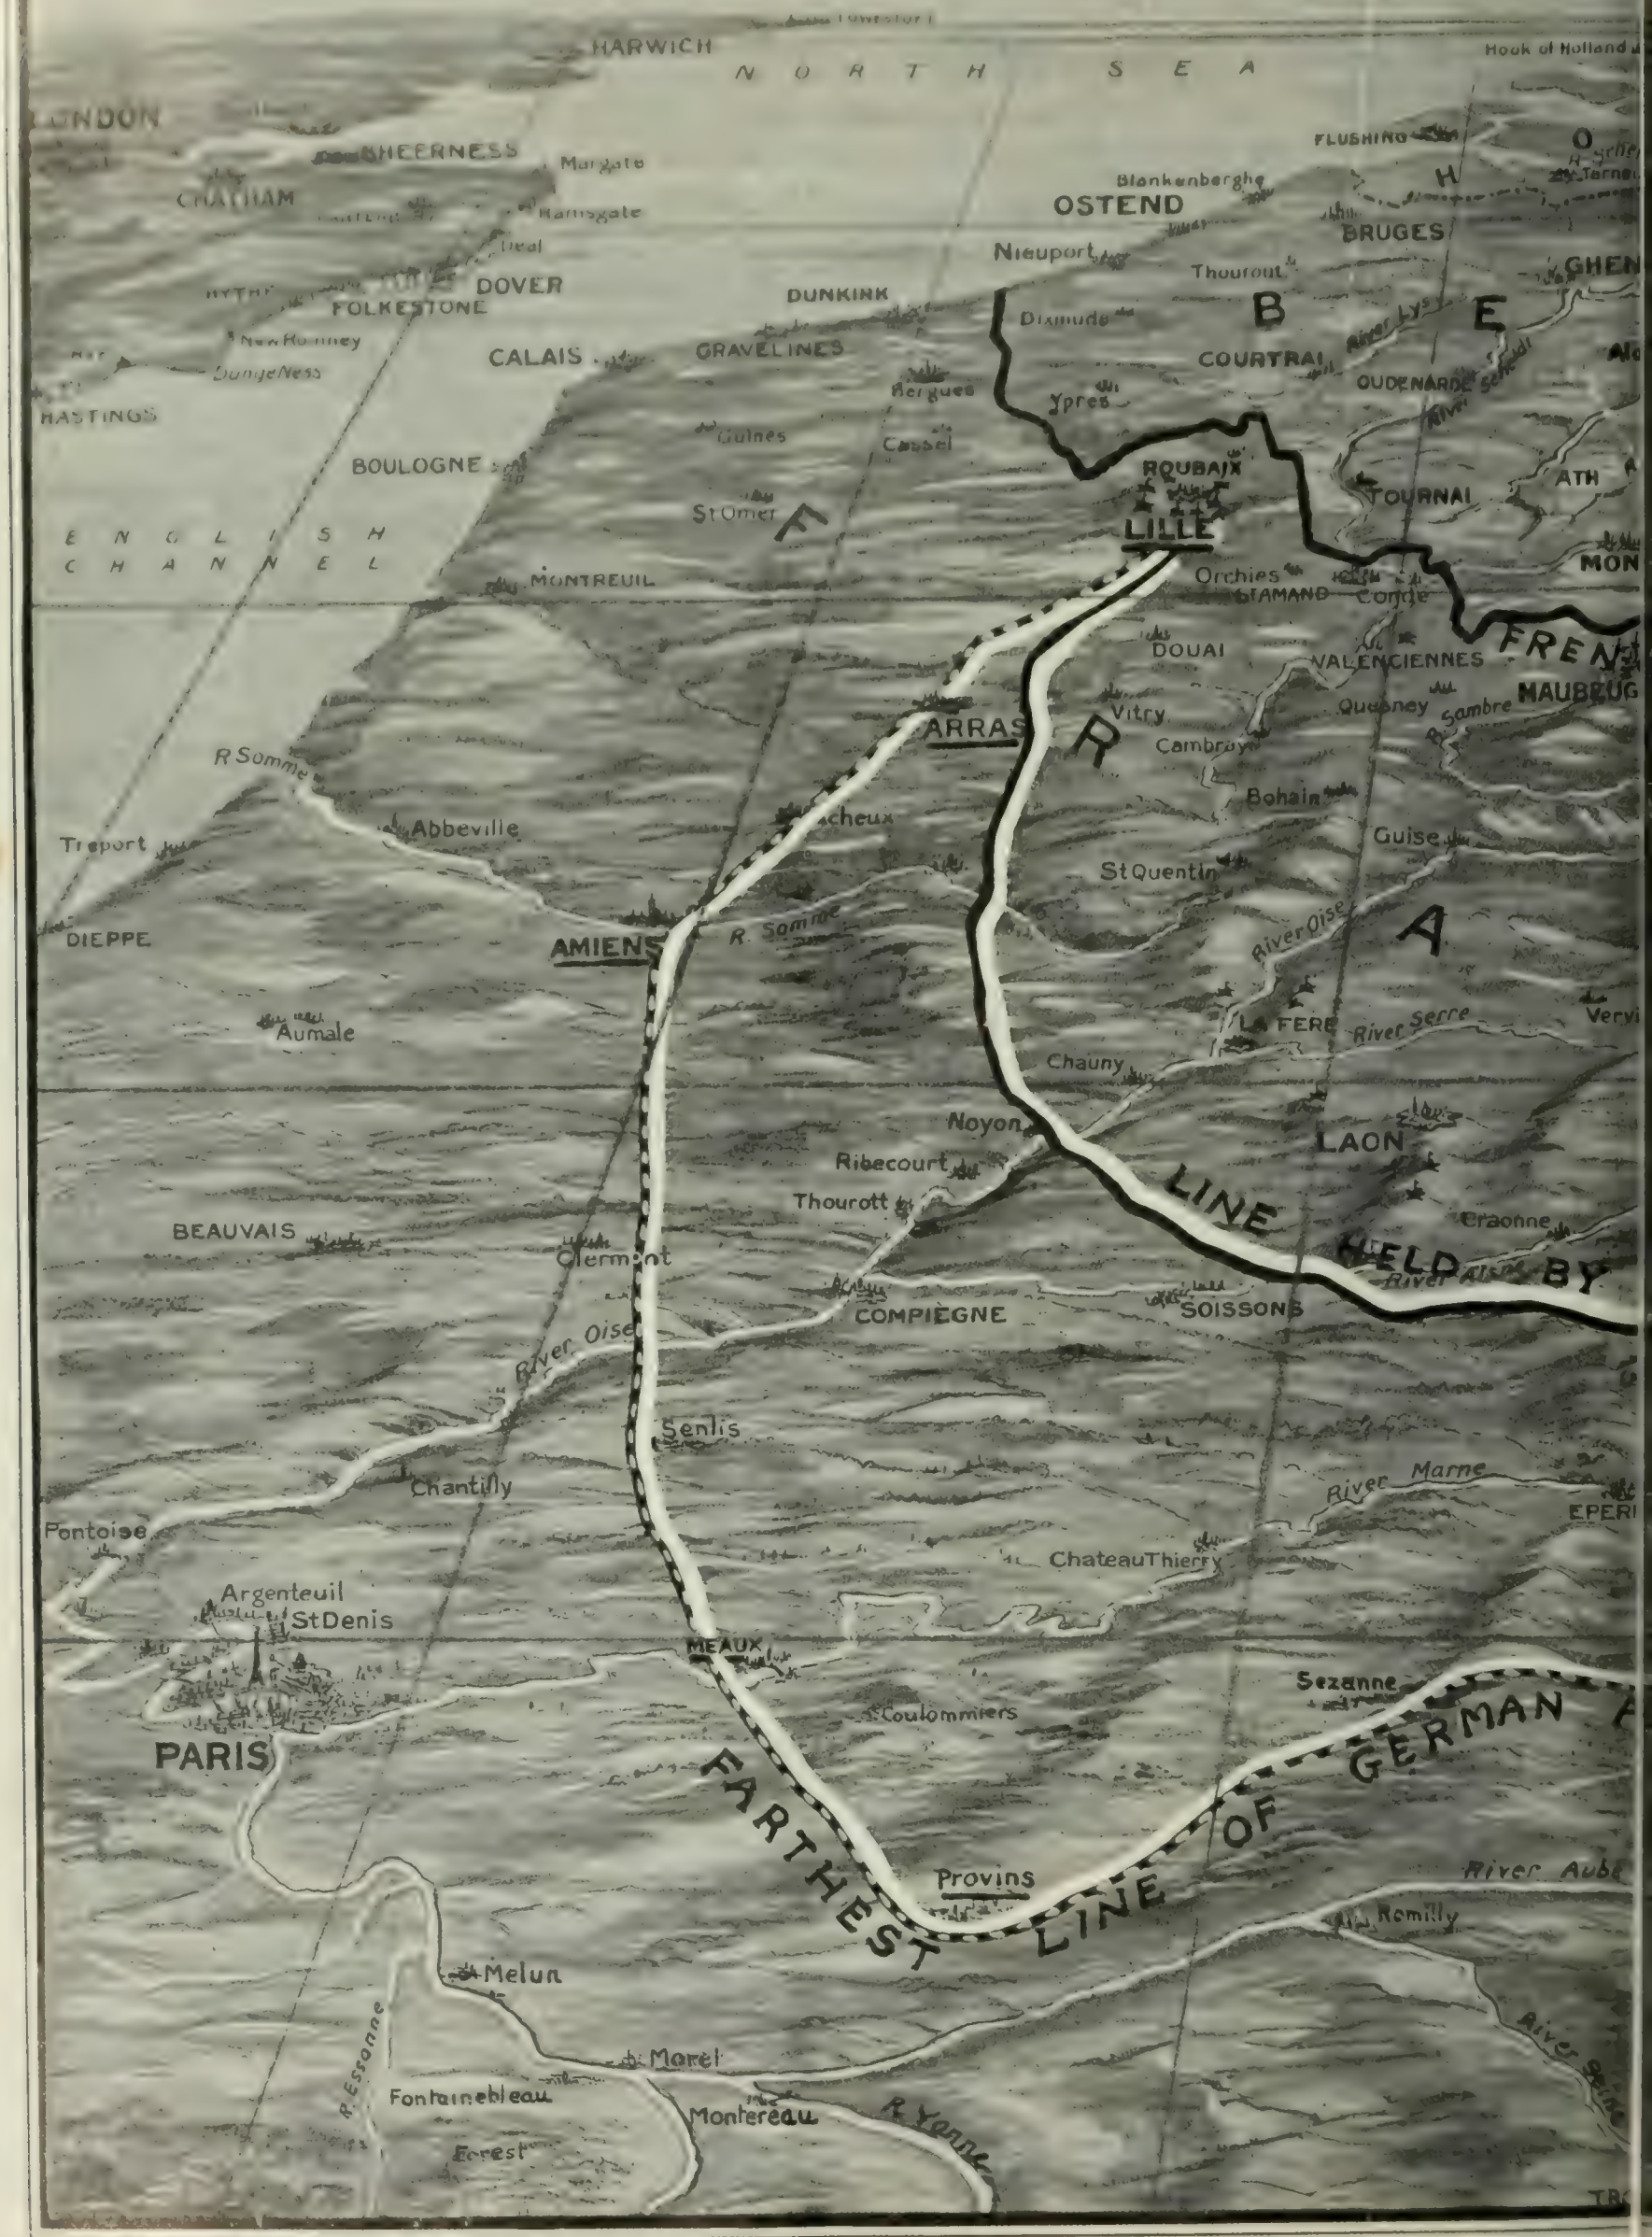
Professor Ernst Haeckel is one of the foremost of living biologists and is known to the public chiefly by his books, "The Riddle of the Universe," "The Wonders of Life" and "The Natural History of Creation," in which he founds a Monistic philosophy upon the theory of evolution. The Monist League has recently carried on a campaign against the state church which has induced thousands to withdraw from formal membership.

Another Monist, Professor Wilhelm Ostwald, of Leipzig, recipient of the Nobel Prize in chemistry and one of the most active workers for international arbitration, has issued a similar protest against Germany's accusers. An appeal to Evangelical Christians of England and America to put a stop to a war which threatens to destroy Teutonic Protestantism has been signed by twenty-eight of the leading theologians and mission directors of Germany, including such names as Harnack, Herrmann, Loofs, Richter and Wundt.—THE EDITOR.

THE whole learned world of Germany is at the present time roused to feelings of deep anger and strong moral resentment at the conduct of England. We the undersigned, who have both of us been for many years connected with England thru the bonds of science and by personal relationships, consider ourselves entitled to give public expression to this feeling of profound indignation.

In close companionship with English scholars of congenial aims, we have zealously endeavored to bring the two great nations closer to each other in spirit and to promote a better mutual understanding; a fruitful interchange of English and German culture appeared to us not only desirable, but indispensable for the intellectual progress of humanity, which is at the present time confronted with such stupendous tasks. We gratefully acknowledge the favorable reception which our endeavors have met with in England; great and noble qualities, native to the English race, manifested themselves to us and we were led to hope that these traits would get the better of and outgrow the dangers and disadvantages bound up in the English character.

And now those qualities have succumbed to the ancient English malady, to a *brutal national egotism* which, careless of morality or its opposite, pursues its own advantage.



Examples of such a ruthless egotism are unfortunately all too common in English history; it may suffice to recall in passing the destruction of the Danish fleet (1807) and the theft of the Dutch colonies during the Napoleonic wars. But what is happening today surpasses every instance from the past; this last example will be permanently characterized in the annals of the world as the *indelible shame of England.* Great Britain is fighting for a Slavic, semi-Asiatic power *against Teutonism;* she is fighting not only in the ranks of barbarism, but also on the side of *wrong and injustice,* for let it not be forgotten that Russia began the war, because she refused to permit adequate expiation for a miserable assassination; but the blame for extending the limits of the present conflict to the proportions of a world-war, thru which the sum of human culture is threatened, rests upon England.

And the reason for all this? Because England was *envious* of Germany's greatness, because she was bound to hinder further expansion of the German sphere at any cost! There cannot be the least doubt that England was determined from the start to break in upon Germany's great conflict for *national existence,* to cast as many stones as possible in Germany's path and to block her every effort toward adequate expansion. England lay in wait, until the favorable opportunity for inflicting a lasting injury upon Germany should come, and promptly seized upon the unavoidable German invasion of Belgian territory as a pretext for draping her own brutal national egotism in a mantle of decency.

Or is there in the whole world a person so simple as to believe that England would have declared war upon France, had the latter power invaded Belgium? In that event, England would have shed hypocritical tears over the necessary violation of international law, while concealing a laughing face behind the mask. The most repulsive thing in the whole business is this hypocritical Pharisaism; it merits only contempt.

History shows that such sentiments as these, far from guiding nations upward, lead them along the downward path. But we of this present time have fixed our faith firm as a rock upon our righteous cause, and upon the superior power and the inflexible will for victory that abide in the German nation. Nevertheless, the deplorable fact remains, that the boundless egotism already mentioned has for that span of the future discernible to us destroyed the collaboration of the two nations which was so full of promise for the intellectual uplift of humanity. But the other party has willed it so. Upon England alone rests the monstrous guilt and the responsibility in the eye of world-history.

THE AUTOMOBILE AS AN AID TO THE COMMISSARIAT—CARRYING PURE DRINKING WATER FOR THE FRENCH ARMY

THE NEW ENGINES OF WAR

THE EFFECT OF MODERN INVENTIONS ON THE TACTICS OF THE CONFLICT

FROM the technical point of view the campaigns now being waged in Europe are of the utmost interest, for they put to the test for the first time many of the new appliances which modern science has contributed to the art of war. Since the last important European war man has grown amazingly in power He has soared into the air and dived into the sea; he has extended the range of his hearing by hundreds of miles and multiplied the area of his vision a hundred fold. The effect of all this is to magnify the operations of war but not totally to change its character.

At Waterloo, June, 1815, 67,000 men under Wellington met 74,000 French on a front of three and a half miles.

At Mukden, February, 1905, 140,000 Russians met the same number of Japanese on a front of forty miles.

At the Marne, September, 1914, probably a million Germans met more than a million French and English on a front of 120 miles.

Doubtless many a reader of Bloch or Fells is surprized to find the war was not ended in a week by some spectacular stroke of misapplied science and is disappointed to see it settle down to the old question of which side can best stand punishment or has the longer purse. Particularly is the public disappointed that the air fleets have played so inconspicuous a part. France, Russia and Germany have each been spending more than five million dollars a year on the "fourth arm" and it was naturally expected that this meant more than an improvement in the scouting service. Yet so far that is what it has amounted to. Over every battlefield, directing the artillery fire, have hovered the aeroplanes, like gigantic ravens, "choosers of the slain." No considerable body of troops can escape the eye overhead, so the effect on tactics is to diminish the importance of screening movements by advanced detachments.

Apart from their military usefulness the airmen have added to the interest of the campaign considered as a spectacle, the element of personal daring which has been missed in these days of mass movements. We all delight in the French avion who flew over Brussels and showered the city with printed slips bearing the words, "Take courage! Help is at hand!" And then while the Germans were firing at him with rifles and aeroplane guns he gave a free exhibition of fancy flying and looped the

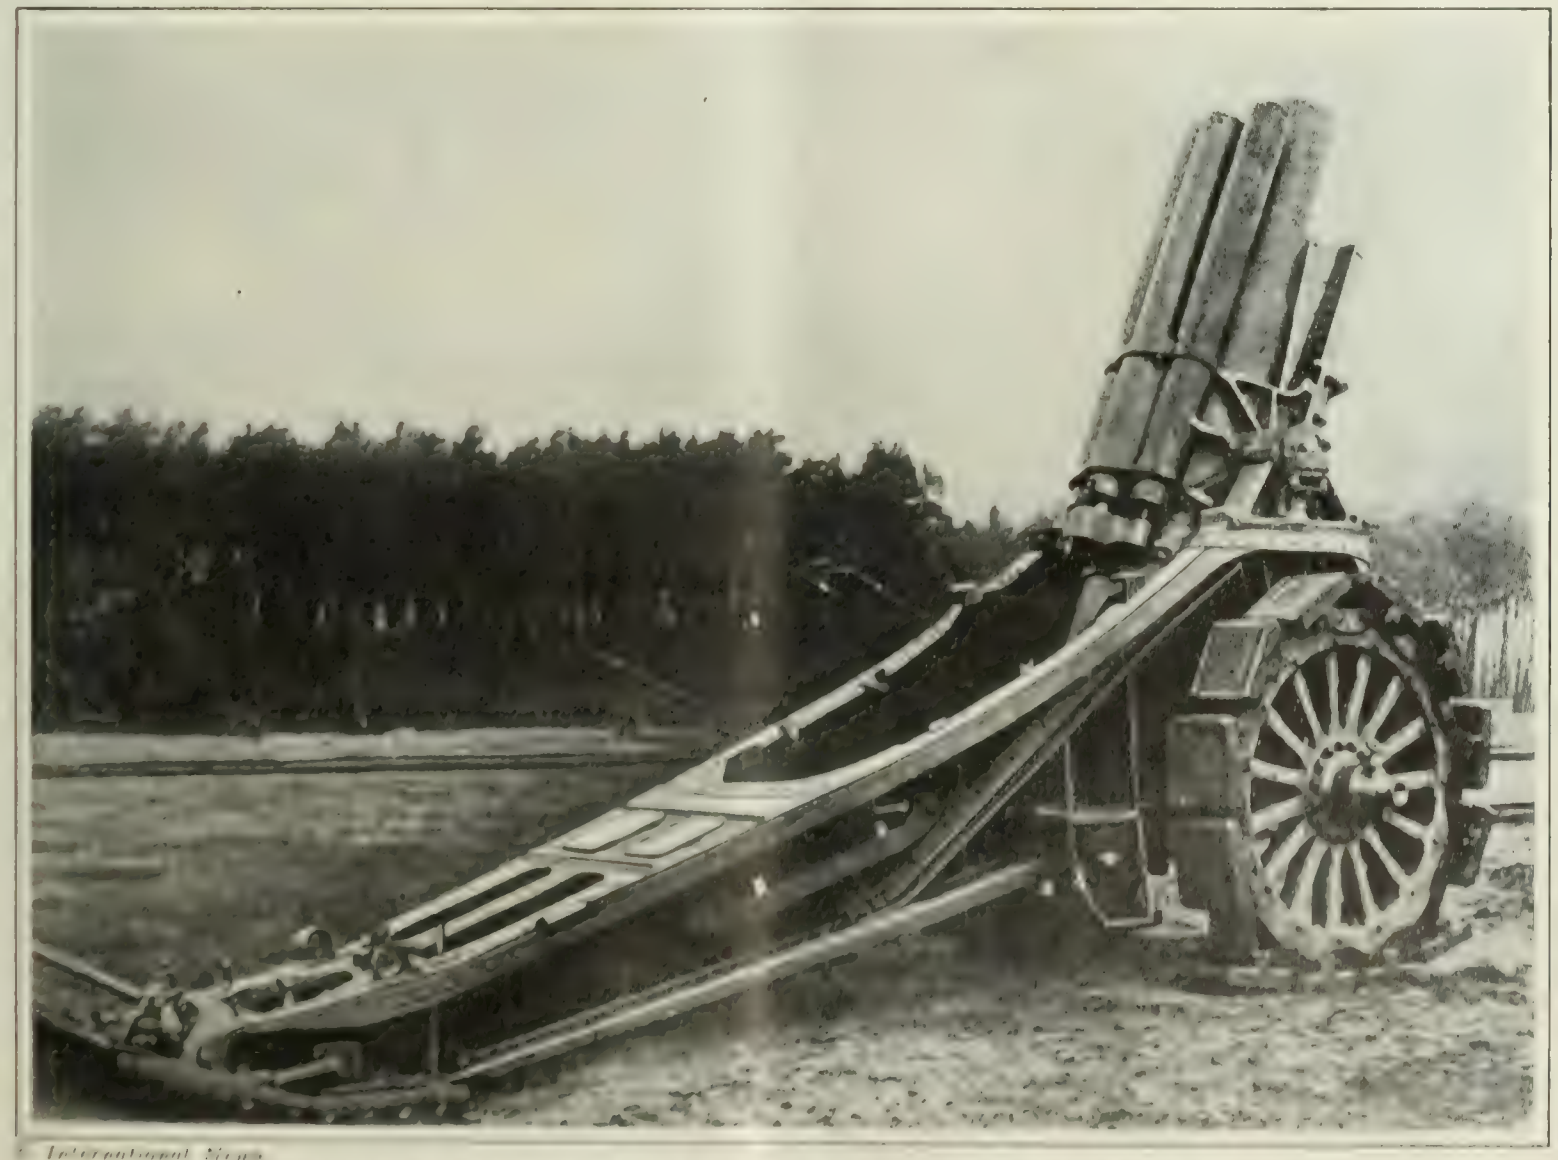
THE VENOMOUS MITRAILLEUSE WITH AN ARMORED OR SCOUTING AUTOMOBILE FOR GUN-CARRIAGE



THE KRUPP SIEGE GUN AND ITS WORK

The reverses of the French during the first month of the war were in part due to their failure to foresee the celerity of the German advance. The fortresses of Liège and Namur, which were expected to hold back the Germans for three weeks, fell in a few days, and the French were forced to make their first stand at the Marne instead of the Aisne, as they had expected. The guns brought to bear upon the forts encircling Namur were the Krupp twenty-eight centimeter (eleven-inch) howitzers and also one of eighty-four centimeters (16.8-inch) caliber. They were stationed at a distance of seven and a half miles. Evidently, then, fortresses can be attacked, and that promptly, by field guns as large as those that defend them. The big guns in our Panama fortifications are sixteen-inch. Photographs of the largest guns have not been received.

GERMAN HOWITZER OF 24-INCH CALIBER WITH CATERPILLAR WHEELS FOR ROUGH GROUND

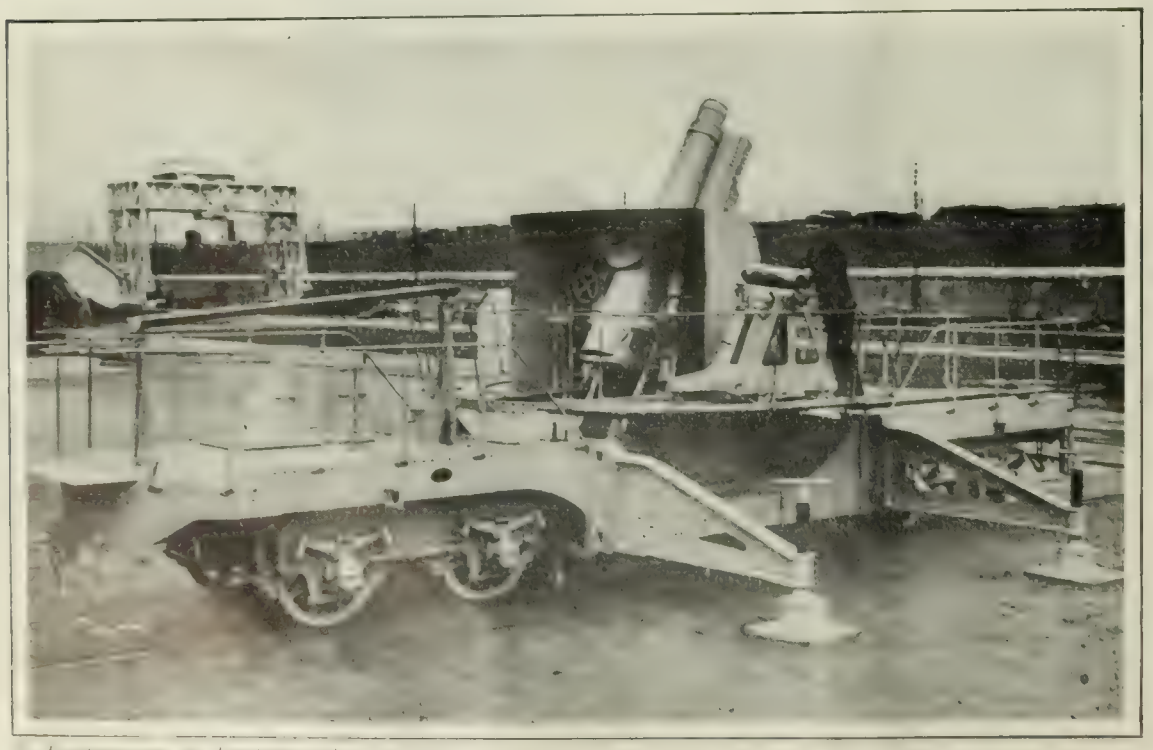
hap above the capital. It may be said "this is not war," but it is much like war as we read of it in Homer and Malory.

We are glad to see also that the Parisian spirit was not crushed even in the days when a second siege was impending. We read that tables on the terrace of a café were at a premium because from there one could watch where the bombs fell and that the police inspector who picked up fragments of a bomb from the street reported in due form that "some rubbish had been dropped by a person or persons unknown from an aeroplane yet unidentified, thereby defiling the public highways contrary to the ordinances of the Municipal Council."

But so far there would be few if any claimants for the honor on the ground of the specific service suggested. There have been many reports of Zeppelins destroyed by the dash of an aeroplane, but on the other hand the Germans say they have lost none of their aerial fleet. How many they had or have nobody outside knows exactly. According to an estimate of August, 1913, Germany had twenty military dirigibles to fifty-five in the possession of the Allies, and her aeroplanes numbered 420 while those of the Allies summed up 1007.

The only use that has been made of the balloons for offensive purposes is the case of the Zeppelin that twice past over Antwerp, dropping bombs which demolished a few buildings and killed some innocent persons. The sole effect of this was to exasperate the Belgians and bring down upon Germany a still heavier condemnation from the outside world. Whether this act was in violation of the rules of war is disputed because the ethics of aeronautics have yet to be defined. On one side it is argued that since Antwerp was a fortified city it was liable to bombardment and that it makes no essential difference whether bombshells are first fired up into the air from a mortar or are simply dropt from an airship. On the other hand it is objected that the usages of civilized warfare require first a challenge to surrender and due notice of a bombardment in advance so non-combatants may escape, or protect themselves. But of course a formal message of warning such as would be sent to the gate of a besieged city is impossible in the case of aircraft, for the city may be far away from the lines of the attacking party. If any use at all is to be made of aircraft at a distance a general declaration of war must be regarded as a sufficient warning to all fortified or defended cities in the country.

AN AEROPLANE SHATTERING A DIRIGIBLE



Reproduced from the Berlin *Illustrirte Zeitung* just before the war. A sketch by an eye-witness of a collision above the Fischamend aerodrome, near Vienna. Several such incidents during the war have been reported

It is very unfortunate that no international agreement on this point was formulated before the war. At present the only authority to be cited is Article 25 of The Hague Convention, No. IV, which reads:

> It is forbidden to attack or to bombard *by any means whatever* towns, villages, habitations or buildings which are not defended.

The words we have italicized were added to the international code in 1907 to cover aerial attack. In the bombardment of a city by siege guns it is nowadays expected that churches and hospitals will not be aimed at, but this does not prevent their being hit by accident, and bombs dropt from aircraft are much more uncertain of aim than artillery fire. So even if the attacking party has the best of intentions, any buildings within the enceinte of fortifications are liable to be demolished.

It will be noticed that the rule does not use the word "fortified" as it is commonly quoted, but "defended." Antwerp and Paris are both fortified and defended cities, none better, but London is not fortified in the technical sense, tho it would undoubtedly be defended. Is London, then, subject to aerial bombardment? One of the most recent and thoro considerations of the question is to be found in the address delivered before the Royal United Service Institution, in London, on April 22, 1914, by Col. Louis

A FRENCH ARMORED HOWITZER MOUNTED ON A WAR TRAIN

A rapid firing 8-inch (200 mm.) gun protected by a shield and arranged for use on a flat car, which is steadied by the arms which swing out on either side carrying ground plates

Jackson, who comes to the conclusion that there is nothing in international law to prevent the attack by airships. A town is subject to attack when it is not willing to submit and is prepared to offer resistance to armed forces. London cannot be regarded as a city of non-combatants since it contains barracks, military stores, shipyards and the headquarters of the army and navy. Colonel Jackson accordingly concludes that if an airship dropt a half ton of gun cotton on the Admiralty Building or War Office or water-works, the only thing to be done about it would be to write indignant letters to *The Times*. In regard to the question of formal warning he says:

> The commander of an enemy's war balloon might arrive over London unopposed and signal as a matter of courtesy: "I am going to drop explosives." We answer: "You must not drop explosives; we are not defended." The commander replies, as it seems to me quite logically, "Then you must surrender. Good. You will now obey orders."

The British colonel has in mind, as he frankly says, that Helgoland is less than four hundred miles from London and so within sailing distance of aeroplane as well as airship. The Zeppelins here stationed are, if we may give any credit to sensational reports of those who profess "inside information," more numerous and efficient than the outside world suspects. Of that we cannot judge, for they have not yet made their appearance. Whether they are kept out of action because of their frailty or whether they are being reserved for some grand *coup*, remains to be seen. If the Kaiser has the unstable temperament alleged by English writers we may apprehend that should he find defeat inevitable and the terms imposed by the Allies intolerable, he will fly into a berserk rage and launch his aerial thunderbolts at Paris, London and St. Petersburg. Then, indeed, would the visions of Tennyson and Wells come true.

But in our consideration of the war as it has hitherto developed, we must keep to the ground, for the sea has been almost as undisturbed as the air, and the dreadnoughts and submarines are still untried. On land the chief effect of the modern inventions has been to accelerate movements all around. The forts are stronger than ever before—and they have fallen sooner. The armies are larger—and they have moved faster. The layman who thinks of war mostly as marching and fighting cannot appreciate the labor and executive ability required to provide a distant army of a million men with their daily rations, ammunition and innumerable necessaries when lines of communication are shifting and tracks and bridges are destroyed. Here the new methods of transportation come into play. But in spite of the advent of the automobile and motorcycle the horse is more in demand than ever. One of the lessons of the Balkan war was the importance of cavalry. Because of their deficiency in horse the Bulgars were unable to follow up their victories at Kirk-Kilisse and Lule Burgas, so the routed Turks retreated in safety to the shelter of the Tchatalja lines. In consequence of this France, Germany, Austria, Belgium and Russia all devoted a large part of the special appropriations obtained last year in anticipation of the war to strengthening their cavalry. The new cavalry regiments added to the German army are armed with a short bayonet attached to their carbines instead of sabers. In France each of the ten cavalry divisions has attached to it a group of three companies of bicyclists. They are trained to travel sixty to eighty miles a day and are expected to protect the flanks of the cavalry and to assist the artillery by reaching quickly positions favorable for firing. The German and Austrian cavalry also have cyclist attachment; the Russian have not, probably because of their poor roads.

But the best roads in the world are to be found in France and Belgium, so here the motor vehicle is in its element. American tourists caught by the war on the French frontier were startled to see the delivery trucks of Selfridge's or Au Bon Marché, and busses marked "Trafalgar Square" or "Place de l'Opéra." The chariot has come back into warfare after a disuse of two thousand years, but now propelled by sixty horsepower instead of two and protected by shields of hardened steel and bearing a mitrailleuse or howitzer in place of an archer. Some are scythe-armed like the chariots of the Britons in Cæsar's time and can cut wire-entanglements. Some have feet on their wheels and can ride the roughest ground.

In these armored automobiles Belgian officers have made audacious raids from Antwerp into the territory occupied by the Germans and, if we may believe their stories, dashed thru lines of infantry and slaughtered Uhlans with impunity. Orders for more of these engines of destruction have come to America since the war began from both par-

THE MOTOR AS TRACTOR, DRAGGING AMMUNITION WAGONS AND GUNS

ties to the conflict, and a Philadelphia factory is said to be making the automobiles, while a New England firm fits them with rapid-fire guns.

One of the chief differences between this and all former wars is the rapid mobilization of heavy artillery close to the front of the battle line. These being mounted on motors instead of being drawn by horses can be brought into position with great swiftness and their fire directed with astonishing accuracy from some convenient promontory or from an aeroplane. The three-inch field guns of the Germans have a range of 10,000 yards and can be concealed behind trees or hills. These throw fifteen-pound shrapnel shells at the rate of twenty a minute.

In the Russo-Japanese war, which does not seem long ago, we learned that General Nogi kept in touch with his troops even at the front by means of the telephone. The Kaiser's army, however, has discarded the field telephone as antiquated and substituted wireless telegraphy, which requires no trailing wires and can send its message across the enemy's lines. Their new apparatus is a marvel of compactness and convenience. The sending and receiving apparatus weighs only eighty-five pounds. The current generator weighs but little more and consists of a dynamo and motor, run by a man treading bicycle pedals. This provides a current of one ampere at fifty volts. The length of the ether waves is about 364 meters. The mast is telescopic, made of aluminum alloy in eight sections of six feet each. The mast is supported by sticking the pointed shoe into the ground and in case of hurry by guy ropes held by the men. The apparatus can be set up in working order in fifteen minutes and removed in less time. The whole is portable by the side car of a motorcycle or even by men on foot. This apparatus will send forty miles, but the larger forms of field equipment, transported by six-horse wagons, have a range of 150 miles. There are fourteen wireless companies in the German army.

War, considered from a scientific standpoint, is essentially an outburst of destructive energy. Modern war, swift, powerful and far-reaching, demands the most concentrated and portable form of energy yet discovered and that is gasoline. It is the invention of the combustion engine that has speeded up the campaign and made it mobile. Every army is athirst for gasoline. It is the first demand of the Germans when they levy tribute upon a captured town. Already the German aeroplanes are reported to be vanishing from the sky for lack of fuel. Now it happens that neither France, Germany nor Great Britain in all of their vast possessions have any important petroleum fields. Russia has an abundance of oil wells, and Austria has some, but chiefly in Galicia, which Russia has now half occupied. This matter of the oil supply may prove to be a determining factor in the war.

THE CATHEDRAL AT RHEIMS: WRECKED BY GERMAN ARTILLERY FIRE

TWO CATHEDRALS

ST. JOHN THE DIVINE AND NOTRE DAME DE RHEIMS

BY MAY PRESTON SLOSSON

I watch the patient masons in the sun
  Building a House to God upon the hill
That overhangs the city; just begun
  The toil of years—the care—the loving skill.

Another minster lifted arch and spire
  By patient builders wrought in futile trust.
The Iron Eagle dropt a plume of fire—
  And all its beauty is a heap of dust!

THE NEW BOOKS

CRAFTSMANSHIP

THE native disposition to find effective ways and means for carrying out the purposes and desires of life constitutes the "instinct of workmanship." It shows itself in the primitive savage and exerts a profound influence upon the course of civilization; and on the other hand, the form that it assumes in any given culture is determined in large measure by the institutions of the times. Professor Veblen in his latest book has set himself to the task of discovering the influence of the instinct of workmanship upon the thoughts and the technology and the institutions of a people, and the reciprocal modifications of the instinct by other social forces.

In effect this "sketch," as Professor Veblen calls his book, is a rapid survey of the essential facts in the history of civilization. In it nations are mentioned rarely, wars and dynasties not at all; but there is an account of how people worked for a living, and how they produced the necessities of life, from the stone age down to the latest in machines and business methods. Races of men are discussed from the point of view of their fundamental instincts, and of the relation of these instincts to the various kinds of life required in different types of culture.

A civilization founded on tillage and husbandry involves a certain understanding of the growth and fecundity of plants and animals. In such a civilization the women will be the great workers, because they have a sympathetic understanding of the forces that operate in the growth and fertility of organisms.

With the development of a predatory culture, prowess comes to manifest itself in the possession of cattle and land, slaves and the prizes of war. With the development of a pecuniary culture the arts of accumulation come to be the measure of all things. The differentiation of the commercial classes from the craftsmen of the middle ages is traced in an interesting way. The emergence of salesmanship as the measure of workmanship or ability suggests the solution of many of the anomalies and absurdities in our present-day life.

The Instinct of Workmanship, and the State of the Industrial Arts, by Thorstein Veblen. New York: The Macmillan Co. $1.50.

ON THE EVE OF THE GREAT WAR

Mr H. G. Wells, that great cosmopolitan optimist, is sometimes both pessimist and patriot. His *Social Forces in England and America*, published in England under the more attractive title *An Englishman Looks at His World*, is a collection of all his important essays and articles for the last four or five years, and the burden of them all is that "the only alternative to a great, deliberate renascence of will and understanding is national disorder and decay." America the author regards as too completely individualistic, a heterogeneous swarm of types and peoples with no collective "sense of the state." But England, as Mr. Wells's native country, is his chief concern, one might almost say his chief worry. Ever since a Frenchman flew across the Channel and no Englishman was found to fly back, he has been haunted by the fear that British insularity, conventionalism, pride of will and indifference to creative intellect were leaving that little island behind its continental rivals in the race for political and cultural supremacy. Seeing that all of these articles were written in a time of profound peace (if armed preparation for war can be called peace), the book contains some remarkable forecasts of the nature and effects of a general war; thus proving once more Wells's claim to be prophet laureate of England.

New York: Harper & Bros. $2 net.

TWO FIGHTS AND A PLATITUDE

Mr. Wriford was harried out of his youth and his sanity by driving work and heckling relatives. That is the first part of *The Clean Heart*, vigorously and rapidly told, and carrying incidentally a brilliant picture of press-night in a London weekly office. Then he strode thru a series of glorious adventures, two of them rattling good fights, and the telling of these is, if anything, better yet. Then the story dawdles, finally, with some relief afforded by an alcoholic schoolmaster whose experiences are worthy of Dickens, taking Mr. Wriford thru a succession of moral and emotional crises that serve to carry the ethical thesis to a wobbly conclusion. The first part of the book offers no substantial premise for this thesis: the platitude and the plot are not thoroly shaken together.

Puddlebox, who flavors the adventurous section of the book, is of Paragot's tribe, without the Beloved Vagabond's *esprit*, but with a jovial heroism that, after a break or two in the emotional pitch of the narrative, sweeps the reader to a powerful catastrophe.

If the book is not so well digested as *The Happy Warrior*, which preceded it, it is even more picturesque; there is again an abundance of humor and pungency of description, and here and there a flawless bit of conversation which reveals the accomplished artist.

The Clean Heart, by A. S. M. Hutchinson. Little, Brown & Co. $1.35.

BOOKS OF THE WEEK

The Younger Generation, by Ellen Key. Studies of the coming social democracy and the part which the education and endeavors of the next generation will play in bringing it to pass.

Putnam. $1.50.

Foreigners in Turkey, by Philip M. Brown. On the tick of timeliness, a Princeton professor with Constantinople experience expounds the Capitulations and suggests a compromise to Turkey.

Princeton University Press. $1.25.

Yourself and the Neighbors, by Seumas MacManus. There's no part at all, at all, of the life of a mountain parish in Ireland—the delightfullest place in all the world—that hasn't been put into this book.

Devin-Adair. $1.25.

Saturday with My Camera, by S. C. Johnson. A tremendous quantity of information for the amateur, simply presented but poorly arranged, illustrated by diagrams informal enough to be encouraging.

Lippincott. $1.50.

Criticism, by W. C. Brownell. On Acting, by Brander Matthews. Twin booklets, neatly dressed, the first developing, on middle ground, a sound theory; the other a primer pleasantly illustrated by anecdote.

Scribner's. Each 75 cents.

Major Prophets of Today, by Edwin E. Slosson. The sketches of the personality and philosophy of Maeterlinck, Bergson, Poincaré, Metchnikoff, Ostwald and Haeckel which appeared in The Independent are here brought together in book form.

Little, Brown. $1.50.

ARE YOU EDUCATED?

One must get away from the schoolmen to find the most thoro-going thinking on what the whole schooling process is for; but the schoolmen will give scant attention to the views of too rank an outsider. Mr. Henderson occupies a unique position in that his thinking concerns itself with life as a whole—that is, he is primarily a philosopher—while his criticism of educational practise rests on an intimate acquaintance with what is actually being done in the schools. He is sufficiently detached to have perspective, and he is sufficiently familiar to have sympathy for the concrete problems of the educator.

His latest book, *What Is It to Be Educated?* is in some ways an expansion of his *Education and the Larger Life*, published a dozen years ago; but it is a great deal more. It extends the author's theory of "organic education" by showing concretely what he would do with the child at every stage in his development, from early childhood to the end of the college course.

Mr. Henderson would have every parent and every teacher (he is not concerned with the "general reader") base his dealings with young people not primarily on a study of pedagogy or on a knowledge of subject: the first thing is a clear conception of your ideals of life, of your essential religion, and of your economic creed. Since education has to do with body and with spirit, you must understand the things of the body, matters of health and diet and exercize and bread and butter; and you

must understand the things of the spirit, reverence, courage, honor, serenity, truthfulness, sincerity, initiative. Without clear convictions in religion and economics the teacher's work, or the parent's work, with children must be vacillating and ineffective, for it must either neglect the essentials, concentrating on purely intellectual achievements, or it must get the child more or less perverted and confused.

It is not to be expected that the radical views in this book will be quickly or widely accepted. But like the author's earlier writings, they challenge our existing conventions and procedure at every point—not alone in our conduct of schools and home, but in our whole conduct of life. It is for this reason that every one concerned with the rising generation and every one who is not too old to seek for better adjustments in his own life, should reflect on the suggestions here made. Mr. Henderson's style is, if anything, more charming than in his earlier books.

What Is It to Be Educated? By C. Hanford Henderson. Boston: Houghton Mifflin Co. $1.50.

TALES OF THE MISSISSIPPI

Duciehurst, by Charles Egbert Craddock, adds a House to the River and they are the most interesting characters in the book, for each has a personality and the group of people who enact the plot are shadowy in comparison. The story is of plantation life in the South just at the close of the Civil War. We miss the far, blue magic of the Tennessee mountains to which Miss Murfree has accustomed us.

Mr. Cable in *Gideon's Band* puts his characters aboard a Mississippi steamboat at New Orleans in 1852 and sends them up the river to Louisville, thirteen hundred miles away, and the River takes the center of the stage and keeps it to the end. Its sluggish current gives continuity, and the slowly unrolling green ribbon of its banks never grows monotonous by some magic of which Mr. Cable is master. The ship carries the fortunes and the fates of the voyagers; cholera breaks out in the steerage and invades the first cabin; smoldering antagonisms and a family feud threaten the peace of the voyage. It is an ante-bellum story told in an ante-bellum style, but its leisureliness suits the slumbering river in its long siesta, and achieves a sort of triumph over any less discursive relation.

The Story of Duciehurst, by Charles Egbert Craddock. Macmillan. $1.35.
Gideon's Band, by George W. Cable. Scribner's. $1.35.

THE ETHICS OF BERGSON

The structure of Bergson's system is so obviously incomplete without its application to life that more than one attempt has been made to provide its capstone. The most recent and the most thoro study of the question is the monograph on *The Ethical Implications of Bergson's Philosophy,* by Una Bernhard Sait of Columbia. Mrs. Sait interprets her author sympathetically and shows great skill in projecting his thought into the realm of sociology.

Science Press. New York.

SEPTEMBER DAYS

Swordfish and sheepshead leave the northeastern coast soon, but the spot is coming in—good compensation.

Fishing for trout and salmon remains good in Canadian waters; and in Dixie the boys are beginning to fish for crappies.

The open season for game began on the 15th in eastern Canada and hunters have taken to the woods after deer, bears, grouse and other venison.

This is the month when ratflesnakes, copperheads, water-snakes and garter-snakes are delivered of their wriggling and snapping offspring—six or seven in a litter.

The September air is full of the hum and rattle of insects. The most noise is made by the locusts—the disputatious katydids—mole-crickets and the springing rattle of grasshoppers taking sudden flight.

Bright new butterflies appear on sunny days, mostly born in second broods. On the other hand, caterpillars of various species are already turning into chrysalids and forming the cocoons within which they will remain housed until next spring.

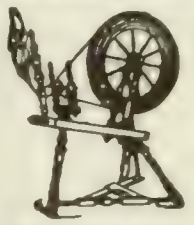
In September all the four-footed folk of the woods are eagerly devouring the berries and fruits so plentifully provided. Even the fiercest carnivores eat them and improve their condition. They will need all their accumulated muscle and fat when the famine-days begin a few weeks hence.

Queens are matured, or maturing, in all the busy colonies of wasps and hornets, and so the prime object of their social existence has been accomplished. The fertilized queens will survive the death of their subjects and the chill of winter, and so the various races will be revived next summer.

As September advances the flocking of birds becomes more and more noticeable. Sparrows whirl up before one as he walks along a country road, swallows cluster on the telegraph wires, and on the stubble fields platoons of blackbirds wheel and maneuver like an army. By the end of the month many species of birds have wholly departed toward the South.

The does and fawns of the deer are coming out of the woods and are seeking the rank grass and succulent growths along the banks of sluggish rivers and in the shallow margins of forest ponds. They wade among the lily-pads and swim out into deep water to get relief from flies. The bucks remain hidden, for their antlers are not yet quite in fighting trim.

These warm, still days are heavenly to the woodchuck. He sits in Buddhistic mood, motionless in the sun for hours together, assimilating the grand breakfast taken from the farmer's clover patch, looking forward to a moonlit supper in the garden, and calculating with miserly glee his increase of fatness. Late in September he will go to bed and live on his fatness for five long months.



NEW RED CROSS MEMBERS

On behalf of the American Red Cross The Independent expresses its appreciation of contributions received from the following, who have thus become members of the Red Cross for the current year. The contributions, with the names of the givers, have been forwarded to Hon. Jacob H. Schiff, treasurer of the New York Department.

Housekeeping Linens
At McCutcheon's

Reg. Trade Mark

The distinguishing characteristic of our stock of Housekeeping Linens is the wide variety of sizes, designs and styles. We are at all times ready to supply not only the *ordinary* but the *unusual.*

We have Round, Square and Oblong Cloths in very large sizes for extraordinary occasions; we have them from every country where Table Linens are made, in every kind of design, and in any quality that may be required.

This is equally true of our stock of Bed Linens, Bed Coverings and Towels—in fact, no such variety of reliable Housekeeping Linens can be found anywhere else in this country—and the values are invariably the very best.

Mail Orders Receive Our Prompt Attention.

THE AMERICAN NATURAL HISTORY

A Foundation of Useful Knowledge of the Higher Animals of North America.

WILLIAM T. HORNADAY, Sc.D.

Director of the New York Zoological Park, author of "Our Vanishing Wild Life," etc.

Entirely reset in Four Crown Octavo Volumes; with 16 full-page illustrations in colors, 67 full-page illustrations from original drawings and photographs, and nearly 300 text illustrations; and with numerous charts and maps.

Since the first edition of this standard work was published, in 1904, the conditions affecting the wild life of North America have changed greatly. In this revised and enlarged edition Dr. Hornaday has embodied all the scientific facts that have been accumulated by specialists in that interval, and these facts he has presented so that their significance will be apparent to the lay reader.

The set, in a box, $7.50 net; postage extra.

THE MARKET PLACE

THE PLEA OF THE RAILWAYS

One hundred and twelve railway companies, composing thirty-five railway systems, have formally requested the Interstate Commerce Commission to reconsider its recent decision and grant the petition of the railways for a five per cent increase in freight rates. The commission has granted the request for a rehearing of the case and has set October 19 as the date for it. The interval of a month is explained by the commission as being intended to afford an opportunity for shippers to prepare, if they desire to do so, to present arguments in opposition to the plea of the railways.

Three reasons are given by the railways for their request:

The continuing decrease in operating revenue amounting to over seventy-three million dollars during the last fiscal year—a decrease which took place in spite of extraordinary efforts to reduce expenses;

The extraordinary destruction of wealth and dislocation of credit by reason of the Great War; and

The inadequacy of the increased revenues resulting from changes suggested in the previous order of the commission.

The railways are wise in not asking for a rehearing of the whole case—for that would have taken months to get thru with—but for a plain reversal of the commission's decision because of vitally changed conditions. Such an order could be made by the commission with a minimum of delay.

The need of the railways is desperate. It is a need in which the whole country shares. An efficient transportation system must form the foundation of national prosperity. The railways cannot be efficient unless they themselves are prosperous.

Will the commission show itself big enough for the emergency? Every day of unnecessary delay will be an added count in the indictment which its fifteen months of pondering over the original case have led many fair-minded citizens to draw against it.

The commission has two responsibilities of equal importance. The one is to secure justice for the public from the railways. The other is to secure justice for the railways from the public.

The two responsibilities are not only complementary, they are inseparable. Only by discharging the second, fully and generously, can the first be adequately fulfilled.

The commission should keep this fact clearly in mind when the railways present their case for the second time.

THE DOOM OF THE BUCKET SHOP

Action of far-reaching importance has been taken by the Stock Exchange which foretells the downfall of the bucket shop. The life blood of these gambling joints masquerading as brokers' offices lies in the current of stock quotations brought in by the ticker. In the bucket shop not a share of stock is actually bought or sold. The customer merely bets with the proprietor as to whether the price of a given stock will go up or down. The bet is decided by the course of prices recorded on the ticker tape. When the ticker service is cut off, the bucket shop must close.

The New York Stock Exchange sells to the Western Union Telegraph Company the right to distribute thruout the country the quotations of stock prices made in the regular course of business. A new contract has just been entered into between the Exchange and the Western Union by which the quotations may be sold by the telegraph company only to places approved by the Exchange. In this way the Governors will see to it that none but bona fide brokers' offices, where stocks are actually bought and sold, delivered and paid for, benefit by the ticker service. They may be trusted to discharge the duty faithfully. The reputation of the Exchange has suffered much from the unwholesome activities of the bucket shops, too often confused in the public mind with the offices of actual dealers in stocks and bonds.

When will the New York Stock Exchange open again? Many an investor would be glad to have the question answered. We can say, with authority, however, that the question has not even been discussed by those who are guiding the affairs of the Exchange in the tremendous crisis thru which the whole financial world is passing. Two things are sure. The Exchange will not open until some way has been devised to ensure the taking care of the vast quantity of American securities held abroad which are sure to seek liquidation here as soon as there is an open market for them. Nor will it open until there is moral certainty that the banks are prepared to finance the flood of operations that will inevitably pour in.

The following dividends are announced:

American Telephone & Telegraph Company, $2 per share, payable October 15.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more safe and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

INSURANCE TAXATION

In his annual address to the members of the National Convention of Insurance Commissioners at Asheville, North Carolina, September 15, President Young, the Insurance Commissioner of North Carolina, uttered the following sentiments on the subject of taxation:

> The states should not place a burdensome rate of taxation on the insurance business, which, while not philanthropic in its character, is yet of great importance to the business world, and of immense value to our Government and its citizens in the distribution of the misfortunes and losses of life. Those who engage in the insurance business should bear their proportion of the burdens of our Government and be taxed as those engaged in other classes of business of similar character—no more and no less.

These are not unusual opinions. They are very generally held by legislators, state officials and the business elements of our population. The remainder of the people care nothing about the matter, one way or the other, and seldom consider it. If we may be permitted to say so, the conclusions reached by the president of the National Convention of Insurance Commissioners are not the products of a careful study of the subject. Let us examine the statements critically:

> The states should not place a burdensome rate of taxation on the insurance business, which, while not philanthropic in its character, is yet of great importance to the business world, and of immense value to our Government and its citizens in the distribution of the misfortunes and losses of life.

The fact is incontestable that the state should not place a burdensome rate of taxation on any taxable object, for the simple reason that it is burdensome. The safety and security of the state rests upon the happiness, prosperity and contentment of the individuals composing it, and none of these objects is achieved if the contributions exacted for its support are either burdensome or inequitable. It constitutes a form of tyranny that is not patiently borne by a capable and free people, and it easily leads to a form of revolt dangerous to civilization.

It is inaccurate to assert that insurance is not philanthropic in character. It is all of that. It is the most perfect embodiment we have of the advice to men to bear one another's burdens. It distributes among the many the losses incurred by the few. Because this is achieved in a strictly business way, does not deprive it of its philanthropic character. Legislators concentrate their attention on the business methods employed in its administration and wholly neglect its objects. In simple truth, such a form of helpful coöperation should not be taxed at all, if for no other reason than that the contributions, called premiums, are actually losses—values which have suffered annihilation.

The distinguished speaker then observes that insurance, while not philanthropic in character, "is yet of great importance to the business world, and of immense value to our Government and its citizens in the distribution of the misfortunes and losses of life." This statement of the fact is ultra-conservative. In our present state of civilization it would be difficult to imagine how we would carry on the world's work without it. Subtract it from the instrumentalities now employed, and credit would shrink; one of the securities of human intercourse would disappear; and trade, commerce, agriculture and manufactures would stagnate.

Insurance is not only of "great" but of vital importance to the business world; it is not only of "immense value" but indispensable to the security of government and the well-being of the people. For this reason alone, if on no other ground, it should escape taxation.

Now let us pass to the opinions exprest by Mr. Young in the second of the two sentences we have quoted from his address. Those who engage in the insurance business, he observes, should bear their just share of the burdens of government. Who are these people? What set of persons is included in the description: "Those who engage in the insurance business?" Does Mr. Young mean the people who own the capital stock of the proprietary companies, such as are most of our fire and casualty companies, and if he does, how are we to fit his observations to those companies which are wholly mutual? If the stockholders in proprietary companies are meant, then we say that such taxation as is laid should be placed on the profits made by shareholders and not, as is now the custom, on premium income.

What is an insurance premium? A sum of money contributed by the holder of a policy to be used in paying present expenses and future losses—principally the latter. That being true, it follows that the taxation of premiums is nothing less grave than the levying of a tribute on losses and the expense incident to paying them. As an illustration of the actual operation of the present system of insurance taxation, let us briefly consider the figures to be found in the fire insurance report of the New York Insurance Department for the year ending December 31, 1913, covering all the transactions in the United States of the stock fire insurance companies doing business in the state of New York. The total premiums of those companies for 1913 were $304,439,732. Their total losses and expenses (including $1,025,553 loss on the market

prices of invested assets, and not including dividends to stockholders nor taxes and fees paid) were $298,005,219. The total sum paid for taxes, licenses and fees was $8,898,241. Calculated on the premiums, the tax rate was 2.9 per cent. It will be noted that the total disbursements were just short of the total premiums by $6,434,513, which means that ninety-eight per cent of the premiums were used for losses and expenses. This shows that we have not exaggerated the existing conditions.

In discussing the situation as it affects proprietary companies, we have viewed the subject from its most favorable side for the advocates of insurance taxation. It has no justification whatever as related to mutual companies, which yield no profits at all to any one.

To repeat Mr. Young's phrase, "those who engage in the insurance business" are really the persons who seek its protection and pay all the costs of its operations—the policyholders. The officials, managers, general and local agents are not being taxed. They are simply mediums. No matter what form of organization is used, whether stock or mutual, the undertaking is a coöperative one by the policyholders; the object sought is the distribution of losses; the contributions in satisfaction of which come from the participants. This does not seem to be a proper object of taxation.

NOTES AND ANSWERS

The committee of Congress which is drafting the so-called war revenue measure has included insurance among the businesses to be taxed—eight cents per $100 on life, and fifty cents per $100 on other forms of insurance. Fire underwriters are complaining of the additional burden.

J. S. S., Detroit, Michigan.—The company mentioned pays dividends to stockholders and policyholders, the amount to the former thus far being inconsequential. The official report indicates that the dividend rate on ordinary life policies three years old at age thirty-five in 1913 was about twenty per cent.

S. L. R., Harrisburg, Pennsylvania.—The Phenix Insurance Company of Brooklyn was organized and began business in September, 1853. In February, 1910, it lost its separate identity by being consolidated with the Fidelity Fire Insurance Company of New York, which commenced business in 1906. The name is now Fidelity-Phenix Fire Insurance Company.

President Warfield of the Fidelity and Deposit Company of Baltimore has made a suggestion that has at least the merit of novelty. He has proposed that the fire and life insurance companies invest some of their funds in cotton "to help out the South." The proposition is not enthusiastically received by the companies. Anyhow, the laws would not permit of the investment of such funds in merchandise. President Warfield announces that his company is ready to buy 1000 bales.

SCHOOLS

Miss Bangs and Miss Whiton's Boarding and Day School

¶ The only school for girls in New York which can and does give the opportunities of the city with the advantages of country life and sports.

The following features make it a leader in the highest type of School for Girls:—

¶ It is small enough to insure a real home, careful personal training, and thoughtful supervision of health, manners and instruction.
¶ It is large enough to give the proper school spirit.
¶ Its pupils enter College upon its own certificate.
¶ It has a brilliant Music Department.
¶ Class instruction in Folk and Aesthetic Dancing, Elocution and Art are included in the general fee.
¶ Special Gymnastic Exercises for each student according to her needs.
¶ There are upper classes for Special Students.
¶ Summer Tutoring arranged when needed or desired.

JUST A WORD

The secretary of a local Chautauqua Reading Circle writes that the members of his Circle "find only one difficulty regarding The Independent—they cannot keep it away from their husbands."

The edition of The Independent this week—every copy needed for subscription sales, or introductory work—is nearly three times the edition of a year ago, and the circulation is growing with unprecedented rapidity every week.

The director of Chautauqua Institution, Mr. Arthur E. Bestor, writes concerning The Independent and the Great War: "You certainly are covering European conditions most admirably and each issue seems a little more effective than the last."

The Independent as a Class-Room Text-Book has attracted nation-wide attention and the orders already received for the autumn terms in High Schools, Colleges and Universities are nearly ten times as large as they were at the same date last year.

In next week's issue will appear several pictures of Oldway House, one of the most beautiful country seats in England, with an interesting description by Major Louis Livingston Seaman. This great house has been converted into a Red Cross hospital, under the management of the American Women's War Relief Committee.

From Knoxville, Tennessee, comes this pleasant comment: "I got back the cost of my subscription for The Independent in last week's number. The editorials had the ring of the magazine's name and the article by Sydney Brooks was timely and intensely interesting."

In next week's issue our occasional department, "Both Sides—A Debate," will be published. The question discussed will be "Resolved: Germany is the aggressor in the war." Full references to official documents, important pictures and magazine articles will be given presenting both sides of the question.

The following extract from a letter of a subscriber in Utah is greatly appreciated: "Altho it usually is my policy in dealing with the magazines that I subscribe for, to tell the publishers if I do not like their magazine and to tell my friends if I do, I am impelled to write and tell you how very much I value The Independent, especially since the outbreak of the Great War. Actually I become so confused by reading the news dispatches in the daily papers as to the real happenings and course of the war that I look forward to Monday and The Independent as a time of weekly recapitulation when I can ascertain the best results of the week with a degree of certainty that what I read is authentic. I have always highly prized The Independent since its reorganization and appearance in the new form and have considered its policies and world news service as the very best, but it is so much better since the outbreak of the war that silence on my part is no longer possible."

CALENDAR

The Disciples of Christ hold their national convention in Atlanta, Georgia, *October 7 to 14*.

On May 17, 1814, Norway adopted a Constitution as a free and independent kingdom, having just been released from Danish control. To commemorate this event a Centennial Exposition is being held at Christiania until *October 15*.

The annual meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at the University of Virginia *October 22* and *23*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

World's Temperance Sunday will be observed on *November 8* in most of the states. In some states it will be *November 1* and in Ohio *September 20*.

The twelfth annual Philadelphia Water Color exhibition will be held at the Philadelphia Academy of the Fine Arts, *November 8* to *December 13*.

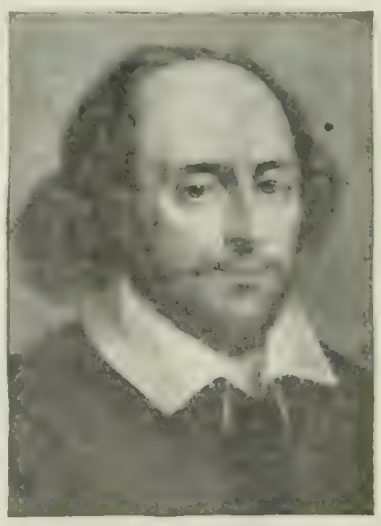
The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

A business efficiency exposition will be held under the auspices of the Cleveland Chapter, American Institute of Banking, from *November 14* to *21*.

The sixth annual Medical Missionary Conference will be held at Battle Creek, Michigan, *November 17 20*.

Between *March 4* and *April 15, 1915*, a monster naval parade from Hampton Roads to San Francisco via Panama will mark the formal opening of the Canal

WONDERFUL THIN PAPER



Booklovers Shakespeare

"The Handy, Helpful Edition"

upsets publishing precedents by being sold for less than ever before. One slender volume, of exactly the same size and thickness, replaces every two of the original edition. The thin paper has every advantage of the old style paper, but not the cumbersome weight and bulk. *Reading and wearing qualities are better than ever.* Best of all, this wonderful paper, expressly made for this edition, neither tears nor wrinkles easily.

Twenty Sumptuous Volumes

bound in soft rich red leather and gold stamped, make up this first Thin Paper Edition. There are 7,000 pages, 40 magnificent full page color plates and hundreds of rare old wood cuts.

Shakespeare's Every Written Word

is included in this justly famous Booklovers. Although *unexpurgated,* every hidden meaning and obscure word is explained. This makes the Booklovers as interesting to read as a novel.

For every purpose the Booklovers Edition is best. Notes, commentaries, glossaries, topical index, life, etc. (*which are contained in no other edition*), are the work of famous scholars and so clear that all enjoy them.

FREE

A Portfolio and Mahogany Rack

will be *presented absolutely free* to each of the first 200 purchasers of this Limited Edition. The Portfolio, consisting of sixteen *Shakespearean Gravure Plates* capable of beautifying any home, would cost $8.00 in an art store. The mahogany rack is especially made to serve as a library table rest for the entire set. Knowledge of the rare value of this thin paper Booklovers Shakespeare makes us offer to send you the entire set, 20 volumes, charges prepaid,

For Free Inspection

Your name and address on the coupon are *all we ask* until you *see the set and decide for yourself.* If you don't like the books we expect their return at our expense. If you do like the set, just send us One Dollar. The balance may be paid in easy monthly payments.

THE UNIVERSITY SOCIETY

44-60 East 23rd Street NEW YORK

UNIVERSITY SOCIETY
New York

You may send, prepaid, for my examination, a set of the Booklovers Shakespeare, twenty volumes, in full limp leather binding at your special price of $29.50. If the books are satisfactory, I shall pay you $1.00 within five days after their receipt, and $2.00 each month thereafter until the balance is paid. If they are not I shall notify you and hold them subject to your order. Also send, prepaid, the $8.00 Art Portfolio and Mahogany Rack which I am to retain without cost if I keep the books.

VOLUME 80 MONDAY, OCTOBER 5, 1914 NUMBER 3434

WOMAN'S RIGHT TO BE WOMANLY

IT is one of the curious features of the feminist movement that each new phase of it has begun by an assumption of masculinity on the part of the women. This has been, indeed, one of the chief causes of the opposition to the movement, for it was instinctively felt that whatever woman's sphere might be it was not exactly the same as man's, and so there was a natural repugnance to see her imitating man and entering fields where she must compete without favor despite the handicap of her sex. But we can now see in looking back on the history of woman's advance that this stage was inevitable. The road to independence lay thru imitation. She had first to make herself mannish before she was allowed to become womanly. This was due to the very absurd and conceited attitude of man. He assumed that as he was ahead of woman the only way of advance must be in his direction.

In consequence of this women have had to burglarize the professions, to sneak into them in disguise. Just as a woman who wanted to go to war had to dress as a man, so the women who first entered any of the higher activities had to assume the masculine habit and bearing so far as circumstances permitted. It was well understood that women could not write novels that amounted to anything, but George Sand and George Eliot, Currer Bell and Charles Egbert Craddock proved that they could and got complimented by the critics on their "virility." Nowadays it is not necessary for women authors to mask as men to get a hearing, nor to write like men either. They have earned their freedom in this field and they are beginning to enjoy it by saying what they like in their own way even when it is not in accordance with masculine standards.

IT was the same way in education. When the women knocked at the doors of the colleges they were told that the kind of education therein given was not suited to women. Quite true; it was not. But there was no other education. It was that or nothing. So the women entered the men's colleges or started colleges of their own just like them. They took the same studies, submitted to the same instruction, past the same examinations and got better marks. Then they said "We've shown you we can do this. Now give us something more to our taste." And they are getting it. We hear sarcastic comments on feminine fickleness because the women who a generation ago were begging or demanding to be allowed to study Latin or Greek are now deserting the classical department for newer studies. Howells observes with whimsical pathos that "nowadays even our women seem to have no use for 'the education of the gentleman.'" But the fact is the women would never have got the chance to study the chemistry of nutrition or the esthetics of dressmaking if they had not first demonstrated that they could do Latin and Greek.

Then the women wanted to come into the business offices and then men said, "Well, come if you must and will work cheap. But you must pretend to be men. You must put on a linen collar and a plain tailor-made suit and cut your hair short and keep your mouth shut and maintain a strictly impersonal and business-like manner." The women complied with the conditions, but once in and become indispensable, they began to do as they pleased. Flowers appeared on the desks and smiles on the faces. The hair grew amazingly fast and waved about; the tight, stiff collar vanished into thin air, taking with it a considerable part of the circumjacent fabric. The business woman of today is not an inferior imitation of the business man but a different sort of an individual, tho quite as satisfactory and capable in her own way.

THE entrance of women into athletics was not a sightly spectacle. It looked like the loss of all feminine graces. Here at least was a field where man's supremacy seemed safe from female competition. So it was except for an occasional tennis game or swimming match. "You can't throw," jeers the boy at the girl who tosses his ball back over the fence to him. He means, of course, "you can't throw as I throw," assuming as usual that his is the only way. But having got entrance into the gymnasium the girl finds that she can throw a ball in a way to please herself—and somehow to please the boy, too. In work or sport it is only by playing man's game and if possible beating him at it, that woman gets a chance to play her own game.

Now when the franchise question is up men take the same unreasoning attitude. They are willing, some of them, that women should enter politics, but only on condition that they do not change the existing order of things in any way, tho there is little reason why they should vote except to change things. They must play the game according to masculine rules or not at all. They may have the ballot if they will vote right, that is to say, vote as those who now monopolize the vote want them to.

But it would be as improper as it is impossible to pledge the women in advance to any cause or course. We condemn the ward boss who goes to a bunch of Italians and says, "I will get you naturalized if you will vote my ticket." What, then, shall we say of the man who is willing to give women the franchise only if he is sure they will vote for or against peace, prohibition, socialism, divorce, capital punishment, child labor, pure food

[illegible] osteopathy, vegetarianism, church schools or whatever he may favor or oppose? We should give votes to women simply because they are entitled to be heard on such questions. All honor then to the conservative who, believing women to be inherently sentimental and impractical, yet is willing to entrust them with the ballot. All honor to the socialist who fears in his secret soul that women are priest-ridden and reactionary and nevertheless works for their emancipation. Such men have the true faith in democracy.

THE first step in the progress toward equality is when man concedes to woman the right to do what he does. The second, and more difficult step, is when man concedes to woman the same right that he has, the right to do what she wants to do. Thruout historic and prehistoric times man has been trying to fit woman into the various spheres which he has from time to time determined she was fitted for. Now he is about ready to give up the attempt as a bad job and is coming gradually to the conclusion that it will be better to let woman have a try at finding out for herself what she is fitted for or can fit for. But this comes hard for man because it means the breaking up of a habit of some hundred thousand years standing. Man thought himself chivalrous when he attained the cultural stage of reverencing woman so long as she did what he liked. But now he is beginning to see that there is ahead a higher chivalry, that of reverence for woman even when she does what he does not like.

"U-9"

WHEN David slew Goliath with a smooth round pebble from his sling, he made giants obsolete.

When gunpowder for the first time in the world's history decided the fate of a great battle at Crecy, it made knighthood and coats of mail obsolete.

When the "Yankee cheese-box on a raft" roundly thrashed the "Merrimac" in Hampton Roads, it made wooden fighting ships obsolete.

When "U-9," with only the eye of her periscope and the foamy wake of a speeding torpedo to warn the enemy, too late, of its approach, sank in rapid succession the "Aboukir," the "Hogue" and the "Cressy" and sent to death more than fourteen hundred men, did it make the battleship obsolete?

Only a future day will show. Today one can only surmise, or, if he feel bold enough, prophesy.

It is true, as Mr. Park Benjamin points out on another page, that the three sunken ships were only cruisers and almost ready for the scrap heap. But a torpedo which sinks at one blow a cruiser of twelve thousand tons would hardly find a twenty-five thousand ton battleship an appreciably harder task.

Whether the twilight of the battleship is falling and the sun of the submarine about to rise in unconquerable splendor, the name (prosaic as it is) of "U-9" and the roster of its handful of officers and men deserve a page of their own in the books of history.

The fate of a companion submarine, "U-15," sunk a few days ago by two shots from a British cruiser, suggests the risks they ran. Terrible as were the consequences of their exploit, awful as is every act of war, the intrepidity with which the little band in a very literal sense committed themselves unto the deep, the singleness of purpose and the heedlessness of personal safety with which they carried thru their fell mission, are qualities which the world could ill afford to lose.

Such a feat grips the imagination, as when any indomitable pigmy challenges an insolent giant, and makes good his challenge.

CULTURE AND DEMOCRACY

WHEN a nation proclaims itself the protagonist of culture, asserting lordship and demanding homage, it challenges the judgment of civilized mankind It is in order to examine the culture. Of what mental and moral stuff is it made? What ends does it subserve? At what stage of evolution has it arrived? How deeply does it penetrate the individual mind? How wide is its social extension?

Culture is no part of the "original nature of man," to quote Professor Thorndike's phrase. It is not an instinct, nor compounded of instincts. It is an acquisition, a sum of things learned by toil and pain, thru age-long "trial and error." It is an equipment of ideas; a stock of selected sentiments, stimulated and strengthened; a complex of habits that have become a true second nature.

The quality of culture is fixed by the ends that it subserves, and these are determined by the struggle for existence. The savage, forever fighting for his life with enemies as savage as himself, creates a culture of suspicion, cruelty and fortitude. The barbarian enlarges his equipment of ways and means, but does not make over his sentiments. The lamented Edward John Payne, in his never-finished *History of the New World Called America,* accurately describes barbarism as the attainment of a relatively effective social organization and the enjoyment of a relatively secure and abundant subsistence by a people whose mind and heart remain savage. Civilization achieves a yet higher organization, a greater efficiency, and material abundance—and then, its supreme work, it begins to re-sort and to make over the sentiments and the habits. It begins to create a culture into which mercy may enter, and gentleness, and justice. The culture of savagery subserves the end—War. The culture of civilization subserves the end—Peace.

But the culture of civilization does not yet fully penetrate every individual mind, and it is by no means uniformly distributed thruout the populations of the so-called civilized nations.

The culture of the modern world differs from all past attainments in its enormous multiplication of ideas, discoveries and inventions. Knowledge about these rather than of them, and interest in them, are easily acquired, and culture to this superficial extent becomes the possession of millions who have no discipline of mind, nor any real understanding of what they talk about. Sentiments and habits may remain naïvely savage in the devotees of this, mere gossip culture.

They may remain savage also, and too often they do, in men who diligently master knowledge for efficiency purposes. These men may think well of themselves, they usually do, but in fact they are barbarians. They are quite incapable of understanding one who is by nature rather than by heraldry, preferment, or purchase a gentleman, to whom success is not more important than kindly feeling and considerate behavior. The culture of

civilization is not comprised in speculative philosophy nor in efficient materialism. It includes grace in the heart and a habit of good manners.

All too obviously, then, the culture of civilization has not yet become the heritage of indiscriminate mankind in the self-described civilized nations. Nevertheless, by virtue of its own qualities it diffuses, and those who have it and appreciate it by virtue of their qualities consciously try to diffuse it. It cannot remain aristocratic. Inevitably it must become democratic.

And democracy, what of it? It will extend over the world and will endure only as it becomes a fact of intellectual discipline, of moralized sentiment, of well-established habit; an embodiment and manifestation of the culture of civilization. A century of European and American history has demonstrated that democracy as a governmental form is a mockery where it is not the expression of popular habits, fed by sincere sentiments of justice and good will to all men. A self-governing people is made up of self-governing individuals, morally responsible, intellectually alert, trusting one another and intent to deal honorably and helpfully by one another. Precisely as men acquire the culture of civilization do they become capable of democracy, as well as desirous of it. And only as they become democratic can the culture of civilization reach its utmost diffusion. In their perfect realization democracy and the culture of civilization are one and the same thing. In neither is there room for emperor or king. In neither is there place for savagery or war.

AWAY WITH THE PORK BARREL

THE power of public opinion, focussed upon the Senate thru the filibuster of righteous protest of Senator Burton, has brought about a remarkable alteration in the Rivers and Harbors bill. As it past the House the bill carried appropriations amounting to $53,000,000. The first impulse of the Senate was to expand this to $65,000,000. But when Senator Burton had talked all night against the bill, and reinforcements were ranging themselves to support him, the Democratic majority in the Senate suddenly saw a great light. They reduced the appropriations carried by the bill to $20,000,000. What is more, they appropriated this in a lump sum, and entrusted its expenditure to the War Department in its discretion. The House may protest against both the reduction and the manner of making the appropriations. But the country is already aroused upon the subject The House majority will hardly dare to recede very far from the advanced stand taken by their associates in the Senate.

It is a fine thing that the demands of economy should be squarely met in this particular bill at this particular time. It would be a tremendously finer thing if the precedent here established in relation to the improvement of the nation's navigable waters could be followed consistently in the future.

River and harbor improvement work has long borne a stigma because it has been associated with Congressional cupidity and extravagance. The Rivers and Harbors bill has time out of mind been the pork barrel par excellence.

The improvement of the navigable waters of the country is one of the most vitally important works which the National Government has to carry on. We ought, for the sake of our national prosperity, to spend large sums of money upon it.

But the question of where and how the moneys are to be spent should not be determined by solicitude for the personal fortunes of individual congressmen or even by considerations of party advantage.

How much money is to be spent on rivers and harbors should be determined by Congress. On what rivers and harbors it is to be spent should be determined by experts.

In the Engineer Corps of the Army the nation has as fine a body of experts as can be found. Let them determine how the money appropriated by Congress shall be spent.

AN INTERESTING COINCIDENCE

IN his article on the Great War in the current *Outlook* Mr. Roosevelt urges the establishment of a League of Peace as the most promising way to bring the nations "nearer to the day of world peace." His suggestions are as follows:

> But in view of what has occurred in this war, surely the time ought to be ripe for the nations to consider a great world agreement among all the civilized military powers *to back righteousness by force.* Such an agreement would establish an efficient World League for the Peace of Righteousness. Such an agreement could limit the amount to be spent on armaments and, after defining carefully the inalienable rights of each nation which were not to be transgressed by any other, could also provide that any cause of difference among them, or between one of them and one of a certain number of designated outside non-military nations, should be submitted to an international court, including citizens of all these nations, chosen not as representatives of the nations, *but as judges*—and perhaps in any given case the particular judges could be chosen by lot from the total number. To supplement and make this effectual it should be solemnly covenanted that if any nation refused to abide by the decision of such a court the others would draw the sword on behalf of peace and justice and would unitedly coerce the recalcitrant nation.

Our readers will not fail to notice the striking similarity of these suggestions to those proposed by Mr. Holt in last week's Independent. When such a robust anti-pacifist as Mr. Roosevelt is in essential agreement with the Editor of The Independent on a plan to diminish war, is it entirely unreasonable to suppose that there may be "something in it?"

THE SITUATION IN COLORADO

THE proposal of President Wilson for a three years' truce in the labor war in the mines of Colorado has been promptly and fully accepted by the miners. It has been as definitely rejected in its main features by the mine operators. The deadlock continues.

More than four months ago civil war raging in Colorado was put a stop to only by the despatch of Federal troops to the scene. The troops are still there, order reigns, but apparently operators and miners are no nearer a settlement of their differences now than they were then.

The President, as he intimated in his letter proposing the truce, would not be justified in using Federal troops indefinitely for police purposes. The Colorado mines are a public necessity, their operation a public service. Their operation cannot be carried on while the two essential parties to that operation—capital and labor—remain at daggers drawn.

Since neither side is willing to yield to the other, the only solution is thru compromise. The President has

a practical way for approaching such a compro-
mise, and meanwhile for keeping the mines open and
the laborers busy.

The miners have accepted. If the operators are unwilling to do the same, they should propose such a modification of the plan as they will accept. If they really want peace in the mining industry in Colorado, it should be a modification to which there is some likelihood that the miners will in turn agree.

The difficulty is that the mine operators are strongly opposed to the recognition of the union. With this opposition as their major premise, they quite naturally find it not easy to join with the miners' union in reaching a conclusion.

In holding to this premise they are wrong. The day is sure to come when they will be compelled by the logic of events to abandon it. Collective bargaining is essential to harmonious coöperation between capital and labor in industry where both are indispensable parts. Collective bargaining without recognition of the bodies into which the employees collect themselves is a contradiction in terms.

THE PRESIDENT'S ABNEGATION

PRESIDENT WILSON has shown a fine spirit in counselling his party associates in his own state not to endorse him just at this time for a second term in the Presidency. It is an admirable delicacy of perception that makes him realize that as he puts it, "it might seem as if he were taking advantage of the extraordinary situation now existing to gain some personal advantage thru such an expression of confidence."

It was not a big temptation, to fall in with the complimentary proposal of his friends at home, but just one of those little ones, which it is so easy to yield to and so fine to put behind one.

This act of the President will only strengthen the conviction of the country that he is single-minded in his determination, among the great events that are taking place about him, to give to the high office he holds the very best that is in him. Surely no one, of whatever political faith, can see here anything but evidence that Mr. Wilson is so much concerned about being a good President now that he really is not concerned at all about whether he is ever President again.

LET THE PHILIPPINES ALONE!

THE bill promising independence to the Philippines is a dangerous measure and should not be past now if ever. This is the worst possible time to throw over the archipelago when the whole Pacific is in a turmoil and Great Britain and Japan are gobbling up Germany's possessions as fast as they can. The Philippines would be a richer prize than any of these and should not be cast aside to be the spoils of the victor when the repartition of the Pacific is effected after the war. When Admiral Dewey was in Manila Bay he threatened a war with Germany unless that country should keep her hands off. At that time we did not know whether the islands were worth having or whether we could govern them to the advantage of the natives. Now the value of tropical dependencies is realized and every country is glad to get them. What is more important, we have demonstrated that we can administer them with unquestioned benefit to the Filipinos themselves, and our success in sanitation and education has roused the admiration of the world.

We may if we will discard the Philippines, but we cannot if we would make them free and independent. Where in the whole wide world is there a tropical island free and independent? Santo Domingo, yes, but who would wish the Philippines to become like Santo Domingo? Cuba? But we have had to set Cuba to rights twice and the third time we may have to stay there. A protectorate over the islands would involve us in more danger of war than our possession of them and would forfeit all the advantages that both parties derive from the connection.

The bill now before the House should be indefinitely postponed. It is impossible even to discuss it as it should be discussed without violating the neutrality of speech advised by the President in this crisis.

REPEATING ITSELF

SAID President Wilson on April 20, 1914:

> If armed conflict should unhappily come as a result of his attitude of personal resentment toward this Government, we should be fighting only General Huerta and those who adhere to him and give him their support, and our object would be only to restore to the people of the distracted republic the opportunity to set up again their own laws and their own government.

Said Francisco Villa on September 23, 1914:

> We will not fight against any other of the chiefs who have contributed to the downfall of the usurper Huerta, our difculties being against the person of Venustiano Carranza. . . . We have declared hostilities, being disposed to fight him until the last—until he is forced to abandon his power and place the same in the hands of the real representatives of the people.

We have made progress, yes, but the treadmill of revolution in Mexico goes round in a wearisomely monotonous fashion. Personal government and democracy are mutually destructive. Until the Mexican people can achieve democracy they will continue to suffer from the rivalries of self-seeking men.

TEN DRY STATES

LAST week the people of Virginia adopted prohibition by a majority of some 35,000. This brings the honor roll up to ten; Georgia, Kansas, Maine, Mississippi, North Carolina, North Dakota, Oklahoma, Tennessee, Virginia and West Virginia, placing a population of over 17,000,000 under a prohibitory régime. The mother state thus follows the good example set by her daughter, West Virginia, which past a prohibition amendment two years ago by over 92,000, the largest vote given by any state yet. The West Virginia law went into effect July 1 last; the Virginia law will take effect November 1, 1916.

Virginia sacrifices by this act $539,000 of revenue which it now derives from the liquor traffic, but according to the figuring of the Anti-Saloon League it will save $826,000 on the theory that forty-seven per cent of the pauperism, thirty-five per cent of the insanity and eighty-five per cent of the crime is due to liquor. We doubt whether it is possible to calculate the gain so nicely in advance, but we are sure that Virginia will find, as Kansas and other states have found by experience, that prohibition pays in more than one sense of the word. The closing of her one hundred and three distilleries which last year produced a million and a half gallons of spirits will be no loss to the world.

THE STORY OF THE WEEK

THE GREAT WAR

September 22—Russians occupy Jaroslav in Galicia. German submarine sinks the British cruisers "Aboukir," "Cressy" and "La Hogue" in North Sea.

September 23—French recapture Péronne on extreme German right. Russians driving back German army in Poland northeast of Cracow.

September 24—Germans attack forts between Verdun and Toul. Cholera breaks out in Austrian army and Vienna.

September 25—Germans are invading Russia along Niemen River. Montenegrins take Mostar, capital of Herzegovina.

September 26—Germans bombard fortress of St. Mihiel on Meuse. Russians take Rzeszow, on railroad between Przemysl and Cracow.

September 27—Germans cross the Meuse near St. Mihiel. Russians cross the Carpathians and invade Hungary. German aircraft drop bombs in twelve cities.

September 28—Indecisive fighting on Aisne River and in Argonne Forest. Servians approach Sarajevo, capital of Bosnia.

The Fighting on the Somme

Another week of indecisive conflict. There has been continuous fighting all along the two hundred mile line, but the net result, in so far as we can estimate it from the stringently censored despatches, may be summed up in a sentence:

On the west the Germans have lost ground; on the east they have gained.

Neither movement is important except in what it indicates as to relative strength and future intentions. Let us first consider the western end of the long serpentine line of battle.

Here the German front turns sharply north from the Aisne River near Soissons, passing near Noyon and between Peronne and St. Quentin. This turned-up tail or whip-lash of the German right has been waving back and forth for weeks. General d'Amade has been placed in command of the allied troops at this point for the purpose of turning the right flank of the Germans. He has not yet accomplished this, altho the newspapers have several times announced his success. On the contrary, General von Boehm arrived on the scene with fresh troops from Belgium and was able to assume the offensive. The Germans recaptured Péronne on the 17th, but were only able to hold it for three days, for the British shelled them out with long range naval guns. This town, which is reported to have been demolished by the bombardment, has suffered much in former wars. In 1871 it was nearly destroyed by the Germans.

The Germans have also reinforced their right still further to the north, at Cambrai and Valenciennes, possibly to resist the attack from the west of a new British army said to have been landed recently at Ostend and Boulogne.

The allies outnumber the Germans two to one in this region, if we follow the French military authorities, who estimate the German forces at 600,000 to 700,000 and the allies at 1,500,000. In the eastern field, along the Meuse, the opposing forces are more nearly equal, about 500,000 on each side.

The Fighting on the Meuse

It will be seen from the map that in the east the German left loops around Verdun. This is the northernmost of the chain of "entrenched camps" or first-class fortresses which the French constructed since 1871 along their two hundred mile frontier between Switzerland and Belgium. So strong is this barrier that the Germans determined to enter France by way of Belgium rather than attempt it, altho by this violation of the neutrality of the buffer state they added both Belgium and Great Britain to the number of their enemies.

But when the Germans got to Paris they were too weak to take it, so they turned to the east, where they are now attacking the frontier forts which they would have begun upon if they had invaded France from their own border.

The system of defense which the French engineers devised to protect their country against a direct invasion from Germany consists of four great "entrenched camps," connected in pairs by a chain of minor fortifications, Verdun with Toul along the Meuse, and Epinal with Belfort along the Moselle. This left a gap of some forty miles between Toul and Epinal, invitingly open and ostensibly unprotected. The purpose of this was to avoid a sudden attack from an unexpected quarter, the idea being that the Germans would either have to lay siege to the fortresses or enter the open door, where the French would be ready to give them pitched battle. But the Germans have warily refused to enter the Toul-Epinal gap, altho they captured Lunéville, which stands at its entrance, a month ago. They are, instead, trying to force an entrance thru the middle of the northern chain, between Verdun and Toul. St. Mihiel is the point of attack, and here the Germans have captured Fort Camp des Romains. On the western side of the Meuse the Germans have recaptured Varennes, between Verdun and the forest of Argonne.

Obviously, if the Germans break thru the Meuse barrier at this point or some other and can make connections with the German forces from Varennes on the other side, Verdun will be surrounded and unless relieved will in the course of time fall into their hands like Metz in 1870. But the reduction of Verdun would probably take a long time and many lives, even with the new Krupp howitzers. The forts grouped

THE SEAT OF WAR IN FRANCE

THE WAR ABOUT POLAND

The shaded part represents the territory held by Russians; the white that held by Austrians and Germans. It will be seen that in the north the Germans have crossed the border from East Prussia into Russia, and that in the south the Russians have invested Przemysl and are approaching Cracow

about Verdun are scattered like a constellation over a circle some ten miles in diameter, lying on both sides of the Meuse. The map shows forty of them and how many more there are is only known to the French General Staff—and doubtless also to the German. Some of them have been under fire since early in September, but so far without apparent result except, say the French, the loss of 25,000 men, killed and wounded, on the German side.

The Campaign in the Baltic Provinces

A curious movement whose significance and importance does not yet appear is taking place to the east of Königsberg. General Hindenburg was not content with driving the Russians out of East Prussia, but followed them over the border for some twenty miles. This seems to be instigated by something more than a mere desire to clear the frontier, for the Germans have backed up the movement with considerable force instead of keeping all their available troops on the Silesian border to check the expected Russian advance toward Breslau and Berlin.

The German front extends from the Niemen River on the north beyond Suwalki to the southward, tho whether the real objective is Warsaw or Riga remains to be seen. The country is a hard one for campaigning, being swampy and sandy and broken by streams and lakes. The Germans have had hard work here in getting their armored automobiles and heavy guns over this rough ground, and have lost many of them. According to reports from Petrograd the German invaders have been defeated all along the line.

There are rumors of naval preparations on a large scale at Danzig and other Baltic ports, which leads to the surmise that the German fleet may coöperate with this land movement in an attack upon Russia along the Baltic coast.

The Battlefield of Galicia

There are few parts of Europe that are less known to Americans in general than the Austrian crownland of Galicia, now being gradually overwhelmed by the Russian avalanche. Its uncouth names are meaningless to us, and we do not know whether to be glad or sorry or how much when we read in a despatch from Petrograd that "the Russian troops have taken Czyschky, Felstyn and Khyroff." It is different with the war in the west, where the places arouse recollections of history and legend. We all know "the jackdaw of Rheims" and "how the good news was brought from Ghent to Aix."

But we ought to know the people if not the land of Galicia, for they have been coming to us in throngs. More than twenty thousand Ruthenians and perhaps as many Poles and Jews have, within the last few years, left Galicia to seek a greater freedom and opportunity in the United States. For theirs is an inhospitable land, one-fourth of it forested, the rest agricultural, poorly cultivated and overpopulated, for more than eight million people are trying to get a living from a country smaller than South Carolina. They cannot do it, even according to their own low standard of life, so the men migrate into Germany or Russia for seasonal work or emigrate to America. A third of the land is held in large estates, mostly by Roman Catholic Poles. The peasants are chiefly Greek Catholic Ruthenians, while in the towns the Jews predominate. So the population is torn by the deeply deeply rooted antagonisms of race, religion, language and economic class and unable to work together in harmony for the development of such natural resources as they have. One source of wealth they possess which makes the country a prize worth fighting for, petroleum. Galicia produces two and a half per cent. of the world's oil output, as much as Great Britain, France and Germany have in all their broad possessions.

If geographers had the making of the maps they draw they would say that Galicia belongs naturally to Poland rather than to Austria, with which it is connected by Cracow. It lies in a crescent on the northern slope of the Carpathian Mountains, high ground and a cold exposure. Winter has already come there and the soldiers are marching and camping in the snow; the Russians well wrapped up in their big overcoats, but the Austrians suffering for lack of winter clothing which was stored in Lemberg and so captured by the Russians.

The Campaign in Galicia

The Austrians are being driven back into the western tip of the Galician crescent where lies Cracow. It is a strong position naturally, between the river and the mountains; their left resting on the Vistula, the Polish boundary, their right on the Carpathians, the Hungarian boundary. Yet it is doubtful if the Austrians can check the Russians anywhere east of Cracow, for they failed to hold the San River, the only well fortified line in Galicia. There they had thirty-six miles of entrenchments protected on the north by Jaroslav and on the south by Przemysl. But Jaroslav was hastily evacuated by the Austrians within two days after the Russians had got their

siege guns into action on the eastern bank of the river. The Russians captured twenty cannon and enormous quantities of stores and ammunition.

Przemysl is a much stronger fortress and should hold out for some time, but by the capture of Jaroslav the Russians can attack it from the north, and they have already made their way around it on the south. So the Russians need not wait for the fall of Przemysl, but will leave a force to besiege it while continuing their advance on Cracow. Along the railroad already they have reached Rzeszow, ninety-eight miles from Cracow, and raids of Cossacks are reported as far as Tarnow, only fifty miles from their goal.

A detachment of Russians captured Uzsok, at the Galician entrance to the pass of the Ung River, and even pursued the retreating Hungarians over the Carpathian divide, which is here about 7000 feet high.

Cracow is being prepared for the attack of the Russians by German officers, who have superseded the Austrians in command of the city. The Austrian and Hungarian officers are said to have been deeply humiliated by the contemptuous way in which the Germans who have come to their rescue have shoved them aside as incompetent and taken the management of affairs in their own hands.

Few pictures are received from the war in the east. These men are advancing thru one of the passes which the Russians now hold and which command the plains of Hungary. Late despatches indicate that forces have been thrown down into northern Hungary

The War on the Sea

There has been no general naval engagement in the present war. The British fleet has held control of the North Sea and the German has kept out of harm's way, but the exact whereabouts of neither is known to the public. German and Austrian shipping is absolutely stopped, but the vessels of the Allies are safe in all seas except for such few German cruisers as are still at large.

The German cruiser "Emden," from the China station, appeared on September 10 in the Bay of Bengal and in four days captured six British ships: the "Diplomat," of the Harrison Line, which had just left Calcutta for Liverpool; the "Indus," which carried a cargo of bagging for American sugar planters in Cuba; the "Lovat," "Killim," "Frabbuck" and "Katinga." Five of them were sunk and the crews sent to Calcutta on the sixth.

The British light cruiser "Pegasus," while repairing her machinery in the harbor of Zanzibar, was attacked by the German protected cruiser "Königsberg" and was completely disabled, losing 25 killed and 80 wounded out of a crew of 234. The new four-inch guns of the German vessel carried farther than the British guns. The "Pegasus" had done a good deal of destruction since the war began, as it had bombarded the port of Dar-es-Salaam, in German East Africa, and had sunk the German gunboat "Mowe" and a floating drydock.

The British auxiliary cruiser "Carmania" on September 14 sunk a German armed merchant cruiser supposed to be the "Cap Trafalgar" in an action lasting an hour and three-quarters off the east coast of South America.

The Australian submarine AE-1 has been lost at sea, presumably by accident, with all on board, 35 officers and men. This is the first loss of the new navy of the Commonwealth.

The efficiency of the submarine has at last been demonstrated. The German light cruiser "Hela" was sunk by the British submarine "E-9" about six miles off the German coast. On coming to the surface in the early morning it discovered the cruiser within range. It immediately dived again and launched two torpedoes. Rising again in a quarter of an hour the lookout on the submarine saw that the "Hela" was sinking, and when the submarine came to the surface after another quarter of an hour it had disappeared. Probably the crew of the "Hela" did not catch a glimpse of the enemy which struck the fatal blow.

The most important event of the war on the sea, the destruction of three British cruisers by a German

submarine, is discussed by our naval expert in a separate article of this issue.

Villa Fights Carranza

The break-up of the Constitutionalist forces in Mexico, long expected and often threatened, is now a fact. Villa has defied Carranza and fighting has begun in Sonora.

The immediate occasion of the split was Villa's imprisonment of General Obregon, whom Carranza had sent to confer with him about the insubordination of José Maytorena, military governor of Sonora, and certain other points at issue. Villa quarreled with Obregon and was barely dissuaded from having him shot. Carranza retaliated by ordering railroad service suspended north of Aguascalientes, hoping thus to forestall Villa's military movements. Mutual demands for explanation followed, and Villa notified Carranza that he no longer recognized him as First Chief, adding: "You are at liberty to pursue any course that may please you."

Trouble has been brewing, however, for a long time. Villa was dissatisfied with Carranza's plans for the military convention that was to establish the provisional government, charging that the First Chief was "packing" it to make sure of his ultimate election as President. Like Zapata, Villa seems to have suspected Carranza of insincerity in his promises of agrarian reform. But it has been obvious since early in the revolution that Villa was a man not likely to submit to control.

In his manifesto Villa claimed that Sonora, Chihuahua, Zacatecas and part of Coahuila were supporting him. San Luis Potosi and the city of Zacatecas were added shortly, General Natera at the latter point swinging one entire army corps to Villa's support. Coahuila is the state of which Carranza was governor when he took arms against Huerta. His forces are estimated at from 13,500—Carranzista figures—to 50,000. The pick of these troops are being sent forward to Torreon, which marks roughly the southern limit of Villa's sphere of influence, and artillery and ammunition go with them.

The first fighting, however, was just south of the Arizona boundary, in northern Sonora. There, at Santa Barbara, on September 25, Governor Maytorena, Villista, met and routed General Benjamin Hill, Carranzista More than 300 were killed, and Hill retired to Naco and intrenched, awaiting reinforcements. The first important battle will probably be fought near the border, where the beaten army can take refuge in the United States.

Villa's Demands

Carranza appeared reluctant to test his strength against Villa, and with General Obregon, who was released, was trying to arrange a conference when fighting began. A meeting at Aguascalientes was agreed upon, to precede the military convention in Mexico City on October 1. Villa announced that he would be satisfied by nothing less than the immediate withdrawal of Carranza from temporary control and his elimination as a candidate from the forthcoming presidential elections.

Villa's choice for Provisional President was Fernando Iglesias Calderon, leader of the Liberal party, allied with the Constitutionalists, and one of Carranza's appointees to represent the Constitutionalists at the Niagara Falls conference. Villa himself has assured Washington that he will not himself be a candidate for the Presidency or

Vice-Presidency. Since Carranza had already indicated his willingness not to run if all the other military leaders of the revolution made a similar promise, there is hope of a peaceful settlement.

General Funston was ordered on the 25th not to withdraw from Vera Cruz within ten days, but President Wilson had said on the 24th that the new revolt would not alter the plan for evacuation. It was understood that the Administration would regard the new war as a matter beyond the scope of our interference.

No Settlement in Colorado

The refusal of the operators to agree to three-year truce with the striking miners of southern Colorado upon the terms suggested by the Federal mediators and accepted by the United Mine workers leaves the situation still unsettled.

The operators, accepting the terms in part, directed their opposition chiefly against two provisions of the agreement: that requiring them to re-employ all striking miners who have not been convicted of lawbreaking, and that establishing grievance committees and a Federal commission for the settlement of disputes. The Colorado Fuel and Iron Company claims that it is now producing over seventy per cent of its normal output and that the deprest condition of the steel industry makes it impossible to promise that there will be work for all the striking workers. The companies decline to employ men under indictment for murder.

The Federal commission of three was to have power to render binding decisions in all controversies between employees and operators not settled by the grievance committees, and without its approval no mine was to be closed for more than six days. The operators decline to surrender so much authority, and assert that grievance committees are a notorious source of disaffection. The Victor-American and Rocky Mountain Fuel companies and forty-six smaller concerns further refuse to enter into a truce with the miners, charging that the union has broken faith before and is not trustworthy.

Taxes and Appropriations

The Democratic majority in the House made short work of the War Revenue bill once it had been framed. After limiting debate to seven hours they past the bill on September 25, by a vote of 234 to 135. One Progressive voted with the majority, 11 Democrats and the other Progressives joining with the solid Republican minority. A hard fight will be made by the Republicans in the Senate, where the Democrats have only ten votes to spare.

MISS LUCY [illegible]

MISS GENEVIEVE CLARK

Three girls, the daughters of Senator Hoke Smith, of Georgia, Postmaster-General Burleson, and Speaker Clark, have planned a national bargain day in cotton goods to strengthen the demand for cotton manufactures and relieve the depression in the industry

Retrenchment was the order of the day in the Senate after the Rivers and Harbors bill had been killed. A substitute measure, appropriating $20,000,000, was past without a fight on September 30. This action was much more significant than a mere reduction from $53,000,000 — the figure at which the House past the original bill — for the new bill leaves the apportionment of the fund entirely to the Secretary of War and the Chief of Engineers. In place of the old "pork barrel" appropriation, in which local projects of all degrees

MISS CALLIE HOKE SMITH

of importance and worthlessness were specifically cared for, there is to be a non-political distribution of money among enterprises already under way or authorized. The House was expected to oppose this revolutionary change.

Direct Primary Results

In New York State the first direct primary election ever held, on September 28, resulted in the following nominations, according to early returns:

For Governor—Republican, Charles S. Whitman, District Attorney of New York; Democrat, Martin H. Glynn, now filling Sulzer's unexpired term as Governor; Progressive, Frederick M. Davenport, professor of law in Hamilton College and formerly a State Senator.

For United State Senator—Republican, James W. Wadsworth, Jr., ex-Congressman; Democrat, James W. Gerard, Ambassador to Germany; Progressive, Bainbridge Colby, former Assemblyman and Progressive candidate for the Governorship in 1912.

The Republican and Democratic nominations are both victories for regulars against insurgents. Harvey D. Hinman, running as an anti-boss candidate, lost both in the city and "up-state" to Whitman.

Glynn's majority over John A. Hennessy, whose revelations of Tammany graft did much to defeat Murphy's candidates in the last city election, was very large, probably 110,000. Franklin D. Roosevelt made a better showing against Gerard. Murphy's control over the state committee was unshaken.

Interest in the Progressive vote centered in the attempt of William Sulzer, impeached and deposed from the Governorship in 1913, to capture the nomination. His success would have meant the abandonment of the party machinery by Roosevelt. He prest Davenport hard in the city, but could not overtake him.

A Prayer in Time of War

BY WALTER RAUSCHENBUSCH

GOD, we call to Thee out of the darkness. The heavens are black with the storm-clouds of wrath. A hail of death is cutting down the harvest of the ages. We had hoped for an era of peace, and behold this war! We had trusted that the nations were moving with steady steps toward the brotherhood of man, and behold, humanity is thrust back to savagery. The spiritual achievements which generations toiled to build, are being swept away as by a flood.

O LORD, our spirits are sick with pity for our brothers who die, for the women widowed of their loves, for the fatherless children, for the unborn who will be seared with the curse of fear in their mother's womb. The sun of hope is darkened. We stand before Thee numb and helpless. We can do nothing but pray to Thee. But, O Thou God in whom our fathers trusted, today we pray with a purpose. We ask for a miracle of Thy saving power. Let not the end come by bleeding exhaustion but by the stern protest of the people and the righteous will of the leaders. We know not how. Therefore we cry to Thee. Do Thou wrest good out of evil. Amid the clash of battle build Thou up the larger unity of nations. Give freedom to the common man. By the terror of this experience confirm us all in a settled hate for war. Dispel forever the lies and illusions that have enchanted the mass. Make bare Thy mighty arm. Beat the sword and the cannon on the anvil of history till they are forged into tools of peace that will build up lasting institutions of international justice and redress.

WE THANK THEE, O God, for the firmness and sagacity of our President and his advisers which cooled our own lust for war. We beseech Thee to save our nation from being sucked into the present flood of passion. May our land remain an island of peace in this red sea of trouble. Grant our people a sober and neutral mind, fair and friendly to all nations, remembering our own sins, and when the hour comes may our nation be fit to serve all mankind as the spokesman of peace and the healer of wounds.

OUR FATHER, let Thy kingdom come and Thy will be done on earth! Forgive us our debts! Deliver us from evil! Amen.

THE SUBMARINE PERIL—IN ROUGH WATER THE PERISCOPE'S WAKE IS INDISTINGUISHABLE

THE CHALLENGE OF THE SUBMARINE

CAN THE BATTLESHIP AND THE BATTLE CRUISER ANSWER IT?

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

THREE 12,000-ton British cruisers, the "Aboukir," the "Cressy" and the "Hogue," while on scouting duty in the North Sea, were successively destroyed last week by the enemy in about an hour. The German Admiralty announces that the work was done by a single submarine boat—the "U-9"—which has since come back uninjured. It has been expected that the known skill and daring of the German submarine corps would show itself before long in some sort of submarine assault upon the British blockading vessels, but nothing like this exploit is to be found in the history of naval warfare. Its importance is not affected by the obsolescent character of the lost vessels nor by their small pecuniary value after fourteen years of service. What was done to them could as well have been—and as well may be—done to the most formidable capital ships in the British line. The event, furthermore, is not only epoch-making, but it begins the solution of the gravest of all naval problems: is war on the sea, as we now know it, to be ended or revolutionized by under-water attack?

All interested from this time on should watch the submarines of the contending navies. To help to a viewpoint and to a general understanding of what to look for, here are some data:

Last June, Admiral Sir Percy Scott of the British navy, one of the most distinguished gunnery experts in the world, publicly affirmed that the warship which floats on the water is of no further use and should be abandoned. The sensation produced by this outgiving among the nations which were feverishly building more and more floating forts at a cost constantly increasing and now nearing fifteen million dollars each, was tremendous. For, if true, it means that billions have been and are being wasted for weapons that are not weapons, and for protection that is not protection. That a huge navy afloat is no longer a warning and a shield against aggression, but a pitfall and a snare invoking only disaster and loss to the nation which depends on it. If true, it seems as if some magic finger has touched these leviathans of steel and fire and in a flash converted them into floating scarecrows.

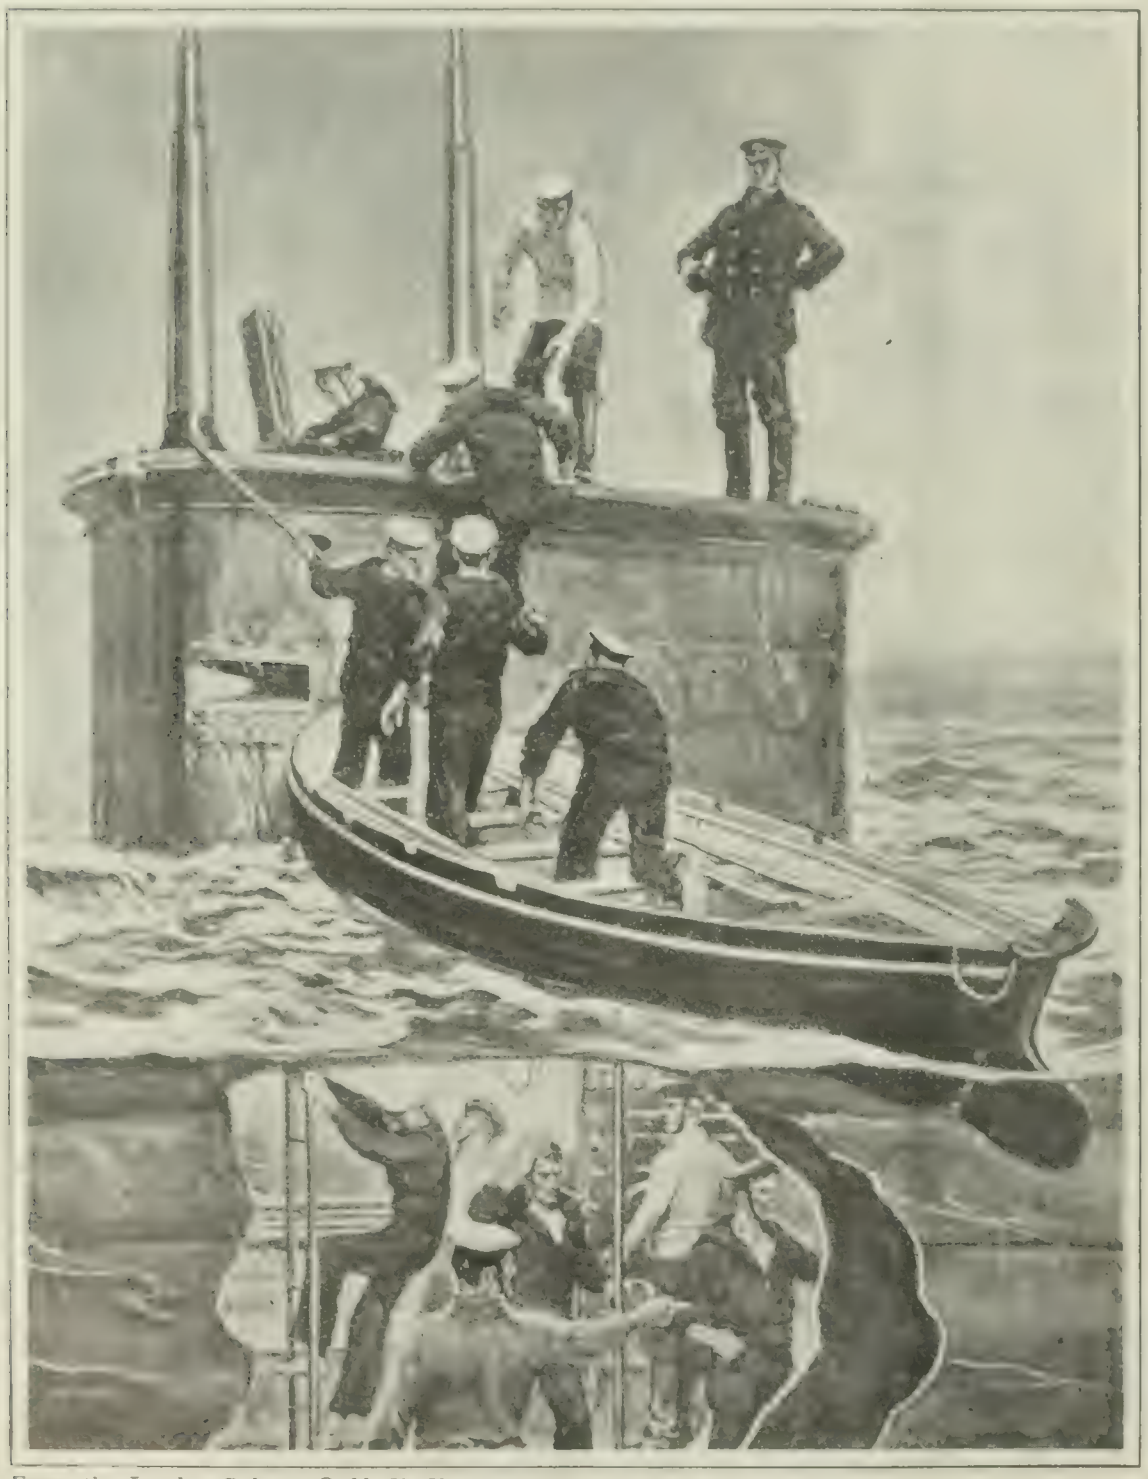
There has been no lack of denial of Admiral Scott's conclusion. Shipbuilders and gun and armor makers, of course, disagree with him emphatically. Conservative as naval officers always are, he has fewer opponents among them than might be expected. For it is obvious that if submarines can drive surface warships away from coasts such ships cannot successfully blockade or bombard ports, or convoy troops, or cover the disembarkation of land forces. If submarines can keep the sea, surface ships must leave it and seek protection in safe harbors, if they can find any. In that event future sea power will not be decided by battles between major fleets wherever they may meet in any ocean; for if major fleets are shut up in friendly harbors major fleets to all intents and purposes might just as well be at the bottom of the sea. And even if a clear road be offered to major fleets to depart from safe harbors, the prospect of navigation in the midst of omnipresent movable mine fields is more inviting to reckless courage than to sober military judgment.

The arguments against the submarine are many

Paul Thompson

ONE OF THE THREE VICTIMS—H. M. S. "HOGUE"

The "Aboukir," "Hogue" and "Cressy" were all light cruisers of the same type, built in 1900. Each had a displacement of 12,000 tons, 440 feet length, 69.5 feet beam, and drew 26 feet of water. They carried 755 men each, with two 9.2-inch guns, twelve 6-inch, twelve 12-pounders, and five 3-pounders. The loss in men and officers was 1133. The significance of the encounter was not in the importance of the vessels involved, but in its threat to all British ships of whatever size and equipment.



and so soon after fatal. When wholly submerged she is blind. For vision she depends upon her periscope, an arrangement of mirrors and lenses in a vertical tube which extends above the water. At night or in a fog or if the seas dash over it this is useless. The boat must then come to the surface to enable her helmsman to get the bearing of her prey, to which after again diving he can direct her course by compass. Not while awash she can be sunk by projectiles from the lightest guns. This is exactly what happened to the German submarine "U 15," which not long ago attacked the British cruiser "Birmingham" about 160 miles from the German coast. The first shot from the cruiser destroyed the periscope, and upon the emergence of the submarine's conning tower a shell blew the structure to atoms.

On the basis of peace-time experiments it is denied that any submarine has ever entered a harbor when an effort has been made to obstruct its passage, or has ever landed an under-water shot during any colorable reproduction of war conditions. It is asserted that most of the essential factors governing the submarine's uses and capacities are unknown; such as maximum speed, limit of effectiveness, how long it can keep the open sea, to what extent it must depend on an attending vessel or so-called "mother ship" and how many submarines are needed to protect a given extent of coast line. It is further pointed out that the submarine has no more immunity than any other craft from being blown up by stationary mines; that aeroplanes can detect it and drop bombs on it; that if trapped in a harbor or in shallow water it can be caught by dragnets no matter how quietly it may "go to sleep on the bottom."

The chief objection is the slow speed, which at the present time ranges from eight to fourteen knots under water and up to twenty knots on the surface. The battleships make twenty-one, large cruisers twenty-eight and light-armored cruisers up to thirty knots. The submarine, therefore, cannot reach a position from which she can launch a torpedo which will hit by overtaking her quarry, but must depend upon stealth and pure chance in much greater degree than upon the difficult estimation of intersecting courses.

The recent action, as well as the two earlier instances in which during the present war the submarine has done successful work, meets several of the objections by the logic of demonstrated fact. The small British cruiser "Pathfinder" was sunk by a submarine 400 miles from the German coast. Here the attacking boat was a long way from her base, besides invading the enemy's waters. The small German cruiser "Hela" is reported to have been destroyed by a British submarine while in the harbor of Bremerhaven—an almost incredible statement in view of the obstacles offered. In the late encounter the three British cruisers when attacked were steaming in column—so that their speed did not prevent the assaulting submarine reaching an advantageous firing position. In fact, they were taken entirely unawares, and the loss of the "Hogue" and the "Cressy" was besides favored by the bad judgment of their respective commanders. The "Aboukir" was sunk first, and the other ships were destroyed while endeavoring to rescue her people. If the "Cressy" and the "Hogue" supposed that the "Aboukir" had struck a stationary mine, the last place for them to go was directly into the same mine field. If, on the other hand, they recognized the presence of a submarine, they knew that their safety lay in their superior speed, and that the worst thing possible was to make themselves into stationary targets. The British Admiralty seizes the opportunity to proclaim that rescue work in the Royal Navy should not be done at the expense of victory—a platitude worthy of the immortal Bunsby even if applicable to present conditions when no foe was in sight.

Submarine warfare has been talked about for centuries. There was some of it in the Civil War, none in

A JULES VERNE EXPLOIT IN THE NORTH SEA

The story was quoted in The Independent of September 14. "The 'Defender,' having sunk an enemy, lowered a whaler to pick up her swimming survivors. Before the whaler got back an enemy's cruiser came up and chased the 'Defender,' and thus she abandoned her whaler. Imagine their feelings, alone in an open boat, without food, twenty-five miles from the nearest land, and that land the enemy's fortress, with nothing but fog and foes around them. Suddenly a swirl alongside, and up, if you please, pops His Britannic Majesty's submarine 'E-4,' opens his conning-tower, takes them all on board, shuts up again, dives, and brings them home, 250 miles. Is not that magnificent? No novel would dare face the critics with an episode like that to it, except perhaps Jules Verne's; and all true"

THE TYPE OF SUBMARINE THAT SHOCKED ENGLAND—THE "U-1," SISTER SHIP OF THE "U-9"

the Spanish War, and the Russians had neither the skill nor the energy to avail themselves of it in any wise effectively against the Japanese. The modern rise began when Greece bought some Nordenfelt boats in 1887 and appropriately tested them in the Bay of Salamis, thereby inciting the Sultan of Turkey to make a similar purchase and to emulate Xerxes by personally directing their trials in the Sea of Marmora. France built her first submarine in 1888, and besides France, Norway, Sweden, Denmark and Austria started submarine construction before either Great Britain or the United States. The first British boats were identical with the six Holland submarines authorized by Congress in 1900, and they seem archaic beside the submarines of today. They were but sixty-three feet long, of 120 tons displacement and had a speed when submerged of seven knots for a four hours' run. On the surface their range of action was about 400 miles. Germany launched her first boat at Kiel in 1905. It was of 240 tons displacement, 128 feet in length and its submerged speed was nine knots and surface speed twelve knots. Today Germany has twenty-seven submarines built and twelve building. Her earlier boats range in tonnage from 240 to 800 tons, her later ones up to 1000 tons, with a speed of twenty knots on the surface and radius of action over 2300 miles. Great Britain has seventy-five submarines built and twenty building. Her latest type (E 1") has a submerged displacement of 1500 tons, oil motors developing 6500 horsepower and giving a surface speed of twenty four knots, while the electric motors for submerged cruising are capable of developing 2400 horsepower and a speed of eighteen knots. This is the highest sub-surface speed yet attained, the next being 15.6 knots, for which the new French submarine "Archimede" has been designed. The greatest endurance so far indicated is that of the two new submarines just completed for Australia, which are said to be capable of making the voyage thither from England under their own oil engines. The foregoing will perhaps sufficiently show that the submarine of today is not a little craft barely able to protect the vicinity of a harbor, but a powerful seagoing submersible cruiser, in some instances over 200 feet long and much larger than many of the gunboats and small cruisers which figured in the Civil and Spanish wars.

Germany has a very highly organized submarine corps which includes 123 officer specialists. Her submarine flotillas have constantly been engaged in maneuvers under most severe seagoing conditions. It has not been the German policy to multiply submarines to any such extent as have the British and French, but rather to possess a smaller number—as one of the leading German experts recently put it—"all ready for service and all successfully constructed for use in the high seas." The semi-official Naval Annual published in Germany, which is a fairly reliable exponent of Germany's naval policy, does not concur with Admiral Scott in his estimate of the submarine's powers, but considers that it will always remain a subsidiary arm, especially fitted to perform by day what the destroyer can do at night.

Submarine development in Great Britain has gone on with even greater rapidity than in Germany. Especial effort has been made to increase the radius of action and sea-keeping qualities of the new boats, and to augment the distance out to sea at which they can attack an enemy's fleet so as to prevent the latter from getting within range of harbors to be defended. Of late there has been some discussion whether harbors cannot be better protected by submarines than by stationary fortifications, and the affirmative has been maintained by distinguished military authority. There are also rumors of British submersible cruisers far larger than any yet built and even attaining a length of 500 feet. No one knows whether these reports are

TAKING A TORPEDO ON BOARD

well founded or not, as, of course, all information regarding such ships is secret and carefully guarded.

Great Britain's submarine corps has 268 officers and 3000 men. Her boats go far out to sea without any attendant vessels and entirely on their own resources, and have rather a predilection for doing so in bad weather.

The task of keeping the German fleet shut up in its harbors was troublesome enough as it stood. It will be rendered more so now by the demonstrated imminence of submarine attack. Nothing is more nerve-racking, nothing more wearing, nothing more threatening to the morale of a crew than such work as this. Not only must the ship keep the sea before a hostile coast and be constantly in motion, but there is no instant night or day when she may not find herself literally blown to fragments. And it is upon the strength of human nerves rather than upon the strength of armament that naval success today depends.

No one has yet found out any way by which vessels at sea can certainly

THE VULNERABILITY OF THE SUBMARINE: HOW A BATTLESHIP CAN SINK HER

The encounter between the British cruiser "Birmingham" and the German submarine "U-15." When once the submarine came within effective range (1) Blizard sees smoke at the periscope. He is provided with mirrors by which the man at the wheel in the interior of the boat sights his course—which is about four inches in diameter and projects a foot above the surface. (No. 1) Then the submarine dived quickly to lose herself (No. 2), but was, of course, forced sooner or later to rise high enough to bring her conning tower above the water so that her officer could take his bearings (No. 3). The "Birmingham" was on the watch and as soon as the wash from the submarine was noticed they opened fire. A shell struck the conning tower and wrenched it off, leaving a great gap thru which the water poured (No. 4). The safety of the submarine depends upon its ability to keep its periscope from being discovered and shot away

detect the advent of a hostile submarine. Nothing can be done but to watch unceasingly the adjacent surface of the sea for the sudden appearance of the oncoming submarine's conning tower when she rises for an instant to get the bearings of her prey and then shoot at it. Or perhaps one may glimpse the still smaller top of her periscope and the little wake it makes as it cuts thru the waves. But when there is fog on the water these may be invisible and at night, altho the beam of an electric light may be used to sweep the sea, it is of questionable advantage, since it furnishes a guide to the assailant.

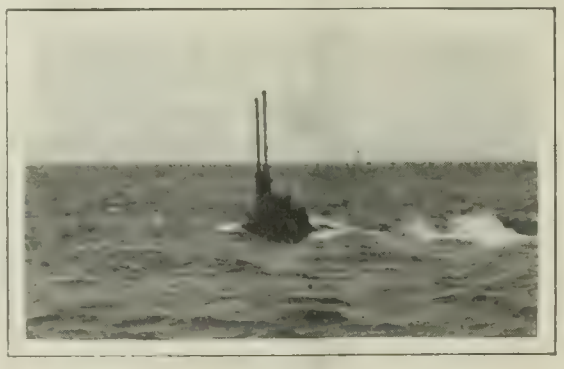
There is a great dearth of suggestions. One distinguished strategist recommends that the blockading British fleet remain out of sight of the enemy's ports during the day and shift their positions every night as the only possible safeguard against attack. While this no doubt is profoundly applicable to the conditions attending Nelson's blockade of the French fleet in Toulon, it is now something over a century out of date. As the British fleet protects the British coast at the same time it bottles the German fleet, no possible reason suggests itself why it ever should be within sight of the German coast, or why it could not with greater efficiency patrol the North Sea some hundred miles therefrom.

Two mechanical expedients for neutralizing torpedo attack are under discussion, one old and the other new. The old one is the division of the ship's hull into many small compartments in order to localize the destruction, in the same way that injuries due to striking a rock or an iceberg have been localized. But rocks and icebergs do not explode and cellular subdivision is no safeguard at all against a 21½-inch automobile torpedo having in its war-head nearly 300 pounds of so frightful an explosive as T. N. T. (trinitrotoluene) and capable of traversing a range of about four and a half miles at a speed of nearly forty miles an hour. That is what the new German torpedo can apparently do.

Battleships are like armadilloes, plentifully sheathed on their backs and soft underneath, where the torpedoes mainly get them, but unlike armadilloes they cannot roll themselves up with their hard side outside. One of the foremost naval architects, Sir John Biles, after admitting the fallibility of multitudinous compartments, proposed the other day at a scientific meeting that the ships' bottoms shall also be armored, even at the expense of reducing the speed two knots per hour, but the assembled scientists who formed his audience and discussed his paper firmly declined the suggestion.

Our Navy Department is reported to be experimenting on detectors depending on sound indications. People who have invented other things may submit them if they like—and if their devices are adopted their executors may collect pay, if Congress sees fit to appropriate funds therefor after a judgment has been obtained in the Court of Claims.

The Kaiser's ships have the advantage in under-water work since they can send their submarines to sea at will, while it is excessively difficult, if not practically impossible, for British submarines to get into German harbors to "dig out the German fleet." Even if they could elude the thickly planted mines there are still the booms closing the port entrances and also the entangling nets.



When the fleets meet in actual battle, the submarines will play their part in the melée, and probably a sinister one for both sides. They may coöperate with aeroplanes and use them as their eyes, or they may in assailant flotillas drive the enemy's escaping vessels upon the stationary mine fields. His Britannic Majesty has no lack of gallant young officers who, to the bottoms of their souls, will envy Lieutenant-Commander Weddingsen, of the Imperial German Navy his iron cross and the sure promotion which he has so brilliantly won, and who will clamor for opportunity to excel him. All this, however, is on the knees of the gods. The significant thing is that the change from naval warfare in two dimensions to naval warfare in three has begun.

To see it develop, watch the submarines!

RUNNING SUBMERGED, ONLY THE PERISCOPE VISIBLE

From the Illustrated London News

HOW IT LOOKS TO BE TORPEDOED

The above picture is one of extraordinary interest at the moment, because it shows a British submarine successfully torpedoing a battleship of course, in supposition. The course of the torpedo can be clearly seen by the white water churned up by its screws, although it has been traveling much as could but below the surface. The torpedo in the picture might be supposed to have been fired from somewhere near the stern of the submarine, but this is not so. The tube from which it was fired was at the bow, but the vessel in rising to the surface has moved a short distance ahead. At the time when the photograph was taken, a few seconds after the shot, the submarine has come to the surface to inform the battleship that she would consider herself sunk. Her periscope—the tube through which she sees when under the water—can be seen standing out with the watcher [illegible] beneath it. Both of these, except the top of the periscope, would, of course, be hidden when the torpedo was fired. A story of one of many incidents that happened in the last maneuvers was recently sent to Sir Percy Scott by an officer in the cruiser concerned. "During last maneuvers," he says, "I was in a first-class armored cruiser in the North Sea. We had an idea that submarines were about, because several of our ships had been sunk; accordingly about sunset we had been the previous day. We consequently were keeping a particularly bright lookout for them. The day was clear for our seeing them, nearly calm, and quite clear. To our dismay, one came to the surface less than a hundred yards from us, and submitted. I have fired two torpedoes into you, and claim you out of action.'" In actual war the submarine would normally not show herself at close up to [illegible] after firing. But when the British submarine "E-9" sunk the "Hela" she discovered her [illegible] quite unexpectedly, dived and discharged two torpedoes, rose in a quarter of an hour and saw the "Hela" sinking, rose again after another fifteen minutes and found her gone

WHERE HUNDREDS OF THOUSANDS ARE SUFFERING

SPECIAL CORRESPONDENCE FROM THE WAR ZONE TO THE INDEPENDENT

BY MAJOR LOUIS LIVINGSTON SEAMAN

On the day of the Zeppelin massacre at Antwerp Major Seaman sent the following letter to President Wilson:

"My Dear Mr. President:

"Preferring liberty of speech to military or other service where it is denied, especially when silence would be a crime against humanity, I herewith tender my resignation as a member of the Medical Reserve Corps of the United States Army."

The following correspondence, within the limits imposed by the censorship, hints at the pitiful sufferings of which Major Seaman has been a witness, and which impelled him to take this action. — THE EDITOR.

I AM writing from the Hotel de la Paix in Ghent, the city whose people for two thousand years have done so much to wring from their rulers the concessions upon which constitutional government is founded. In feudal days it was one of the first of the Free Cities of Europe, and its historic monuments bear witness to the part it played during the Reformation. I believe no city on earth has contributed more to the development of civilization than Ghent. Here, on the 24th of December next, it was the purpose of representatives of Great Britain and the United States to celebrate in the old Convent des Chartreux the one hundredth anniversary of the signing of the Treaty of Peace between England and America. Two months ago in the Royal Casino and Palais de Fête the international exhibition of flowers was held. France sent many roses of rarest hue and variety, many of which still adorn the extensive exhibition grounds, and in the Palais de Danse, the French Opera Company made gay music.

But what a change! The Palais de Fête is now a Palais de Misère, transformed almost in a night. Fourteen thousand desolate peasant women and little children, refugees from the country near Louvain, Malines and Termonde whose husbands or fathers or brothers had been butchered or driven to parts unknown, their homes pillaged and burnt, their crops destroyed, their only possessions the clothing on their backs, have been, or are now, being sheltered here. Could the reader but hear for himself the tales of suffering and horror that come from every mouth, or see the ghastly wounds of many —even among the little children— that bear testimony to the agonies they have undergone, his indignation would know no bounds.

I have participated, as an officer or observer, in eight campaigns, in almost every country in the world, but in none have I ever witnessed such exhibitions of atrocious barbarism as this war is furnishing.

Thank Heaven, there is another side to this dark picture. In that Palais de Fête, now the Palais de Misère, the Red Cross is doing a noble work of rescue and mercy. Refugees are carefully treated, clothed and housed. Many had not tasted food for two days preceding their arrival here. M. de Bruyne, who so ably represented the Burgomaster at the meetings of the International Peace Celebration Committee in America, is supervising the disposition of the victims, some fourteen thousand in number, in a systematic way, sending them to suburban villages where houses are open to them, shipping them to England, and so distributing them that they may eventually be repatriated. I was informed at Ostend that children under fifteen would not be received in England as refugees, but I have since learned that the Government is welcoming *all*.

THE RED CROSS NEED

The Red Cross Societies of the countries now engaged in the war are among the strongest and most efficient in the world, but the best they can do falls hopelessly short of meeting the situation.

Official reports give little definite information of losses, but the number wounded is already in the hundreds of thousands. The hospitals have been filled, public and private buildings have been taken for hospitals; and still they come in ever increasing numbers.

Some of the wounded are taken into the cottages of the peasants on the battlefields. But still other thousands lie in the trenches and on the bleak battlefields, or crawl into the villages in such numbers that nothing can be done for them; and to these, the end comes from thirst and exposure and uncared-for wounds.

Let no man imagine that the American Red Cross can do too much or enough. Nurses and surgeons are needed more and more, and always more of them. And medical and hospital supplies in such quantities are needed as we can never hope to exceed.

The help which our Red Cross is able to give will be limited only by the generosity of the American people.

The work of the Red Cross in Ghent cannot be too highly praised. It has many hospitals (ambulances as they are called here) under its direction and is working most efficiently and in perfect harmony with the military authorities. The most severely wounded are sent to the military hospital, while others are distributed to the hotels, schools, convents, private houses and private clinics which have been thrown open for them. At present comparatively few of the severely wounded remain, the majority having been transferred to other cities in anticipation of the coming of the enemy. Thousands of empty beds, with attendants and nurses from the most aristocratic and highly cultured families of the land, are waiting the arrival of more, ready to care for them with gentleness and skill, German and Belgian alike, in surroundings of elegance such as the majority of them never dreamed of.

Many of the shrapnel wounds are terrible, shattering bony structure and causing extensive laceration of tissue. A very large proportion of the bullet wounds are found in the legs and feet, showing that the Germans, who shoot from the hip, are firing low. The Belgian shoots from the shoulder. Dr. Dulet in Anvers has a dum-dum ball which he extracted from a wounded Belgian. Many of the invalided suffer from extreme exhaustion, after their three days' incessant fighting, but they soon rally and beg to return to the colors.

The three characteristics of the Belgian people that have most deeply impressed me during the past month are their patriotism, their bravery and their gentleness. In the military, civic and Red Cross hospitals of Bruges, Ostende, Ghent and Antwerp, over forty of which I have visited, the wounded German soldier has always received as careful surgical, medical and nursing care as the Belgian whom he came to murder, for this most unjust war was deliberately planned for conquest and extermination.

Whatever may be the outcome of this monstrous holocaust the justice, the honors and the humanities belong to Belgium. When the victorious allies make their triumphant entry into Berlin (and I believe they will) the Belgian should have the line, and royal restitution should be made for his sacrifice, in memory of Liège, Malines and Louvain. All honor to little Belgium!

Ghent, Belgium

WHAT IS BEHIND THE ARMIES?

A CONSIDERATION OF THE RESOURCES OF THE NATIONS INVOLVED IN THE GREAT WAR

AT the beginning of the war there were too many unknown quantities for any one to be certain of his ground. Were the dreadnoughts to fall the easy prey of the submarines? Had the airship made fortifications useless? Had France become decadent or England slothful? Was the untried German war-machine of real efficiency? Might not some secret invention or some unsuspected weakness on one side or the other determine which was the stronger in a few weeks?

But now at the end of two months some of the doubtful points have been cleared up. The seven nations have been tried by fire and none of them has been found wanting. No fatal weakness has been disclosed; no country has been disgraced by cowardice. The Austrians have undeniably been badly beaten in Galicia, but since they have held out for many weeks against a greater force in an unfortified country, it would be rash to charge them with gross incompetence. Thru French reports we learn that some of their troops fled over-hastily from the field, but certainly the army as a whole has shown quite another temper. The German army has demonstrated its efficiency, but France was not taken by surprize. On the contrary the surprize was that the French put up so strong a resistance and that the English were so prompt. Since most of what we hear from the field comes from English instead of the French, we naturally get an exaggerated idea of the importance of the part taken by the British contingent. The force coming from across the Channel probably did not form more than a tenth of the Allied army, and altho the moral effect of these reinforcements must have been great and the work they did in holding the left wing was fine, yet seeing how it turned out, it is quite conceivable that the French alone might have brought the German army to a standstill long enough for Russia to gather her vast forces to the attack.

Since, then, all parties have proved their courage and ability and there is so far no reason to believe that any one of them has a concealed weapon of decisive weight to throw into the scale, the war seems likely to become a test of real strength, moral and physical, active or potential. In 1878, when Lord Beaconsfield sent a British fleet to protect Turkey against Russia, the feeling of the people found expression in Hunt's music hall song:

We don't want to fight, yet by Jingo! if we do,
We've got the ships, we've got the men, and got the money too.

England is on the other side now, but her position remains the same, and the old song, that gave a new word to our language, could still express her sentiments. Earl Kitchener coolly talks about a three-year war and asks for a million men immediately. "Never mind the drilling of them; teach them how to shoot." Winston Churchill says that the war will be fought out "with silver bullets." Now Great Britain has more of these silver bullets in her banks than any other nation has, more than any nation has had in all history before. A hundred years ago she financed a continental war against the French emperor and she is today vastly better able to finance a similar war against the German emperor. The average Englishman is the richest man in the world; next to him stands the Frenchman, and third, if we do not include the American, is the Belgian. The wealth of Germany has been increasing at a more rapid rate than any other in recent years, but she is still behind her antagonists on the west tho ahead of the nations now fighting on the east, Austria and Russia. Estimates of national wealth are variously calculated and cannot be exact because values are largely conventional and prospective, but the following figures are probably sufficiently close to give at least the relative rank of the nations named in individual wealth:

Wealth Per Capita

United Kingdom	$1780
France	1700
United States	1300
Belgium	1200
Germany	920
Austria	500
Russia	250

But the wealth of the United Kingdom does not represent the wealth of the British Empire, for in the dominions beyond the sea there are nearly half as many more subjects of King George who are individually about as well off as those in the Mother Country. They have hitherto contributed nothing to the defense of the Empire except of late a little to the navy, but in this emergency they will doubtless be as ready with money as with men.

"We've got the ships." The First Lord of the Admiralty, Winston Churchill, says:

> We started with a substantial naval preponderance, much more like 2 to 1 than 16 to 10. In the next twelve months we shall have twice as many battleships completed and three or four times as many cruisers as Germany. If the losses were even equal, our position at this time next year would be far stronger than it is today.

Naval warfare is more a matter of chance than the conflict on land. A single shell or torpedo accidentally hitting just the right spot will sink a dreadnought, but an army corps cannot be wiped out so easily. So if the war is a long one the ability to build ships will be as important a factor as the strength of the fleet in being, and here again England has a unique advantage. Every year the British shipyards have turned out more vessels than all the rest of the world put together. Half the shipping of the world sails under the Union Jack and the few German cruisers now at large have not so far been able to make any serious inroads on British commerce.

"We've got the men." Europe is the seat of war, but the battle is world-wide. It is a conflict of empires. Whatever the issue we may be sure that the maps of Asia, Africa and the Pacific will be changed as much as Europe. The fate of every country is involved except the American republics, protected, as they have always been, by the egis of the Monroe Doctrine. It is a fight about colonies, for colonies and by colonies. France has drawn her troops from Algeria and Senegal; Russia from Siberia and Manchuria; England from India, South Africa, Canada, Australia and New Zealand. The Allies outnumber Germany and Austria-Hungary six to one if we count the population of their territories, but actually the odds against them are greater than this, because such weak and scattered colonies as Germany has are no help to her, while England, France and Russia are able to enlist in defense of their cause the alien peoples under their rule. Bismarck shared the theory of the Little Englanders that native colonies are a source of weakness rather than of strength. Only the bold imagination of Beaconsfield grasped the possibilities of Asiatic dominion, and in 1878 he startled Europe by ordering the Sepoys to Malta. There were only a few thousand of them, but when it was realized that Great Britain had there a population of three hundred millions to draw upon, the congress of Berlin listened attentively to what Lord Beaconsfield had to say.

So now the presence of the Sikhs in France has a value far above their fighting strength. The mere fact that

THE COUNTRIES WHICH ARE INVOLVED AND

1. *Belgium.* The Germans conquered all Belgium except Antwerp early in August.
2. *France.* Germans invaded France as far as Paris in August, but in September were driven half-way back to the Belgian frontier.
3. *East Prussia.* Russians occupied East Prussia as far as Königsberg, but a counter-attack by the Germans drove them back.
4. *Galicia.* Russians defeated Austrians and now occupy eastern half of the province.
5. *Servia.* War began by Austrian attack on Belgrade. Servians and Montenegrins invade Bosnia.
6. *North Sea.* Three British cruisers sunk by submarines.
7. *Baltic.* German warships attack Russian vessels and naval stations. German cruiser "Magdeburg" destroyed.
8. *Cattaro.* French fleet repeatedly bombards Austrian port.
9. *Off African Coast.* "Kaiser Wilhelm der Grosse," a North German Lloyd steamer converted into a cruiser, was sunk by British cruiser "Highflyer" August 27.
10. *Togoland.* British troops seize the German colony, August 26.
11. *German Southwest Africa.* Fighting on Orange River and Walfish Bay between Germans and South African Union troops.
12. *German East Africa.* Several engagements between small forces of Germans and English along Lake Nyasa.
13. *British East Africa.* Invaded by Germans from German East Africa.
14. *Zanzibar.* British cruiser "Pegasus," while repairing in the harbor, sunk by German cruiser "Königsberg."
15. *Dar-es-Salaam.* British cruiser "Pegasus" bombarded the chief port of German East Africa, sinking a gunboat and floating drydock.

in this hour of distress Great Britain can bring native troops from India instead of having to send English troops there to put down a native insurrection is worth many an army corps. Both Mohammedans and Hindus, native princes and nationalist leaders, have not only declared their sympathy but proffered their services. It does not now seem probable that Japan will be called upon to fulfil the obligation, to which she is bound by treaty, to protect British interests in India. Evidently the agitation in India has had for its aim not so much the throwing off of British sovereignty as to secure a greater degree of industrial and political autonomy. Certainly the English people will be less reluctant after the war to grant these legitimate aspirations for a larger share in the government and the development of native industries.

IDE WAR

PLACES WHERE FIGHTING HAS OCCURRED

16. *Bay of Bengal.* German cruiser "Emden" captured eight more British steamships.

17. *Kiau chau.* Japanese and British attacking the German city of Tsing tao in territory leased by China to Germany in 1898.

18. *Ladrones.* These islands, which were, all except Guam, sold by Spain to Germany in 1899, have been seized by British.

19. *Caroline Islands.* Bought from Spain by Germany in 1899. Seized by Australian expedition. Yap is cable and wireless station.

20. *Bismarck Archipelago.* Formerly New Britain Archipelago. Acquired by Germany 1884. Australian expedition captures chief island, New Pomerania, after sharp fight.

21. *Kaiser Wilhelm's Land.* Australian expedition annexes the German part of New Guinea. The southern part already belonged to the Australian commonwealth.

22. *Samoa.* New Zealand expedition seizes Savaii and Upolu islands. Tutuila and other Samoan islands belong to United States.

23. *Off the Brazilian Coast.* The German cruiser "Dresden" has been preying upon the British steamships from Buenos Aires, Montevideo and New Zealand. The British freighter "Holmwood" was sunk August 24 and ten other British vessels are missing.

24. *Solomon Islands.* Australian expedition seizes the German islands of this group, Buka and Bourgainville.

25. *Kamerun.* French gunboat "Surprise" on September 21 attacked Coco Beach and took possession of the German territory in equatorial Africa.

Rumania. The Rumanian troops are mobilizing and may soon take the field on the Russian side.

Turkey. The Turkish fleet in the Black Sea has been reinforced by a German dreadnought and cruiser and war between Russia and Turkey is thought to be imminent.

Italy. The Italian army is mobilized and the Government seems disposed to join the Allies.

In Egypt also, where disaffection reigned a few years ago, there is no apparent disposition to take advantage of England's strait, and it is doubtful if even the proclamation by the Sultan of a Holy War against the infidel would cause serious disturbance in Africa. The British administrator has not an ingratiating manner toward the natives and he rarely sympathizes with their feelings and desires, but he is on the whole just and efficient and so earns the respect if not the love of the people he rules.

The most striking demonstration of the success of British imperial policy is the attitude of South Africa. Twelve years ago the Boers were fighting with desperation against the English with the open encouragement of the German Emperor. Today the conquered Boers have greater freedom of self government than they

and while nominally independent. General Botha is about to take the field under the flag he once fought, and General De Wet goes to France to reinforce his former enemy, General French. Are the Poles of West Prussia after 120 years, and the French of Alsace-Lorraine after forty-four years of Prussian rule, as loyal to Prussia, or are the Serbs of Bosnia as loyal to Austria after thirty-six years as are the Boers to Great Britain?

Taking advantage of the fortunate circumstance that the Dey of Algiers once gave the French consul a box on the ear, the French began to acquire African territory nearly a hundred years ago, and in the final partition —or at least the partition completed in 1914—it turned out that she had the lion's share. The French holdings in Africa amount to more than the British in area, altho less in population, for the Sahara desert forms a big part of it.

Now, the French method of administration is entirely different from the British, but may be said to be equally successful in its own way. The conquest of Morocco has been effected in the last three years with surprizing ease and there is no such antipathy to French rule in Tunis and Algeria as has been manifested against the English in Egypt and India. Unlike the British colonies, Algeria is represented in parliament and the Mohammedan population has considerable power in the local administration.

The French are free from the race prejudice of the Anglo-Saxon. They fraternize and amalgamate with the natives on the Barbary Coast and enlist them in their armies, as they did in America. The horror which the Germans have for the "Black Legions" reminds us of the tales we heard in childhood of the French and Indian war. A Senegalese trooper was detected concealing on his person the head of a German to carry home as an emblem of his prowess in the same way as the Indians under French officers used to scalp the women and children of New England as well as British soldiers. To keep order in Senegal since the male soldiers have been sent to Europe, the French have organized a force of Amazons, not an unusual thing in Africa, where militancy has always played a large part in the feminist movement.

The Belgians have in the Kongo a territory of immense value, both present and prospective. A few years ago Germany and France came near to blows over the question of which should be the residuary legatee and get the Kongo if or whenever Belgium relinquished it. But Belgium will hold on to the Kongo as long as possible, for it is worth nearly two dollars a year to every Belgian man, woman and child. In 1911 the Kongo produced ten million dollars worth of rubber and two million of ivory.

But the Belgians can expect neither aid nor sympathy from the natives, for their rule has been more oppressive than any of the other European powers in Africa. Egypt under the English and Algeria under the French have prospered immensely and increased in population, but the Kongo under the Belgians has been devastated and the natives in many places exterminated. The Independent, on November 5, 1905, published photographs of men, women and children whose hands had been cut off by the Belgians because they failed to bring in the tale of rubber demanded. In England the public indignation at Belgian tyranny was so strong that the British Government refused to recognize the validity of the annexation of the Kongo until May 29, 1913, five years after the late King Leopold had signed the act of annexation.

Austria has no colonies and Germany, surrounded by enemies, can get no help from hers in this emergency, so they cannot be counted among the resources of the war. Her Pacific islands have been picked up by Australia and New Zealand. The Kiao-chau enclave is being attacked by the British and Japanese. Togoland was seized by a British force in the first days of the war. German East Africa is invaded on the north from Lake Nyasa and on the south from Kikiyu—which, but a few months ago, was a theological storm center. The railroad which the Germans have been constructing to open up this great territory starts from Dar-es-Salaam, the seaport recently bombarded by the British cruiser "Pegasus," altho, as the Germans point out, it was an unfortified town and therefore should have been immune under the rules of war. The French have annexed the German Kameruns. The British have possession of German Southwest Africa.

It is useless to discuss the Germans as colonial administrators, since it is doubtful whether they will have a chance to carry out their ambitious plans for the development of their non-contiguous territory. So far as we may judge by what they have done they would have been less sympathetic than the French and more bureaucratic than the British. The German colonies have not yet paid their way, but they would have become in time valuable assets to the empire, and it is easy to see why Germany put forth her strongest efforts to gain territories of any kind in any part of the world. It is for lack of fortified outposts and coaling stations that the German cruisers at large pass back and forth over the face of the waters, like the birds sent out by Noah, without finding a resting place. The lesson of the war is the value of colonial possessions—when they are administered in such a way as to promote the prosperity and secure the friendliness of the subject peoples.

TO A PEACE ADVOCATE

BY JOHN FINLEY

Your work will not be vain; for out of war
Will come the proofs, the ghastly, hideous proofs,
Gathered from fortress, trench and corpse-strewn field,
Witnessed by myriad wounds and broken hearts,
Inscribed, in time, on sorrowing shafts and tombs,
And writ at last on history's calm page,—
Proofs of the truth you've made the whole world hear,
Proofs of the truth the whole world yet will heed.

When the red strife is but a memory,
On new foundation will the nations build,
And they will take for its chief corner-stone
This stone rejected by the purblind kings.

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

THE HORRORS OF WAR

WE hope the effort now being made to suppress, thru the censorship or special legislation, the exhibition of the pictures of war scenes which are beginning to come to us will not be successful. These views will constitute the most effective form of peace propaganda and will tend to counteract the pictures of the pomp and glory of war which are being shown freely everywhere. A charge of cavalry across the screen is a beautiful and inspiring sight until we think of what they are going to do and what is going to happen to them when they reach their goal. Without the final scene of double catastrophe the charge is meaningless or misleading. Real war is a very different thing from dress parades and chessboard maneuvers and we want people to see for themselves just what the difference is.

The objections raised against the exhibition of pictures of crime and violence do not here apply. To present the details of safe-blowing might possibly lead some impressionable youth to become an amateur yeggman. But war is a crime that no man can commit alone and a contemplation of the seamy side of soldiering is not likely to increase the youthful longing to enlist. The suffering and atrocities of war as depicted in such books as Zola's *Downfall*, Tolstoy's *Sebastopol* and the Baroness von Suttner's *Ground Arms!* and such paintings as Vereschagin's battle scenes have always been regarded as powerful arguments for peace and the motion pictures which it is proposed to suppress are still more effective.

But one thing should be insisted upon. The pictures must be *genuine*. If any more legislation is needed on motion pictures it should take the form of a "correct labeling act." This would tend to protect the honest meaning exhibitor against the numerous fake pictures now being shown. It is apparently impossible to obtain the pictures of actual fighting and scenes at the front demanded by the public. In default of these it is permissible to show old maneuver pictures and soldiers posed for the purpose in trenches, firing at an imaginary enemy, but all such scenes of mimic warfare should be clearly designated, and every scene of the war's havoc and misery should be correctly placed and dated. It is so easy to fake pictures of atrocities or ascribe them to the wrong parties that this must be guarded against. Some of the horrible pictures purporting to show Bulgarian cruelty were proved by the Carnegie Peace Commission to have been fabrications of the Greeks. If the motion picture claims to be historical it must be accurate.

THE LIFE OF OUR SAVIOR

Churches and Sunday schools wishing to exhibit a complete Passion Play have a choice between two films, widely different in character but each good in its way, Kalem's *From the Manger to the Cross*, from which we reproduced some views in our issue of February 13, 1913, and Pathé's *The Life of Our Savior*, which we have here to consider. The former takes what might be called the realistic or Protestant view of the life of Jesus and the latter the traditional or Catholic, but both are sufficiently free from sectarian bias to make them usable in any church; in fact they may well be used as complementary presentations of the subject.

The Pathé play might be regarded as a succession of beautiful pictures, many of them familiar to us from famous paintings, but instead of being suddenly shifted or dissolved into one another thru a chaotic blur as in the ordinary lantern slides, the transition from one tableau to another is made by the natural movement of the characters. The film is colored in harmonious and tasteful tints. The acting is dignified and decorous and will not offend any except those who object on principle to any form of the Passion Play.

In fact, these outdoor scenes have less of theatricality than the stage, but like every new art the cinematograph imitates its elders. The Greek architects shaped their marble pillars to look like logs of wood and we paint our steel pillars to look like marble. So the early Christian sculptors in making statues of the saints and angels used gilt crescents and wooden sunbursts to represent radiant light. It is therefore not surprizing, tho somewhat amusing, to see the modern film-maker employing the same crude method for his haloes instead of utilizing his unequaled opportunity in the manipulation of light itself. In such scenes as the Transfiguration and Ascension the effort to cling to the conventional types established by the artists of the Renaissance has resulted in making the miracles not supernatural but merely unnatural. On the other hand, where the film-maker has allowed himself greater liberty as when Christ enters Jerusalem and the wise men follow the star very attractive effects are secured.

The miraculous element in the gospel story instead of being minimized, as it generally is nowadays, is here made prominent and indeed exaggerated by the use of apocryphal legends such as that of St. Veronica's napkin. The flight to Egypt is developed extensively because of its pictorial possibilities and includes the extraneous miracles of Joseph's striking water from the rock in the desert and the angel who made the Holy Family invisible to Herod's soldiers. Christ walking on the sea and turning the water to wine offer, of course, no difficulties to the cinematograph, and as we should expect from Pathé, the crowing cock is not omitted.

ALASKA AND THE ARCTIC OCEAN

The motion picture as an educational medium is shown at its best in presenting wild life in remote regions, for this gives something that can never be obtained from the reading of books and but rarely by travel. Captain F. E. Kleinschmidt's *Arctic Hunt*, of which a new series has just been released, is among the most valuable of this class of films because of its sincere and successful effort to show how the walrus and the seal, the reindeer and the Kadiak bear, the cormorant and the murre, behave themselves at home. We see here bull moose with horns as widespread as the ambitions of the Progressive party; polar bear in their icy bath; birds by the thousand; Alaskan and Siberian natives on land and water. This film has a geological as well as zoological interest, for it gives us views of a new hatched island of the Bogoslof group, still warm from the internal fires of the volcano. (*Arctic Film Company, New York.*)

© *Arctic Film Co*

TAKING A MOTION PICTURE UNDER DIFFICULTIES

While the motion picture man is turning the crank of his camera, a hunter protects him with his rifle in case the polar bear should suddenly mobilize, and a still life photographer takes a snapshot of all three from the rear

MME. VANDERVELDE

THE WOMEN OF BELGIUM

BY LALLA VANDERVELDE

Mme. Vandervelde is the wife of the Belgian Minister of State, now in this country, who voiced in The Independent of September 21 Belgium's appeal to America. She also has come to the United States on behalf of her suffering countrywomen and as the representative of Queen Elizabeth, who wrote to her "the best wishes of the Queen accompany you to that country which loves to help those in distress." Mme. Vandervelde told the New York women who greeted her that she hoped to take back for the relief of Belgium a million dollars.—THE EDITOR.

"WE must be patient and encourage those around us—we must not weep without reason." These words are taken from a letter which I have just received from a Belgian friend and which is characteristic of the spirit prevailing among the women of Belgium. A wave of heroism has spread thru the entire country and the women are doing their part. There is hardly one in the country who has not a near relation fighting and all have suffered in some way. Even the most privileged, those whose relatives have not been killed and whose possessions have not been looted or confiscated, have intimate friends who have suffered and see the terrible sufferings of the people.

Imagine the anguish of being in some town like Antwerp, for instance, not occupied by the enemy, and being absolutely cut off from one's friends in the rest of the country. Among thousands of others that one knows of, I can mention the case of a young doctor of twenty-six who volunteered directly war was declared, altho he had been married for just over one year and had a baby boy a few months old. He was sent to Liège at once, and while Brussels was not invested, was able to communicate with his wife of twenty-one and to receive news from her. Since the occupation of Brussels these poor young people have been without any news of one another. Think of what it must mean to that young woman to know that, whatever may happen to her husband, she can get no sort of news from him or about him, and he is in the same case as regards his wife and child. During the first days of the German occupation it appears that all the milk brought into Brussels by the peasants was requisitioned for the troops and there was none left for the Belgian babies. So he does not even know whether his baby is alive.

But the women, who have to stay at home, are much more to be pitied than the men, who are fighting, whose every moment is occupied and who are so wearied at night that they sleep. A woman, however much she be occupied, has time to *think*, and the courage that is required to remain calm and helpful under such conditions is really superhuman.

Then there are the refugees, those—and there are many—who have gone to England, where they are being taken care of most generously. Still this means—especially for the women of the poorer classes—a strange country, different habits, an unknown language, and in most cases being cut off absolutely from all relatives and friends. To those remaining in Belgium it means either living among the enemy or else being in constant terror of his approach. It is almost impossible when one is living in a country which enjoys the blessings of peace to imagine such a state.

But the Belgian women, like their husbands, brothers and sons, prefer every sort of hardship to dishonor.

New York City

THE CHAUTAUQUAN

MERGED WITH THE INDEPENDENT, JUNE 1, 1914

Official Publication of Chautauqua Institution, a System of Popular Education, Founded in 1874, by Lewis Miller and John H. Vincent.

JOHN H. VINCENT - - Chancellor
GEORGE E. VINCENT - - President
ARTHUR E. BESTOR - - - Director

FRANK CHAPIN BRAY - - - - Chautauqua Editor

THE summer season for Chautauquas ends this month, and from the standpoint of the bureaus which supply lecturers and entertainers, it merges into the winter lyceum business. The line of demarkation is the difference between an "outdoor" daily program of events lasting a week or ten days and an "indoor" program of detached features stretching over several winter months. This distinction tends to become indistinct, for in the South, where climatic conditions are favorable, successful circuits of winter Chautauquas are maintained, and the winter Chautauqua scheme of concentrated program appears to grow in favor in northern towns and cities. "Invasion" of New England states and the increase of Chautauquas held in eastern states stand out in the record of the current summer season. It is reported that the number of Chautauquas held in 1914 past the 3000 mark, an increase of about 800 over 1913. The lyceum courses in the United States for 1914-15 number approximately 15,000.

Hon. William B. Wilson, of Pennsylvania, Secretary of Labor in President Wilson's Cabinet, is the star speaker on the Pearson Chautauqua Circuit. His topic is "Industrial Peace." Secretary Wilson says: "I regard the Chautauqua platform as the most efficient means of acquainting the American public with the work of my department. The Labor Department is only sixteen months old. I hope to make it a potent factor in our industrial life, and to do that the people must know our aims and work. Chautauqua is giving me this wonderful opportunity of meeting the people who think and who are interested in vital topics. The Chautauqua platform, at least as Dr. Pearson is conducting it, is doing a great work in arousing public sentiment and crystallizing public opinion."

The character of Sunday programs at the Circuit Chautauquas has aroused vigorous discussion in different sections of the country. One bureau announced a religious censorship of its Sunday programs and requested the public "not to attempt to induce musical companies or entertainers to change the program as arranged under such censorship." Afternoon or evening sacred concerts, the Chautauqua Vesper Service, and an evening address of ethical import have generally been provided. Church pulpits have frequently been filled by Chautauqua speakers on Sunday morning. On some circuits no admission tickets are sold for the Chautauqua Sunday program, but a free-will offering is taken up.

In the business of selling Chautauqua "talent," advertisement writers are responsible for the following: "I believe that talent should give their best influence and endeavor toward maintaining the lyceum as a 'free and independent force' in our national life; one that stands in no need of being helped or directed by the state or by any state institution." "We have several companies that do *not* play the 'Sextet from Lucia,' the 'Quartet from Rigoletto' and the Prison Scene from 'Trovatore' with sounding brass and tinkling cymbal, but have brought out other less venerable and less frazzled art gems." One circuit system announces that it is "operating De Luxe Chautauquas." Among the lecturers are "The Verbal Cartoonist" who "delivers the new commercial gospel—with a smile"; "The Community Builder and Business Missionary"; "The Young Man Eloquent"; "The Cowboy Humorist"; "The Town Doctor"; "The Philosopher of Life"; "The Man with a Message."

The Lyceum Magazine reports that Edwin L. Barker, former editor of *The Lyceumite*, now in the service department of the International Harvester Company of Chicago, has worked up the industrial lectures of the company, furnished with pictures to lyceums and Chautauquas, to the point where three "International Industrialogs" are being given: "The Dawn of Plenty," which is the story of bread; "The Dawn of Power," the story of the wheel; "The Dawn of Commerce," the story of business.

Mrs. Frances Kellogg Curtis, a Boston society woman, is lecturing on votes for women on the Pearson Chautauqua Circuit. Mrs. Curtis has spoken to street crowds in Boston with a soapbox for her platform, but that is not as exciting and strenuous as motor rides cross-country on rainy nights, "jumps" which allow only three hours' sleep and no time to wash your face before going on the platform. Mrs. Curtis considers it fun.

At Bedford, Virginia, she was escorted to the tent by a company of young men drest in white, carrying "votes for women" banners and a "pure food" transparency. On this circuit most of the prominent speakers, including Rev. Chauncey J. Hawkins, Frank Stephens, Judge Ben Lindsey, Victor Murdock, Rabbi Levy and Congressman James Manahan of Minnesota, have taken occasion to advocate woman suffrage in their addresses. Frank Dixon urges every town to appoint a woman inspector of stores.

The twelfth annual convention of the International Lyceum Association was held at Chautauqua, New York, after the close of the regular season in September. This organization is made up of about one thousand persons in Chautauqua and lyceum work, either as "platformists," local committeemen, bureau managers or representatives. A ten-day I. L. A. Chautauqua program offered to the public included Dr. Carolyn Geisel, James Whitcomb Brougher, Meddie O. Hamilton, Louis Williams, Frederick Vining Fisher, Russell H. Conwell, Governor Martin H. Glynn, Judge George D. Alden, Mrs. Grace Wilbur Trout, Albert Edward Wiggam, Dr. William S. Sadler, Thomas E. Green, among the lecturers. Special I. L. A. convention topics announced were: "What Shall We Do to Be Saved in the Lyceum?" "Coöperation vs. Competition in the Lyceum," "What Talent Should Know About Railroad Laws," "Talent as Seen Thru Advertising," "Lyceum Courtesy."

Officers are: President, William A. Colledge; vice-president, Mrs. Belle Watson Melville; secretary, Glenn Frank; treasurer, Arthur E. Bestor.

The new year of the Chautauqua Home Reading Course opens October 1.

CHAUTAUQUA PLATFORM ECHOES

"We have been interpreting Christianity individualistically, as bringing salvation to the individual soul. That is all right to start with, but if made the end it is a woful narrowing of the real scope of salvation. We are inclined to regard Christianity too much from the standpoint of intellectual belief. There is too much orthodoxy of doctrine and too little orthodoxy of life. We have laid too much emphasis on the belief that if a man is of another denomination than yours he is not a Christian. We have not grasped Christ's idea of the Kingdom of God. We have been thinking of it as something in the far distant future, as something in Heaven and not as something to be established here on earth. Then, finally, the Church has lost two of the great beliefs of the old apostolic Church: the brotherhood of man, and love of enemies. We must gain a new vision of Christ and his doctrines; of the brotherhood of man and of love for our enemies. We must get a new vision to understand what Jesus meant by the Kingdom of God; to understand that God has no favorite race; to see that there must be international justice. In other words, we have got to Christianize our Christian Church before we try to Christianize the rest of the world." *Dr. Sidney L. Gulick, University of Tokio, Japan.*

THE NEW BOOKS

AN APOLOGIA FOR GERMANY

THE first literary output of the Great War is a volume on *The War and America* by the well-known psychologist of Harvard Professor Hugo Münsterberg. In birth, training and wide experience as a teacher and writer, the author has high qualifications for the task he undertakes of defending the course of Germany and winning for her the good opinion of Americans in the present crisis. The book is a plea for a better understanding of Germany's position.

The nation, as a whole, he says, has today probably overcome that blind, passionate unfairness of the first weeks, but it is not yet ready to listen to both sides really without prejudice.

Yet this judicial position is especially desirable because every day makes it clearer that America's political influence in the war is of the highest import. It will, he declares, ultimately be "America's gigantic task to give to Europe honorable peace."

Professor Münsterberg's own feelings and views of life are much in evidence. He has been in a quandary over the attitude of his adopted country toward his native land. He could not understand America's sudden reversal of her former attitude of good will toward all things German which prevailed before the war began. He has been in doubt as to whether it is due to a fundamental lack of fairness, or the eclipsing the intellect and will by the wave of emotional excitement. He inclines to the latter explanation. We suggest a simpler solution which would also be less liable to offend American sensibilities: Facts seemed to indicate that the peace of the world had been broken by those who had been praised and regarded as its friends and guarantors, and the American people, whose minds are set on peace, turned their praises into denunciations accordingly. It was but the natural expression of disappointment and just indignation. No psychological investigation or analysis can remove the cause. Only facts tending to establish the inability of Germany to stay the hand of violence in the interest of peace will reverse the judgment against the dual alliance, and such facts are not forthcoming in this volume. Indeed, Professor Münsterberg is not careful of his facts and frequently exposes himself to the charge of misrepresentation, and either disregard for truth or ignorance of it. His unfair treatment of ex-President Eliot is a case in point. With easy dexterity he turns Dr. Eliot's felicitous phrase of advice "to seize every opportunity that may present itself to further the cause of human freedom and of peace at last," into the astonishing phrase "to seize every opportunity *for attacking Germany.*" (The italics are ours.)

Professor Münsterberg does little better in matters of consistency and logic. Germany must be right because America, forsooth, has more than once committed the same wrong. The author "cannot share in the indignant sentiment of the masses" against England, but if the charges and insinuations he makes are well grounded (as usual he gives no real proof), it is certain that every righteous soul should thoroly hate her immoral course of action in this war. Verily, some great psychologists would fail to pass an examination in sophomore logic.

But an impassable gulf which neither facts nor logic could ever bridge, but only make more deep and well defined is found in the difference of moral attitude toward force and war prevailing in Germany and America. And we are warranted in thinking that Professor Münsterberg has presented the generally accepted German view. Here is the crux of the whole matter. The standards of judgment are not the same. This war, says the apologist for the Fatherland, was absolutely necessary sooner or later. It had to come, for it was strictly in accord with the ethics of development.

> There may be no moral wrong on either side. Every one of the great nations did that which was morally right and necessary to its historical development.
>
> It was the ethical duty of the Russians to strain every effort for the expansion of their influence, and it was the ethical duty of the Germans and Austrians to strain every effort to prevent it. In the same way it was the moral right of France to make use of any hour of German embarrassment for recapturing its military glory by a victory of revenge. And it was the moral right of England to exert its energies for keeping control of the seas and for destroying the commercial rivalry of the Germans. No one is to be blamed.

Thus does Professor Münsterberg argue for a neutral mind, and bases his plea for fair play on such a construction of the rules of war as will insure victory to the strongest. This may be German ethics, but it has little vogue in America. On the contrary, we do not believe that war is necessary to pave the way for higher culture. We are not ready to sneer at the angels' song of "Peace on Earth" as an impossible chimera. We believe that some people, governments or conditions are to blame for this crime against civilization, and that it is the duty of world leaders to place the responsibility and seek, if possible, to remove the causes which lead to such calamities. We utterly reject the doctrine that for nations "to respect the possessions of other nations as individuals respect the private property of their neighbors" would be "the grossest immorality." Might does not make right, and progress in human affairs is not dependent upon the liberty of the strong to destroy the weaker cumberers of the ground by force of arms. America, with all its chase after the dollar, has never wholly replaced the worship of the God of Justice with the idolatry of Force, and we are far from ready to adopt the blasphemous parody of the words of Jesus made by Germany's great, mad philosopher, Nietzsche:

> Ye have heard that man (sic) hath said, Blessed are the peacemakers, but I say unto you, Blessed are the warmakers, for they shall be called, if not children of Jehovah, then children of Odin [the War God of the North], and Odin is greater than Jehovah.

Our attitude toward Germany has changed much since the war began, and it will change more. We shall be more tolerant, more patient, more sympathetic, and, if necessary, more forgiving toward a great, burdened, sorrowing and misguided people; but our moral judgment will never condone the choice of way of war, or commend the progress of culture at the expense of justice, mercy and goodwill.

The War and America. By Hugo Münsterberg. D. Appleton & Co. $1.

BOOKS OF THE WEEK

American Labor Unions, by Helen Marot. An interpretive summary of labor organizations and their activity, by a union executive. Frank, simple and restrained.
Holt. $1.25.

The Mutiny of the Elsinore, by Jack London. A story of the Cape Horn voyage, gruesome and vivid as one expects, but a better yarn before the mutiny than when it actually occurs.
Macmillan. $1.35.

Charles Stewart Parnell, by Mrs. Parnell. Katharine O'Shea gives a frank picture of the "Chief" and tells directly and occasionally with distinction the story of their love and his political life.
Doran. $5.

California, Painted by Sutton Palmer, Described by Mary Austin. A travel-book, well suited to war-time overseas, in which the colorful prose has rather the advantage over the pleasant illustrations.
Macmillan. $4.

The Subterranean Brotherhood, by Julian Hawthorne. To the old problem of penology, miserably unsolved, this vigorous description of existing conditions in a Federal prison brings abundant data.
McBride, Nast. $1.50.

Gilbert and Sullivan and Their Operas, by Francois Cellier and Cunningham Bridgeman. A bulky, gossipy volume about the first performances of those unforgotten fancies, with side glances at the collaborators and the Savoy Theater's history.
Little, Brown. $3.50.

AMERICAN NATURAL HISTORY

The home that secures the new edition of William T. Hornaday's *American Natural History* will be fortunate. In four handsome volumes, fully illustrated with color plates, full-page pictures, text illustrations, maps and charts, Mr. Hornaday takes up in turn the mammals, birds, reptiles and fishes of America, confining himself to the more familiar and useful types. Too many Americans otherwise well educated are lacking in knowledge of birds and animals. These people not only deprive themselves of one of the real

pleasures of life, but by their indifference deprive their nation of that public sentiment which is needed to end the wholesale destruction of animal life, which has grown so alarmingly in recent years. So Mr. Hornaday's books, besides giving us a speaking acquaintance with the "best people" of the animal world, perform an important mission apart from the pleasure and scientific knowledge they give.

American Natural History. By William T. Hornaday. Scribner's. $7.50.

ANOTHER AMAZING MARRIAGE

If one can shut his eyes to the absurdity of its opening situation *Bambi*, by Marjorie Benton Cooke, is an entertaining tale. It is incredible that even a genius could be married out-of-hand, as a baby is adopted, without being conscious of what was going on. In a cataleptic trance of creation of a vision-play some things might be possible, but hardly that. The vivacity and vitality of Bambi make the book go, as such a radiant personality must, altho her easy success in authorship is a further strain on the reader's credulity. Marrying a man to take care of him is a risky venture that does not always turn out so well as in the case of Bambi—the most absurd and delightful heroine in a thousand.

Bambi. By Marjorie Benton Cooke. Doubleday, Page & Co. $1.25.

THREE ENGLISH POETS

Three new volumes in the admirable and useful "Home University Library," a series of surprizingly cheap books which continues to prove its value to be many times greater than its price, are devoted to the exposition of three English poets: Chaucer, Shelley and William Morris, respectively, each of whom differently has exerted such an influence as to justify the saying of one of them that "Poets are the unacknowledged legislators of the world." Miss Hadow's *Chaucer and His Times* is a workmanlike and readable little treatise summing up all the known facts about the poet's life, describing his works, analyzing his treatment of his sources, studying his character-drawing, his humor, his descriptive power, and pointing out his influence on his successors. In all the Chaucerian literature there is no other volume of exactly the same plan and scope, and this one is decidedly worth having.

Of Chaucer's modern disciple Mr. Clutton Brock writes in a very interesting and informing way in his *William Morris: His Work and Influence*, in the doing of which, he tells us, his purpose was not to produce a short life of Morris, but to explain Morris' importance to his own time and to ours. Art, said Morris, is the natural solace of men's labor. For him true art meant the expression of man's joy in his work. He saw that in the present industrial and economic conditions man had no joy in his work and could not possibly have any. So he sacrificed himself, turning from the making of works of art to the effort to remake society, and "devoted the whole of his extraordinary powers toward no less an object than the re-

WILL THE NATION'S PRAYER BE ANSWERED?

October 4th, the day set apart for the nation-wide prayer for peace, will mark a great revival of faith in prayer.

¶ In this connection many will find inspiration in

THE BOOK OF ANSWERED PRAYER

BY JOHN T. FARIS, D.D.

Price, $1.00 net

In this book Dr. Faris, who is Editorial Superintendent of the Presbyterian Board of Publication, gives simply and without argument seventy striking instances of answers. These have been gathered from both home and foreign sources.

Many of the incidents told have been drawn from the personal experiences of friends and from biographies. These are grouped under the chapter headings: "For Daily Needs," "In the Home," "Travel Mercies," "The Prayers of Four Students," "God in Everyday Life," "Solving the Difficulties of the Pastor," "Soul-Winning," "Revival Incidents," "In Mission Lands," "What Prayer Costs."

THE BOOK OF GOD'S PROVIDENCE

Price, $1.00 net

This book, also by Dr. Faris, will instantly grip the attention by its interest and at the same time deepen faith in God and inspire to patient endurance and hopeful endeavor. The Christian will find on every page some message of comfort and encouragement for his own soul in the midst of life's burdens and perplexities, and the Sunday-school teacher and Christian worker will find many usable illustrations. Its short helpful chapters taken from life are grouped under such heads as the following: "God in History," "In Every-day Life," "The Sequel of Adversity," "Accidents That Proved Blessings," "Sequels of Hardships," "Then Do Not Worry."

THE INDEPENDENT, 119 WEST 40th STREET, NEW YORK

constitution of the civilized life of mankind."

But more valuable than either of the foregoing, and more vitally and absorbingly interesting at the present moment when the butcher-monarchs of Europe are turning a whole continent into a vast human shamble, is Mr. Brailsford's *Shelley, Godwin, and Their Circle*. This is a brilliant piece of writing, sparkling with epigrammatic terseness, but it is also much more. "The history of the French Revolution in England begins with a sermon and ends with a poem," is its opening sentence, and the whole book is a lucid and glowing epitome of that progress of thought from Dr. Richard Price's famous discourse "on the love of our country," delivered in the first excitement that followed the fall of the Bastille, to the publication, thirty-two years later, of Shelley's *Hellas*. Only the final chapter, occupying but forty of the book's 250 pages, is devoted exclusively to Shelley, but the author justifies himself by saying that "to attempt to understand Shelley without the aid of Godwin is a task hardly more promising than it would be to read Milton without the Bible."

Chaucer and His Times, by Grace E. Hadow; *William Morris; His Work and Influence*, by A. Clutton-Brock; *Shelley, Godwin, and Their Circle*, by H. N. Brailsford. New York: Henry Holt & Co. 50 cents each.

SOURCES OF THE BIBLE

The ponderous volume, *A Grammar of the Greek New Testament in the Light of Historical Research*, by A. T. Robertson, D.D., LL.D., will be a surprize to many scholars, who have not known that a professor in the Southern Baptist Theological Seminary in Louisville, Kentucky, could accomplish so enormous a work of German painstaking labor, in the field of New Testament grammar. How does it happen that he has had the courage to achieve a work superior to anything on the subject that has gone before?

Professor Robertson was a young associate of Dr. Broadus, who assigned him this task, in which he was encouraged by Professor Gildersleeve. Five years ago Dr. Gudemann, of Munich, said of American classical scholars: "Not a single contribution marking genuine progress, no work on an extensive scale, opening up a new perspective or breaking entirely new ground, nothing in fact of the slightest scientific value, can be placed to their credit." Perhaps not; there are very few such works from any country. This work of Professor Robertson is not *bahnbrechend*, but it is a noble monument of most laborious and careful study in a field that affords fresh material and needs development.

Every biblical scholar has Professor Thayer's *Grammar of the New Testament*. But that, based on Winer, was written before the discovery of the Greek papyri in Egypt which prove that the *koiné* of the New Testament was the common Greek of popular speech the Greek world over, very different from the classical Greek of literature. Many scholars are now at work

on this new treasury of material, and they find that what was thought peculiar in the New Testament Greek belonged to the language of the street and the trade. The Hebraisms are much fewer than was supposed. Indeed, the new material adds much to our knowledge of the true meaning of the text.

The fulness of the author's treatment of the subject appears in the index, which shows nearly every verse in the New Testament to have been noted. The pages are sprinkled with Greek, and the notes at the bottom of the pages show multitudes of references to authors consulted. Indeed, the historical side of this work, showing the growth of the study, is very full. For the New Testament student this volume will take the place of any that has gone before in any language, including the author's *Short Grammar* of a few years ago.

A Grammar of the Greek New Testament. By A. T. Robertson. New York: Geo. A. Doran. $5.

WAR A CENTURY AGO

The reader turns with a certain sense of relief from his newspaper to read the story of the two tiny wars with Great Britain which marked the beginning of our career as a nation. But if the American Revolution and the War of 1812 were parochial in scope, the importance of their results has been world-wide, and even now they are worth the attention of the historian. Prof. T. C. Smith's *The Wars Between England and America* (Home University Library) sketches not only the military operations of the two wars, but the foreign policy of the English and American political parties between the years of conflict. Some of the author's dicta will surprize those brought up on the old style of "patriotic" histories; for instance that "there is not the slightest evidence that Grenville or his associates dreamed that they were in any way affecting the colonists' rights or restricting their liberties," that the Americans are "an essentially unmilitary people," and that the Treaty of Ghent "was an acknowledgment of defeat, a recognition that the war was a failure."

Henry Holt & Co. 50 cents net.

FIRST AID TO THE FARMER

Those interested in modern scientific farming will find profit in the study of *Manures and Fertilizers* by Homer J. Wheeler. The author is an expert in this matter, and the only question we raise is whether his treatment is not too chemically technical for the ordinary farmer. Yet careful reading will bring out the lessons wished for, and the study required is worth while. The pictures show the comparative results, as of a crop to which lime has or has not been applied.

Macmillan Co. $1.50.

CONFOUNDING THE SCEPTICS

The extreme positions of Prof. W. B. Smith, Dr. A. Drews and J. M. Robertson that the whole Gospel story of Jesus is a myth, and that no such person ever lived, is sharply and conclusively refuted in *The Historical Christ* by F. C. Conybeare. The author shows the absurdity of these writers and also

NEW LONGMANS BOOKS

GEORGE THE THIRD AND CHARLES FOX

The Concluding Part of "The American Revolution"

By the Right Hon. Sir George Otto Trevelyan, Bart., O.M. 2 Vols. 8vo. **Vol. II.** With Map. [illegible]

[illegible] narrative of the events in England, and on the Continent [illegible] a history [illegible] of America, but a tale of [illegible] War in the Cabinet of Lord North and the Parliament of Great Britain, and the Campaigns of Sir Henry Clinton in America and the Continental Provinces.

The Riddle of Mars: The Planet

By **C. E. Housden**, Member British Astronomical Association. With 5 Plates (3 colored) and 1 Figure. 8vo. Pp. [illegible]. $1.20 *net* (Weight, 11 oz.).

The purpose is to solve the riddle of Mars (or what is possibly happening there) from quite a new direction. This result will, it is hoped, help towards the universal acceptance of the artificial nature of Mars' canals and oases and all that this implies.

International Law:

A Treatise

By **L. Oppenheim, M.A., LL.D.** University of Cambridge. In 2 Vols. Second Edition. 8vo. **Vol. II. War and Neutrality.** Pp. xxxvi+711. $6.50 *net* (Weight, 34 oz.).

"[illegible] Professor Oppenheim's well-known work has already received a cordial welcome at the hands of those who have appreciated his thoughtful and scholarly treatise from the time of its first appearance. . . . Nothing short of the highest praise can be given to this simple and logical method [illegible] *International Law.*

Master-Clues in World-History

By **Andrew Reid Cowan.** Crown 8vo. Pp. viii+331. $1.75 *net* (Weight, 22 oz.).

This work is an attempt to rationalize world history in terms of certain conceptions which hitherto, in the writer's opinion, have not been sufficiently emphasized.

Germany and the Next War

Every one should read this book, which discloses Germany's war plans for the crushing of England and France. A remarkably prophetic and illuminative book by the great German militarist, **General F. von Bernhardi.** New Edition. Crown 8vo. $1.00 *net* (Weight, 16 oz.).

The Rise of South Africa

A History of the Origin of South African Colonization and of its Development towards the East from the Earliest Times to 1857

By **G. E. Cory, M.A.,** King's College, Cambridge. In Four Volumes. **Vol. II.**—From 1820 to 1834. With 38 Illustrations and 2 Maps. 8vo. Pp. xvi+489. $5.50 *net* (Weight, 44 oz.).

Municipal Life and Government in Germany

By **William Harbutt Dawson,** Author of "Germany and the Germans," etc. With Appendices. 8vo. Pp. xvi+507. $3.75 *net* (Weight, 34 oz.).

This book is an expression of municipal government in practice, and is based on first-hand study and observation. Beginning with chapters setting forth the organization of German town governments, and the wide and almost limitless administrative powers enjoyed by them, the author reviews the most important departments of local administration, land policies, town planning, housing policies, public health and sanitation, poor relief, education and culture, including the schools and the theatre, social welfare endeavors, trading enterprises, finance local taxation, etc.

LONGMANS, GREEN, & CO. Fourth Ave. & 30th St., N. Y.

THE H. R. HUNTTING CO., Booksellers and Publishers
Springfield, Massachusetts

criticizes positions of Dr. von Manen as to St. Paul. Dr. Conybeare is himself an advanced critic and does not accept the miracles of the Gospels, but he cannot endure the extravagances of these writers. He is well worth the reading.

Open Court. $1.50

CHAMBERS AMONG THE INDIANS

The Hidden Children, by Robert W. Chambers, is a novel of Revolutionary days, and of Indian folk-lore, adapted very prettily to an out-of-doors Chambers' love story. It deals with the breaking up of the great Iroquois Indian confederacy by Clinton's army, and the forest marches and battles are vividly pictured.

Appleton's. $1.40.

A TITLE THAT IS A MISNOMER

A few entertaining pages—an historical setting with a sketch of Bonaparte—a dash of good old-fashioned blood and thunder—with a sprinkling of sentiment might be sufficient for summer-time amusement. But there is a good bit that is unpleasant enough to debar *Great Days,* by Frank Harris, even from that category.

Kennerley. $1.35.

TOLSTOY

Edward Garnett's *Tolstoy: His Life and Writings,* in the "Modern Biography" series of coat-pocket volumes, is a brief and concise but sympathetic and just account and appraisal of the greatest of the Russians as "a revolutionary mind and evolutionary force." Save for a careless haste in style, which affronts the reader with repetitious use of that lazy and abominable abbreviation "etc.," the sketch is surprizingly well done, and it should prove of value to many as an introduction to the many-sided colossus of Yasnaya Polyana.

Houghton Mifflin. 75 cents.

A NEW LAND OF ENTERPRISE

Almost the only good thing we can see about the war is the opportunity it brings for the expansion of American commerce into the inviting fields to the south. But the chief obstacle is that we do not know these countries; we have not even learned the A B C's. Let us begin, then, with *The Amazing Argentine,* for John Foster Fraser is a geographic journalist by profession and is able to play up statistics so they stand out like an electric signboard. We get a vivid impression of a land where millionaires are made by magic, and there are chances for many more.

Funk & Wagnalls. $1.50.

WORDS YOU HAVE ALWAYS NEEDED

Mr. Gelett Burgess, lexicographer and neologist, has given us one hundred new expressions for the hitherto inexpressible, in his *Burgess' Unabridged.* We all remember how he planted "bromide" in the dictionary; will he have equal success with these?

17. Flooijab—An apparent compliment with a concealed sting.

26. Golobrify—To adorn with unmeaning and extravagant ornament.

31. Huzzlecoo—An intimate talk, a confidential colloquy.

66. Rizgidget—An inability to make up one's mind, an indecision.

74. Splooch—One who doesn't know his own business; a failure.

89. Wijjicle—A perverse household article, always out of order.

Frederick A. Stokes Co. 80 cents net

PEBBLES

Alfred Dreyfuss, Jr., officer in the French army, has been promoted for gallantry. A reminder of time's changes.—*Detroit Free Press.*

Father—I had a good number of sealed proposals at my office today.

Daughter—Oh, pa, were any of them for me?—*Baltimore American.*

Some way or other the United States just can't keep out of anything. The wife of the victorious admiral in the Heligoland battle is an American.—*Troy Times.*

"I want a pair of button shoes for my wife." "This way, sir. What kind do you wish, sir?" "Doesn't matter, just so they don't button in the back."—*Philadelphia Public Ledger.*

Breathless Would-Be Passenger—Station master, when does the half-past five train leave?

Station Master—Five-thirty.

Passenger—Well, the new church clock is 27 minutes past, the post office clock is 25 minutes past, and your clock is 32 minutes past. Now, in the name of goodness, what clock am I to go by?

Station Master—You can go by any clock you like, but you can't go by the train—it's gone.—*Pearson's Weekly.*

Science was horrified when Statistics discovered that babies to the economic value of $200,000,000 perish each year.

"This must cease!" exclaimed Science excitedly.

"It's up to you," rejoined Statistics without emotion.

But no sooner had Science by various devices caused the babies to stop perishing than Statistics discovered that half of these were girls and $200,000,000 wouldn't begin to dress them.

Science looked rather foolish.

"The laugh is on you," quoth Statistics grimly.—*Life.*

A traveling sales agent visiting a large factory made a bet with the manager that he would pick out all the married men among the employees.

Accordingly he stationed himself at the door as they came back from dinner and mentioned all those whom he believed to be married, and in almost every case he was right.

"How do you do it?" asked the manager in amazement.

"Oh, it's quite simple," said the traveler, "quite simple. The married men all wipe their feet on the mat, the single men don't."—*St. Louis Post Dispatch.*

A colonel wanted a man-servant, so he inserted an advertisement in the local weekly. One of the applicants who answered was an Irishman.

"What I want," explained the colonel, "is a useful man—one who can cook, drive a motor, look after a pair of horses, clean boots and windows, feed poultry, milk the cow, and do a little painting and paper hanging."

"Excuse me, sor," said Murphy, "but what kind of soil have ye here?"

"Soil?" snapped the colonel. "What's that got to do with it?"

"Well, I thought if it was clay I might make bricks in me spare time."—*Every body's.*

Two roads lead out from poverty
To ease and wealth galore
And one of them is Do Without,
And one is Make Some More.
One or the other each must take
If and pathway he would break.

Upon the road of Do Without
The Old World peasants plod
And women walk its narrow way
And carry the sacrifice sod
For there is little bloom or shade
In all the windings it has made.

Upon the road of Make Some More
The New World enterprise trod
And strong men walk its lofty length
And forge their way ahead,
While flowers grow at every bend
And beauty lines it to the end.
—*New York World.*

ECONOMIC PRIZES

ELEVENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman
Professor J. B. Clark, Columbia University
Professor Henry C. Adams, University of Michigan
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1915 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects may be had by addressing the undersigned. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

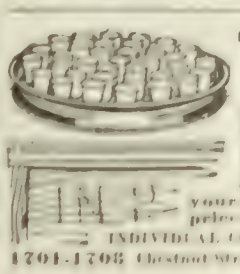
1. A Local Study of the Immigration Problem.
2. A Study of the Protocol in the Needle-Trade Industry.
3. The Economic Validity of the Single Tax.
4. Price Maintenance.
5. Reciprocity and Retaliation in Foreign Trade.
6. Ship Subsidies by Indirection.
7. The Development of Trade with Latin America.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

A First Prize of One Thousand Dollars, and
A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and
A Second Prize of Two Hundred Dollars



are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The committee also reserves the privilege of dividing the prizes offered, if justice can be best obtained thereby. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will [illegible] to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. No paper is eligible which shall have been printed or published in a form to disclose the identity of the author before the award shall have been made. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1915, to

J. Laurence Laughlin, Esq.

You Can Weigh Exactly What You Should

You can I know it, because I have reduced 32,000 women and have built up as many more—scientifically, naturally, without drugs, in the privacy of their own rooms. I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 89 lbs. before I began. I have gained wonderfully in strength." *Another says:* "I put May I weighed 100 lbs., this May I weigh 126, and Oh! I feel so well."

WOMEN AND THE WAR

The women of Holland have stopped all work of organizations toward their own aims and are urging all women to devote time and energy to the work abandoned after the mobilization order, in an effort to keep all public services available.

England's corps of mounted nurses will be of incalculable service on the battlefield. It is composed of fifty picked women, splendidly trained, many of them expert shots, and was formed in 1910 to provide mounted detachments with ambulance wagons.

Germany is now almost a community of women, practically all business being carried on by them. In factory, workshop, post office, they have taken the reins, and women doctors and dentists are in great demand. Even the post of night watchman is frequently filled by a woman.

Women vote in Chicago—and the soaring food prices resulting from the war have been speedily and forcefully checked. The city council has past an ordinance giving the city of Chicago power to punish all who have arbitrarily raised prices since the declaration of war.

One of the unique features of the recent peace parade at Pittsburgh, Pennsylvania, was the division composed of women of foreign birth. Over a thousand women, each carrying a peace pennant, marched thru the business district of the city, led by a squad of mounted police.

A new peace organization is planned by the committee in charge of the recent peace parade in New York City, which will protest not only against war but against armed peace. An appeal will be sent to all enfranchised women and those organized to procure the vote, both here and abroad.

Under the leadership of several prominent Englishwomen a league has been formed in London to give financial or other aid to soldiers' wives and babies who are in need. There is to be no confusing red tape and aid is to be given regardless of class or creed. A valuable feature will be the nursery where mothers may leave their babies while seeking for work.

The International Woman Suffrage Alliance, with headquarters in London, have given efficient service since the war broke out by converting its offices into an information and relief bureau for foreign women in England. Offers of hospitality and assistance were made by English families and during the first two weeks 120 foreigners were enabled to return home thru its aid.

The Premier's appeal to the women of France to save the harvest and take up the work of the fields was not necessary. Already they were bearing their double burden, gathering the crops and picking up the loose ends the men were forced to drop at the call of war. Wives of municipal councillors are even allowed to vote on matters of immediate importance, such as sanitation and relief funds.

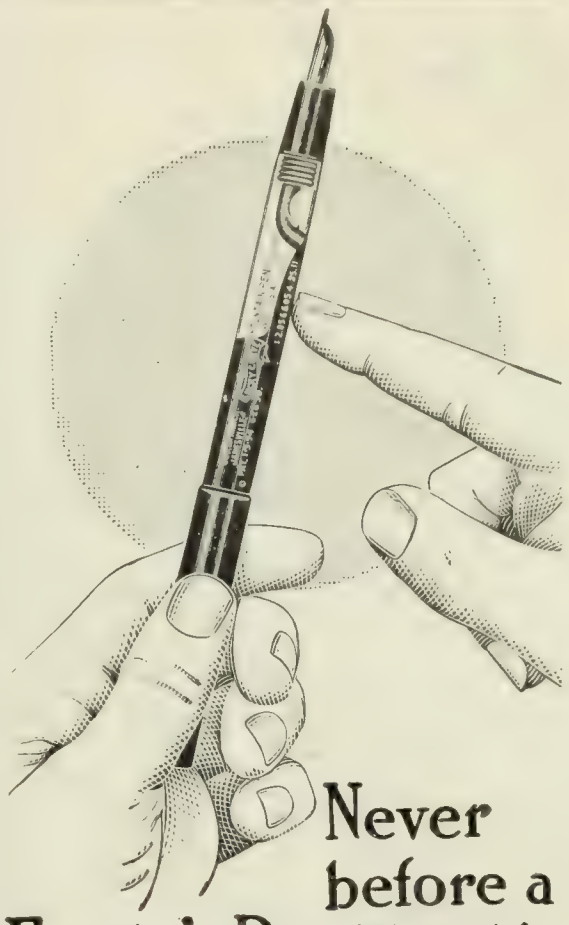
POPULARIZING GOOD OPERA



ORGANIZED and maintained by a practical subsidy for the popularizing of good opera in English, the Century Opera Company, whose first season barely escaped shipwreck on the shoals of mediocrity and incompetence, began its second season on the evening of September 14 with a performance of Gounod's mellifluous "Romeo and Juliet." This performance, it may be said at once, showed a great and gratifying improvement over the work of last year.

The company makes its fresh start with its forces augmented and strengthened in all departments. There are new and better singers both among the principals and in the chorus, while the best of those in the company last year have been retained. The orchestra has been decidedly improved by the elimination of poor players and the addition of many musicians of training and experience in older opera houses. There are new conductors, headed by Agide Jacchia, who was musical director of the Montreal Opera Company for several years and who had won an enviable reputation as a conductor in European opera houses before coming to America. And an acquisition of the very first importance is a new stage director, Jacques Coini, whose masterly staging of several new works at Oscar Hammerstein's Manhattan Opera House a few years ago constituted an artistic achievement memorable in the annals of opera in America.

Notable improvement has been made also in the quality of the English texts to be sung this year, new translations into English of several opera librettos having been made specially for the Century Company by Algernon St. John-Brenon.

In the current season, which is to run for twenty weeks at the Century Opera House, two operas will be sung each week, on alternate evenings, and at matinees on Thursday and Saturday. The repertory for the first few weeks comprises, in the order here listed, the following named works: Rossini's "William Tell," Verdi's "Traviata," Wagner's "Lohengrin," Verdi's "Trovatore," Wolf-Ferrari's "Jewels of the Madonna," Gounod's "Faust," Leoncavallo's "Pagliacci" and Mascagni's "Cavalleria Rusticana" (as a double bill), Wagner's "Tannhäuser," and Donizetti's "Lucia di Lammermoor."

The more auspicious opening of the Century Company's new season and its very real promise of musical enjoyment should be of interest to many of The Independent's readers

Never before a Fountain Pen like this

IT'S transparent. You look right through the heart of the pen and see its inner workings. Hold it up to the light and watch the ink chase down the barrel. See how the *Lucky Curve* Ink Feed drains back the ink and keeps pen from leaking. *A new idea in fountain pens*—for folks who like to "set the pace."—*Geo. S. Parker*

PARKER LUCKY CURVE

TRANSPARENT FOUNTAIN PEN

So teetotally different from any other fountain pen that you'll warm up to it like a hungry man to a square meal. Get one of these new transparent pens *now* while it has the special charm of novelty and watch your neighbors take notice when you start using it. The transparent barrel tells you in advance when the pen needs refilling.

Parker New Self-Filler
No outside projections or mechanism — no openings into barrel. "Press-the-button"—fills in two seconds at any ink well.

Parker Jack Knife Safety
Carried in a man's pocket, lady's purse, or handbag without danger of leaking—a vice-like safety lock shuts back the ink.

Parker Pens—Standard, Self-Filling, Transparent, Jack Knife Safety—are made in over 200 styles. $2.50 "lucky curve" dealers sell them. If you can't locate a dealer write for illustrated catalog.

A. C. BARLER MFG. CO., 60 W. Lake St., Chicago

besides those who contemplate the pleasure of hearing it in New York, for plans are making to have the company visit ten or more other American cities after the close of its New York run. The projected tour, to begin on February 1 next, is to cover about fifteen weeks, presenting in each city, for a stay of from one to two weeks, six or eight operas. The itinerary of the tour has not yet been worked out in detail, but among the cities likely to be visited are Boston, Philadelphia, Baltimore, Cleveland, Cincinnati, Chicago, Milwaukee, St. Louis and Kansas City. Inasmuch as the war in Europe has broken up the Chicago-Philadelphia and Boston opera companies, it is probable that the Century forces will be the only ones to give opera in the cities of the interior in the season of 1914-15.

WAR AND THE MINES

The sudden oncoming of the war produced some very striking effects upon the American and other markets for various metals and minerals. In some cases the war resulted in cutting off a raw material supply commonly used by American manufacturers; in other cases the conflict has borne more hardly upon competitors than upon our own industries.

Among mineral products whose importation will be more or less seriously interfered with by the war may be mentioned chromite, manganese, antimony and magnesite. In all cases there are undeveloped or slightly developed American deposits which can serve as temporary sources of supply.

Immediately upon the outbreak of war a strong demand for West Virginia, Sydney and other American export coals set in. France promptly removed her import duty on coal, and began drawing on the American supply. This European trade is likely to prove an important factor in the American coal mining industry from now on.

The copper market experienced the most sudden and temporarily disastrous effect. For many months past the European, and particularly the German, demand for copper has been the mainstay of an otherwise deprest market. With German buying withdrawn for an indefinite period, copper prices reached new low levels, and the mines and refiners promptly curtailed their output.

With regard to iron and steel the effect of the war has been entirely different. About one-quarter of the world's steel output is ordinarily produced in the area which lies in the immediate battle zone—the country along the borders of Germany, France and Belgium. Removal of this tonnage from world competition, and the certainty that large steel tonnage will be required for use during and immediately after the war, operated to strengthen the position of American and Canadian steel producers. Prices of many iron and steel products have already advanced.

There are a number of mineral products commonly supplied to the American market from foreign sources, whose importation has been made either difficult or impossible by the war. Chief among these, of course, is potash; for our entire supply of potash salts has come during recent years from the great deposits at Stassfurt and other points in Germany. As an essential ingredient in fertilizers, and an important factor in other chemical industries, the cutting off of the German potash supply will be seriously felt in the United States. For many years past investors have attempted to work out processes for producing potash from native sources, but so far none of these processes has been able to supply potash salts in competition with the German deposits. Under stress of war conditions, however, it is possible enough that a domestic supply will be secured by treatment of greensand, feldspar, or other potash-bearing rock.

STEINWAY

AFTER three-score years and one the Steinway today is unexcelled for exquisite tone and singing quality—recognized by master musicians and music lovers as the ideal piano. The enduring fame of the Steinway rests upon the supremacy of its basic principles. Four succeeding generations of pianoforte experts have faithfully adhered to these principles, and have made the Steinway the standard of piano perfection. Purchase a Steinway for your home and you have the assurance that money cannot buy a better piano.

If you are about to buy a piano, you will be interested in our literature. It will be sent free with name of Steinway dealer nearest you. Mention this magazine.

THE MARKET PLACE

BANKS THAT HOARD CASH

Secretary of the Treasury McAdoo last week published a list of two hundred and fifty national banks which he declared are hoarding cash. They are all carrying reserves far in excess of the legal requirement of fifteen per cent. It is interesting to observe that most of the banks thus accused of hoarding are in the rural districts and not one of them in New York City. Mr. McAdoo declared that if the large amount of loanable funds kept from active employment was invested in commercial or agricultural paper, or loaned on proper security, the present situation would be greatly improved.

Mr. McAdoo further asserted that while the New York banks were not found to be hoarding cash they were demanding higher rates of interest than the situation required. In this connection he said:

> I am using every just effort to persuade the banks thruout the country to extend reasonable credits, and at reasonable rates of interest to meet the existing unusual conditions created by the European war, which, if dealt with in a helpful spirit by all concerned, should quickly ameliorate.
>
> I should like to see the New York banks take the lead in establishing and maintaining moderate rates of interest for accommodations, as their example always has a large influence upon banking action and sentiment in the country. If this course is pursued by the leading banks in New York and other great money centers a real public service will be rendered and a return to normal conditions of business will be quickened.

The President of the New York Clearing House asked Mr. McAdoo to lay before him any evidence that he may have that New York banks are charging unduly high rates of interest. He assured the Secretary that if the accusation were substantiated the Clearing House would use its influence to put an end to the practise. Secretary McAdoo later informed Mr. Wiggin that he found that he had been misinformed as to two specific cases in which New York banks had been accused of charging more than six per cent for loans. It is regrettable that the Secretary of the Treasury should have made publicly an accusation which was based on erroneous information.

THE OPENING OF THE STOCK EXCHANGE

Three steps have already been progressively taken looking toward the resumption of trading in securities and the reëstablishment of the open market which was hermetically sealed when the Stock Exchange was closed on July 30.

The first step was the permitting of brokers to make purchases and sales of securities thru the clearing house of the Stock Exchange at prices not lower than those ruling when the Exchange closed.

The second step was the resumption of bond sales at prices below those of July 30.

The third step, taken last week, was the resumption of trading in unlisted stocks at moderate concessions from the quotations when the Exchange closed. This will permit buying and selling, not in an open market, but by private dealing between brokers, of what may be called Curb stocks, of which the various Standard Oil securities are the most prominent.

The next step to be expected is the relaxation of the regulation requiring trading in listed securities to be done at not less than the prices on July 30. It should not be long now before that step is taken and then nothing will remain to be done but to open the Exchange.

It would not be surprizing if a plan for a partial resumption of free trading on the Floor were to be devised which could be put into effect in the not far distant future. The Exchange might be opened and trading in only a few stocks permitted, stocks which are not largely held on the other side of the water.

Probably the most urgent necessity for a closed Exchange now lies in the need to prevent the dumping into our market of the American securities held in Europe. A flood of foreign held securities pouring into our market would have two serious effects. It might easily depress prices to the panic point. It would mean a dangerous drain upon our gold supply if it came before we had been able by renewed exports to build up a credit balance abroad.

If, however, the Exchange were to open with trading in only a few securities at first, and progress were made a step at a time, other securities being added as experience showed that it could be safely done, the threatened dangers might never materialize.

But all these things are yet on the knees of the gods. One thing alone is certain. The governors of the Stock Exchange will do nothing rashly or prematurely. The Exchange will be opened in the fullness of time, but not until the best judgment of the best intellects in the financial world are convinced that the time has come.

John Barrett, Director of the Pan-American Union, has been making an investigation by cable of the possibilities of extending our trade with Latin America. As a result of his inquiries he has addrest a word of warning to American business men. He says:

> "These advices emphasize that what is needed at this hour in Latin America is not so much a supply of the manufactured products of the United States, altho these are required in considerable quantities, but money, loans and advances, credits on purchases, and markets at reasonable rates for raw products which usually go to Europe. If Latin America can sell at a fair figure her accumulating raw products and buy, in turn, thru receiving financial help and co-

operation in the form of advances and credits from United States exporters, importers and bankers, the situation will speedily be remedied and a new era of Pan-American commerce and comity will open.

"The fact that twenty Latin-American countries last year bought imports and sold exports to the vast total of $3,000,000,000, of which $2,000,000,000 were transactions with Europe, proves beyond doubt that the opportunity is there; but it is subject to conditions. That the United States already has a good start, and is making encouraging progress, is shown by the fact that its exchange of trade with Latin America has grown nearly 100 per cent in the last seven years, or from $450,000,000 to $850,000,000.

"Numerous business men and commercial agents are crowding the steamers bound south with the expectation that they will find the Latin Americans awaiting them with outstretched hands filled with gold and ready to buy everything and anything they have to sell. These men will presently return north and unfairly condemn and criticize the markets and peoples of the countries they have visited. The Latin American market, while vastly potential, is at this moment embarrassed by a serious financial stringency and dislocation of commercial conditions for which it is not in itself to blame. The opportunity of the hour is not so much for immediate large sales of United States manufactured products as for coöperation and mutual help, together with careful investigation of commercial conditions and preparation to meet future competition successfully."

There are two sides to every shield. The American financial world has had its eyes fixed with concern upon the debts to Europe which will fall due in the near future and the consequent effect upon our gold supply. Meanwhile British financiers are looking at the matter from their own point of view with apparently equal concern. *The Statist*, for instance, comments upon the situation thus:

"Furthermore, it is to be borne in mind, as every reader no doubt is aware, that the United States crops are excellent this year, that therefore the United States is likely to export to us on a great scale. The United States, altho it owes a considerable amount to the United Kingdom at present . . . will be able to take considerable sums in gold if it chooses. Whether it will choose, of course, nobody can yet say. The United States Treasury has an immense amount of the metal, and if the new banking system is started upon really scientific banking principles there ought to be in the United States not only enough of gold for all legitimate purposes, but so much more as will enable it to set free a good deal of what it now holds. Until the new system is in working order and we can judge from experience, it is impossible to say what course will be adopted, but this at all events is clear, that the American crops this year are so large that they will enable the United States merchants and bankers not only to pay off all the debts due this country, but to take a large amount of gold if they deem that desirable."

The spirit of cooperation which infuses the Buy-a-Bale movement should find play in other directions as well. When the Stock Exchange opens again, Buy a Share-of-Stock will be a good rallying cry for every potential investor with a little surplus money.

The following dividends are announced:

La Rose Consolidated Mines Company, quarterly, 2½ per cent, payable October 15.

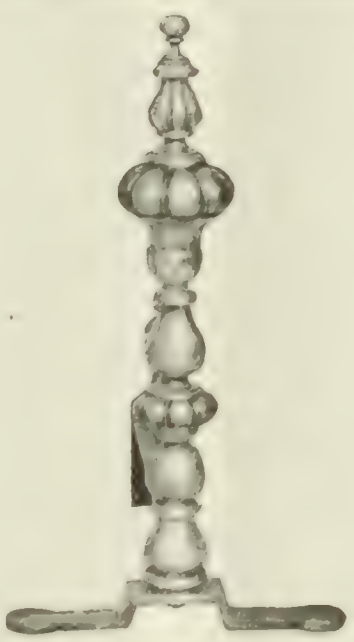
The New York Central & Hudson River Railroad Company, quarterly, 1¼ per cent, payable October 15.

The Otis Elevator Company preferred, quarterly, $1.50 per share; common, quarterly, $1.00 per share, both payable October 15.

United Fruit Company, quarterly, 2 per cent, payable October 15.

Worthington Pump & Machinery Company, preferred, quarterly, 1¾ per cent, payable October 15; common, quarterly, 1 per cent, payable October 15.

Boston Safe Deposit & Trust Co.



In Active Business since 1875

¶ Assumes the care of property of those going abroad, collecting coupons, dividends, interest and rents.

¶ Pays interest on deposits subject to check.

¶ Transacts a General Trust and Banking business, acting as Transfer Agent for Railroad and other Corporations. Acts as Executor and Trustee at no more expense than where individual executors and trustees are appointed.

YOU HAVE A RIGHT TO INDEPENDENCE

You have a right to independence, but you must have an honest purpose to earn it. Many have purpose, ambition and energy, but thorough direction and intelligent help must be supplied. My instruction supplies the first, and our Co-operation Bureau fulfills the second. Large numbers have availed themselves of both, succeeding to a remarkable degree. Investigate without prejudice, this opportunity to

Learn the Collection Business

and escape salary drudgery for life. If you have an idea that the collection business as I teach it is not safe, sure and dignified as a bank, or any other profitable business, you are mistaken, and I will prove it, if you earnestly desire to get ahead. No essential branch of business is so limitless, nor less crowded. No business may be built so large without investment of capital. I will gladly send you, for the asking

"Pointers On The Collection Business"

It may mean comfort for life, if not a great deal more. Write for it now.

American Telephone & Telegraph Company

A Dividend of Two Dollars per share will be paid on Tuesday, October 13, 1914, to stockholders of record at the close of business on Wednesday, September 30, 1914.

O. D. Mosle, Treasurer.

THE OTIS ELEVATOR COMPANY

The Board of Directors of The Otis Elevator Company has this day declared a quarterly dividend of One and One-Half Dollars ($1.50) per share on the Preferred Stock of the Company, payable on October 15, 1914, to stockholders of record at the close of business on September 30, 1914.

W. A. Mellen, Treasurer.

WESTINGHOUSE

Electric & Manufacturing Company

A quarterly dividend of One and One-Half Per Cent. on the Preferred Stock of this Company has been declared, payable October 15, 1914, to stockholders of record at the close of business September 30, 1914.

The transfer books will not be closed.

E. D. Leavitt, Treasurer.

bodily vigor and men with wives and families, a most serious condition will be set up in the economic life of the nation. A number of employers have denied that any such policy had been adopted or was contemplated; but there are superficial evidences which indicate that the physical test is being more widely applied.

But suppose that both of these bases of selection are resorted to, would it be cause for astonishment? We do not think so, because it is natural and it would be quite consistent with the rules of business—which, by the way, are not always humane.

If the men and women of impaired physical condition, those with dependents, and those whose productive capacities have been depreciated, but not destroyed, by age may not secure employment, what is to become of them? Will the answer be disability and old-age pensions? If the economic conditions of a nation, thru legislation and changes of customs, crystallize in such form as to deprive a part of the population of the privilege of earning a living, will it not become the duty of the state to support them? It would seem so. Then, we say that it would be better that all—the sound and the infirm, the married and single, the old and the young—be given equal chances in the workshop. Each will earn in proportion to his capacity and, what is more valuable, retain the self-respect which is founded on self-support. We ought not to have in this country any sort of disability pensions arising from physical depreciation or old age that have not been previously provided by the beneficiaries themselves. We cannot afford to decrease by ever so little the big stock of self-reliance which is a characteristic of the American people.

NOTES AND ANSWERS

L. A. N., Dallas, Texas—Due to the so-called Robertson law, which requires that seventy-five per cent of the companies' Texas premium reserves be invested in Texas securities.

R. W., Chicago, Ill.—The objection to tontine forms of life insurance lie principally in the fact that dividends are forfeited by lapse of the policy or death of the policyholder. It is besides a gambling contract.

A recent examination of the Casualty Company of America (New York City) by the Insurance Department of New York places the admitted assets on June 30, 1914, at $2,901,466; the liabilities (exclusive of capital stock), $1,892,788; net surplus, $258,678.

Whatever one's view of the value to the community of speculation, there can be no difference of opinion about betting on stock quotations. Thru the action of the Stock Exchange this demoralizing form of gambling will go the way of race track gambling.

Up to September 15, the Bureau of War Risk Insurance recently established by the United States Government had issued policies on eleven vessels for a total sum of $[illegible]. There were then pending applications for $3,000,000 insurance on [illegible] vessels.

JUST A WORD

The Twenty-fifth Annual Book Number of The Independent will be the issue of November sixteenth. Advertising pages of this striking number will reach an audience nearly if not quite three times as large as any one of the twenty-four preceding Book Numbers. A word to the far-sighted publisher is sometimes sufficient.

After reading the editorial appearing in The Independent of September 21st under the caption "The Railway Crisis," the Passenger Traffic Manager of one of the most important Western railroad systems commented upon it as follows: "I have read it with keenest interest. Coldly, honestly and logically it deals with every phase of the biggest subject that confronts the American people. It is splendid to find The Independent among the 'unprejudiced observers' lending such powerful support in a good cause."

Much the larger part of the success of The Independent's first campaign to double its circulation was the result of coöperation among its readers, which was the best possible evidence of the satisfaction with which the new Independent was received. The increase in circulation has been an accelerating one since that time. The Second Campaign for Doubling the Circulation of The Independent has been inaugurated, and the preliminary announcement sent to our readers. We are confident of the result. If by any chance you have not received this announcement, and the attractive opportunity which it offers, a post card to our Circulation Manager will bring it to you by return mail.

It is a significant fact in this connection that the cash receipts from subscriptions in the month of September exceeded the receipts of the same month a year ago by *Two Hundred and Eighty-three Per Cent.* The italics are our Circulation Manager's!

Have you observed the pride with which you have been shown in some museum or family archives a copy of a paper or magazine published at the time of Lincoln's death or the battle of Bull Run? Did you ever notice in some book catalog what price the fortunate possessor of the war-time numbers of *Harper's Weekly* charges for the set? Do you realize that the war now being fought is more extensive and more important in the world's history than even our Civil War? Can you imagine with what curiosity your children and grandchildren will in years to come look at a copy of The Independent for a contemporary record in words and pictures of the Great War you are now living thru? Could you invest the price of a subscription at compound interest in any way that would pay them better than getting a set of The Independent, binding it and storing it for them? But you will not have to wait fifty years to get full value of it. You and your friends—for your children and your children's children—need it now, to give a clear idea of what is going on, and you will all need it every year hereafter as a reference book to refresh your memory. A special offer by which you may provide for your friends this Contemporary History of the Great War will be sent on postal card request.

The following letter from a prominent publisher of the trade paper field presents an interesting point of view in relation to The Independent:

"For a great many years I had heard of The Independent Magazine, but I had never seen it at close quarters.

"I was surprized and delighted with what I found, and read nearly every word in the magazine before I had finished with it.

"There are always interesting articles in such magazines as the *Century, Harper's, Scribner's,* and the *Atlantic* and the *North American Review* by people who are masters in their own lines, but there is also in all these magazines a great deal of matter which is uninteresting to Mr. Average Man.

"However, in The Independent Magazine, I found that my interest grew as I went from page to page. I want to put myself on record as saying that I have never before had the privilege of reading a magazine whose every page grips the reader as do those of The Independent.

"It seemed to me that there was a distinct entertaining and instructive personality speaking to me as I read on. The subjects treated were alive with the great issues which appeal to thinking men thruout the entire world."

By special arrangement with the London "Sphere." © N. Y. H.

THE STIRRING THINGS THAT STILL HAPPEN—EVEN IN SCIENTIFIC WARFARE

In spite of the huge siege guns and the leviathan battle-lines the sharp, sudden, hand-to-hand skirmishes between men on foot and men on horses still occur. The London *Daily Express* repeats the story of this clash in a village of northern France, as told by a wounded British Hussar: "We came plump on them round a corner in a little village," said he. "Absolute surprise for both of us. Before you could wink we were flying at one another as hard as the horses could go, and the villagers were yelling and scrambling into the houses on either side of the road. There was no firing. It was absolutely a proper cavalry charge, like you see in the pictures—horses going hell-for-leather and every man sitting hunched up under the No. 1 guard and hoping he wouldn't get his knees crushed by the fellows on each side of him"

The Independent

VOLUME 80 | MONDAY, OCTOBER 12, 1914 | NUMBER 3435

THE ENFORCEMENT OF PEACE

OUR readers will be glad to know that the article by the Editor of The Independent entitled "The Way to Disarm," published two weeks ago, has already attracted wide comment. We are receiving by every mail newspaper clippings and letters commending or criticizing it. A few of these we are reserving for future publication.

In the meantime it seems profitable to continue the discussion of the function of force under a reign of law, for that is the core of the whole peace problem.

In an article published in The Independent July 5, 1906, the Hon. John Basset Moore, long recognized as the leading living international lawyer in the United States, wrote:

> The great problem confronting those who wish to do away with war is how to employ the force necessary to the restraint or repression of evil without producing the legal condition known as a state of war. The most striking imperfection in the international system today is the lack of a common agency for the enforcement of law. If, at the present time, a contest by force breaks out between two nations, the conflict is recognized as a war, and other nations assume the attitude of neutrals, even tho the cause of the conflict be the flagrant disregard by one of the contending parties of a well-settled principle of international law. Such a condition of things involves an obvious incongruity, the remedy for which would be the organization of a common agency for the enforcement of law; the addition, in other words, to judicial and legislative power of what we call executive power.

IN our proposal for the constitution of a League of Peace we made no attempt to define how the force of the League shall be exerted. That was left for the decision of the Assembly of the League. We simply suggested that "the nations shall disarm to the point where the combined forces of the League shall be a certain per cent higher than those of the most heavily armed nation or alliance outside the League." This implies that the forces of the League shall be used for the neutralization of the aggressive force of nations outside the League—that is, for defense. As the Great War has absolutely demonstrated that defense is a necessity as long as war lords exist, there can no longer be any doubt of the importance of defense for those nations who prize their sovereignty and independence. But shall not the force of the League be also used as police power, that is, to maintain aggressively international law and order? A League with power to exert its will without any constitutional limitations might easily become a League of Oppression. It would have the right to be judge and sheriff in its own cause, a violation of the first principles of justice.

It would not, in our judgment, be over-sanguine to expect that the Assembly of the League would vote that the armaments of the League should be brought into regular and concerted action for compelling obedience to the judicial decisions of the Court of the League both among members of the League and those outside who have agreed to this method of settling their disputes. It may even be anticipated that the force of the League will be used to assist one of the members of the League in a controversy with a nation outside the League that has not previously agreed to resort to arbitration and that refuses so to agree upon request. Such an agreement would tend to enthrone law and suppress arbitrary action. Entering a League with such a policy would not subject the United States to the necessity of waging war thru the erroneous action of its allies in an "entangling alliance," but only to extend the reign of law. This is the fundamental purpose of our Government and perhaps the United States is now ready to go thus far.

BUT the question of the proper use of force for preserving peace is practical only after the nations have *federated* themselves for that purpose.

Given a World Confederation or League of Peace, the problem of the establishment and exercize of an international police force to maintain international law and order and to neutralize the aggressive force of any nation outside the League will present no greater difficulties than the similar problem which confronted the framers of the United States Constitution or even of the Articles of Confederation. It must ever be borne in mind, however, that the constitution of a League of Peace will differ in this important respect from the Constitution of the United States. Our Constitution is both an instrument for federating the states and for guaranteeing each citizen within the Union certain rights; the proposed constitution of the League of Peace has no relation whatsoever to any so-called "world-citizen."

Thus the whole problem of the League of Peace resolves itself into this: The League follows the example of the United States in the relationship its members hold to one another and the example of England in the relationship it holds to outside nations. Within the League danger of war and size of armaments will decrease contemporaneously as happened with the formation of the United States. Between the League and outside nations an excess of armaments will be maintained over the heaviest armed outside nation or alliance, as England maintains a navy equal to any two likely to be brought against her.

In urging the United States to take the lead at the end of the war in organizing the world for peace, we are not unmindful that such a proposal contemplating the use of the armed forces of the United States under the federal authority of the League may require a constitutional amendment for its adoption. The power to declare war under our Constitution is vested in Congress alone, and even in time of war Congress is for-

bidden to make military appropriations for more than two years ahead. Nevertheless, the organization of an international government is essential to further progress of the peace movement. All obstacles will have to give way, even constitutional ones. The monster of war must be dethroned. The majesty of law co-extensive with human intercourse can alone achieve this beneficent and inevitable result.

THE DIRECT PRIMARY IN NEW YORK

THE result of direct primaries held for the first time in New York State last week will doubtless afford great comfort to the opponents of direct nominations. And this for two reasons.

In the first place the number of voters who went to the primaries was lamentably small. Therefore, the argument will run, the direct primary is a failure, since the voters will not use it.

In the second place, the organization candidates were successful in each party. Therefore, it will be contended, the direct primary is a failure, since the organization will make the nominations anyhow.

The arguments are plausible. But they are based on a complete misconception. No sensible person maintains that the direct primary is an infallible panacea for the ills of machine politics. The direct primary does not operate *ex proprio vigore*—by virtue of its own strength. It will neither make men vote if they do not want to nor make them vote against the machine in spite of themselves. But it does provide a means by which the voters, when they really want to do so, can upset the machine.

Under the old caucus and convention system it was easy for the machine to wield the power and hard for the rank and file to snatch it away. Under the direct primary it is relatively hard for the machine to hold the power against the will of the voters and relatively easy for the voters to seize the power whenever they care sufficiently about doing so.

But they must care. Evidently in New York State this fall most of the voters did not care enough to go to the primary and vote; and those who did go did not want to turn the organizations out.

This election proved nothing to the detriment of the direct primary. It merely proved that the voters of each of the three parties were on the whole satisfied to accept the candidates endorsed by their leaders.

ECONOMY *VERSUS* HOARDING

THE New York *World* takes a humorous slant at the Buy-a-bale movement when it says on its editorial page:

> A "buy-a-barrel-of-apples" movement has been started in the West, and the American Tobacco Co. announces its readiness to buy cotton in return for a buy-a-pound-of-tobacco movement. Perhaps wool, corn, wheat, etc., will have their turn, and in the end general prosperity will receive a boost thru a system of sentimental barter all around.

Humorous and at the same time—as the best humor generally is—close to the heart of the truth. If everybody will continue to buy—cotton goods, apples, woolen goods, corn, wheat, even, if he have so depraved a taste, tobacco—as nearly up to the line of his normal purchasing as he can, it will do much to maintain the accustomed level of our common prosperity.

A man of comfortable means remarked the other day that he had been going thru his wardrobe and had determined to buy no clothes this winter. He neglected to consider how his action would affect his tailor and his tailor's family, his tailor's workmen and their families. If, as is probable, his own income had not been seriously affected by the war, he was not playing the part of a good citizen in refraining from his normal expenditure.

A time of war is of necessity a time of scarcity. It is a time for economy, but not for hoarding. Economy means careful spending, prudent adjustment of expenditure to income. Hoarding means too careful saving, penurious insistence upon a wide margin of income over expenditures.

Judge Gary, the head of the United States Steel Corporation, has used an excellent phrase in describing this deplorable attitude of mind—"hysterical economy." He said:

> What this country needs now more than ever is more courage. This is not the time for Americans to be "quitters." It is time for prudence and economy, but not for hysterical economy. There is danger that some of our business men in their overcaution will wreck the mechanism of their own organizations and injure every one else.

A better spirit is that shown by a member of the New York Stock Exchange. He said the other day with unassuming frankness: "I am cutting my personal expenses to the bone, but I haven't made any reduction in my office force yet. I shouldn't be able to look myself in the face if I kept up my motor for my own personal pleasure and discharged my clerks."

In a time of common disaster like this coöperation and mutual helpfulness should be the ruling spirit. Let us all keep on buying, then, with wisdom and careful economy but without miserliness. So may we all prosper and hasten the return of a season of abundance.

CHURCH UNION AND COMITY IN MEXICO

THE sad civil war which has continued in Mexico for over two years has played havoc with all religious work in that distracted country. Catholic organizations have protested to the President against recognizing any government there which shall not give protection to the harassed Catholic activities; and the strife soon drove out of the country all Protestant missionaries, under orders from the United States Ambassador.

So all these missionaries were in this country, and very naturally they met last summer in Cincinnati to consult as to their work in the future. Just as a terrible fire or destruction by war gives opportunity to lay out a city on better lines, so the war in Mexico suggested to the workers a complete reorganization of their mission work. Nine denominations were represented in that conference: Northern Baptists, Congregationalists, Disciples, Friends, Episcopalians, Methodists North and South and Presbyterians North and South.

Just one great question was before them, namely, how they could unite their forces to prevent wasteful duplication or more wasteful rivalry. The agreement between them was complete, and their conclusions happily unanimous. These have been presented to the several missionary boards, and are just now under consideration, with the assurance of their adoption by all the boards; except that the conduct of its missions in Mexico is by the Episcopal General Convention, which does not meet for two

years, and not by the Board of Missions. Also the Southern Baptists were not represented in the conference and their board may refuse to join the other bodies. Nevertheless the full agreement of the eight boards, which seems assured, will give one work and one dominant Protestant Church to Mexico.

For this is the first great conclusion reached, that there shall no longer be denominational lines maintained in Mexico; no Baptists, Methodists, Presbyterians, but one body, called "The Evangelical Church of Mexico." The time had come when no other decision was possible. This is what the mission churches have done in Japan, in southern India, and elsewhere. The report of the conferences well says that "our denominations are sufficiently near to identity with each other, and the taste of Mexicans so indifferent to the distinctions that persist among us," that union is perfectly feasible.

Union in one Mexican Church means union in all mission work. So the conference, composed, be it remembered, of active missionaries, men and women, agreed to parcel out the whole country between them, allowing two missions to occupy the same field in cities of more than 20,000 inhabitants. This will assure better distribution. Thus there have been thirty-nine mission high schools in fifteen Mexican states, while there is not one in the other fifteen. Similar unity is planned for education and publications. There will be one Bible school for the training of preachers and evangelists, at least one high school for boys and girls in each mission territory, a parish school with each church, and a union college for men and women in some central place. It is proposed that all present Church papers be united in one, and a joint publishing plant and depository be established in Mexico City.

This is the new federation in religious work that breaks down sectarian walls. It is better than federation; it is union. Union and amity in mission fields, in Japan and India and China, and Kikuyu in Central Africa, is setting valuable precedents for the denominations in the home land. Why do we raise Southern and Northern Methodists and Presbyterians? Why over a hundred denominations in the home land? It is wasteful folly. Give us some broad ecclesiastical statesmanship, and let the young men demand it.

THE PROHIBITION OF MATERNITY

IT is a curious instance of contradictory policy that while the Government of France is striving to encourage educated and self-supporting women to have children, certain reactionary officials of our own land are exerting their power in the opposite direction. We have followed the history of the test case in New York courts in The Independent (see issues of March 20, May 8, and November 20, 1913) because we believe it ranks with the Dred Scott case as one of those defeats which mark the progress of human freedom.

The case is this. The New York City Board of Education discharged a teacher, Mrs. Peixotto, for "neglect of duty" because of absence for the purpose of bearing a child. The case was carried up to the Supreme Court of the state, where Justice Seabury decided in favor of the teacher. This decision has, however, been overruled by the Court of Appeals, which held that the board had a legal right to discharge a teacher on that ground. The five judges who gave this decision based their opinion solely upon the technical point of the powers of the board and declined to consider the merits of the case. The two judges who did take into consideration the justice of the ruling of the board dissented from the opinion of the majority on the ground that "maternity is a natural consequence of the employment of potential mothers as teachers" and therefore is not prohibited by law.

It is announced that the board will proceed next to the dismissal of all married women in the schools. Such a policy not only is, in our opinion, an injustice to the women teachers concerned, but will have a detrimental effect upon the schools and upon future generations. It means that children in their impressionable years may never be taught by wives and mothers, but instead will be under the influence of women who by reason of incapacity, disinclination or unfortunate circumstance are not fulfilling the functions of their womanhood.

DUM-DUM BULLETS AND HUMAN NATURE

A DUM-DUM bullet is one whose nose is either hollowed out or split or whose steel jacket is filed thin at the apex. The bullet striking, mushrooms out and tears a great hole instead of the cleanly drilled one made by the ordinary steel-jacketed bullet of the modern high powered rifle. It takes its name from the arsenal at Dum-dum in India, where it was first made. The British officers in India found that the ordinary bullet would not stop a fanatical tribesman in his rush, not having enough shocking power. So the dum-dum was introduced for use against the natives of the Indian border.

The Hague Peace Conference adopted a declaration against the use of dum-dum bullets, but it was not accepted either by Great Britain or by the United States.

Already there have been hurled back and forth across the frontiers of Europe accusations that each of the participants in the Great War is using dum-dum bullets. This is nothing new. The same thing has happened in every war since the dum-dum was invented.

It were well not to take these charges and counter charges too seriously. They sound too much like the bitter accusations that fly about wherever boys indulge in the mimic warfare that makes up so much of their play. The cry of "You're another" is seldom convincing.

It were well also not to believe implicitly the charges of sporadic cruelty and pillage that are rife, especially against the Germans. We hear more of those made against them because we get more news of all kinds from the Allies than from the other side.

Admirable counsel on this point has been given to his countrymen by the veteran Lord Roberts:

> May I give a word of caution to my countrymen against the unsportsmanlike practise of abusing one's enemies? Let us avoid what Kipling, during the Boer war, described as 'killing Kruger with your mouth.' Let us rather devote all our energies to defeating our foemen by the superior fighting of adequate numbers of British soldiers in the open field.
>
> When we read the charges against the German troops, let us remember that gross charges, absolutely untrue, were brought against our own brave soldiers fighting in South Africa, but whether the charges are true or not, let us keep our own hands clean, and let us fight against the Germans in such a way as to earn their liking as well as their respect.

War is brutal business. It would be matter for wonder if in great armies, made up of mere men, war did not brutalize many and cause them to revert to habits of barbarism. No general indictment should be framed against any nation in the Great War because of the individual acts of cruelty and bestiality of individual men.

The sack of Louvain and the bombardment of the Cathedral at Rheims stand on a different footing. These were deliberate, official acts not of individuals but of the German Army. For them the German nation must answer to the world. But news of sporadic outrages should be accepted with reserve, interpreted in the light of the inherent cruelty of war, ascribed not to the deliberate barbarity of a nation, but to the pitiable weakness of individual human nature.

THE TWO SIDES OF TWO SHIELDS

GERMANY and England stand facing and fighting each other, and each defending herself with the shield of her own complacency. Each sees her own shield, pure gold, and each sees the opposing shield of worthless lead. How can eyes be so bewitched, and which, if either, sees true?

Each nation has summoned the priests and doctors of its religion to tell the world the truth of its just cause. So the theologians of the Evangelical churches of Germany have spoken. They are supposed to know better than any others the distinctions between right and wrong. They have been students of the ethics and the religion of Jesus, and they, if any, ought to see clearly and to tell truly. They have all the facts before them.

So also Great Britain has bid her highest ecclesiastical experts speak truly for her before the world's bar. They have spoken, archbishops, theologians and famous pastors. They too have told the truth as they see it.

We do not believe they have meant to deceive. They have said what they believe. Invincible is prejudice. And here the prejudice is that most mischievous of all prejudices, that of race against race—not primarily of English against German and German against English, altho this is not wanting, but chiefly of Teuton against Slav. Germany really believes, has long been taught, that Muscovy is barbarous and wildly eager to overrun Europe. Germany cannot be delivered from this obsession. She thinks she is the arm of the Lord to hold back the breed of the Hun. Hers is an anticipative war of self-defense.

And a prejudice between Great Britain and Germany born out of commercial rivalry and the mastery of the sea, has been vastly accentuated by this war. Germany is jealous of England's naval supremacy, and England has feared Germany's swift commercial progress, and now that they are fighting each is determined to crush the other. Patriotism, which is too often national selfishness, requires the nationals to see only good of their own nation, and too often to hate and injure and crush, if possible, those of another nation or race.

Because we are, most of us, of English stock and talk the English language, do we cultivate a prejudice in this war in favor of Great Britain? We must guard against it; we must remember the warning of our President against the infraction of neutrality in language or deed. We love and honor both nations, but by an almost unanimous judgment we decide that Germany was wrong when she promised to support Austria in making war on Servia, knowing perfectly well that Russia would defend the weaker nation. And with equal unanimity we decide that England was right when she stood by her promise to defend Belgium against invasion by the strongest military power in the world. At least we must try without prejudice to see the gold or the lead in the two shields.

THE WORTH OF ALSACE-LORRAINE

IT is not generally realized that Germany owes to her war with France not only her existence as a nation but also her commercial prosperity. The industrial development of modern Germany, which has amazed the world and aroused the apprehensions of her rivals, rests upon two pillars, coal and iron. She had the coal beds before; she got the iron ore to go with it in 1871. Bismarck did not know what a great thing he was doing for his country when he extorted Alsace-Lorraine from France as the spoils of war. He was a diplomat, not a metallurgist, and he thought only of the superiority of a mountain boundary to a river. In fact, even a metallurgist would then have called the iron ore of Lorraine of little value because it contains phosphorus and phosphorus in the minutest amount spoils steel.

But by a strange circumstance it was two Englishmen who put into the hand of Germany the key to unlock the secret treasure vaults of the annexed provinces and so enabled her to outstrip their own country in the steel business. In 1878 Thomas and Gilchrist invented a modification of the Bessemer process which not only removed the baneful phosphorus from the steel but made it a source of profit by selling as a fertilizer the familiar "Thomas slag." With this the German steel industry and all the manufactures dependent upon it went forward by leaps and bounds. By 1906 Germany had distanced England and today stands second only to the United States. Before 1871 Germany produced only half a million tons of steel; in 1911 she produced fifteen million tons and about one-third of the ore came from Lorraine and Luxemburg. Just across the Rhine in Westphalia is the coal and the combination of the two has brought forth the new industrial towns like Essen and Düsseldorf that are the admiration of the sociologist as well as the metallurgist. We think of the Krupp works chiefly as makers of munitions, but in recent years the manufacture of ironmongery of a peaceful sort has been absorbing a greater share of attention at Essen.

On the French side of the line, in the region occupied by German armies are also coal and iron in close proximity and this region, too, has been recently transformed into a great industrial center. This is the great prize, sufficient to account for the Great War, for whatever power may get possession of Westphalia, Rhenish Prussia, Belgium, Luxemburg, Alsace-Lorraine and northern France will dominate Europe in steel and have no important rival except the United States in the whole world—until the day when China enters the field.

MR. CARNEGIE ON THE WAR'S OUTCOME

WE are glad to be able to announce that Mr. Andrew Carnegie will contribute to next week's issue of The Independent the first complete statement he has made since the Great War began on the issues of war and peace.

We are particularly glad that he elaborates therein his idea of a League of Peace originally suggested in his Rectoral Address given before the University of St. Andrew on October 17, 1905.

No man has done more in a practical way for the cause of peace than Mr. Carnegie, and this article should command the earnest consideration of all men of goodwill.

THE STORY OF THE WEEK

THE GREAT WAR

September 29—Germans destroy the French town of Albert. Indian troops landed at Marseilles. German cruiser "Emden" sinks five more British vessels in Bay of Bengal.

September 30—Three forts of Antwerp's outer ring reduced. Two Italian fishing boats sunk in Adriatic by Austrian floating mines.

October 1—Fighting on German right extends to Arras. Germans fail to cross Niemen River.

October 2—Germans fail to cross the Meuse. British and Japanese attacking German port of Kiao-chau by land and sea.

October 3—Russians defeat Germans at Augustowo near East Prussian frontier. Russians invade Hungary thru Carpathian passes.

October 4—Strong attack on German advance angle at Lassigny. Bosphorus and Dardanelles closed. Japanese squadron in possession of Marshall Archipelago.

October 5—Left wing of Allies falls back in neighborhood of Roye. Japanese seizing German railroad in Shantung despite Chinese protest.

German Right Advances

Another week of incessant but indecisive fighting. The battle of the Aisne, if we may continue to call it so, is the greatest battle in history in duration, extent of operations, ammunition expended, numbers engaged, and probably also numbers fallen. Still, the end is not in sight, for both sides have been reinforced and are in the main holding their positions with undaunted firmness.

The chief change in the situation is that the German right wing under General Kluck has resumed the offensive and directed a counter attack at the allied army under General d'Amade, which has been trying to outflank the German line at this end. The troops required for this movement were, it is said, mostly drawn from the center, so there has been a slackening in the activity on the line between Rheims and Verdun. The German force concentrated in the vicinity of La Fère in the angle where their line turns northward from the Aisne River to the Belgian boundary.

The allies met the attack with an equal concentration of troops and succeeded in holding their line unbroken, altho they were obliged to fall back. The German line advanced about twenty miles westward in ten days. By September 24 the Germans had been driven back nearly to St. Quentin and La Fère. By October 4 they had advanced to Lassigny, Roye, Chaulnes, Albert and Arras.

The allied armies in France are now being reinforced from the Far East. The first contingent of Indian troops, strength unstated, was landed at Marseilles, September 26. All the continents except South America are now represented among the combatants along the Meuse and the Aisne; from Africa the Turcos and Senegalese from the French colonies, and soon, if not already, the contingent contributed by the South African Union; from Asia the Sikhs and Gurkhas in the English service; from America the Canadian troops of French and English stock. There are renewed rumors, still officially denied, of the presence of Russian troops in France, brought from Archangel by way of Scotland.

The Siege of Antwerp

The Germans began the bombardment of the outer ring of forts encircling the temporary Belgian capital on September 27, and the attack has been continued ever since. Having got the range it is possible even to keep up the bombardment at night, so the boom of the heavy guns is almost incessant. The German artillery, however, is not having the sudden success which it had in the reduction of Liège and Namur, partly, it is said, because many of the heavy guns are being used in France, or have been put out of commission in the course of the two months' warfare, so it is chiefly Austrian guns that are being used in the siege. The main attack came from the south and the fire was directed chiefly upon the forts of Waelhem and Wavre St. Catherine. These were soon rendered untenable, so the Belgians were forced to retire to the northern side of the Nethe River, between Lierre and Boom. The attempts made by the Germans to cross this river have been repulsed, but the forts further to the right, Konigshoyckt and Broechem, have been subjected to bombardment. The map given on another page of this issue shows the position of these points. On the left the Germans have advanced from Termonde to the Dutch frontier and threaten an attack upon the Scheldt, tho here as well as at Waelhem the advance has been checked by the inundation of the lowlands by the defenders. The country round about has been devastated, the towns are burned and the inhabitants have taken refuge in Antwerp or Holland; thereby increasing the danger of famine.

Germans Repulsed in Russia

The German invasion of Russia from East Prussia, whatever its object, seems to have accomplished nothing except temporarily to free the frontier.

THE LINE OF THE GREATEST BATTLE IN HISTORY

The territory held by the Germans is shaded. The week's heavy fighting has been to the north of the Aisne

THE RUSSIAN CAMPAIGN

The shaded territory is held by the Russians. The Germans have been driven back into East Prussia after fighting their way to the Niemen

They reached the Niemen River, which here runs north parallel to the East Prussian boundary and about twenty miles from it. If they had succeeded in crossing the river at Grodno they could have cut the railroad which connects Petrograd with Warsaw. But those who crost the Niemen were attacked by the Russians on the other side at night and lost heavily in men and guns in their flight back across the river.

It is rumored that the Kaiser was directing the movements in this quarter, and even that he narrowly escaped capture from being involved in the rout. The Czar is also reported to have gone to the front; President Poincaré and Premier Viviani have made a tour of inspection of the lines on the Aisne, and King Albert of Belgium has been more than once under fire, so it looks like a return of the old times, when a ruler was a leader.

The hardest fighting in this region took place about Augustowo, at the entrance to the canal which connects the Vistula with the Niemen. This is in the midst of an extensive forest, and since the ground had been softened by the torrential rains the Germans were not able to make use of their artillery to advantage. In fact, the big howitzers which the Germans handled with such remarkable celerity and effect on the well metaled highways of Belgium and France are only an impediment in the swamps and woods of the Russian frontier. After an engagement of several days, culminating on October 3, the Germans were decisively defeated in the Augustowo forest and driven back to East Prussia. The opposing forces in this region are said to be nearly equal; General Rennenkampf and General Hindenburg are both supposed to be in command of four army corps, that is, of about 140,000 men.

It had been surmised in Petrograd that the German invasion was designed to take a northeasterly direction after crossing the Niemen and to invade the Germanic province of Courland. Confirmation of this was found in the fact that a squadron of some forty ships, including transports, appeared at Windau, September 24, and attempted a landing, but were driven off by the fire of the Russian forts. No determined effort, however, seems to have been made to reduce the forts, so it may be assumed that the naval demonstration was a feint or that the failure of General von Hindenburg (or the Kaiser) to carry out his part of the program rendered it useless.

The Balkans

The Balkan states, which formed the center of infection from which the war spirit has spread thruout Europe and all over the world, have been with two exceptions more peaceful than usual during the Great War. There seems now less likelihood than there has been since the war broke out that other countries besides Servia and Montenegro will be involved in the war. Both sides have been striving to influence the neutral nations of the Mediterranean by pressure and promises of all sorts, and it appears that Italy and possibly also Turkey have found these inducements sufficiently strong to keep

SINGING THEIR REGIMENT TO VICTORY

Many of the Russian cavalry regiments have specially trained singers to take the place of the customary band while they are on active service. Some of the singers carry simple hand instruments on which to accompany their songs. Those who have heard Russian melodies sung will not be surprised to learn that the music has a profound effect on the soldiers

them from entering actively into the war. The sinking of an Italian fishing boat in the Adriatic by a floating mine caused great excitement in Italy and seemed likely last week to precipitate Italy into war, but the prompt action of the Austrian Government in denying that they had turned loose any unanchored mines in the Adriatic and offering compensation to the families of the seventeen fishermen drowned relieved the stress, for Italy seems disposed to accept these assurances and to refer the question of compensation to The Hague. The ambition of Italy is being directed toward the new principality of Albania, created by the powers and now left derelict. Prince William of Wied, who was taken from a Prussian regiment and put upon the throne, failed to gain the good will or respect of his unruly subjects and was obliged to leave Durazzo as soon as the support of the powers was withdrawn. In his place comes Essad Pasha, whom Mpret William expelled four months ago because of his intrigues with Italy. He is said to have 12,000 troops under his command and will doubtless be supported by Italy. Italian marines are said to have been already landed at Avlona. The senate of Albania, after the flight of William of Wied, offered the throne of Albania to Prince Burban-Eddin, a son of Abdul Hamid, the deposed Sultan of Turkey.

The Ottoman Government has closed the Dardanelles on the ground that the Prussian fleet is interfering with merchant shipping. The two vessels from the German navy, the dreadnought "Goeben" and the cruiser "Breslau," which were sold to Turkey to escape capture by the allies, are said to be repaired in the Black Sea, ready for action, still in command of their German officers.

Violation of Chinese Neutrality

When Japanese troops were landed on Chinese territory to attack the German enclave of Kiao-Chau, the Chinese Government protested against this violation of the n utrality of China, but made no effort to oppose the invasion. The only action taken by the Government was to attempt to limit the area of operations to a radius of thirty miles from the German city of Tsing-tao. No attention, however, was paid by Japan and Great Britain to this restriction of their field operations. The Japanese effected their landing on the other side of the Shantung peninsula at a new port of Lung-kau, about seventy miles from Tsing-tao. The Chinese officials at the port made a formal protest to the commandant of the expeditionary force, but made no hostile demonstration.

On the ground of this failure to protect her neutrality China was notified by the German Ambassador at Peking that the Chinese Government would be held responsible for all losses incurred by Germany in consequence of the Japanese invasion. In reply, China pleaded her inability to make an effective resistance to the combined forces of Great Britain and Japan, and called attention to the fact that Germany was also violating Chinese neutrality by extending her operations beyond the limits of the Kiao-Chau zone.

The apprehensions of the Chinese were increased by the fact that the Japanese brought with them to the continent the materials for railroad building and at once set about constructing a narrow gage line from Lung-tau to the southward behind their advancing troops. This is the same method they adopted in their invasion of Korea and Manchuria. The Japanese have also seized the German railroad leading from Tsing-tau to Tsi-nan, the capital of the Province of Shantung. When the

THE FATE OF A RED CROSS HOSPITAL

The state room of the Cardinal of Malines was turned into a Red Cross ward; then the Germans bombarded the town and this is the condition in which an exploding shell left it

Japanese had got as far as Weihsien along the railroad they were stopped by the Chinese, who blew up the bridge across the Tahu River. An army of Chinese are said to have been mobilized in the Shantung Province to prevent further Japanese aggression.

Both British and Japanese troops are taking part in the attack on Tsing-Tao from the land side, while the allied fleets are bombarding the city from the harbor. Aeroplanes are being used on both sides to drop bombs on troops and warships.

Trust Legislation President Wilson has signed the Federal Trade Commission bill, but it is understood that the members of the Commission will not be appointed until December. The conference report upon the Clayton bill (the second of the three Administration measures relating to Trusts) has been the subject of discussion in the Senate, where it is opposed by several Democrats, as well as by prominent Republicans, who hold that, in conference, the original bill was greatly weakened.

The opposition was led by Mr. Reed, who spoke for the greater part of two days. This conference report, he asserted, was a betrayal of the Democratic party. He complained because the criminal penalty for price discrimination, tying contracts and holding companies had been stricken out, together with the provision authorizing the courts to appoint receivers and sell the property of convicted corporations. Mr. Borah asserted that enactment of the bill in its present form would make the Sherman act a dead letter.

The Senate has adopted resolutions for two inquiries concerning the Standard Oil Company. One, to be made by the Interstate Commerce Commission, will relate to the effect of the company's ownership of pipe lines upon the prices paid to producers of crude oil. The new Trade Commission will conduct the other investigation, to ascertain whether the company has obeyed the Supreme Court's dissolution decree. So much is required by the terms of the resolution that the work, it is estimated, may consume a year.

A Rockefeller Labor Investigation Mr. Wilson has continued to urge acceptance by the coal mine operators in Colorado of the basis of settlement proposed by the Federal mediators, but no change in the attitude of the companies has been reported. It is understood that if no agreement is reached within a few days he will order a withdrawal of the troops.

Possibly on account of the Colorado controversy, in which Mr. Rockefeller was involved by reason of his financial interest in a prominent company, the Rockefeller Foundation, to which he gave a fund of $100,000,000, has undertaken an investigation of industrial conditions thruout the world. This will be made under the direction of W. L. Mackenzie King, formerly Minister of Labor in Canada, author of the Canadian Industrial Disputes Act, and an experienced mediator in labor disputes. He has acted as conciliator in forty strikes, and it is said that in seven years this law has reduced the number of strikes in Canada by 90 per cent. A graduate of the University of Toronto, he was for a time instructor in political economy at Harvard. He is said to have procured the passage of Canada's Trust law, and to his influence is ascribed the enactment of many Canadian laws favorably affecting the condition of workingmen.

Officers of the Foundation say that in spirit and method the inquiry will be like those made by the Rockefeller Institute for Medical Research. It will seek to ascertain the causes of bitterness in the relations of capital and labor, and the means of promoting harmony. It will not be confined to conditions in any one country. The Foundation, regarding the problem as "the most complicated and the most urgent question of modern times," asks for the coöperation of employers, labor unions, universities and governments.

Philippine Independence There has been an acrimonious debate in the House at Washington on the Jones bill, relating to the government and the ultimate independence of the Philippine Islands. An amendment, proposed by a Democrat, which would provide for neutralization of the islands by international agreement, was rejected by a vote of 14 to 58. Twelve Democrats voted with Speaker Clark in the affirmative. This amendment exprest the purpose of the United States to "cease to exercise sovereignty over the Philippine people as soon as may be with justice to them and with honor to the United States," and requested the President to negotiate treaties with all the great nations for the preservation of the independence of the islands. Another rejected amendment (also offered by a Democrat) required the Philippine people, after gaining independence, to reimburse the United States for all expenditures on account of the islands since they were acquired from Spain.

The next sensational contribution to the debate was made by Mr. Mann, of Illinois, the leader of the Republican minority. Philippine independence, he asserted, meant surrender of American strategic command of the Pacific, "the fighting ground of the future." A conflict between the United States and the Far East, "commercial or otherwise," was inevitable, he declared. "It is as certain as that the sun will rise tomorrow that a conflict will come be-

tween the Far East and the Far West across the Pacific Ocean. All that has taken place in the history of races teaches us that avoidance of this conflict is impossible. A fight for commercial supremacy in the end leads to a conflict of arms." If we should now let the Philippines "go without a string tied to them," he continued, they would belong to some other country within ten years, and even if they should retain their independence for a longer time, they would eventually be used against us in the conflict between competing races. He would keep them under the American flag and make them our friends. At the same time, if they were really capable of governing themselves, he would give them the broadest liberty of self-government.

Villa and Carranza

An attempt to harmonize the warring factions of the Constitutionalist army in Mexico will be made on the 10th, at Aguascalientes. General Obregon, representing Carranza, met General Villa at Zacatecas on September 30. The latter proposed that on the 10th there should be a convention of all the Constitutionalist Generals and Governors, and that Zapata should be invited to attend. His proposition was accepted and an armistice was declared. This agreement for a suspension of hostilities was ignored by Villa's military associates in the north. The convention which had been called for October 1, at the Capital, was duly held. The delegates were twenty-four Governors, twenty-six Generals, and a few other prominent Constitutionalists.

Carranza had promised to submit his resignation to this convention. Some expected that it would be accepted and that he would retire from office, to become a candidate for the Presidency at the approaching elections. His resignation was presented, only to be rejected by an almost unanimous vote. Addressing the convention, Carranza asserted that Villa's attitude was due to a plot of the Cientificos, as those who profited greatly by their association with President Diaz were called. But Villa had just caused the trial and prompt execution of two men who were seeking to make him an ally of Felix Diaz.

A large majority of the convention delegates were in favor of attending the proposed convention at Aguascalientes, and the presence of all of them is expected. It is said that Carranza will have eighty-nine votes, and Villa only seventeen. Carranza, it is predicted, will have the support of the convention. Unless he shall insist upon withdrawing from office, Villa will move his army southward and attack him. Carranza has about 65,000 men. Villa had a little more than 40,000 before the recent defection of General Herrera and General Hernandez, who took with them 7000.

The armistice agreement was ignored, as has been said, by the men whom Villa left in the north. In Sonora, General Maytorena was pursuing General Benjamin Hill, whom he had already worsted in one battle. San Luis Potosi and Zacatecas had fallen into the hands of the Villistas, as they are called, without a fight, but there was a battle when Durango was captured.

Hill retreated to Naco, on the Arizona border. There he was besieged by Maytorena, whose troops, unrestrained by the warnings of the United States patrolling soldiers, sent bullets into the adjoining American town. Two residents were wounded by them and then the people fled to a safe place. This was three days after the armistice agreement had been made.

Several Catholic bishops, pointing to the looting of Catholic churches and the harsh treatment of the clergy, have urged President Wilson not to recognize any Mexican government which does not guarantee religious freedom.

THEY DIED THAT THEY MIGHT LIVE?

BATTLEFIELDS

BY PERCY MACKAYE

On the battlefields of birth,
Lulled from pain in twilight sleep,
  Languorous in calm reliance
  On the Christ-like soul of science,
They whose patient soldiership
Bore the age-old pangs of earth
Till the patient seers of reason set them free—
  Volunteers, whose valiant warring
  Is the passion of restoring—
Mothers, gentle mothers, bless you, Germany!

By the battlefield of death,
Racked by prayers that never sleep,
  Anguished with a wild defiance
  Of the Satan powers of science,
They whose loving guardianship
Knit the subtle bonds of breath
Till their sons of iron tore them ruthlessly—
  Victims, whose heart-blinding portion
  Is their victory's abortion—
Mothers, maddened mothers, curse you, Germany!

SOCIALISM'S MORAL COLLAPSE

BY JOHN R. McMAHON

The author of this article has been a member of the Socialist party in this country for more than half a dozen years, and has written extensively for the party press. His views seem to foreshadow an internal revolution in the ranks of socialism.—THE EDITOR.

SOCIALISM in Europe is guilty of a monstrous crime. It has swallowed its principles, spat upon brotherhood, betrayed the class it professes to represent, everlastingly disgraced the red banner of internationalism. It has surrendered to the enemy; it has joined with enthusiastic abandon the capitalistic and dynastic butchers who are turning Europe into a people's killing bed.

These are severe charges for a Socialist to make against Socialists. I make them, and I know that hundreds of my comrades in this country are making them in their hearts, tho they may not have yet publicly exprest them.

William English Walling, writing in The Independent of August 24, 1914, treats socialism in Europe with mild and academic tolerance. He gently blames the compromising majority of German Socialists and apparently rather approves the attitude of the parties in other lands. It will not do. Scientific apology for Judas may have its place. But this is not the time or place for apology or extenuation. Let us understand the facts, yes. But once having the facts, we are forced to give a verdict in accordance with them.

Algernon Lee, a prominent American Socialist, wrote from Amsterdam that we should suspend judgment on European socialism for three months. Why? The evidences of a foul and frightful betrayal have been mounting up for six weeks, and we could not learn more to the point if we waited for six years. We dare not delay judgment. Events are moving at railroad speed.

The cowardly surrender of this false army of peace, eight million able-bodied and "class-conscious" men, has already had terrible results and will yet spread chaos over the whole earth. The example of treachery has been set, the futility of socialism has been demonstrated. If European socialism failed, how can American socialism succeed? Our organization has a trifling strength compared to theirs.

I am not a sentimentalist. I do not utterly despair of the world. I believe the final results of the Great War will be beneficent. But the welter and loss of attaining to beneficent results are chargeable to incompetent and criminal socialism. Whatever happens in the future, whatever socialism yet accomplishes toward world peace and justice, the blot upon its record and the stain upon its banner cannot be wiped out.

Troelstra, leader of the Dutch Socialists, says that after the war the international movement will have to be reconstructed. He is right. Socialism will have to vivisect from itself its shining apostles in many lands—Vandervelde of Belgium, Guesde of France, several Englishmen and Austrians, Deputy Haase and a large number of his fellow Judases masquerading as Socialists in the German Reichstag. And the rank and file of the Socialist army must be purged of perhaps half its members, who are perfectly good patriots and butchers with a sickly tendency toward reform.

All our news from Europe is censored. Is it not possible that cunning military authorities have invented the patriotic spasms of Gustave Hervé, the fatherland drivel of Germany, the motherland whine of England, and that appeal of German Socialists (God save the name!) to Italian and Dutch comrades to "come on in, the blood is fine"? Let us assume that these things have been invented, that the military authorities are writing and publishing the Socialist newspapers and Socialist manifestos of Europe. Assume so much, and yet we can hardly doubt the equally monstrous facts that Vandervelde, a leader of the international party, took a job in the war cabinet of Belgium, that Jules Guesde, the once venerable revolutionist of France, became a war minister of the French republic, and that English socialism's best word to the combatants (excepting Keir Hardie's stalwart but vain protest) has been to use the bayonet on our foreign comrades—gently.

Renegade John Burns and aristocratic Lord Morley, quitting their government posts in protest against war, played a better part than our Socialist misleaders.

But the fundamental and conclusive evidence of the crime of European Socialists is that we have had no disavowal whatever from them of the multiplied news of their loyalty and activity in the capitalistic slaughter. They have had plenty of chance to send out word past the censorship. They have uttered only a few pious wishes and have scarcely deigned to offer a few weak-kneed apologies for the most colossal betrayal in history.

Socialism opposes war, on the ground that war is due to the clash of economic interests of the master class and that the working class has no reason to spill its blood for the sake of trade and markets. This has been taught for half a century as a first principle. International socialism began to consider years ago how to exert its strength practically against war. At Stuttgart and Copenhagen the subject was debated. We

laughed at the churches and the peace societies, knowing that we were the only real force for peace. Did not a single word from us, at the time of the Algeciras crisis, bring Germany and France to their senses? We were a power in the parliaments of Europe, having around one hundred representatives in each of the chief legislatures. We controlled the army of the working class, we could call a general strike. . . . Ah, yes, that general strike. It needed the brains of the party to consider it. We couldn't decide that question in a hurry; put it off to another congress and let a special committee make a scientific report on it. Events hurried. The Balkan crisis of 1912 came on. A special congress of the International was held in Switzerland. There were eloquent and threatening speeches. Was it Bebel, the German warhorse, who made a passing reference to defending the Fatherland? Well, of course, that was all right. About the general strike and practical measures—talk and further talk. Thank heaven, the crisis past. There was plenty of time to take practical measures.

The Hardie-Vaillant motion for a general strike to oppose war was scheduled for discussion and action at the Paris congress of August, 1914. We must admit that general strike was a ticklish subject. To vote for that measure might be unpleasant for delegates from countries where military service is compulsory; a charge of treason might lie; immediate prosecution blocking the grand work of Socialist growth. Anyhow, the subject would be discussed, scientifically and eloquently discussed by the brains of the world's Socialists.

Then the capitalistic stage manager let the drop curtain fall. Martial law, no ships or trains to Paris, no congress anywhere, international socialism paralyzed, gagged, dumb, stowed out of sight, swept aside as a feather while hell's legions marched blood-lustfully to the front. Millions who had been singing

> The International Party
> Shall be the human race!

took up the refrain of "Deutschland ober Alles!" "Allons, enfants de la Patrie!" and "God Save the King!" And shortly thereafter the brilliant leaders of socialism, who had made up speeches against war to be spouted at Paris, were joining the cry of fatherland and motherland (not sisterland or brotherland) and were entering the cabinets of governments they had ever denounced.

Where was the science of socialism, that it had no hint of impending war and knew no more of this vast social event than a native of Patagonia? It had not only scientific theory, but extraordinary special means of knowing the inside of events. Why did Socialist leaders talk and only talk so long on the brink of a volcano whose day of eruption was near?

The Paris fiasco itself proves the sheer incompetency of the Socialist leaders. If a band of low grade outlaws had determined to hold a congress in Paris, they would have held it, police or no police. But the world's revolutionists couldn't get together, anywhere.

Not an apology nor excuse advanced for European socialism will bear examination. "We had not agreed on a practical anti-war program." A dereliction to excuse a crime; you violated a cardinal principle, the spirit if not the statutory letter. Capitalistic England stood by France, impelled by honor and interest, despite the absence of a positive agreement or pledge. "We would have been shot if we had refused military service." Better shot for the Cause than alive for Capitalism. How many Socialists were shot and will be shot in the service of the enemy! For betraying your principles you gained a few weeks' life and the agony of the battlefield. For example, Dr. Ludwig Frank, Reichstag deputy, disgracefully killed at Lunéville, September 3. "Socialists are not martyrs." Then they should quit mouthing "revolution." A little Socialist martyrdom, a few thousand Socialists shot for refusing to be traitors, would have saved a world of horror. "If we had not gone with the tide, we would have lost our influence." Your influence is forever gone except as henchmen of the ruling class. "We had to defend our country against the inferior —" Yes. "Inferior" and "defend" are the most lying words in language. There is not ten cents' worth of choice between the fatherlands and motherlands you are offensively defending and defensively offending. In a word, you act as plain, honest patriots, tools for the trading oligarchy, murderers in the interest of the world market, loyal cannon fodder. You cannot plead ignorance. You have the light. You act deliberately. What right have you to the name of Socialists?

Ernest Untermann suggests that we send money to our European comrades to show solidarity. Why? So that they may destroy one another on the battlefield more quickly?

What explanation, not excuse, for a colossally lamentable situation may be given, consists, firstly, in the inherent character of the Socialist movement. It is a movement of the proletariat and partakes of the weakness, ignorance, sentimental enthusiasm and inefficiency of the proletariat. It especially attracts cranks, failures and weaklings. It is a hospital for cripples and a haven for the feebly discontented and the visionary. It is inflated and tainted with numbers of the petty bourgeoisie whose grievance is against big business rather than capitalism. It is composed largely of those who by age and temperament have not an ounce of real fight in them. Dr. Halpern, returning from Berlin, says that anti-war meetings on the eve of mobilization were attended by serious persons of middle age, including women, while patriotic meetings were attended by young hoodlums. Yes; such Socialists may talk ably against war, but they are outweighed by young hoodlums eager to fight.

A weak and incompetent proletariat has produced leaders of its own sort, politicians of the first water, dry rotted parliamentarians, talkers of great brilliance and no practical ability. Always orators, never practical men. American as well as European Socialists have chosen as their leaders the best and noisiest talkers. These talkers have proved worse than worthless in a great crisis.

Yes, I ascribe importance to leaders. They have a real great power and responsibility. Without its great captains and commanders, where would capitalism be today? Imperial Germany has great leaders; so with the other nations. If socialism is markedly inferior in leadership, it is partly due to a fetish worship of democracy—again inherent in the movement. Capitalism also pretends to worship democracy, but tempers its adoration with tricks and devices whereby fools are shoved into places of harmless honor and a sufficient number of capable men are kept in charge of the vital concerns of government, and particularly the army and navy. Socialism's eloquent incompetents immediately rise to the top and stay there, for there is no inner circle of big business directors to pull them down.

A new kind of Socialist leadership will be inevitable in the near future, a leadership less democratic and eloquent but more practical and effective.

The final conclusion is that socialism will yet win the world, but at a great cost and waste and loss. It will win like the Cossack hordes invading Germany, destroyed like ants by scientific efficiency, but at last invincible thru sheer weight of numbers and the momentum of social forces. It will win on account of capitalism's harakiri rather than its own ability.

New York City

BENEDICT XV—A POLITICAL POPE

BY SALVATORE CORTESI

STAFF CORRESPONDENT OF THE INDEPENDENT AT ROME

THE most surprized person at the election of Giacomo della Chiesa as Head of the Catholic Church was Benedict XV himself, for he knew his disqualifications as well as did his colleagues, and so had not contemplated the supreme dignity—for the present. To begin with he is only sixty years old, which is quite young for a Pope, and means a probable pontificate of fifteen or twenty years; he has only been a Cardinal three months, and he was sent to his Archdiocese of Bologna, if not as a disgrace, at least to remove him from the Vatican, where, as Cardinal Rampolla's most faithful disciple, he was not *persona grata*. These were the disqualifications; the qualifications were less on the surface. Certainly the policy of Pius X was not looked upon with favor by many of the Cardinals nor was his easily influenced character considered the best for the Head of the Church in a crisis, and in turning to della Chiesa they found one who supposedly will follow Rampolla's policy, and who is strong and firm in whatever he does, while having a thoro knowledge of Church affairs thru his training in the time of Leo XIII.

The new Pope is small in stature even for an Italian (so much so that the tailor had to be called immediately after his election, to make smaller the smallest of the three suits which are always prepared beforehand for the new Pontiff. He is sallow, with a thin, keen face; gesticulates freely with nervous movements of the hands; wears spectacles and is full of energy and life; and with it all has the indefinable "something" which is popularly supposed to denote refinement and a long line of ancestors.

The della Chiesa is a noble family of Genoa originally from Milan, and dates back to the time of St. Ambrose, who, having the temporal as well as the spiritual government of most of northern Italy, created some Captains, with the object of defending the Church from the Arian attack. Some of these Captains thru their acts of valor were called "Champions of the Church," in Italian, "Campioni della Chiesa," and the founder of the Pope's family was one of these soldiers. The della Chiesa family distinguished themselves in the Church, counting two saints, a Cardinal, several bishops, and now a Pope, but not showing great capacity in other fields. The father of Benedict XV was Marquis Giuseppe, while he has a brother who is an admiral on the retired list of the Italian navy, and is related to many well known families of Rome and Italy.

Altho noble, the della Chiesa family is quite poor, so that the many acts of charity of Benedict XV are all the more to his credit, as they manifest a large generosity, and to this he adds faithfulness and gratitude. He undoubtedly owed the first steps in his career to Cardinal Rampolla, who took him to Madrid when he was Nuncio there, and had him as his substitute when he himself was Secretary of State.

Della Chiesa witnessed the fall of his patron, saw the sycophants drop away, even friends finding too little to be got out of it to make it worth while to visit the lonely recluse. But the loyalty and affection of della Chiesa never wavered. No matter what his cares or fatigue he paid his daily visit to Cardinal Rampolla, bringing a wave of affairs with him and brightening the declining years of his old friend and master, while on his part receiving counsel, and, more remarkable, acting on it. When Cardinal Rampolla died, Archbishop della Chiesa was in Bologna. He rushed to Rome and showed such violent and sincere grief that the saying, "like della Chiesa's love for Rampolla," became the symbol of fidelity at the Vatican.

So much has happened since Giacomo della Chiesa was a comparatively young man at the Vatican that looking back it seems thirty instead of fifteen years ago.

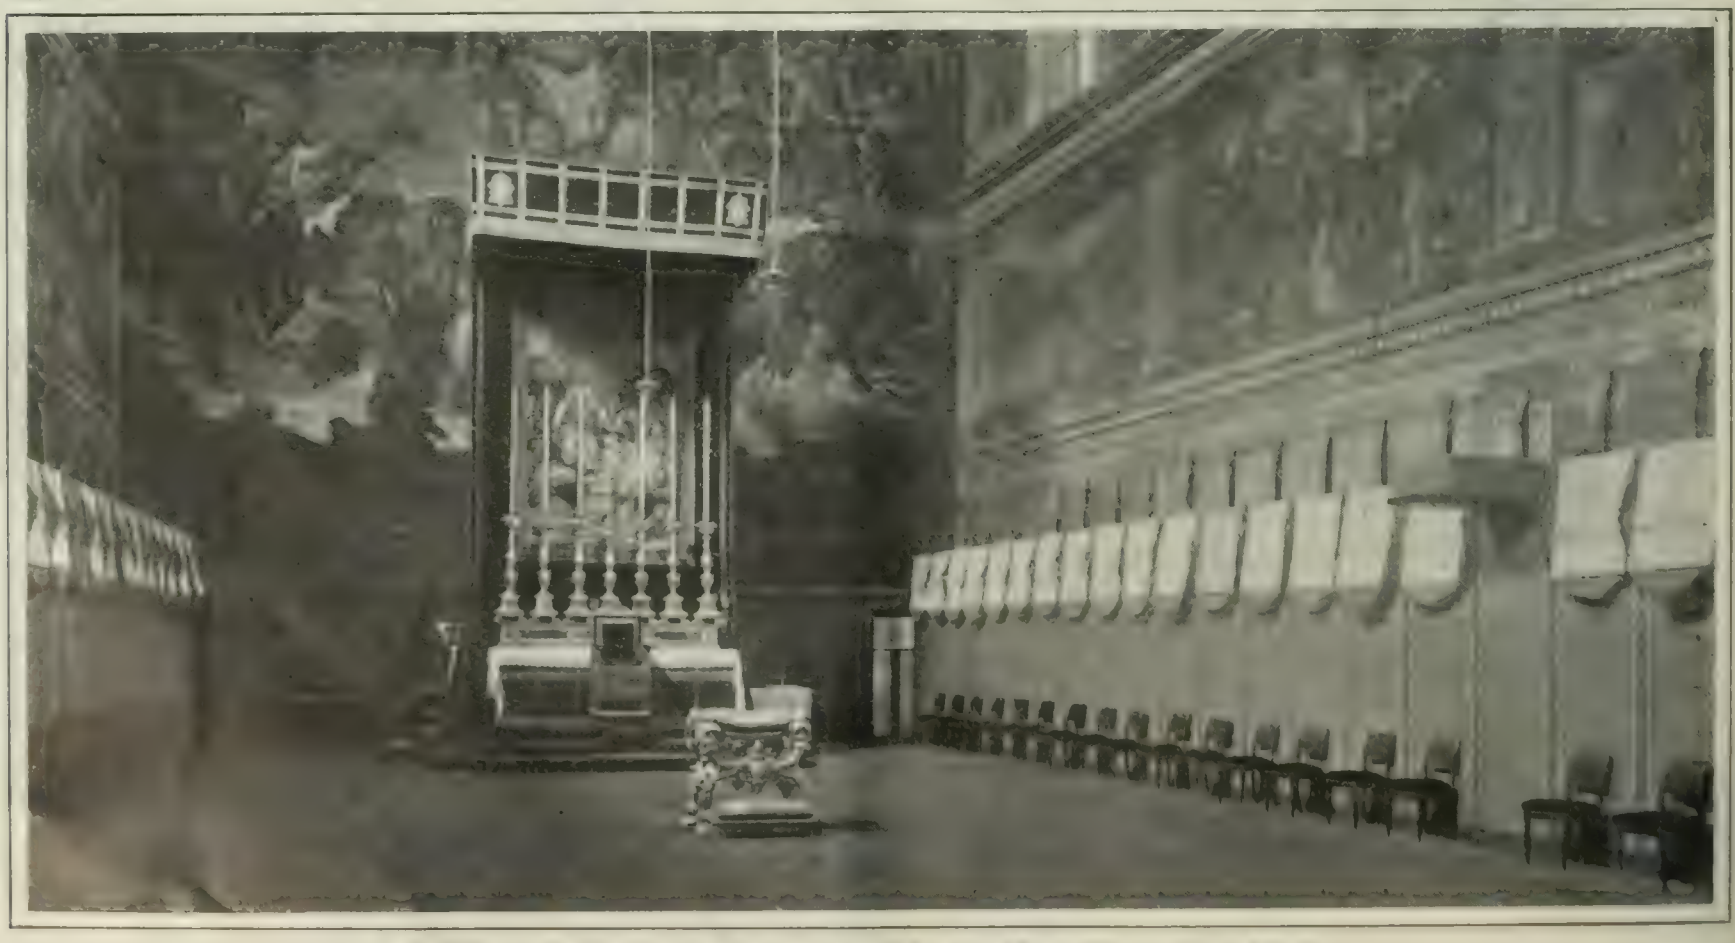
It seems only the other day that I climbed the innumerable stairs (at that time the only elevator in the Vatican was forbidden to outsiders and especially to journalists) leading to the Secretaryship of State in the Apostolic Palace. Once arrived one had the impression of being in a garret transformed into a photographer's gallery, as the corridor out of which the rooms of the office open takes its light from a skylight. In these modest and small, but historic rooms, where the celebrated Consalvi worked at the time of Napoleon, and Cardinal Antonelli under Pius IX; where Gioacchino Pecci, the greatest Pope of modern times, began his career, and where his powerful Secretary of State, Cardinal Rampolla, had made his mark, there the young Monsignor della Chiesa was then supreme. Those rooms, which seem to be camped in the sky, so high they stand at the top of the Vatican, are the same which have produced the present generation of Papal diplomatists; Merry del Val, perhaps the chief, who had his first mission in Canada; Sbaretti, who went to Cuba, and Ceretti, who after having been in Washington has recently been appointed to be the first Apostolic Delegate to Australia, and so on. Monsignor della Chiesa was always to be found there, or walking in the upper loggia, on which his own apartment opened, with the Eternal City at his feet. Even then, over fifteen years ago, one could scarcely call him "young," for he is one of those people who are never young and never old, this appearance being emphasized by a slight inequality in his shoulders, the habit of wearing his spectacles crooked, and using his hands continually in arranging the sash about his waist. I cannot say that he liked newspaper men, but at a time when the suave and kind Monsignor Bisleti, now Cardinal, had not yet risen to be Majordomo, and his place was then occupied by men like della Volpe and Cagiano de Azevedo, who detested journalists, journalism and writers, and took no trouble to conceal their feelings, Monsignor della Chiesa seemed an anchor of refuge. He was indeed most affable, very witty and sarcastic when in a good humor, as he usually was, *but* if something had gone wrong, altho it had nothing to do with the person he was receiving, he was one of the most brusque men that I have ever come across. I remember that his face was entirely transformed and it seemed as tho a dark, threatening cloud had descended upon it. We knew the signs portending the storm, and when we saw him thus at a distance we quickly turned and literally ran, waiting for a more propitious moment, which always came, and, as is usual with men of his nature, the sunshine repaid for the preceding squall. The worst time to approach him was in the last years of the pontificate of Leo XIII, when the trouble with France began and the policy of the great Secretary of State, to which Monsignor della Chiesa had contributed such strenuous labor, threatened to fail.

Such is the man at sixty years of age. At ten he was much the same—impatient of control and given to fits of stormy temper, which a loving mother was helpless or careless of controlling, followed by the sunshine of a most attractive repentance. At thirteen he turned his thoughts toward the Church and developed a love of study which has

"I ANNOUNCE TO YOU A GREAT JOY"

THE SENIOR CARDINAL DEACON PROCLAIMING THE ELECTION OF POPE BENEDICT XV FROM THE CENTRAL BALCONY OF ST. PETER'S

HOMAGE TO THE NEW POPE



The camerlingo or chamberlain, Cardinal Della Volpe, on his way with his quaintly garbed retinue to pay homage to Benedict XV. The camerlingo, always a cardinal, is the Pope's financial secretary

remained thru life. His mother became so worried that on one occasion she presented him with a spade and insisted upon his digging up the garden. At that time he planted a palm in a pot which became his chief treasure. It grew so great that it was eventually set out in the garden, and will now, of course, be the chief sight of his home. His father insisted upon his taking his degree as a lawyer, which was an extreme penance to him, as his talents did not lie in that direction, but he persevered and took a high place in his class. The day that he received his degree he went to his father and said, "I have obeyed you about my studies, and now wish my reward. I must enter the Church." This he was allowed to do by his parents, but reluctantly.

Like his predecessor, Benedict XV is most abstemious in his habits and a very early riser. Half past five or six sees him at his altar, and at seven he has already breakfasted; at eight he is at his desk, and wo to the clerk who is not in his place.

It remains to be seen if Benedict XV will restore the pomp of the Papacy, so much relied upon and appreciated by Leo XIII, and so much reduced by Pius X. His traditions and training must have taught him the usefulness of pomp, while his personal wishes would be for simplicity—time will tell. Time will also reveal his policy, of which it can now only be said that it will not be conspicuously Germanophile; but he will certainly be a political Pope, belonging to that school of churchmen who think that it is the duty of the Holy See to make itself felt in all possible ways and directions for the good of humanity, and therefore it is impossible to ignore the influence which the Vatican traditionally and historically has exercized over the destinies of the peoples by dealing with the different governments, Catholic and non-Catholic alike.

THE MEETING PLACE OF THE CONCLAVE THAT ELECTED THE POPE

The Sistine Chapel, where the cardinals assemble to cast their ballots. Over the place where Cardinal della Chiesa sat the canopy is still raised, all the other canopies are lowered when an election is announced

BOTH SIDES A DEBATE

WHO IS RESPONSIBLE FOR THE WAR?

RESOLVED: That Germany is the aggressor in the Great War.

Some have questioned the policy of any discussion of the merits of the present war, especially in a country which is morally bound not only to complete formal neutrality but to relations of friendship with all of the nations involved. But since those who follow current events are almost certain to form and express opinions upon the present struggle, it is well that such opinions should be the product of reading and discussion rather than of whim or prejudice. Each side insists that it is acting purely upon the defensive, that the other is responsible for the war and that it used every effort to avert the impending conflict. That no nation will admit that it was the aggressor is encouraging proof that a war is nowadays regarded as a calamity and its initiation as a crime.

ARGUMENT FOR THE AFFIRMATIVE

I. German support of Austria-Hungary against Servia caused the war.

A. Germany opposed all attempts at a peaceful settlement of the dispute between Austria-Hungary and Servia. As a result of German opposition, the British attempt to prevent war between Austria-Hungary and Servia was a failure.

B. The Austrian policy was calculated to draw Europe into a general war.

1. The demands of Austria-Hungary were unusual and provocative.

2. Altho Servia granted as many of the demands as were consistent with national sovereignty and offered to submit the rest to arbitration, this was met by an immediate declaration of war.

3. Germany and Austria-Hungary must have known that Russia would not let a small Slavic kingdom within her own sphere of policy be crushed by a rival power, and that Russian mobilization would mean a general war.

C. Italy, the ally of Germany and Austria-Hungary, left the alliance on the ground that the war in which they invited her to join was not one of defense but of aggression.

II. Germany forced the war upon France and Belgium.

1. Germany made no attempt to induce France to stand aside from the Russo-German war.

2. Even before Germany's ultimatum to France expired, German troops were mobilized on the French border.

3. France made no move against Germany until actually invaded and forced to fight in self-defence.

4. Belgium and Luxemburg were not only neutral states but *neutralized* states that is the principal powers including Prussia had pledged themselves to use them as a theater of war and to protect their neutrality.

5. Chancellor von Bethmann Hollweg admitted in the Reichstag that Germany had wronged Belgium by violating her neutrality.

6. Had Belgium allowed the Germans to make use of her roads and railroads this would have been an act of war against France.

III. Germany forced the war upon Great Britain.

A. The British White Paper shows that England strove for peace from the beginning to the end of the crisis.

B. The invasion of Belgium involved British intervention.

1. Great Britain had promised to protect the neutrality of Belgium and Luxemburg.

2. The occupation of Belgium would be highly dangerous to Great Britain.

C. The invasion of France involved British intervention.

1. The destruction of the military power of France would have left Germany supreme on the continent of Europe.

2. France was at the opening of the war in friendly agreement (*entente cordiale*) with Great Britain, while Germany was and had been for years almost openly hostile.

IV. The Great War was part of Germany's plan for world-domination.

1. The present German empire is largely the result of wars of conquest and contains subjugated nationalities.

2. With German support Austria annexed Bosnia and Herzegovina in violation of the treaty of Berlin.

3. When Great Britain proposed a "naval holiday" the chief opposition to the scheme came from Germany.

4. German writers on foreign policy (Treitschke, Bernhardi) advocate expansion at the expense of the neighboring European countries and colonies.

ARGUMENT FOR THE NEGATIVE

I. Russia caused the war by mobilizing in behalf of Servia.

A. Russia should not have intervened in the Servian war.

1. The Serajevo murders were planned, or at least approved, by Servian officials and this fact justified the demand for special methods of inquiry.

2. Servia had threatened the existence of Austria-Hungary by stirring up rebellion in Bosnia and Herzegovina.

3. Russia had no interests in Servia to justify war with Austria-Hungary.

4. The war was a punitive expedition, not a war of conquest.

B. Russia opposed the German efforts to localize the war by mediation between Austria-Hungary and Russia.

C. In spite of repeated protests by the German Government, Russia mobilized her army not only against Austria, but also in the north against Germany.

II. The alliance of France with Russia forced Germany into war with France. France refused to remain neutral because she had long wanted a chance to go to war to recapture Alsace-Lorraine.

III. Germany was not the aggressor in Belgium.

A. The invasion of Belgium was a necessary defensive move. Because of the odds against her, Germany must crush France in time to return east in time to resist the Russian advance. A quick defeat of the French army was only possible by way of Belgium.

B. Belgium was not really neutral.

1. Belgium was a heavily armed nation for its size and had important fortresses facing Germany.

2. Belgian public policy was pro French and French officers and engineers were active in organizing the Belgian army and erecting Belgian fortifications.

3. German reports tell of British and French troops in Belgium upon the outbreak of the war.

IV. Great Britain was the aggressor against Germany.

A. Great Britain should not have intervened in behalf of Belgium.

1. Germany offered to safeguard Belgian independence and to compensate her for all losses due to her army.

2. The nations of the coalition have been guilty of equally flagrant violations of treaty and international right: Japan in annexing Korea, France in annexing Morocco, Belgium in annexing the "Congo Free State," Russia in absorbing Finland and Persia, Great Britain and Japan during the present war in landing troops in China to besiege Kiao-chau, Great Britain in acquiring Egypt and in sending troops across Portuguese East Africa to attack the Transvaal.

3. Gladstone declared in 1870 that a violation of Belgian neutrality would not necessarily involve British intervention.

B. Great Britain should not have intervened in behalf of France.

1. The "Triple Entente" of Great Britain, France and Russia was not a temporary public policy, not a binding alliance.

2. The independence of France was in no way menaced, and the downfall of French military power could not have endangered the British empire, which was safe thru its command of the sea.

C. By bringing Japan into the war Great Britain showed that her aim was not solely defensive, but the conquest of German colonies and trade.

V. The German empire is and has been a power for peace.

1. Germany spends less each year on her army than Great Britain, France or Russia, on her navy than Great Britain, France, Russia or the United States.

2. An adequate army is essential to the existence of Germany, located as it is in the heart of Europe and between hostile Russia and France.

3. Since 1870-71 Germany has been engaged in no important war.

4. During this period Great Britain, France, Russia, Japan and even Belgium have built up great colonial empires and Germany has been forced to take the inferior colonies left.

5. Germany's interests lie in the development of her great and growing trade; Great Britain's in its destruction.

6. Germany's interests and those of her ally demand the preservation of the present balance of power and distribution of territory. It is France and Russia that have desired the disintegration of Austria-Hungary and of Germany to aggrandize themselves.

The World is so full of

A NUMBER OF THINGS

I'm sure we should all be as happy as Kings

AN OCCASIONAL PAGE BY

EDWIN E. SLOSSON

TURNING from the latest "special extra" whose flaming headlines fail for once to exaggerate the importance of the news beneath, I eagerly tear open the wrappers of the belated European periodicals only to be shocked by their serene unconsciousness of the storm about to break over their heads. The war caught one of the leading French monthlies, *La Grande Revue*, in the midst of a peace movement, a serial symposium on "What the German Elite Thinks of France," intended to secure a better understanding between the two countries. One of the contributions to the July number is by Oscar A. H. Schmitz, who is introduced as "one of the most remarkable writers of the new generation," author of *Das Land der Wirklichkeit*, "The Land of Actuality," such being the term he applies to France in calling the attention of his countrymen to the commendable virtues of that nation. The final passage of his contribution reads strangely now:

> We are younger and consequently more robust than you, but you possess the incomparable secret of *savoir-faire*. What a chance for an intellectual and political alliance! Together we could decide the fate of this old Europe, which we would save from the fatal assault of Americanism and Anglo-Saxonism in general. Franco-German friendship would form the nucleus of this United States of Europe which seems so desirable.
>
> But don't forget this: The door of the Vosges must remain closed. While it was open the French armies have crost the threshold whenever they pleased. Think of the campaigns of your kings and Napoleon. Since we have held the key to the door, we have never abused it. The peace of Europe has been supported upon the foundation of our armed empire and we are the only great nation which since 1871 has never made war on any one in Europe or elsewhere.

Very well, but it appears that the Kaiser is no more to be trusted with the key to the door than Napoleon the Big and the Little. The publication of Herr Schmitz's article finds the Germans pounding hard on "the door of the Vosges" which for some reason does not open so readily from the outside as they anticipated.

This is the way it looked to the Britisher on the other side of the world—and before the war, I quote from Sydney, Australia, *Bulletin* of July 9, 1911:

> Great Britain, which pays the biggest naval and military defense bill in the world, and also the biggest in all history, finds its burdens rather heavy. It is announced that next year the income tax on incomes derived from property will be 1s. 4d. in the £, with a super-tax on big incomes and an extra super-tax on bigger incomes. If only George of Britain and William of Germany would toss for the two thrones, and the winner take both, and the loser be made an Archduke, and the two armies and navies be united, and the two countries agree on a common language—if these things were done some £50,000,000 a year might be saved in the joint defense bill. Quite a heap of things may be done with £50,000,000 a year.

Since this was written the expense of Anglo-German antagonism has become greater but the ingenious solution here proposed has become more impracticable than ever. The Australian has almost the American's aversion to the entangling alliances of the European powers, particularly when they involve a closer association with the dreaded Asiatic, but he is loyal to the British Empire and in the present crisis he cheerfully volunteers to fight alongside the Japanese and Hindu.

A new factor in the development of language has come into play, the advertisement. It used to be held by linguistic authorities that there is no instance of the creation of a purely artificial word, but Mr. Eastman disproved that when he invented the word "kodak," which has by lavish advertising become noun and verb in good and regular standing in the English and other languages. It seems then that etymological abiogenesis is not an impossibility but merely a matter of money.

The publication of the White Paper in a British Blue Book containing the diplomatic correspondence preceding the war shows that a phrase emanating from the same fertile brain or corporation and popularized in the same manner has been admitted to court circles. Sir Edward Grey, the British Foreign Secretary, telegraphed to the British Ambassador at Berlin on July 29 that he told the German Ambassador at London that "mediation was ready to come if only Germany would 'press the button' in the interests of peace." On the following day Sir E. Goschen replied that the German Chancellor "told me last night that he was 'pressing the button' as hard as he could." But evidently Austria was not willing to "do the rest."

This unconventional official language reminds one of the time when Lincoln used the phrase "sugar-coated" in a Presidential paper. When it was read to the Cabinet, Secretary Seward objected to the use of the slang of the day in a document of historic importance, but Lincoln refused to change it and remarked that if the day should ever come when the American people stopped using sugar-coated pills he was willing to have his words forgotten. Since then the gelatin capsule has largely replaced the sugar-coated pill, but the phrase still remains in our language. Evidently Sir Edward Grey places a like confidence in the permanency of kodakery.

One of the distressing things about this destruction of historic monuments is the lack of discrimination shown by the bomb shells. If now a German airship should drop a bomb neatly on the pagoda of the Albert Memorial in London, and at the same time a British airship should demolish the row of Hohenzollern statues "made in Germany" with which the Kaiser has adorned his capital, the world would shed few tears.

August 24, 1814—The British burn the Capitol and White House at Washington.

August 27, 1914—The British denounce the burning of Louvain as an act of vandalism.

Verily the world do move.

On my desk this morning I find the following. I did not write it even in my sleep, for it is not in my typewriting. So I suspect as the perpetrator a young chap in whom I have a one-half undivided interest and who sometimes accuses me of anachronistic knowledge:

THE NEW GEOGRAPHY

A little lad once asked his Pa,
"What capital has Servia?"
His father answered to his wish,
"Belgrade, of course."—"Oh, no, it's Nish!"

"What is the Russian capital;
What city lords it over all
The Slavic realms with iron rod?"
"Saint Petersburg."—"No, Petrograd!"

"What city head of France may be?"
"You know it well; 'tis gay Paris."
"Dear father, you are *weeks* too slow,
That famous city is Bordeaux!"

"What busy port, what bustling mart,
What city now is Belgium's heart?"
"Brussels, I have been taught to say."—
"But Antwerp now, you're miles away!"

"Now, father mine, I've got you beat;
Is Lemberg still Galicia's seat?"
"You blazing nuisance, now leave off!"
"You've hit it *nearly* right—Lvoff."

The destruction of medieval statuary and architecture in Rheims and Louvain has shocked the world. I fear, however, that the Germans have been guilty of even greater atrocities. If the reports in the newspapers are true it looks as tho they had been killing living men.

THE STRATEGY OF THE GREAT WAR

THE SIEGE OF ANTWERP

A CONSIDERATION OF THE STRATEGICAL AND DIPLOMATIC QUESTIONS INVOLVED

ALL good Germans when they travel in foreign lands take along Baedeker, so we may assume that the Germans now temporarily sojourning in Belgium are so armed, and have placed the red bookmark at the page which says that "Antwerp is one of the strongest fortresses in Europe" and "would require an army of 260,000 men to besiege it effectually, and at least a year to reduce it by starvation." But the Germans have found a quicker way of disposing of a garrison than starving them to death, and they have had some experience in the demolition of the fortifications which General Brialmont and the French engineers constructed for the Belgians at Liège and Namur as well as at Antwerp. If the Germans really concentrate their efforts upon it, the city will probably not hold out for fourteen months, as it did in the siege by the Duke of Parma, which Motley describes so vividly in his *United Netherlands*.

But it does not yet appear whether the Germans are really determined to capture Antwerp or whether they are merely keeping up a bombardment in order to ward off the Belgian attacks on their lines of communication. In either case the siege of Antwerp is likely to involve the Netherlands in the war, for if the Allies are cut off from reinforcing the city by land from Ostend, they can only reach the beleaguered city from the sea by way of the Scheldt, and this means a violation of Dutch neutrality.

Gladstone in 1870 expreet the opinion that England was not necessarily bound to intervene in defense of Belgian neutrality unless she found her own interests involved. But whether since then her obligations to Belgium have become stronger or not, her interests are undeniably involved now in the question of Belgian neutrality, and this chiefly in regard to Antwerp. Napoleon said that Antwerp was a pistol aimed at the heart of England. The English have always agreed with Napoleon on this point and have accordingly made it their concern to see that the pistol was in the right hands—or plugged at the muzzle so it could not fire. The muzzle of the Antwerp pistol is the Scheldt River mouth and this is Dutch domain.

Holland is made of the wash of many rivers running from her neighbors' territory. The Dutch control the outlets of the waterways of France, Belgium and Germany. If the French want to go from Verdun to the sea by way of the Meuse, or the Belgians from Antwerp by way of the Scheldt, or the Germans from Cologne by way of the Rhine, they must go thru the Netherlands. This geographical anomaly has been the cause of many conflicts in the course of the last four centuries, and the trouble is not over yet.

The Dutch have always claimed the right to control the channels of the Scheldt, which means that they would have the power to choke off the trade of Antwerp whenever they chose. England supported their claim for two centuries when she was friendly to Holland and not to France. But recently, since Belgium, France and Great Britain have been virtually in alliance and Holland has been drifting toward Germany, English policy and opinion has inclined the other way. This became so decided that Great Britain has for the last three years opposed the Dutch Government in its desire to erect fortifications at Flushing, which commands the chief channel of the Scheldt.

This desire was assumed to be instigated by Germany, and it was even rumored that a secret treaty had been signed by which Germany had agreed to provide the military force necessary to defend Flushing if the Dutch would put up the fortifications. However that may be, a bill was introduced into the Dutch parliament in December, 1910, appropriating some $20,000,000 for strengthening the navy and naval defenses, which included a project for making a strong naval base and arsenal at Flushing. Since the Scheldt is only four and a half miles wide, this meant that the entrance to Antwerp would be as completely commanded by the Dutch as Gibraltar is by the English, or the Bosphorus by the Turks. The English took the ground that this would endanger the neutrality of Belgium, and that the sudden impulse of the Dutch to fortify the Scheldt while totally neglecting their land fortifications on the German border indicated that Holland was coming under the influence of Germany.

On the other hand, the Dutch asserted their right to fortify any part of their own territory they pleased, and they resented the intervention of Great Britain in their internal affairs.

London Times

THE SIEGE OF ANTWERP

The German attack described in The Story of the Week is concentrated between Boom and Lierre and the forts in front of this line have been reduced by the bombardment

They also pointed out that the Scheldt was already closed to hostile ships by agreement of the powers, including Great Britain, and they inquired why Great Britain should object to their attempt to protect their legal neutrality unless she herself intended to violate it. A writer in *Blackwood's Edinburgh Magazine* pointed out this inconsistency in March, 1911, and argued that:

> The passage of our troops and war ships thru the lower Scheldt in time of war would be just as much of an infringement of the neutrality of the Netherlands as a march of German armies thru the Ardennes would be an infringement of the neutrality of Belgium and Luxemburg.
>
> If the Netherlands were, under the supposed circumstances, to assent to our using the Scheldt, such assent would constitute an act of hostility against Germany and would justify reprisals on the part of that power and even if the Dutch declined to sanction the arrangement but failed to prevent it by force of arms, this might well afford Germany an excuse for sending troops into Holland to sustain that country in defending its rights.

This is doubtless the correct view, but still if Antwerp should be hard prest England would be strongly tempted to go to the rescue, in spite of her obligation to respect the neutrality of the Netherlands. In fact, some English writers have sneered at the idea that Great Britain would in case of war be kept by "a piece of paper" from crushing German commerce by blockading the Netherlands. For instance, one of the leaders in the anti-German movement, J. Ellis Barker (*né* Eltzbacher), in discussing the idea that had been advanced in Germany that it was better for Germany that Holland and Belgium to be independent and neutral, for they would provide channels for German trade in case Hamburg and Bremen should be blockaded, says in *The Nineteenth Century* of July, 1906:

> Of course it is possible that a superior naval power at war with Germany will, at the bidding of some professor of international law, leave Germany's trade via Holland and Belgium unmolested. But that hardly seems likely. No sane German statesman will be influenced in his policy toward Holland by the argument that a superior sea power will leave Germany's trade thru the Netherlands undisturbed. Germany trusts for her security in war to her right arm, not to a piece of paper or to the dicta of her professors.

The question, which was merely hypothetical when this was written, has suddenly assumed tremendous importance. Great Britain is not likely to take such high-handed action as Mr. Barker intimates and put a stop to all German commerce thru the Dutch ports, but the restrictions she is imposing upon them have already called forth remonstrances from Dutch and American shippers. The munitions and supplies needed by a modern army are so varied that almost anything, from cotton to copper, may be called "conditional contraband of war" and as such prohibited.

The fact that England has continuously opposed the fortification of the Scheldt gave ground for the suspicion in the mind of some of the Dutch that she intended to take advantage of the absence of such defenses. Why, argued the advocates of the project, should England object if she intends to respect Dutch neutrality anyway? In the debates over the coast defense bill in the Dutch parliament during the last four years, similar use was made of criticism by the British press of the Dutch colonial administration, and their inference that these colonies might be in better hands. The London *Times* even went so far as to suggest a British protectorate over Dutch East India. The pro-German party in the Netherlands also insinuated that Australia was likely to seize the Dutch portion of New Guinea, as she had the southeastern part of the island.

On the other hand, those who opposed the defense bill asserted that it was imposed upon the Dutch Government by the German Kaiser. In fact, M. van Heeckeren, former Minister of the Netherlands in Sweden, published quotations from a letter which he said the Emperor William had written to Queen Wilhelmina in 1904, warning her to fortify her seacoasts against England, and hinting that if these measures were not taken he might find it necessary to occupy Holland. The Dutch Foreign Minister denied that any such letter had been received by Her Majesty.

It is, however, no secret that Germany ardently desires the acquisition of the Netherlands, both for its commercial and naval advantages and for the tropical possessions it would bring with it. Amsterdam and Rotterdam are surpassing Hamburg and Bremen as shipping centers, Antwerp has gone ahead of London, and their growth is largely due to the development of the German industries in the *hinterland*. The Germans naturally dislike to see the Netherlands, thru the accident of geographical situation, growing rich thru German enterprize. Professor Treitschke, in his *Politik*, the Bible of Pan-Germanism, puts it in his usual outspoken way:

> The Rhine is the king of rivers. It is an infinitely precious resource to Germany and, owing to our own fault, the very part of the Rhine which is of most material value to us has fallen into the hands of foreigners. It is an indispensable duty of German policy to regain the mouths of that river. A purely political connection of Holland and Germany is perhaps not necessary; but an economic union of Holland and Germany is absolutely required; and we are all too modest if we are afraid to say that Holland's entrance into the German Customs Union is as necessary to us as is our daily bread.

Professor Lexis, of Göttingen, uses more persuasive language:

> Germany alone can defend the Dutch colonies against English greed, and for that reason a military alliance ought to be concluded to be followed by a customs and commercial union of such a nature as to remove the aversion to this connection felt by the prodigal son of the great German family.

In order to overcome this aversion of the Dutch people to incorporation into the German empire, the Dortmund-Ems canal has been constructed, at a cost of some thirty million dollars. This brings the Rhine traffic to the new German port of Emden, close to the boundary of Holland, and so frees it from the humiliating necessity of passing thru foreign territory in order to get to the sea. The diversion of German trade thru this outlet will endanger the prosperity of Antwerp, Amsterdam and Rotterdam, and make these cities realize their dependence upon Germany.

The foreign trade of these cities is already largely in the hands of Germans, and recently great excitement was aroused by the revelation that the Dutch Government had granted, as an exclusive concession to a German syndicate, a large basin near Rotterdam, on such terms as to make it virtually a German harbor. The Government and the financial interests of the Netherlands have shown pro-German proclivities in recent years, but the bulk of the people are determined to maintain their historic independence, and would be as discontented to be united to the Germans as they were when the Congress of Vienna yoked them with the Belgians. In the present crisis all factions recognize that it is to the interest of Holland to preserve a strict impartiality, both in word and act. So far the effort has been successful, and it is to be hoped that the siege of Antwerp will not introduce any complications which would involve her in the war. As a non-combatant she has already suffered severely thru the ruin of her trade and industries. The fortification of Flushing on the elaborate scale proposed was never carried out, owing to the opposition mentioned above. But the port has been declared in a state of siege and the Dutch Government is prepared to close the mouth of the Scheldt whenever it seems necessary.

THE FAILURE OF COLORADO

A PLAIN STATEMENT OF THE SITUATION IN THE COAL FIELDS

BY WALTER LAWSON WILDER

THE main facts of the situation in Colorado, whether in the long series of events leading up to the outbreaks of 1913 and 1914, or in the strike itself, or in the present conditions under martial law, are not matters of dispute. There is such a difference of statement regarding particular incidents as is always found in similar cases, but as a result of numerous investigations by federal and local authorities, the testimony of unprejudiced observers, and the admissions of parties to the controversy concerning their own acts, the main facts may be said to be universally agreed upon.

One of these facts, which is of prime importance, is this: a great majority of the people of this state believe that law, as it affects the relations between the coal companies and their employees, and between the big corporations and the general public, is corporation-made law. They believe that government, to a considerable extent, is corporation-controlled injustice. They believe that every citizen of Colorado has suffered greatly in the past from extortion, injustice and usurpation of public authority on the part of the same group of powerful corporation interests against whom the unlawful, riotous and rebellious acts of coal strikers and their sympathizers have been directed, and in behalf of whom other numerous acts of lawlessness and oppression have been performed.

Such a belief is doubtless exaggerated. It results in part from long-continued and bitter partizan strife, in part from "muck-raking" articles in local newspapers and magazines. It has been inculcated in all the channels of union labor activity. But it is a belief that has a very real foundation in undenied and undeniable corporation control of politics and government, a control that is openly admitted and often defended as necessary to the protection of property rights and to the enforcement of law.

The years from 1904 to 1912 were the period of popular revolt against the alliance of the partizan political machines and the corporations. In that period Colorado established the initiative, the referendum, the recall, direct primaries, the headless ballot, the commission form of city government, and the so-called recall of judicial decisions. These radical measures of direct legislation were remedial rather than experimental. They were the people's effort to cure existing evils, the evils of machine politics and corporation controlled government. These remedies brought the immediate effect desired in the overthrow of the partizan machines, but they caused unexpected troubles.

In destroying the political machines, the people destroyed for the time being the solidarity of government. Their immediate effect was to break down the party organizations, to destroy party responsibility, to increase the susceptibility of public officials to popular clamor, to exaggerate the importance of demagogs and to weaken the powers of government all along the line. The corporation control of government was destroyed, but the party in power failed to make itself an efficient instrument of the people's will. Personal rivalry became the mainspring of government.

Had the state government under Governor Shafroth from 1909 to 1913 dealt fearlessly and effectively with the strike situation in the northern Colorado coal fields, there would have been no outbreak of violence under Governor Ammons in 1913. For three years the miners of Boulder County pursued their lawful occupation and maintained their residence under an armed guard and within a barbed wire stockade. The stockades of Boulder County and not the tent colonies of Las Animas and Huerfano counties are the true clew to the tangled industrial situation.

The typical southern Colorado coal mine is remote from any town, and the company owns the houses in which the miners live and all lands upon which houses might be conveniently built. The company owns the store, the school house and the church if there is one. It pays the school teacher, the physician and the minister. It controls the sale of intoxicants, and regulates or prohibits the social evil. It chooses and pays the marshal of the little settlement, and singly or together the coal companies have controlled the nomination and election of county officers, including those of the county and district courts. These statements are not made as an accusation against the companies, but as a record of undisputed facts, admitted by company officers and agents, and defended by them upon the ground of practical necessity for the well-being of their employees and for the peaceful operation of the industry.

The company officials always professed their willingness to treat with any of their employees who were dissatisfied, but it was always a part of their policy to retain no employee who was a trouble maker. They professed the policy of the open shop, but the man who began to talk unionism soon found himself out of work. There being no other employment in the vicinity, discharge by the company was equivalent to banishment. The company controlled the government of the camp absolutely; in alliance with other corporations and with the political machine it controlled the government of the county; and for many years previous to 1913 the state government had been also under control of the corporation interests. The individual miner, or any group of miners, had no opportunity of redress.

Both sides in the strike controversy have admitted that their sole point of irreconcilable difference is the recognition of the union, a point which the miners have a lawful right to demand and which the companies have a lawful right to refuse. So much has been said of lawlessness on both sides that it is well to emphasize the point that the unrestricted exercize of the full lawful rights of either party would bring success to its cause. The lawful rights are conflicting and irreconcilable. Peace now exists only because lawful rights are suspended by military force.

The outbreak of violence that followed the withdrawal of the state militia, like that which caused their entrance upon the field, was inevitable under the circumstances. Its immediate occasion was the culmination of bitterness and hatred between the residents of the Ludlow tent colony of strikers and a small group of militiamen who had become notorious for acts of violence, lawlessness and injustice toward the unionists. The attack of unionists upon the small force of militia remaining in the district was treason and rebellion, but the basic cause of this attack was a collapse of the state government for which the miners were in nowise responsible, and it was provoked by misconduct on the part of a few militiamen which is openly denounced by all rightminded citizens, but for which no punishment has been inflicted by the state.

Since that time the federal soldiers have enforced peace. The inevitable result of their withdrawal would be riot, insurrection and anarchy. An extraordinary session of the state legislature has provided a war fund for the payment of past indebtedness and for future contingencies, but it has made no settlement of the controversy.

Denver, Colorado

A MANSION TURNED HOSPITAL

Photographs from The Independent's Special Correspondent

THE SOUTH FRONT OF OLDWAY HOUSE, PAIGNTON, DEVONSHIRE

THE home of Mr. Paris E. Singer, Oldway House, is one of the most beautiful country seats in England. Transformed for Red Cross service, it is now the most beautiful surgical hospital in the world. A complete operating theater and all the necessary armamentarium of an up-to-date hospital have been supplied; the gymnasium has been converted into the "Mary Ward"; beds line the splendid apartments. There is room for 200 surgical patients, soldiers or sailors of any of the conflicting armies.

The American Women's War Relief Committee, of which Lady Paget is president, administers the hospital. Sir William Osler is honorary physician, and Dr. Ernest Lane, F.R.C.S., well known in America, is the principal medical officer. The matron, Miss Gertrude Fletcher, served in the South African campaign and is assisted by an efficient staff of fully trained nurses.

IN THE WORLD'S MOST BEAUTIFUL SURGICAL HOSPITAL

Lady Randolph Churchill is chairman of the hospital committee of the American Committee; Mrs. John Astor is vice-president; the Duchess of Marlborough chairman.

In London the committee is providing work for the unemployed wives of men at the front. These women are kept busy making garments for the Belgian refugees.

LOOKING FROM THE BALL ROOM INTO THE "ALEXANDRA WARD"

THE NEW BOOKS

THE FAILURE OF SUCCESS

THEODORE DREISER did not get enough of his financial superman in *The Financier* and takes Frank Cowperwood as the hero of *The Titan*. The pile-driving style of his former novels gives an impression of brute strength, a little softened by an aloof sympathy with those to whom life has been unkind. Sister Carrie and Jennie Gerhardt are piteous figures, victims, at first, of fate and, later, of habits as relentless as fate. But no one can care about Cowperwood or what becomes of his ruthless personality. He is a great brute, utterly incapable of generosity or even of common decency; his love for art is an alien note of culture in his otherwise barbarian character; his treatment of all the women who unaccountably fall in love with him is cynical to a degree; "I'm tired of you," he says to the wife of this book, who had sacrificed much for him when he served his prison sentence in *The Financier*, and he discards her as frankly and carelessly as one changes a glove. Faithless in love, dishonest in business, corrupt in politics, he is a portentous figure of evil power, but not all Mr. Dreiser's skill is able to make him interesting. On the whole it is a dull book, and the life of high-handed finance it depicts is heavy with commonplaceness. There is no lift to the spirit anywhere in it, but a sodden and sordid depression. At the close Mr. Dreiser says: "The world is dosed with too much religion," but really there are worse doses—such as this satyr-cynicism.

The Titan. By Theodore Dreiser. John Lane. $1.40.

A COMMENTARY ON THE TRIPLE ENTENTE

Sir Thomas Barclay's *Thirty Years' Anglo-French Reminiscences* give remarkable sidelights on the development of Anglo-French relations during the last generation and the consequent effects on the rest of Europe. Written the early part of this year, the book helps to explain some of the complex feelings that preceded and led up to the Great War now raging with such intensity. The author began his residence in Paris as a correspondent of the *Times* in 1876. Soon after he began to labor for the rapprochement of France and England. His association with diplomats and other government officials and his work thru various societies organized primarily for the encouragement of better international relations have given him unusual opportunities for observing and judging the course of events.

In a conversation with the German Chancellor in 1905 Sir Thomas reports the substance of Prince von Bulow's remarks as follows:

> All business and traveled Germans are Anglophil. The English are the Germans' commercial teachers. In England they have learnt the methods which have brought them prosperity, and if they have been able in some cases to outrace their teachers, they honor them none the less and are none the less grateful to them. Among them, in your efforts to draw the two peoples together, you will find only friends of England. It seems at first sight anomalous, but the anti-English feeling in this country is strongest among the professional classes who have had a learned education.
>
> We Germans, at least the *gebildeter Stand* (the educated middle class), have history on the brain. It is an intellectual disease which makes Germans see current events out of focus. Far-off happenings stand out in their minds as large as the nearer ones. We see them without the sense of perspective that fixes their true value. The professor and his pupil are as indignant at wrongs inflicted on Germany a century or even centuries ago, as they are at what happens today, and publicists seriously write historical books to show up the evil ways of their neighbors, as if they were might-be precedents for action today.

The author believes that the way was open at that time for an understanding with Germany that might have given a widely different course to events that have since occurred.

> If England had responded at the time to the German tender of friendship instead of treating it with scornful indifference there might have been no German rivalry today in naval armaments. It is a great mistake to try to deal with international questions on abstract, historical or geographical principles only. Even the most undemocratic of governments would feel very uneasy, if public opinion did not move with it, and the feelings of a nation, as only too many recent instances show, are apt to outrun arguments.

The Jameson raid, the Fashoda incident, and Morocco, as well as other interesting episodes, are discussed.

Thirty Years' Anglo-French Reminiscences, by Sir Thomas Barclay. Houghton Mifflin Co. $1.

BOOKS OF THE WEEK

The Poet, by Meredith Nicholson. In a neatly sketched little story, a quaint, wise, old *deus ex machina* has a beautiful time demonstrating the efficacy of romance.

Houghton Mifflin. $1.30.

The Little King, by Witter Bynner. Kingliness in a Capet studied against a harshly drawn picture of French plebeian avarice and brutality, in dramatic form.

Mitchell Kennerley. 60 cents.

British Shipping, by A. W. Kirkaldy. A chunky, fact-full account of the creation of England's maritime supremacy. Useful now when we are trying to build up our own shipping.

Dutton. $2.

The Anti-trust Act and the Supreme Court, by William H. Taft. A clean bill of health for the Sherman law and the Court, with much careful, illuminating analysis and some criticism of earlier decisions.

Harper. $1.25.

The Balkan Wars, by Jacob Gould Schurman. The Great War is the direct outcome of the Balkan wars of 1912-13, of which this little volume by the president of Cornell, then Minister at Athens, gives a convenient account.

Princeton University Press. $1

Germany and the Next War, by General von Bernhardi. A popular edition of a book now much in demand because it gives frank expression to the ideals of Prussian militarism. A remarkable anticipation of the aims and strategy of the present war.

Longmans. 75 cents.

THE IMPORTANCE OF LOAFING

One afternoon in June, 1876, three Princeton undergraduates were lying under trees languidly getting ready for an examination, when one of them suddenly said, "I have been reading an old magazine article which describes a fossil-collecting expedition in the West; why can't we do something of the kind?" This chance remark was taken up seriously by the others, and led to the first of the Princeton paleontological expeditions of the next year. Of the three Professor Osborn is the distinguished zoölogist of Columbia University and the American Museum of Natural History, and Professor William B. Scott, of Princeton University, is author of *A History of Land Mammals of the Western Hemisphere*, which is as complete an account of the subject indicated by the title as can well be comprest in 700 octavo pages. There are illustrations of many living forms, but the main part of the book is devoted to the extinct fauna of the two Americas. Written by a man who has given his life to the study, the book is not for children, but gives the necessary data of comparative anatomy, with figures of structure and dentition, and discusses lines of evolution; but the lay reader will be interested in the figured representations of a multitude of extinct animals restored from their skeletons in the principal museums. Especial interest attaches to the last chapter, in which the author very conservatively discusses the difficulties which attend the effort to trace the line of descent of the various species; and also throws light on the causes of variation which have led to the creation of new species.

A History of Land Mammals of the Western Hemisphere, by William B. Scott. Macmillan. $6.

THE MEASURE OF LIFE

Having been brought up in the market-place, where haggling for prices and for bargains is the prevailing mode of life and of thought, most of us will find the questions raised by Mr. Hobson in his *Work and Wealth* either without meaning, or a challenge of what we have considered most worthy and most commendable in our business life.

In the market-place we measure everything in terms of dollars. Mr. Hobson's question here—by no means a new one—is, What is the value of a dollar in terms of human life? How can we evaluate a dollar, either as costing so much human effort, or as producing so much human enjoyment or utility?

And this is the challenge to the economic order, that we exchange entirely

Author of "George Bernard Shaw: His Life and Works," "European Dramatists," etc. Discusses significant changes in the drama itself rather than individual dramatists. *$1.50 net.*

AS FOR THE WAR—Recent, Authoritative Books of Permanent Value

EUROPE SINCE 1815 — CHARLES D. HAZEN

Library Edition, with 14 colored maps. *$3.75 net.* "Comes down to 1909 and has easily the field in English. For the last twenty-five years it is almost without a competitor."—*Harvard Graduates' Magazine.*

RUSSIA THE COUNTRY OF EXTREMES — N. JARINTZOFF

Illustrated. *$4.00 net.* "A valuable study of a fascinating subject."—*The Nation.*

GERMANY AND ITS EVOLUTION IN MODERN TIMES — HENRI LICHTENBERGER

"As safe a guide as we know to an understanding of the inner workings and outward manifestations of Germany's national power."—*Literary Digest.* *$2.50 net.*

IN THE HOME UNIVERSITY LIBRARY

Brief, Clear, New Books by Authors of World-wide Reputation — Each 50 Cents Net

GERMANY OF TODAY — CHARLES TOWER

Describes the constitution and government of the Empire and its several States, and the outstanding features of social and intellectual activity.

THE HISTORY OF ENGLAND — A. F. POLLARD

"One of the most brilliant little volumes."—*Springfield Republican.*

A SHORT HISTORY OF THE WAR AND PEACE — G. H. PERRIS

The Hon. James Bryce writes: "I have read it with much interest and pleasure, admiring the skill with which you have managed to compress so many facts and views into so small a volume."

HISTORY OF OUR OWN TIMES (1885-1911) — G. P. GOOCH

A "moving picture" of the world since 1885.

HENRY HOLT AND COMPANY 34 WEST 33d STREET NEW YORK

without regard either to cost or to utility, cheating the worker and cheating the consumer under the pretext that shillings is shillings. Our standards of value bear no consistent relation to human welfare.

But accustomed as we are to dealing in prices and wages, how are we to find a "human" valuation? Mr. Hobson, influenced by Ruskin and the humanists on the one hand, and by the biologists and psychologists on the other, evolves as a standard of values what he calls "organic welfare" of human beings.

The true measure of the cost of any commodity, from a human social point of view, should be not how cheaply you can get a hungry or a desperate worker to duplicate the labor, but the actual wear and tear it imposes on human life. Human valuation must take cognizance not only of different strengths and capacities for work; it must recognize also different interests. What is a burden to one will be a pastime to another, and the human costs cannot be the same, altho the product may be identical. The same principles apply to utilities. Without regard to the cost of production, no matter how measured, luxuries have not the same human values as goods that supply organic needs; consumption that debases and weakens cannot have the same utility as consumption that strengthens and enlarges the personality.

No person who is seriously concerned with the great economic problems of the day can afford to ignore Mr. Hobson's analysis, unless, indeed, he has already gone thru the process himself. The criticisms that Mr. Hobson incidentally makes of socialism and of socialist doctrines are rather subtle, tho well taken; yet most informed Socialists will probably agree with the main arguments and conclusions of this book.

Work and Wealth; a Human Valuation, by John A. Hobson. Macmillan. $2.

THE GREATEST OF THE ALLIES

The Great War has so enormously stimulated American interest in the belligerent countries that the public will certainly welcome another good account of English history even tho it contain little new material. *A History of England and Greater Britain*, by Professor Arthur Lyon Cross, fulfills the demand for a long and broad treatment of the subject brought down to the present year. Like most histories for school use and general reading, Professor Cross's work is essentially a political and Parliamentary chronicle and relegates the economic, intellectual and social history of England to summarizing chapters. In spite of its title, moreover, the space and emphasis given to the mother country is very much greater than that given to the rest of the Empire.

Macmillan $2.50.

A NEW GOLDEN TREASURY

Surely any one who owns Palgrave's *Golden Treasury*—and who does not?—can afford to buy *The New Golden Treasury of Songs and Lyrics*, edited by Ernest Rhys. It is meant to be a sequel to that volume, including short

poems of a period earlier than those included by Palgrave, and also later. The average of quality is not equal to the earlier volume, but there are included a few dear Shakespeare lyrics and splendid verses from Tennyson, Browning, Rossetti, Stevenson, Swinburne, and coming down to Francis Thompson. In as many as "CDXXIV" (which means 424) poems there must be many to please the ear.

Dutton. 35 cents.

THE HUMAN SIDE OF PLANTS

The Human Side of Plants is an attractively illustrated volume of two hundred pages by Royal Dixon which attempts to show that plants are very human and do in their way what men do. They eat, fish, keep a standing army, have servants, rob, predict the weather, keep a diary, carry life insurance, and, indeed, actually think and reason, love and hate, in reality after the fancies of Erasmus Darwin. That they have actual mentality we do not believe; but the author has in a pleasant way gathered a multitude of facts that greatly simulate intelligence.

Stokes. $1.50.

WELL ROUNDED LIFE

Dr. Richard C. Cabot, Assistant Professor of Medicine in Harvard University, has written an admirable book entitled *What Men Live By.* His careful studies and labors in the sphere of his own profession have revealed some of its larger relationships and have led the author into wider fields. He views life as a profound unity in which each part has its distinctive effect upon the whole. Work, play, love and worship, always in due proportion, are essential to physical health and social effectiveness.

Houghton Mifflin. $1.50.

RAJAHS AND PREACHERS

A stirring and unusually well written story of love and adventure in India just before the Sepoy Rebellion is *Rung Ho!* by Talbut Mundy. The author pictures the life and scenes of the country with the vividness of the brush of Vereschagin. A young English subaltern wins the hearts of a troop of Rajput cavalry, is mixed up in an intrigue between a rajah and his brother and rescues and falls in love with the daughter of a Scotch missionary.

Scribner's. $1.35.

A STORY OF IDAHO

The capable heroine of *The Ranch at the Wolverine*, by B. M. Bower, says of the brave struggle made by a gaunt pioneer woman to tame the wild ranch she had selected in the mountains of Idaho: "It's a bigger thing to make a home here in this wilderness than to write the greatest poem in the world or paint the greatest picture," and that very well may be taken as the message of the novel.

Little, Brown & Co. $1.30.

SLAVS AT WAR

The story of *The Hussite Wars* is told in detail and with great sympathy for the Bohemian leaders and patriots by Count Lützow. Altho the struggle was precipitated by the life and tragic death of Huss in 1415, and was incited by the antagonism of the Bohemians to

NEW FICTION—BIOGRAPHY—ESSAYS—ETC., ETC.

A strong novel of the American wilderness that has the tang and flavor of a James Fenimore Cooper tale.

The Ward of Tecumseh

By CRITTENDEN MARRIOTT, Author of "Sally Castleton, Southerner." Illustrated.

$1.25 *net. Postage extra.*

The ward of Tecumseh is a charming French girl brought up in the camp of the Shawnee Chief and loved by the young warrior, Wilwiloway. The heroine unexpectedly inherits large estates in France and in consequence is wooed by an unwelcome English cousin. Jack Telfair, an old friend, is warned of the girl's plight. She disappears, but Jack goes on the trail, and adventures come thick and fast until the final rescue. One reads the story with the same eagerness that the hero feels in his attempt to solve the mystery of the lost girl.

A Ripping Adventure Romance

The Duke of Oblivion

By JOHN REED SCOTT. Frontispiece in color.

$1.25 *net. Postage extra.*

NEW YORK TIMES: "There are plots and counterplots, hand-to-hand fights, and many thrilling adventures. . . . Until the end the reader is kept in a high state of doubt as to whether or not they will all escape in safety."

A Novel of Unusual Distinction

The Three Furlongers

By SHEILA KAYE-SMITH. Frontispiece.

$1.25 *net. Postage extra.*

NEW YORK TIMES: "Her story is written with such sincerity of feeling and appreciation of moral beauty and contains so much human truth that the author deserves warm commendation. For she has given it also dramatic moments and strong emotional tension. . . . An achievement worth while."

Betty's Virginia Christmas

By MOLLY ELLIOT SEAWELL. Illustrated in color, with page decorations, artistic cloth binding.

$1.50 *net. Postage extra.*

A captivating picture of Southern life of anti-bellum days. Betty wins the reader on the first page and holds him to the last, while the story has the true Christmas spirit of dancing, merry-making, song and sport.

A Timely and Important Biography

The True Ulysses S. Grant

By GENERAL CHARLES KING. 24 illustrations. Crown Octavo. *Buckram.* $2.00 *net. Half Levant.* $5.00 *net. Postage extra.*

This new volume in the true Biography and History Series is the work of a writer peculiarly fitted to deal with Grant. Not only Grant, the general, but Grant, the man, and Grant, the president, are treated with the same regard for truth that characterizes all the volumes in the series.

Boys of All Ages Will Enjoy

Buffalo Bill and the Overland Trail

By EDWIN L. SABIN. Illustrated in color and black and white. $1.25 *net. Postage extra.*

This new volume in the Trail Blazer's Series in addition to being a thrilling story of the adventures of a boy in the days of the Overland Trail, is also a true sketch of the great pioneer and Indian fighter, Colonel William F. Cody.

Essays Political and Historical

By CHARLEMAGNE TOWER, LL.D., Former Minister of the U. S. to Austria-Hungary, Ambassador to Russia and Germany. 12mo. Cloth, $1.50 net. Postage extra.

Essays upon vital subjects by one of our greatest figures in the diplomatic world will demand instant attention. The book will be widely read for its important revelations in the light of the present disturbed conditions.

The Mystery of the Oriental Rug

Including the Prayer Rug and Advice to Buyers

By DR. G. GRIFFIN LEWIS. Frontispiece in color and 21 full-page plates. Octavo. Cloth. $1.50 net. Postage extra.

This charming volume is compact with information and no one should buy rugs without its aid. Those already possessing the author's "Practical Book of Oriental Rugs" should not fail to secure it as an interesting supplement.

Heroes and Heroines of Fiction

Modern Prose and Poetry

By WILLIAM S. WALSH. Crown 8vo. Half morocco. $3.50 net. Postage extra.

Mr. Walsh has compiled the famous characters and famous names in modern novels, romances, poems, and dramas. These are classified, analyzed, and criticised and supplemented with citations from the best authorities.

A Woman in China

By MARY GAUNT. Fully illustrated. Octavo. Cloth, $4.75 net.

The author of "Alone in West Africa," which was probably the most successful travel book of 1913, has here written a book of thrilling interest. Unknown China lives in her pages of vivid description.

HOME FOLKS **What 15c Will Do!**

You have wished for a paper that gives all the news of the world, and that tells the truth and only the truth. The **Pathfinder** is just the paper you have been longing for, and the little matter of **15c** in stamps will bring it to you every Saturday for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, **printed from large, easy reading type,** published at the National Capital, for the Nation; now in its **22nd** year of increasing success. This paper fills the bill without emptying the pocket—costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

TEACHERS

We have prepared interesting literature telling how The Independent is being used as a text-book in schools thruout the land in connection with English, Current History and Civil Government classes. Mailed free on request. **THE INDEPENDENT, 119 WEST 40TH STREET, NEW YORK**

the Church of Rome, it was also the result and expression of a rising Slavic solidarity and the awakening of the spirit of democracy.

Dutton. $4.50

FOR COLLEGE GIRLS

The advice given by Helen Dawes Brown in her *Talks to Freshman Girls* is concerned mainly with the acquisition of true culture and the methods of putting it to the highest use.

Houghton Mifflin. 75 cents.

PALEONTOLOGY AND PASSION

It is an event to find a book that brings the unexpected with every turn of the page. *Little Eve Edgarton* has the real flavor and charm of *Molly Make-Believe* and it needs Eleanor Hallowell Abbott's skillful touch to transform the curious heroine, an odd mixture of knowledge of paleontology and passion for a real home, into a fascinating if altogether impossible little person.

Century. $1.

FOR REAL HOUSES OR DREAM ONES

Varying tastes are rarely so satisfied in one short book as in *House Furnishing and Decoration* by Abbot McClure and H. D. Eberlein. Diagrams for the accurate, decorative hints for the artistic, ingenious suggestions and cut-and-dried figures for the practical, are all interesting enough to delight even that hobbyist, the imaginary house-builder.

McBride, Nast. $1.50.

BETTER BEFORE THEY GROW UP

The mischievous small boys and demure little maids of the first half of *The Copy Cat and Other Stories* are very amusing and of course the grown-ups in the last half suffer by comparison. But those who doubt the existence of a typical New England atmosphere and character do not know Mary E. Wilkins-Freeman.

Harper. $1.25.

AN UNFORTUNATE MIGRATION

After viewing the world thru the blue-spectacled eyes of a discontented young woman in Mary Findlater's *Tents of a Night*, the reader is rather indifferent to her somewhat purposeless conversion after an escape from death. It seems a pity to make a departure from that setting of the lowlands of Scotland which the Findlater sisters have made their own.

Dutton. $1.35.

A WICKED ANGEL

Enter Carmencita with elfin wistful face, a pathetic yet merry little figure, persistently dancing away the tears. With a wisdom beyond her twelve short years, she straightens out the tangled little romance of Kate Langley Bosher's *How It Happened* and bring it to a happy end. The small *dea ex machina* is quite as lovable and delightfully wicked in spots as the author's well-remembered *Mary Cary*.

Harper. $1.

WHAT'S IN THEM?

Professor Ernest Weekley in his delightful disquisition on *The Romance of Names* adopts the comparative method in seeking explanations, and he has used the Domesday Book and the Rolls as main sources in tracing the history of the thousands of names he discusses.

Dutton. $1.50

GERMAN RULE IN CAPTURED TOWNS

The proclamation which follows was issued by the officer in command of the Germans who occupied the commune of Grivégnée, near Liège. As a specimen of German methods of administration in conquered territory it is significant. We quote from the New York *Times:*

"Commune of Grivégnée.

"IMPORTANT NOTICE.

"Major Dieckmann gives notice to persons present that:

"1. Before 6 p. m. on the afternoon of September 6, 1914, all arms, munitions, explosives, and fireworks still in possession of citizens shall be given in at the Château des Bruyères. Whoever does not do this will be liable to the penalty of death. He will be shot on the spot or executed unless he can prove he was not to blame.

"2. All inmates of inhabited houses in the places of Beyne, Hensay, Bois de Breux, and Fléron must be indoors by nightfall today from 7 p. m., German time. The aforesaid houses must have lights kept burning as long as any of the inhabitants are still about. Doors must be shut. Any one not obeying these orders exposes himself to severe penalties. Resistance to orders entails the penalty of death.

"3. The commandant must not meet any difficulties when domiciliary visits are made. All rooms must be thrown open on summons. All opposition will be severely punished.

"4. From 9 a. m. on September 7 I shall permit the houses of Beyne, Hensay, Grivégnée and Bois de Breux to be occupied by their former inmates as long as no formal prohibition to stay in them has been pronounced against the aforesaid inhabitants.

"5. **In order that it may be certain that no abuse is had of this permission, the** burgomasters of Beyne, Hensay, and Grivégnée must draw up at once a list of persons who will be kept as hostages and changed every twenty-four hours in Fort Fléron, the first list to be drawn up for the hours of 6 P. M., September 6, to 6 P. M., September 7. The lives of these hostages are at stake, if the population of the above named communes does not keep quiet under all circumstances. During the night it is **strictly forbidden to make any signals with** lights. Bicycles may only be used between **7 A. M. and 5 P. M., German time.**

"6. I shall select, outside of the lists given me, persons who from noon on one day to noon on the next will have to stay as hostages. If the relieving hostage does not appear punctually the first hostage will be detained for another twenty-four hours in the fort. After the second twenty-four hours he may be shot if his substitute does not appear.

"7. In the first class among the hostages will be placed priests, burgomasters, and members of the administration of the communes.

"8. I require that all civilians moving about in my sphere of command, and especially those of Beyne, Hensay, Bois de Breux and Grivégnée, shall show respect to German officers by taking off their hats and bringing their hands to their heads in military salute. In case of doubt whether an officer is in question any German soldier should be saluted. Any one failing in this must expect a German soldier to exact respect from him by any method.

"9. **German soldiers may search carts and bundles belonging to the inhabitants of the district.** All disobedience will be severely punished.

"10. Anyone who knows that a greater quantity than 100 litres of petrol, benzine, benzol, or similar liquors is stored in any place in the above named communes and fails to give notice to the military commandant when there is no doubt about the place or quantity, incurs the penalty of death. Only quantities above 100 litres are in question.

"11. Any person not obeying without de-

REVISED RE-WRITTEN ENLARGED

Editors of the Second Edition { FRANK MOORE COLBY, M.A.
TALCOTT WILLIAMS, LL.D., L.H.D., Litt.D.
Director, School of Journalism, Columbia University

You Need An Encyclopaedia NOW More Than Ever Before

The War raises unusual questions daily. For instance:

What is a Mitrailleuse, Maxim, Machine Gun, Mortar, Siege Gun, Howitzer?

What is Shrapnel, an Army Corps, Division, Regiment, Battalion, Company?

What are Uhlans, Cuirassiers, Lancers, Walloons?

What are Moujiks, Turcos, Algerians, Senegalese?

What is the meaning of Moratorium, Landwehr, Landsturm, Armageddon, Cataclysm, Vodka, Verst, Kilometer, Pan-Germanism, Balance of Power, Foreign Exchange, Reichstag?

What are the "Rules of War," and who signed them?

What are the commercial centres of Latin America; what goods have these countries been buying from Europe?

How do you pronounce P-R-Z-E-M-Y-S-L?

The New International Encyclopaedia will answer satisfactorily the above questions.
It contains 30,000 more articles than any other standard encyclopaedia.
It is the Most Recent Reference Work in existence.

Its great mass of new, exclusive information will necessitate at least three additional volumes, making 24 volumes, instead of 21, as in the First Edition. It will present

THE TRUTH ABOUT THE WAR

and all other subjects of human interest. The revision goes steadily forward, despite current excitement and readjustments. It couldn't have been more opportune. This great Second Edition will contain new maps and new illustrations as well as momentous new facts. Its stories will be accurate, impartial, clear, concise, complete, and written in the entertaining literary style which added so materially to the popularity of the First Edition. It will contain the most modern, comprehensive and authoritative bibliography ever presented.

24 Volumes **80,000 Articles** **20,000 Pages**
New Maps **New Illustrations** **New Type Throughout**

Additional Volumes Ready in December

Printed on Thin Paper made especially for this edition—light, opaque, strong. It won't crumple.

Bound in Special Library Edition on regular book paper, bound in library buckram, practically in accordance with the specifications of the Binding Committee of the American Library Association.

THE COST LOWEST NOW

Immediate subscription can secure this edition now at the lowest price at which it will ever be sold. The price MUST be advanced as publication progresses.

THE OTHER FRANCO-PRUSSIAN WAR

From The Independent, October 13, 1870

We disdain the pitiful talk of shallow-brained philosophers who say that France is not fit for a republic. There is no nation in Europe—not even Russia—which is not at this hour more fit for a republic than for any form of government. And there is no nation in Europe which is *so* fit for it as France. If Prussia lifts her king's gauntlet to strike down democratic liberty in France, may her king never return to Berlin except behind muffled drums!

If Prussia meets with no reverses, if "the miracle of 1792" cannot be repeated, it is not only France that will be reduced to the rank of a third-rate power. England will be struck down to the same level by the very wind of the sword that has laid low her ancient enemy and modern ally.

As yet the Prussians have made no important demonstration against the fortifications of Paris. They have been busily engaged getting their siege-guns and mortars in position and preparing for an assault.

WARAWOCKY

'Twas Przemysl, and the Handelsblad
Did Rheims and Combles in the Pau;
All Soissons was the Petrograd,
And the Tsi-nan-fu-Kiao-Chau.
—*F. P. A. in the New York Tribune.*

Senator La Follette was talking about corruption.

"The public is to blame for this corruption," he said. "The public accepts the corruption in politics and finance too calmly. The public, in fact, reminds me, in this connection, of the old lady.

"An old lady sat knitting in her armchair when a young girl burst in on her.

"'Oh, grandma,' she said, 'father has just fallen off the roof!'

"'I know, my child,' the old lady answered placidly. 'I saw him pass the window.'" —*Philadelphia Bulletin.*

Powdered Perfection For the Complexion

TO give your skin a smooth, transparent radiance like Nature's own charm, use only this — the powder that clings and beautifies.

Ingram's
Velveola Souveraine
Face Powder 50c

CHAUTAUQUA

Chautauqua is doing more to nourish the intellects of the masses than any other system of education extant, except the public schools of the common country. GEORGE W. ATKINSON.
(*Governor of West Virginia*)

The Chautauqua Idea comprehensively stated is religion realized in life, and culture in practise, not merely in theoretical ways or barren creeds. Chautauqua cultivates faith and works.
HERBERT B. ADAMS.

If you have not spent a week at Chautauqua you do not know your own country. There and in no other place known to me, do you meet Baddeck and Newfoundland and Florida and Tiajura at the same table, and there you are of one heart and one soul with forty thousand people who will drift in and out—people all of them who believe in God and in their country.
EDWARD EVERETT HALE.

If I understand Chautauqua, this is what it means: It finds value in the vitality of its students. . . . It summons those who are alive with true human hunger to come and learn of that great world of knowledge of which he who knows the most knows such a very little, and feels more and more, with every increase of his knowledge how very little it is that he knows.
PHILLIPS BROOKS.

Nowhere else have I had such a vivid sense of contact with what is really and truly American. The national physiognomy was defined to me as never before; and I saw that it was not only instinct with intelligence, earnestness and indefatigable aspiration, but that it revealed a strong affinity for all that makes for righteousness and the elevation of the race. The confident optimism regarding the future which this discovery fostered was not the least boon I carried away with me from Chautauqua. H. H. BOYESEN.

Chautauqua is a place "beautiful for situation," where Nature and Art unite to bless all who land on its shores, wander among its forests, float on its waters, enter its hall, and enjoy its fellowships.

Chautauqua is an idea, embracing the "all things" of life—art, science, society, religion, patriotism, education—whatsoever tends to enlarge, refine and ennoble the individual, to develop domestic charm and influence, to make the nation stronger and wiser, and to make Time and Eternity seem to be what they are—parts of one noble and everlasting whole.

Chautauqua is a force, developing the realities of life in the consenting personality; applying to the individual the energies that make for character-wisdom, vision, vast horizon, ever-brightening ideals, strength of resolve, serenity of soul, rest in God, and the multiplied ministries that enable the individual to serve society.—(*From Bishop's Vincent's introduction to a Reading Journey thru Chautauqua by Frank Chapin Bray.*)

T. W. MOFFAT, Secretary.

IMPORTANT TO TEACHERS

It is letters like this below that show how teachers regard The Independent. We have more than one hundred similar letters in our files, and they show us that The Independent makes good with good teachers.

Altho it is the business of the instructor to keep in touch with a half dozen standard weeklies, the motives which led to a selection of The Independent for our work are these: This magazine presents a positive and sane discussion of vital matters, yet one from which we can occasionally fairly dissent. It presents definite information, and trustworthy, unencumbered by discussion. Its articles are brief enough to fall within the compass of high school pupils. It is devoid of nonsense and casuistry. It contains a great deal of current history in concise form. It is comprehensive and cosmopolitan in its contents. Now this looks very much as if I were writing an advertisement for the magazine, but I mean it simply as a statement of facts which formed our judgment. I esteem certain other magazines very highly, but I regard The Independent as peculiarly adapted to our needs.

Send for booklet "How To Use The Independent In The Teaching Of Civics."

A Dividend of Two Dollars per share will be paid on Thursday, October 15, 1914, to stockholders of record at the close of business on Wednesday, September 30, 1914.

G. D. MILNE, Treasurer.

DIVIDEND NO. 132.

THE HANOVER FIRE INSURANCE CO.

New York, October 1, 1914.

At a meeting of the Board of Directors, held this day, a Quarterly Dividend of Two and One-Half (2½%) Per Cent. was declared, payable at the Office of the Company, HANOVER BUILDING, Nos. 34 and 36 Pine street, to stockholders of record at close of business this date.

JOSEPH McCORD, Secretary

THE MARKET PLACE

THE REPUTATION OF AMERICAN RAILWAY SECURITIES

THE question of the opening of the Stock Exchange is receiving serious consideration by the Governors. This is a distinct sign of progress toward the return of normal conditions in the financial world. Any intimation as to a possible date for opening would still be entirely premature. But the mere fact that the question is under actual discussion by those upon whom the responsibility for decision rests would indicate that the fateful day is nearer than the financial world dared to hope a short time ago.

One of the most vitally important factors in the problem still remains—the question of European holdings of American railway securities. There is a strong conviction among the most influential and far sighted in Wall Street that if the opening of the Exchange is not to bring a devastating avalanche of selling orders from Europe, railway securities must meanwhile be made more attractive to foreign investors.

Attention is therefore concentrated upon the Interstate Commerce Commission, which will begin its reconsideration of the railway rate decision on October 16. The first decision in the case was rendered the day before the Exchange closed, so that no test was possible of the effect of the decision on prices. The moment the Exchange opens again, the test will come, accentuated by the conditions of war time.

There is strong reason to believe that a reconsidered decision favorable to the contention of the railways would do much to encourage the holding on of European investors. If they were given evidence that the railways are to receive not only fair but generous treatment at the hands of the Commission in this critical time in their history, they would be much less likely to throw their railway securities over.

During the month that is elapsing since the Commission announced the reopening of the case, those in control of the affairs of the Eastern railways are preparing their presentation of the case under the new conditions. The problem will be approached this time from the point of view exprest by an eminent publicist the other day when he said, "It is no longer a railway question, it has become a national question."

When the case is reopened by the Commission, the case for the railways will be presented, not chiefly or even primarily by railroad executives and operators, but by representatives of the real owners of the roads, the holders of railroad securities. As has been already pointed out in these pages railroad securities are largely held in this country by those who are in effect trustees for large groups of the public. It is accordingly of the greatest importance that the point of view of those who own the roads should be set forth.

THE FOREIGN EXCHANGE FUND

The first instalment of the $100,000,000 gold fund has been collected and forwarded to Ottawa. The committee in charge of the fund has notified the banks who are subscribers to the fund to be prepared to pay in twenty-five per cent of their respective contributions. The first ten millions was contributed by banks in New York City, the National City Bank putting in $2,000,000; the Chase National, the National Bank of Commerce, the First National, the National Park, the Hanover National, the Bankers' Trust Company, the Guaranty Trust Company and the Central Trust Company a million dollars each. It was natural that the financial center of the country, which is to contribute fifty-five of the hundred millions of the fund, should make the first contribution.

We suspect that the exact purpose and working of this fund are not perfectly clear to all who would naturally be interested in its purpose. The best explanation that we have seen has been given in an editorial in the New York *Evening Post*, and we cannot refrain from reproducing it:

> Put in the simplest way, the plan for a pro-rata contribution of that sum of gold from the hoardings of banks in the larger cities of the country was adopted because the chaotic conditions prevalent in foreign exchange made careful and concerted action necessary. Our immediately maturing indebtedness at London was larger than the accruing supply of commercial drafts on London could meet. The Bank of England had consented to accept, as a cash payment in London, gold shipped from here to Ottawa, Canada, and deposited there in trust. But some of our banks were unwilling to give up gold at all for export under existing circumstances; others were willing to do their part in such a process, but objected to bearing the whole burden, while other banks refused to touch their own gold reserves. As a consequence, Europe got the impression that our market had virtually suspended gold payments on international account.
>
> This condition placed the foreign exchange market in an almost unworkable position. It handicapped very seriously our foreign trade, because both exporters and importers found it extremely difficult to arrange for international payment. That was the reason for the raising of a provisional $100,000,000 fund in gold, to be paid over if and when required by all the reserve city banks in proportion to their individual gold holdings. Yesterday, $10,000,000 of this gold was sent to Ottawa, where a credit is now established against which exchange bills to that amount may be drawn, such bills being valid as drafts in the London market. How much more gold, if any more, will have to be sent depends on circumstances yet to be developed. The obvious advantage of the issuing of such exchange by a centralized committee is that a definite and concerted policy has replaced complete uncertainty of purpose. No doubt, the difficulties of the committee in discriminating between applicants for

drafts on London has only begun. The whole undertaking is necessarily more or less experimental. Its high practical value, however, is that it asserts and vindicates our international credit. In accordance with usual experience, the fact of this readiness to meet required payments in Europe should reduce the number of accruing liabilities on which extension is refused and immediate payment demanded.

In a word, the fund is a measure for paying our international debts. It is a get-together movement on the part of the banks of the country to maintain by collective action our common credit before the world.

During the past week an important step was taken by the London Stock Exchange which should be a distinct help to the situation here. The general committee in charge of affairs there have adopted a rule that no trades in American securities shall be made by members of the London Exchange at prices lower than the closing prices in New York on July 30. This action is taken to mean that the British market, which forms the best index of sentiment abroad on American securities, will not flood our market with liquidation. It is, further, only one more instance of that spirit of coöperation which is the best possible guarantee of ultimate safety that the financial world can have.

A prominent leader among the Democrats in Congress said the other day: "One good effect of the war will be that we shall have no more demands from the cotton growing regions for legislation directed against the Cotton Exchange. The planter realizes, now that it is shut off, the service which the Exchange does for him. And the same will be true of the Stock Exchange." It's an ill wind—

The Buy-a-Bale campaign, whose purpose is to induce each of us who has fifty dollars or so to spare to buy a bale of cotton and hold it in storage until there is a market for cotton again, is an admirable one. It is based upon the principle of cooperation and mutual helpfulness which ought to rule in times of stress like these. The war has hit the cotton planter a blow between the eyes. Strangely enough the blow lands in a year when the South is likely to have the second largest crop in its history. The price of cotton would have been low enough in any case. But when to low prices is added a sharply narrowed market, the case of the planter is serious indeed. It would be good neighborliness to buy a bale."

In times of stress men as well as conditions easily revert to the primitive. In the lobby of a popular New York hotel stands a bale of cotton, with this notice posted conspicuously above it: "Cotton good as gold. Cotton Warehouse Receipts are accepted by the ——— in payment of room bills." This is barter pure and simple. It also looks like pretty good advertising, which is decidedly more modern.

The index number of the cost of living prepared by the *New York Times Annalist* shows a steady decline during September. During August the average wholesale price of the twenty-five commodities selected to represent a family's food budget, on which the index number is based, shot up like a rocket from 142 to 163. During September it receded to 153. So much, then, is the roof pushed back from the door.

The following dividends are announced:

Associated Gas & Electric Company, preferred quarterly, 1¾ per cent. payable October 15.

The Hartford Fire Insurance Company, quarterly, 7½ per cent.

THE TRUTH ABOUT GERMANY

FACTS ABOUT THE

WAR

The above notable Pamphlet, which is now exciting worldwide interest, and which gives the origin and cause of the present European conflict from the viewpoint of Germany's most eminent men, issued under the patronage of men like Fuerst Buelow, Albert Ballin, Prof. Dr. von Harnack, Prof. Dr. Lamprecht, Dr. Kaempf, has just been published in this country under the auspices of an American committee.

This Pamphlet can be secured from Booksellers and Newsdealers generally and from the following Booksellers in New York City:

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

The Most Costly War

that has involved the whole human race for all time is the conflict between Nature and Disease. The first move in the warfare against Disease is to clear the alimentary canal of all the toxins of past food follies by eating Nature's food—

SHREDDED WHEAT

the food that keeps the bowels healthy and active by stimulating peristalsis in a natural way and at the same time supplies all the tissue-building material in the whole wheat grain prepared in a digestible form.

"War prices" need not disturb the housewife who knows the nutritive value and culinary uses of Shredded Wheat. It contains the maximum of nutriment at smallest cost. Delicious for breakfast with hot or cold milk or cream, or for any meal with sliced pears, sliced peaches, or other fruits.

"It's All in the Shreds"

CONDUCTED BY W. E. UNDERWOOD

THE CHARWOMAN

I have an office in one of the more comfortable and less modern down-town buildings. It is one of the solidly built old-fashioned brick and stone structures so common thirty years ago, of but eleven stories, with wide tile-paved halls and roomy high-ceilinged offices. I like it because of the amplitude of its accommodations and the air of generosity which everything about it exhales. So I stay on year after year, resisting every spring the seductive offers made by the soliciting agents of more pretentious buildings.

In the years I have been here, charwomen have come and gone on my floor, as doubtless they have on the other ten floors. I have known them all. Most of them have been very ordinary persons, quite unfitted, I believe, for any but such work as that in which they were then engaged. There has been an occasional exception, one that would stimulate my imagination in an effort to account for the misfortune which reduced her to the necessity of wielding scrubbing brush, duster and broom in such a place as this.

You may be sure that all these women are selected principally on the qualification that their physical strength is equal to the drudgery they are called upon to perform and endure. No weakling would long survive this wearing labor.

Among these women came one who excited my curiosity and sympathy. I felt instinctively when I first saw her in the hall, sleeves rolled to the elbow, a pail of warm suds in one hand and a broom in the other, that she was one of the dramatis personæ in one of the innumerable tragedies — lived thru rather than acted—so common to humanity. And I was sure of it on a later occasion when I heard her say in well modulated tones to her work companion, as if commenting on some statement made by the other: "Yes, if it were true." Perhaps it was only my fancy, but it pleased me to think that the exactitude of the English of this tall handsome woman of forty was not an accident. The form in which the reply was couched seemed to modify what was doubtless a dogmatic assertion of the other woman—always a gracious thing. There were other small evidences of superiority—a shapely head and forehead, hair simply but becomingly arranged, erect posture and graceful carriage.

This is one of the charwomen we have had on our floor to whom I never spoke. She went about her duties, averting her eyes whenever she met one of the tenants in the hall, and unless one of them had good reason to speak to her on some matter connected with her work, and there are few such reasons, it seemed an imposition, a taking advantage of her position, to address her. So, of course, I never knew in the remotest degree, what were the circumstances which had brought her fortunes so low. But I felt that some man was mainly responsible, and that life insurance, wisely employed at the right time, would have saved her. This applies to the fathers, sons and husbands of all women, whether they have or have not been trained to earn their own living.

There is a small picture on a card which comes into my hands at irregular intervals, and has been coming for some years past. In the foreground is the sitting figure of a worn and weary woman with uprolled sleeves, her head resting against the base of a marble column, her right hand grasping a scrubbing brush; by her side on the tiled paving is the pail of water and the wiping cloth. In the background is another column and the broad sweep of a flight of marble steps. Underneath the latest of these pictures received I find the following legend:

MOTHER

Yet He Failed to See the Value of
LIFE INSURANCE.

When my eyes fell on that card this morning, my mind immediately went back to the charwoman I have so haltingly described. Intelligent, perhaps well educated and refined, there was no service she could so readily render in exchange for bread and shelter as that which lay within the compass of her superb physical endowments. The women of the home, those who have not been trained in some business occupation, are peculiarly helpless when thrown on their own resources, especially if they have reached or past the age of forty. There are few wage-earning places open to them. Whatever their intellectual qualifications may be, their lack of experience and training serve as gates that shut them out of positions in which the labor is light and the pay fair. Thus many of them must enlist in the ranks of those who are the world's drudges—who do its hard, dirty and poorly paid work.

These are the people for whom life insurance performs its noblest service —these women and their helpless little ones. It preserves their homes, keeps them together, and provides education and training for the children, enabling the boys in a few years to fit themselves as home-keepers and defenders.

I am quite sure the charwoman of whom I have written deserved a better fate than that I witnessed. I imagine she was the mother of children and, of course, I conclude that their father was dead. Certain it is he left them no insurance.

How many prospective charwomen do you know?

AN INTERESTING COMPARISON

Here is a curious and interesting fact: Each soldier in the battle of Gettysburg had the same chance of surviving that bloody engagement as a man now forty-nine years old has of reaching the age of fifty-three. A writer in *Field Notes*, published by the Northwestern Mutual Life Insurance Company, after studying the question, concludes that the chances of death in battle are not so great as might be supposed. He uses the experience at Gettysburg, cited above, and continues:

"But what a difference in our attitude toward these chances. We are such slaves to our emotions that no one can contemplate entering battle, with all its shocks to the feelings, except under a keen realization of the probability of death. We would pay almost any possible price for life insurance. But eliminate the imagination of battle pictures, take out the emotional factor, and we pass age forty-nine with the most serene confidence that we shall live to be fifty-three. Yet our chances of doing so are no better than the chance of surviving this bloodiest battle of the Civil War."

He brings it closer home when he asks the insurable man: "You know something of the horrors of battle. If you knew that this week you would have to fight thru a bloody battle, like Gettysburg, would you sign the application for insurance to protect your family?"

A list of twenty-one battles of the Civil War has been prepared showing the death rate per 1000 of those engaged alongside a column showing the equivalent risk in life. Here it is:

Battle	Death rate per 1000	Equivalent risk in life
First Bull Run	40.7	Age 26 to 31
Shiloh	42.2	" 30 to 35
Seven Pines	25.1	" 48 to 50
Seven Days	27.1	" 36 to 39
Second Bull Run	45.4	" 35 to 40
Antietam	39.7	" 40 to 44
Perryville	25.6	" 32 to 35
Fredericksburg	18.1	" 55 to 56
Chancellorsville	26.3	" 42 to 44
Gettysburg	55.5	" 49 to 53
Vicksburg (Cam.)	42.0	" 42 to 46
Stone's River	56.9	" 47 to 51
Chickamauga	47.6	" 23 to 29
Chattanooga	20.5	" 42 to 44
Wilderness	31.2	" 42 to 45
Spottsylvania	44.3	" 33 to 38
Cold Harbor	33.0	" 28 to 32
Atlanta (Cam.)	59.2	" 39 to 45
Winchester	26.9	" 35 to 38
Cedar Creek	27.9	" 37 to 49
Nashville	14.8	" 52 to 53

A. R. P., Washington, D. C.—You doubtless mean the New York Life Insurance and Trust Company. It has not transacted a life insurance business for many years, and there remain in force but two policies for $6000. It is, however, a large and prosperous trust company.

J. W. W., Cincinnati, Ohio—Both are good companies and equally entitled to your confidence. You must decide the question yourself.

T. J., St. Paul, Minn.—According to an examination recently made by the New York Insurance Department as of June 30, 1914, the net surplus of the company mentioned was $252,678.15.

Fair Play in Telephone Rates

IT is human nature to resent paying more than any one else and to demand cheap telephone service regardless of the cost of providing it.

But service at a uniform rate wouldn't be cheap.

It would simply mean that those making a few calls a day were paying for the service of the merchant or corporation handling hundreds of calls.

That wouldn't be fair, would it? No more so than that you should pay the same charge for a quart of milk as another pays for a gallon.

To be of the greatest usefulness, the telephone should reach every home, office and business place. To put it there, rates must be so graded that every person may have the kind of service he requires, at a rate he can easily afford.

Abroad, uniform rates have been tried by the government-owned systems and have so restricted the use of the telephone that it is of small value.

The great majority of Bell subscribers actually pay less than the average rate. There are a few who use the telephone in their business for their profit who pay according to their use, establishing an average rate higher than that paid by the majority of the subscribers.

To make a uniform rate would be increasing the price to the many for the benefit of the few.

All may have the service they require, at a price which is fair and reasonable for the use each makes of the telephone.

These are reasons why the United States has the cheapest and most efficient service and the largest number of telephones in the world.

The ANGELUS Player-Piano Is Your Royal Road to Music

THE ANGELUS provides you with all the skill—the technique of the most accomplished pianist. More than this, it gives you a simple guide to the way each piece should be interpreted and a marvelous means by which you yourself can accomplish it.

THE WAY is through the Artistyle roll markings. The three characters "A" (Accelerando), "R" (Ritard), "T" (Tempo), spell art for you in the language of music as well as conversation. The correct tempo or phrasing of every note is indicated for you—while the change of the line of characters from left to right indicates the varying degrees of loud and soft.

THE MEANS. The marvelous Phrasing Lever (patented and exclusive to the ANGELUS) is the "means" by which you may follow the "way" indicated by the Artistyle. The slightest pressure on this marvelous device will affect all the variations of tempo, all the delicate nuances that go to make up artistic piano playing.

THE HUMAN TOUCH

The ANGELUS is the Only Player That Compares With Hand Playing because it is the only complete and perfect player. It is equipped with the Melodant that accents the melody, and the Sustaining Pedal Device, both self-acting—while the Diaphragm Pneumatics give exactly the same touch as the human finger.

Knabe-Angelus—Grands and Uprights. Lindeman & Sons Angelus—Upright.
Emerson Angelus—Grands and Uprights. Angelus Piano—An Upright built expressly for the Angelus.
In Canada—The Gourlay-Angelus and Angelus-Piano.

Any of these instruments can be played by hand in the usual manner.

LE MOT JUSTE

I may add that not only the shooting of prisoners but the burning of them alive has been commended by a portion of the German press, tho it is fair to say that other portions consider these measures excessive.—*Despatch from Copenhagen to the London Times.*

This characterization of burning alive is hardly "excessive."

"Wasn't King John a wicked man?" said the professor's little daughter the other evening. "He used to run over people with his motor-cars."

The professor was puzzled. "Haven't you made a mistake?" he inquired doubtfully. "Surely your teacher didn't tell you that?"

"Oh, yes, she did. She told us that King John ground down the people with his taxis."—*Town and Country.*

A girl who saw the Atlantic Ocean for the first time was standing on the beach gazing dreamily over the expanse of foaming water.

"So this is the first time that you've ever seen the ocean," said her escort.

"Yes, the very first time."

"And what do you think of it?"

"Ah!" she sighed in ecstasy, "it smells just like oysters."—*National Food Magazine.*

A story of the wonders of "red tape" is told by the "Regiment."

In giving vent to his feelings on his discharge, an old soldier wrote to his late colonel:

"Sir—After what I have suffered, you can tell the Army to go to ——!"

In due course he received the following:

"Sir—Any suggestions or inquiries as to movements of troops must be entered on Army Form 123XYZ, a copy of which I enclose."—*Army and Navy Journal.*

NEWS FROM THE FRONT

The Allies at the Germans lunged
And won a fight at Name-Expunged.
But swiftly reinforcements came
From German-Censor-Canned-the-Name.
And French's army was defeated
Upon the field of Place-Deleted.
From Town-Blue-Pencilled, lovely spot.
The Uhlans galloped, fierce and hot.
But hundreds bit the dust and grass
In Place-Press-Bureau Would Not-Pass.
The hottest work in all the field
Burst round Locality Concealed.
To understand these frightful scraps,
Pray, reader, please consult the maps.

JUST A WORD

The first of the series of eight articles describing the difficulties of the past hundred years between Great Britain and this country and the manner of their peaceful settlement will appear in the Christmas Number dated December 21—the nearest issue to the centennial of the signing of the Treaty of Ghent on Christmas Eve, 1814. The articles have been written by Mr. Preston W. Slosson, of Columbia University, and each is compact, comprehensive, and of very timely interest in this time of the Great War. The Independent offers to every school in the United States a Chautauqua Peace Centenary Medal, to be awarded for the best essay based on these articles. Full details as to this Prize Contest will be furnished on application.

This is the kind of letter we like to see. It comes from Honolulu: "During your campaign to increase the subscription list it was my privilege to add the names of several friends. It may interest you to know that during one afternoon a few days ago three of these friends thanked me for having remembered them and exprest their admiration of your publication. Enclosed please find check covering ten 'To the End of the War' subscriptions."

The President of the American Civic Association, Mr. J. Horace McFarland, says in a personal letter: "I have been intending to write you to express my own appreciation of the strength, breadth and wisdom of The Independent as it now appears. I trust it will abundantly advance and greatly prosper."

Brief Bits from Recent Letters: "My freshman boy at Harvard writes that he doesn't see how he can possibly get along without The Independent. . . ." "I am a stewardess, more on sea than on land. I find The Independent's articles the most reliable, the most interesting and the best written of any magazine that I read, indeed so much so that I get six extra copies to lend out, that I may have my personal copy for filing. . . ." "You conduct a newspaper and you have done well to let all speak. Truth never suffers in this way. Your illustrations also have been excellent: in short, in the language of the street, 'you have done a good job.'"

"It is very clearly recognized in England," writes Sydney Brooks, the London correspondent of The Independent, in an article to be published October 26, "that there is reserved for the United States in this war a part that will test, as it has never been tested before, the capacity of American statesmanship."

CALENDAR

The annual meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at the University of Virginia *October 22* and *23*.

The twenty-fifth anniversary of the College Settlement at 95 Rivington street, New York City, is to be celebrated on *October 31*. It is proposed to raise a testimonial fund of $100,000.

The National Society for the Promotion of Industrial Education will meet at Richmond, Virginia, *December 9-12*.

Barnard College, in Columbia University, will celebrate its twenty-fifth anniversary on *November 5*.

World's Temperance Sunday will be observed on *November 8* in most of the states.

The twelfth annual Philadelphia Water Color exhibition will be held at the Philadelphia Academy of the Fine Arts, *November 8* to *December 13*.

From *November 9* to *13* will be held the fourth American Road Congress, at Atlanta, Georgia. J. S. Pennybacker, Colorado Building, Washington, D. C., is secretary.

The annual convention of the National Suffrage Association will be held at Nashville, *November 12* to *17*.

A Business Efficiency Exposition is to be held in Cleveland, Ohio, from *November 14* to *21*, by the Cleveland Chapter of the American Institute of Banking.

The sixth annual Methodist Missionary Conference will be held at Battle Creek, Michigan, *November 17-20*.

A Colonial Exhibition at Samarang, Java, will continue to *November, 1914*. It is to "give a comprehensive picture of the Dutch Indies in their present prosperous condition attained since the restoration of Dutch rule in 1814."

An international horse show is scheduled at Chicago for *November 28* to *December 5*.

The fifth International Congress of the American Republics will hold its opening session on *November 29* at Santiago, Chile. It will be in session for several weeks, adjourning about New Year's, 1915.

The American Public Health Association holds its forty-second annual convention at Jacksonville, Florida, *November 30-December 6*.

The tenth annual convention of the American Civic Association will be held at Washington, D. C., on *December 2, 3* and *4*.

The march of the new form of city government is so rapid that a City Managers' Convention is to be held at Springfield, Ohio, on *December 2, 3* and *4*. C. E. Ashburner, city manager of Springfield, is in charge.

The National Society for the Promotion of Industrial Education will be held at Richmond, Virginia, *December 9-12*.

The eleventh annual convention of the American Road Builders' Association, the fifth Good Roads Conference, and the sixth annual exhibition of machinery and materials will take place in the International Amphitheater, Chicago, *December 14-17*.

ADMIRAL SIR JOHN JELLICOE

COMMANDER-IN-CHIEF OF THE BRITISH HOME FLEETS. AN ARTICLE ON ANOTHER PAGE RAISES THE QUESTION OF THE PRESENT SUPERIORITY OF THE BRITISH NAVY TO THAT OF GERMANY. SIR JOHN JELLICOE, BY THE WAY, WAS DECORATED BY EMPEROR WILHELM FOR SERVICES IN CHINA

The Independent

VOLUME 80 | MONDAY, OCTOBER 19, 1914 | NUMBER 3436

FORSWORN!

ONCE more the brave little land of Belgium writhes beneath the blows of the invader. A ceaseless hail of destruction beats upon the ancient and well-loved city of Antwerp. The skies redden with the flames of burning homes, the air shudders with the wailing of the wounded and the moaning of the homeless.

Out of the city by a narrow way stumbles and staggers a pitiable host, women, children, the aged, the sick, the crippled. The hideous explosions of the shells from the giant guns behind them galvanize their weakness into spasmodic effort. Homeless and harried they face a menacing fate. Their hands are empty, their mouths cry to be filled. Their minds are palled by a black mist of terror and despair. Their souls call upon the God of mercies for succor.

Antwerp is falling—has already fallen.

And why, forsooth?

Because Germany "could not wait." Because the War Lord and his counsellors had long since chosen, for the assault upon his ancient foe, this path over the prostrate body of the people he had sworn a solemn oath to protect.

When the Great War is over, the cold, calm mind of history will weigh out the measures of responsibility and apportion them among the nations. Today men may only prophesy what that apportionment will be.

But when the day of reckoning shall come there will be found indelibly written on the page against the German nation a fateful list: Liège, Louvain, Termonde, Malines, Namur, Alost, Mons, Antwerp.

And the page will bear the ineffaceable stain of a bar sinister, inscribed with a motto of faithlessness and contempt, "A scrap of paper."

WHAT MIGHT MAKES RIGHT?

WHEN the Great War is over the world will be staggered to discover how much has been destroyed besides life and property. Already there is some realization of the irreparable loss of art possessions of the race. Here and there no doubt individuals have reflected also upon what it means to cut off scientific investigations in progress, creative impulses that never will find realization. But it will be when the work of recreating civilization is taken up that the full extent of the devastation wrought will fall with appalling force upon the human mind.

The world can never be what it was beginning to be when the conflict began. Thruout history social evolution has proceeded, as Lester F. Ward was fond of insisting, not along straight lines of growth like the main stem of a pine tree, but irregularly, like a vine which, finding its progress one way impossible, buds and branches in any other line of least resistance. The European nations have come to one of these fateful checks in their development. In directions that were not thought of five years ago the new collective life of mankind must now go on. Plans that were alive with hope and promise have gone into the wreckage of the past. It is beyond the power of imagination to picture the extent to which the ways of a world now to be reshaped will differ from the ways of the world that is gone.

One clue, one indication only, affords guidance to our speculations upon the general direction that the new trial and error experiments of the nations will take. It has become clearly evident that one of the biggest things at stake in this war, perhaps the biggest thing, is the system of moral ideas and practises upon which civilized society has hitherto securely rested. The enlightened and decent part of mankind had grown accustomed to assuming without argument that moral right and temporary expediency are different things. It had become confident in the feeling that truth, straightforward dealing, personal and national honor are of supreme value, to be defended under all circumstances and at any cost. This scheme of morals has been assailed. Already for many years it had been referred to now and again as "the old morality," and here and there one met with the assertion that a "new morality" grown out of our newer science, and altogether superior, was to take its place.

When, however, a lunatic named Nietzsche formulated the new moral philosophy, his cardinal thesis was not at first taken seriously by sane people. The contention that "might makes right" did not seem to offer anything new. Machiavelli and his political disciples, it had been supposed, had presented about all that could be offered in defense and exposition of that doctrine. This proved to be a mistake. Nietzsche had heard of Darwin, and he believed that he discovered in the teaching that evolution proceeds thru a struggle for existence in which the strong survive and the weak perish a new and impregnably scientific demonstration of the truth of the Machiavellian view. The idea of strength, brutal, conquering, and unconquerable took full possession of his insane mind. But his was a mind of genius, as many an insane mind has been, gifted with powers of expression that fascinated minds by no means insane or contemptible.

His arguments began to receive attention, and presently, as we now know, to win adherents not by thousands merely, but by hundreds of thousands and millions.

One party to the awful struggle now going on rests its case frankly on the Nietzschean philosophy. The conquering nation, this side declares, is the only moral nation. It only has the power to live, to do things, to achieve. The weak individual must go down before the superman. The small states, the weak nations, not only have no rights that the strong are bound to respect; they are essentially evil; they cumber the ground; they stand in the way of progress. It is the duty of the strong either to destroy them or to subjugate and regenerate them. Therefore treaties that obstruct the designs of the valiant are scraps of paper. Words of honor are children's prattle. Suffering has no claim. Pity is the only original, essential and unforgivable sin.

This is the morality that we are frankly and somewhat stridently warned is to supersede the "old" morality when the collective superman has subjugated Europe and America and has entered in full swing upon the God-commanded task of imposing a superior culture upon the human race.

In view of the industry with which this new morality is being preached just now in America we may be pardoned, we trust, for calling attention to an examination of its claims that was made some years before this war loomed as an immediate possibility, and which therefore was uncolored by the partizan feeling which now inevitably mingles with fresh argument.

Fourteen years ago Professor Giddings in a study of the forces that make for war and peace, which was published under the title of *Democracy and Empire*, made a critical examination of the claim of the Nietzschean morality to acceptance as scientific, and legitimately derivative from evolutionist doctrine. The major premise from which Nietzsche's conclusions were drawn Professor Giddings held must be conceded. There is a struggle for existence, and it does doom to nervous disorder and ultimate extinction those family and racial stocks that are persistently weak or unsound in a purely physiological sense. "Beyond any doubt, physiological power, physiological vigor, is the only enduring basis of human excellence. Any contrary doctrine is a form of the self-destructive philosophy that existence is an evil." The error, then, of Nietzsche and his disciples is not in their assumption of this major premise. It lies in a totally inadequate conception of the myriad forms in which physiological power may manifes itself thru that process of differentiation which is an essential phase of all true evolution. And because differentiation is an essential phase, the maxim that might makes right in the abstract form in which we commonly hear it quoted is neither true nor untrue, but only meaningless. Might makes right or makes wrong according to the form of the might. "Might differentiated, physiological power manifesting itself thru unnumbered different channels duly coördinated—this might makes right and is right. Might crude, undifferentiated, contending against might differentiated and organized, makes for wrong and is wrong."

For example, without quite saying so, Nietzsche uncritically assumes the savage to be a stronger man than an intelligent business or professional man or competent artizan in a civilized community. Actually, however, the investigator would have to search long and far to find a savage who, day after day for ten hours a day and six days in the week could strike the number of blows on an anvil regularly struck by an ordinary blacksmith in an American country village. And the amount of mere physical energy, irrespective of skill, that is expended night after night by an average violin player in a good modern orchestra not one savage in ten thousand would be capable of storing up and giving forth. Or, once more, it is doubtful if anywhere on the surface of the earth the savage could be found whose power to absorb and give forth energy in the slightest degree approaches that of the business manager of a great modern railway system.

How far, then, does the distribution and differentiation of might extend? Obviously in the higher civilizations to all the activities of intellect and of emotion, to art and to science, to compassion and to mutual aid, to the creation of ideals, to the passion for justice and equality. For into all of these things has the might of the human race been projecting itself thru the centuries of historical evolution. They have not impaired power but have increased it. This evolution and this alone has been the development of might into right.

The issue is clearly drawn, and the future of mankind is in the balance. Is the world to be given over to the might of savagery, ruthless, crude, regarding neither mercy nor obligation, or is it to go on building ever fairer creations by might converted into right?

CONTRABAND OF WAR AND THE RIGHTS AND PERILS OF NEUTRALS

THE diplomatic dispute between Great Britain and the United States—already in a fair way toward harmonious settlement—over shipments from this country to Holland, opens up the whole question of contraband of war. It is a long and much vext question. No complete codification of the rules of contraband has ever been accepted by all the great powers. On this matter of contraband there is continuing conflict between the interests of belligerent and neutral powers. It is, in the very nature of the case, difficult for a nation to take the same view of the subject when it is belligerent that it inevitably takes when neutral.

Trade between neutral nations has an unquestionable right to go on, in spite of war, without molestation. On the other hand, a belligerent nation has an unquestionable right to prevent its opponent from receiving from neutral nations materials for use in prosecuting the war. Each warring power, in so far, at least, as the enemy can compel it to do so, must fight it out on its own resources. But the warring powers must not damage, by any overt act, the rest of the world that remains neutral.

Contraband of war consists of goods which, in furtherance of these principles, neutral states are forbidden by international law to supply to a belligerent. There are two kinds of contraband, absolute and conditional.

Absolute contraband includes materials of direct application in naval and military armaments—guns, cartridges, projectiles, powder, military clothing and equipment, saddle and draft horses, warships, armor plate.

Conditional contraband includes articles which are fit for, but not necessarily of direct application to, hostile uses. Into this class fall foodstuffs, forage, money, boots

and shoes, boats, railway, telegraph and telephone material, fuel, barbed wire, horse-shoes, and other articles of similar character.

The line of demarkation between the two classes of contraband shifts from time to time, either because of new developments in inventions and the art of war or because of the changing point of view of a particular power. In the days of wooden ships, for instance, no such item as armor plate would be found in the list of contraband. On August 5 Great Britain notified the nations of the world that it has transferred flying machines from conditional to absolute contraband.

In 1909 the leading naval powers came together at London, on the invitation of Great Britain, in an attempt to codify the international rules in regard to contraband. The Declaration of London was the result of their deliberations, but unfortunately Great Britain itself has not ratified this important document.

In the Declaration there are included not only the two lists epitomized above, but a third, of articles which may not be declared contraband of war. This list includes articles used exclusively for the sick or wounded or for the vessel whereon found, raw cotton, wool, silk, jute, flax, hemp and other raw material of textiles; rubber, resins and gums; manures, including nitrates and phosphates; ores, clays, marble, bricks, slates and tiles; china and glass, paper and paper stock, soap, paint and varnish; sundry chemicals; agricultural and industrial machinery; precious and semi-precious stones and watches; fashion and fancy goods; feathers, hair and bristles; articles of household or office furniture or decoration.

Two articles of the Declaration of London describe the fate that awaits contraband, absolute and conditional, when the neutral ship in which it is being carried toward one belligerent state is met by an armed vessel of the other belligerent. They read:

Article 30.—Absolute contraband is liable to capture if it is shown to be destined to territory belonging to or occupied by the enemy, or to the armed forces of the enemy. It is immaterial whether the carriage of the goods is direct or entails transshipment or a subsequent transport by land.

Article 33.—Conditional contraband is liable to capture if it is shown to be destined for the uses of the armed forces or a government department of the enemy's state, unless in the latter case the circumstances show that the goods cannot in fact be used for the purposes of the war in progress.

An example or two will make the matter clear. In considering them the basic principle should be kept in mind: Neutrals attempting to give aid to a belligerent by supplying him materials for carrying on war do so on peril of capture and confiscation by the other belligerent. In this connection it should be remembered that no responsibility rests upon a neutral nation to prevent the shipment of contraband from its ports to a belligerent. The ship carrying the contraband merely does so at its peril.

An American vessel carrying to a German port a cargo of agricultural machinery, or raw hides, or paper, or watches, must remain unmolested by the British fleet in the North Sea, unless a blockade of the German ports shall have been declared by the British and maintained by their fleet.

If an American vessel were to attempt to carry to a German port a cargo of gunpowder, or mules, or military uniforms, or armor plate, she and her cargo would be subject to capture by any British cruiser.

If an American vessel should sail from New York for Hamburg with a cargo of barbed wire and horse-shoes and harness, she could be taken into port by a British cruiser, but the ultimate right of the British Government to confiscate her cargo would depend upon the determination in a prize court of the question whether the cargo were in fact destined for the use of the German army.

If an American vessel were to sail from Philadelphia with a cargo of coal which it was intended to transship to a German warship outside the three-mile limit, her cargo would be subject to capture by British cruisers; but the fact that the coal was intended to be so transshipped must be definitely established in the prize court.

These cases are simple. There would probably be no room for conflict of opinion as to the application to them of the basic principles. For in each of these cases the immediate destination of the goods is beyond question either the territory or the armed forces of a belligerent. But there is great room for disagreement as to the application of the principle and the respective rights of belligerent and neutral when the immediate destination is a neutral port but the ultimate destination an enemy port

It is this question which is involved in the present diplomatic controversy between Great Britain and the United States. Great Britain had tentatively asserted the right to take possession of shipments of foodsuffs and copper from this country to Holland on the assumption that their ultimate destination was Germany and their ultimate purpose the feeding of German soldiers and the manufacture of munitions of war for the use of the German forces. Against this view the United States protested, with complete success in regard to the grain and other food supplies and with probable success in regard to the copper.

Curiously enough it was a doctrine whose application had been largely extended, against the will of other nations, by the United States during the Civil War. The doctrine is known as that of "continuous voyages."

This doctrine declares that it is the ultimate destination of contraband goods which determines whether they are subject to capture or not, and not the immediate destination of the neutral ship on which they are being carried. The doctrine was enunciated by England at the end of the eighteenth century to meet the acts of American ship owners who were trying to get around England's prohibition of trade in neutral vessels between the colonial and home ports of England's enemies. It was elaborated by the United States in 1863 to permit the capture of contraband being carried in British ships from England to neutral ports in the Carribean, but intended, in the belief of the American Government, for the forces of the Confederacy.

In 1896, the Institute of International Law adopted a rule embodying the doctrine, which reads as follows:

Destination to the enemy is presumed, where the shipment is to one of the enemy's ports, or to a neutral port, if it is unquestionably proved by the facts that the neutral port was only a state towards the enemy as the final destination of a single commercial operation.

But in the Declaration of London a compromise was effected. The doctrine was affirmed in relation to absolute contraband, as set forth in Article 30 quoted above. In relation to conditional contraband the doctrine was affirmed only in relation to a nation having no sea-

board. In the words of an eminent writer on international law: "Few compromises are popular at the time, but some work admirably in practise. Let us hope that this will be the fate of the particular compromise we have just considered."

Great Britain's first position in the case of the recent shipments from this country to Holland was a direct reversal of the principle enunciated in the Declaration of London. Her yielding to our protest was a recognition of that principle.

It should be inconceivable that England and the United States should allow any serious quarrel to arise between them as a result of the Great War. Both countries are to be congratulated at the prompt removal of this first cause of controversy.

ON KEEPING A BAROMETER

THE Irishman "keeps a pig." The old maid "keeps a cat." It is much more fun to keep a barometer. That is to say, it is more fun if you are interested in the weather. And you are. If you will not admit it, you are either an untrustworthy witness or a *lusus naturæ*, a jest of nature.

Weather is one of the three great universal experiences of mankind. All men are born, all men die, all men are "weathered." The rain falls alike upon the just and the unjust, or would if it were not that the unjust have the umbrellas of the just. In winter we all shiver, in summer we all sweat. And all the time we all talk about the weather. There is no other perfectly common topic of conversation; because there is no other perfectly common experience. Men talk to their fellows about the weather not because they cannot think of anything else to talk about, but because it is the one thing about which they know that their fellows have thoughts ready for exchange.

Since you will talk about the weather, you should keep a barometer. It is better than a pig, in that it produces nothing that you can sell, and you may therefore know that your motives in keeping it are unsullied by greed. It is better than a cat in that it drinks no milk, yowls no yowls, sheds no hair. It is better than a dog in that —but no, we cannot admit it. Nothing is better than a dog.

Keeping a barometer is a peaceful occupation. It hangs silent on the wall, demanding nothing, asserting nothing, merely recording an impalpable fact—the pressure of the air.

But keeping a barometer is an exciting occupation. When you come down to breakfast to find its needle hovering thru a narrow arc away up in the fair region above the thirty mark, a gentle thrill runs thru you at the thought that the wonderful weather we have been having is to continue. When the needle executes a two-inch swoop in a few hours, as it did one day last winter, you tingle with the expectation of the "big wind" that is surely coming, and hurry down to stoke up the furnace. And when the storm is still roaring and the cheerful little needle begins to climb, you know with a rebound of the spirit that the worst is over. An exciting occupation in its own quiet way.

An absorbing occupation no less. The last thing at night when you have locked up, put out the cat, set the screen before the embers in the fireplace, and are all ready for the ascent to bed, you turn to the faithful disc on the wall and set the index finger fair over the needle. So when morning comes and you stop on the way to the front porch for the morning paper to see what the elements have prepared over night for you, the discrepancy between finger and needle tells the tale. An absorbing occupation indeed.

WESTWARD THE COURSE OF TOURISM

A MAN from Chicago once visited New York and was invited to dinner, one of those big talky dinners that New York is so fond of. The toastmaster, seselected as usual for that position by reason of his powers of sarcasm and ability to make a speaker uncomfortable in advance, roasted the Westerner to a turn by jibes on the youth, crudity and egotism of the metropolis of the lake. The speaker took it calmly and began: "It is true I am from Chicago. It is true I am proud of it. However strange it may seem to you Chicagoans are just as proud of Chicago as New Yorkers are proud of London."

But London has just now more serious business on hand than entertaining American visitors. This is not a good time to make a tour of the cathedral towns of northern France. The Riviera, the Alpine lakes and those quaint Dutch towns with their wooden shoes are not easily accessible. The bains and the bads, the spas and the springs are not suitable resorts for nervous patients. Is it too much, then, to expect that the eyes of Easterners may be tempted to turn westward and even that some of them may get sufficient courage to plunge into the wilderness of the hinterland and see what they can there discover. If so, they will learn that the United States extends several miles west of Chicago, that there are mountains which might be mistaken for the Alps if sufficiently reduced in size, and, if they surmount this barrier, they will find themselves staring at the Pacific with a wild surmise that it is quite a sizable ocean compared with the Atlantic. They will discover that the natives in this region hold the curious beliefs that San Francisco is the front door instead of the back door of the continent, that the problems of the Pacific are not to be settled exclusively by the dwellers on the Atlantic and that opportunity still points toward the setting sun, toward the new lands and old peoples of the islands and the continents beyond.

We understand that these Pacific Coast tribes are to open on February 20 some sort of an exhibition of their arts and crafts which will doubtless contain much of interest, but nothing, we are sure, so interesting and enlightening to the confirmed Easterner as the people and the country he will find there. If he delights in a foreign atmosphere he will find among these countrymen of his, much that is more foreign to him than Paris or Berlin. He will find himself among a people who look upon the world thru spectacles different from those that grew upon his nose; people who do not admire the things he most admires and who do not fear the things he most fears. He will learn much from a trip across, clear across, the continent unless of course his education is completed and the lid nailed on before he starts. It will pay him to become acquainted with these partners of his in the Uncle Sam Mutual and who are likely in time to acquire a controlling interest in the company.

THE STORY OF THE WEEK

THE GREAT WAR

October 6—Germans carry Nethe River defenses of Antwerp. Belgian Government removes to Ostend.

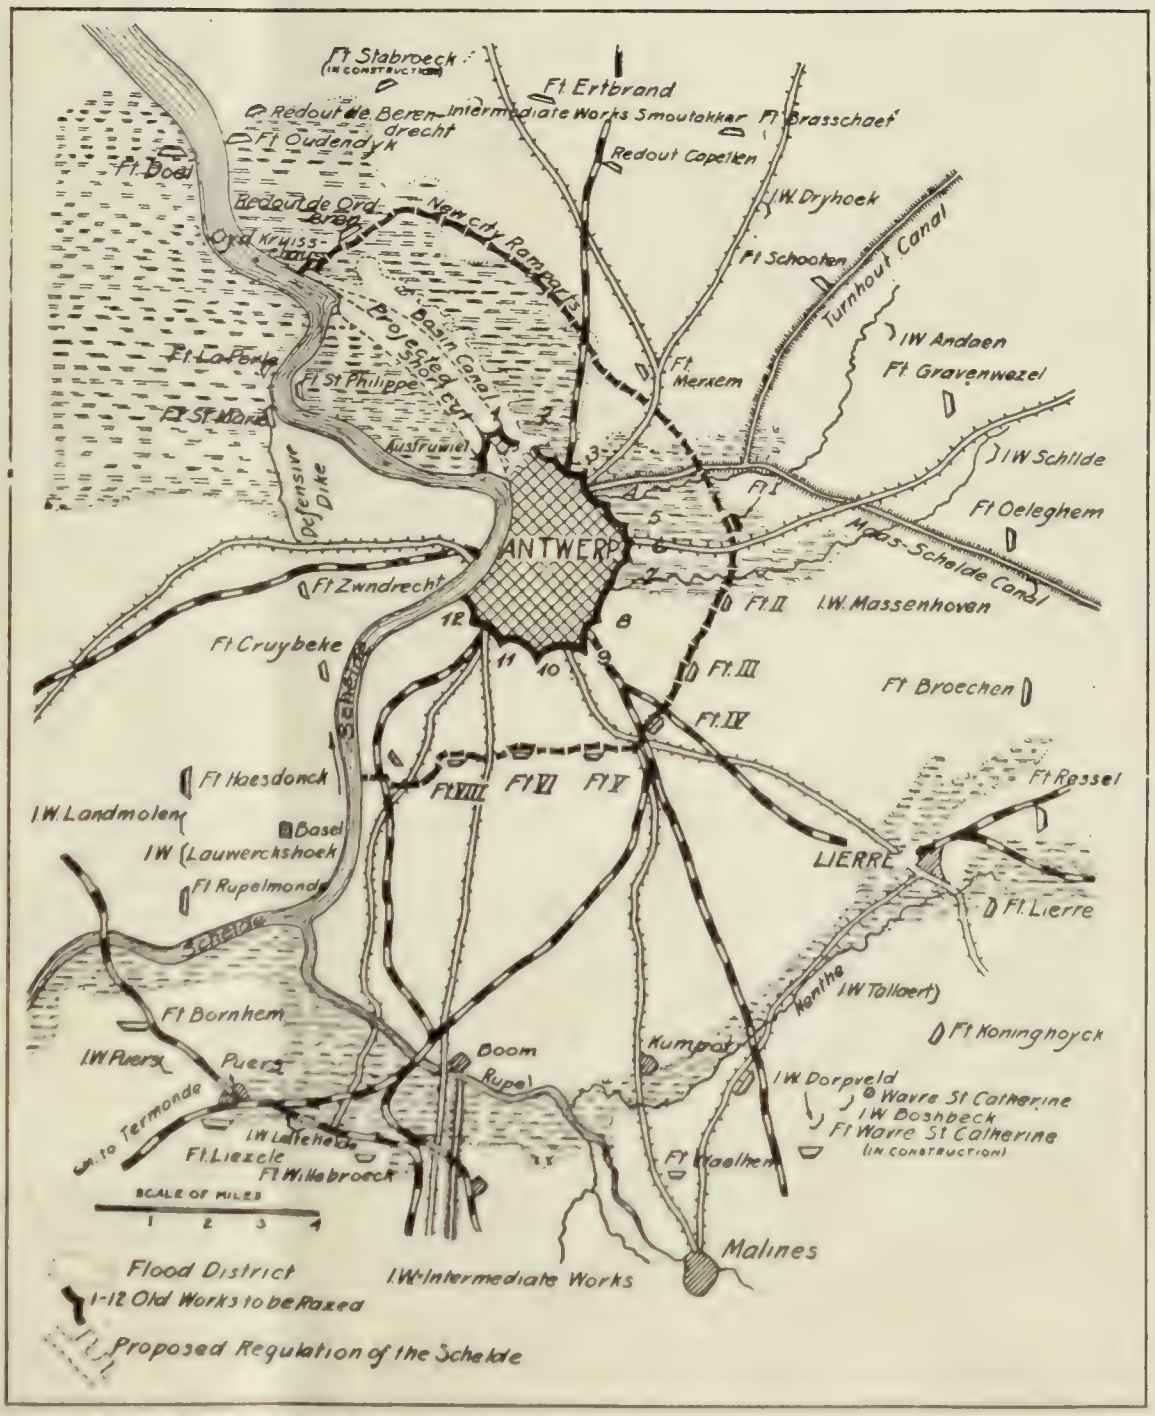
October 7—Bombardment of city of Antwerp begins. German cavalry fighting with Allies near Lens and Lille. German destroyer sunk by British submarine off mouth of Ems.

October 8—Inner ring of Antwerp fortifications reduced. Russians again invading East Prussia. Japanese take Yap and Jaluit islands.

October 9—Antwerp surrenders. Germans defeated near Arras.

October 10 — Besieged fortress of Przemysl relieved. Hard fight north of Soissons.

October 11—Two German aeroplanes drop bombs in Paris. Russian cruiser sunk by German submarine.



October 12—Germans take Ghent. Ferdinand becomes King of Rumania.

The Siege of Antwerp

The capture of Antwerp on the eleventh day after the attack began is a feat unparalleled in the history of warfare, considering that the city had not been surrounded, but was receiving reinforcements from the rear up to the last, and that for forty-five years all the resources of military engineering had been employed to render the place impregnable. In 1859 General Brialmont constructed the *enciente* immediately surrounding the city and the chain of detached forts about two miles out numbered 1 to 8 on the accompanying map. After the Franco-German war it became evident that the lines of defense must be placed further out, so in the eighties another ring of Brialmont forts, of the type described in the article on "The Duel Between the Gun and the Fort" of this issue, was constructed eight or ten miles from the city. These have been supplemented and modernized in recent years, and by the winter of 1913 everything was in readiness for the expected attack except that some of the big guns ordered from the Krupp firm had not yet been received at the outbreak of the war. The Belgians accuse the Krupps of delaying the delivery at the behest of the German Government. This deficiency was, however, remedied by the introduction of heavy artillery from the British navy. The defenses at Lierre, which bore the brunt of the German attack, were manned by British marines, of whom 8000 were in Antwerp.

The Germans began the bombardment of Forts Waelhem and Wavre St. Catherine, of the outer ring, on September 29, and by the following day these defenses had been reduced to a mass of ruins by their eleven-inch howitzers. The reservoir near Waelhem was demolished, so the city was deprived of water except for the artesian wells, and could not put out the fires that were started by the shells.

The Belgians and British then attempted to hold the Nethe River at Lierre, but were shelled out of this line by the morning of the 6th and fell back upon the inner line of fortifications. The Germans succeeded in getting their guns across the river, altho losing terribly in the operation. This brought them within range of the city itself, and a formal notice of bombardment was sent to the burgomaster and at the same time the people were warned of the dangers by circulars showered down upon the city from aeroplanes. Altho there was no hope of a successful defense, the authorities refused to surrender, so for forty hours the city was subjected to bombardment. The King and Queen left for Ostend and 40,000 refugees tried in vain to find a way of escape into Holland. The fire of the German howitzers was directed by three Zeppelins which hovered over the doomed city and occasionally added to the destruction by dropping bombs. It is estimated that five thousand shells fell in the city. In the southern quarter and suburbs many buildings were demolished and burnt, but the rest of the

Handbuch fur Heer und Flotte

THE FORTIFICATIONS OF ANTWERP

These defenses designed by Brialmont and extended by later engineers were supposed to be practically impregnable. The Germans made their attack from the south, first reducing with their big howitzers the forts of Waelen and Wavre St. Catherine, then crossing the Nethe between Boom and Lierre, which enabled them to demolish forts IV to VI of the inner ring and to bombard the city beyond

THE WAR IN FRANCE AND BELGIUM

Attention has been concentrated upon that part of the German line which extends from the Aisne to Antwerp. The Allied troops have pushed northward beyond Lille in the vain attempt to turn the German right or to reach Antwerp before its fall

city suffered comparatively little. The Germans had been provided with maps showing the location of the cathedral, hospitals and famous buildings, and took pains to avoid hitting them.

The Surrender of Antwerp

The Belgian and British troops abandoned the fortifications and city on the night of the 8th and retreated to Ostend, leaving Antwerp so empty of military that it devolved upon the police to turn over the city to the Germans in the morning. At nine o'clock Friday morning the Belgian flag was lowered from the cathedral tower, and the white flag raised in its place. At 2.30 p. m. the German infantry marched into the city with bands playing and took possession of the public buildings. General von Beseler, who had been appointed military governor, established himself in the city hall with Burgomaster Jan de Vos as his aid. A proclamation was posted announcing that the lives and property of all citizens would be protected so long as they refrained from hostile acts, which might "lead to the demolition of your beautiful city."

The Belgians and British as they retreated blew up the magazines of the northern forts and exploded the boilers of thirty-two German vessels in the harbor, some of them large and valuable steamships. The four oil reservoirs on the banks of the Scheldt had been set on fire the night before, and the vast volume of flame and smoke had added to the terror of the inhabitants. Two thousand of the British marines were cut off by a German attack north of Lokeren and retreated into Dutch territory, where they were obliged by the laws of neutrality to lay down their arms.

There are said to be over half a million Belgian refugees now in the Netherlands, men women and children, mostly without any money or food, thus adding to the distress caused in that country by the interruption of industry and commerce.

The Campaign in France

The capture of Antwerp releases the German troops which have been keeping guard over that city, and they can now be sent into France to relieve the pressure on the right wing. The Germans have taken Ghent and it is expected that they will next move on Ostend and attempt to clear the coast of the French, British and Belgian forces. Ostend is not a fortress, but Dunkirk and Calais are, and all the coast towns will be under the protection of the British fleet, which controls the Channel and the North Sea.

Before the fall of Antwerp the Germans had already begun such a movement by sending cavalry across the Scheldt just south of Ghent, and raiding the country as far south as Ypres and Lille. This was doubtless for the purpose of checking the Allied forces, which were trying to make their way northward in time to relieve Antwerp. They do not seem to have got beyond Arras and Lens in this direction. The German cavalry have approached within twenty miles of the North Sea coast behind Ostend and Dunkirk. Arras was taken by the Germans after a bombardment which destroyed most of the town. Lens changed hands three times.

Further south, near the angle in the German line, there has been hard fighting, but with no important change in the situation. Roye was taken by the Germans and a few days later recaptured by the Allies.

Along the rest of the line the fighting has languished. The bombardment of Rheims, which has now lasted more than a month, is kept up in a perfunctory manner by dropping one or two shells into the city every day about noon. Most of the inhabitants have fled; those who remain are living in the champagne cellars. At St. Mihiel, on the Verdun-Toul line of barrier forts, the Germans claim to have made progress, but there is very little news.

A Typical Bombardment

Owing to the almost complete exclusion of newspaper correspondents from the field of operations the public gets very few first hand descriptions of actual fighting to relieve the aridity of the scanty official announcements, and the more or less competent commentary that accompanies them. For that reason we quote the following vivid description by a correspondent of the London *Daily Mail* of the bombardment of the town of Albert, eighteen miles northeast of Amiens, on the afternoon of September 29:

We were warned along the road to be careful and saw a vast column of people coming away from the town, but nothing happened until just after five, when we heard a deep boom, quite unlike the noise made by an ordinary field gun, and a shell, evidently of much greater force and size, fell in the town.

We thought it must be an accident of misdirection, and then, to our indignation, the shells began to fall rapidly. They came in bunches. There were several batteries at work and their aim was excellent. I saw only three shells burst outside the town.

The place collapsed literally like a pack of cards that had been built up into houses, and every moment something fresh went. Now it was the Town Hall, now a group of cottages, and then a high wall.

It reminded one of a scene in a Drury Lane melodrama. One could not believe without an effort that one was seeing a real town shelled. It was just as if some inventor had made a new kind of explosive and had invited his friends to see it demolish a model of a town. I stayed there an hour fascinated.

At 6:30 o'clock a number of fires, lighting up the whole countryside, were visible. Looking toward Albert, they appeared to be hayricks which had been set alight by shells. The largest of these red glares, however, was Albert on fire. Against the flaming background the tall spire of a church stood out uninjured up to eight o'clock, but it was impossible to enter the town, as the heat was too great and the streets were too unsafe.

The War with Russia The news from the eastern seat of war is scanty and conflicting. According to Berlin accounts, the Germans have repulsed the Russians in East Prussia, have advanced to the Vistula in southern Poland, and have relieved the besieged garrison at Przemysl in Galicia. Both the Germans and the Russians claim a victory and the capture of thousands of prisoners at Augustowo on October 1 and 2. According to Petrograd accounts, the Russians are advancing into East Prussia, have driven the Germans from northern Poland, have taken five of the Przemysl forts, and are making their way thru Hungary toward Budapest.

It is impossible to determine from this exactly what is happening, but it appears evident that General von Hindenburg, who was recently put in charge of the German armies in the south of Poland, is having the same success as he did in his former field of operations, East Prussia. A fortnight ago it was expected that the Russians would soon attack Cracow, or even invade Germany in the direction of Breslau. Now, however, it seems that both these dangers are averted and instead Warsaw is threatened by Hindenburg's forces.

WHILE THE MEN FIGHT

A reward in Paris forbidden to call their leaders "to mourn your husbands or placards by way of advertising their patriotism"

Rumanian King Dies The death of King Charles of Rumania on October 10 may have an important influence upon the war, for that country is in a state of unstable equilibrium and has been undecided whether to take part in the conflict, and if so, on which side. The late King was a Hohenzollern, belonging to an older branch than the Kaiser, and his sympathies naturally inclined him toward the side of Germany. Rumania gave valuable aid to Russia in her war against Turkey in 1876, but Russia, instead of rewarding her, seized the Rumanian territory in Bessarabia. In consequence of this ingratitude Rumania became virtually an ally of Austria, but offended Austria by an unprovoked attack upon Bulgaria in the second Balkan war, and during the last two years has been drawn into closer relations with Russia. The Rumanians claim to be a Latin people and have made of Bucharest a miniature Paris.

The King died in his seventy-fifth year of age, and forty-eight years after he had been made Prince of Rumania by the powers. He married Elizabeth, Princess of Wied, better known to the literary world as "Carmen Sylva." Under this pen name she contributed to The Independent for many years poems and stories of Rumanian folklore. Their only son died in infancy, and the new occupant to the throne will be Prince Ferdinand of Hohenzollern, brother of the late King. The new Queen, the Crown Princess Marie, is a granddaughter of Queen Victoria.

The New Taxes Changes made by the Senate committee in the war revenue bill recently past by the House caused much dissatisfaction, and the bill was submitted to a caucus of Senate Democrats. One of the committee's changes was a reduction of the House bill's tax of two cents a gallon on gasoline to one cent, and the addition of a tax of fifty cents per horse-power on new automobiles. This new tax was to have been paid by the sellers and would have yielded about $15,000,000 a year. A higher tax on automobiles had been proposed by a subcommittee, and the manufacturers had sent to Washington a protest, saying that the war had cut down their export trade and that the tax might close several factories.

The caucus struck out the proposed taxes on gasoline and automobiles by a vote of 20 to 17; increased the beer tax to $1.75 per barrel; added a new tax of five cents a gallon on whisky; reduced the tax on bank capital from $2 to $1 per $1000; eliminated the House bill's tax of $50 on brokers; cut down the tax on Pullman car tickets from two cents to one cent, and graduated the tax on cigarette manufacturers from $24 to $96. The bill, as reported to the Senate, carries

ONE REASON WHY THE GERMANS NEEDED ANTWERP

While the Belgian army held the capital and were not closely hemmed in, their sorties and raids harried the German rear. The photograph shows the wreck of a railroad line running out of Brussels

stamp taxes on proprietary medicines, cosmetics, perfumery and chewing gum, which were added by the committee just before the caucus. There are also stamp taxes on negotiable instruments, stocks, bonds, deeds, bills of lading and ocean steamship tickets. Life insurance policies are exempt, but there is a tax of one-half of a cent on every dollar of premium for property insurance. It is estimated that the bill as it stands will yield $105,000,000 additional revenue.

Passage of the Clayton Bill

In the Senate the conference report on the Clayton anti-trust bill was accepted by a vote of 35 to 24. Three Democrats—Messrs. Lane, Reed and Martine—voted against it. The opposition had been led by Mr. Reed, who said that in conference the bill had "degenerated from a raging lion with a mouth full of teeth to a tabby cat with a plaintive mew." He moved that the bill be sent back to the conference committee with instructions for the restoration of criminal penalties which had been cut out. The motion was lost by a vote of 25 to 35. Six Democrats voted for it, with all the Republicans except Mr. Root. Mr. Reed predicted that passage of the bill would split the Democratic party.

The vote in the House, three days later, on the conference report, was 244 to 54. In favor of it twenty-two Republicans and five Progressives voted with the Democrats. Opposing the bill, Mr. Mann, the Republican leader, urged the House not to prevent American manufacturers from taking advantage of the opportunity offered by the war in Europe. They should be encouraged, but Congress was doing all it could, he asserted, to menace and demoralize trade, and to hold the penitentiary over those who should not be restrained from investing capital in manufactures.

The bill, a very long one, forbids price discrimination, limits interlocking directorates, and prohibits holding companies when the effect is to destroy or substantially lessen competition. It declares that the labor of a human being is not a commodity or an article of commerce, exempts labor unions and farmers' organizations from the operation of the Sherman act, and revises the law regulating contempt of court proceedings and the use of injunctions in labor disputes. The addition by the Senate of the word "lawfully" in provisions relating to labor unions essentially modifies the original exemption. Mr. Gompers, president of the Federation of Labor, said he was satisfied with the bill in its final form.

Congress and Adjournment

The President has has said that, so far as his desires about legislation are concerned, there is nothing to prevent adjournment of Congress on or about the 15th, if by that time the War Revenue bill shall have been past. An agreement as to the Alaska Coal Land bill has been reached in conference, and it has been decided that the Railroad Securities bill shall not be taken up at present. It may not be considered at the next regular session, which must be a short one. In that session Mr. Wilson will not ask for legislation concerning presidential primaries. His program for the session ending on March 4 includes the Philippine Government, Ship Purchase and Conservation bills, and the annual appropriations.

So far as he can learn, it will not be necessary to call a special session after the approaching adjournment and before December, nor does he think that a special session after March 4 will be required. Some opposition to adjournment is shown by Senators and Representatives who earnestly desire legislation for the relief of cotton growers. There are members also who say that, on account of the situation in Mexico and of questions arising in connection with the war in Europe, there should be no adjournment, but a recess until the middle of November. It is generally expected in Washington, how-

DUMDUM BULLETS FOUND AT LIEGE

English, French, Germans, Austrians and Russians have each been accused by their opponents of using these barbarous projectiles and all these accusations have been officially repudiated. The Kaiser supports his charge with the exhibit of unused bullets, as shown above, said to have been found in packages of six or eight wrapped in stout green paper on French and British soldiers at Longwy, Liege and elsewhere. The cutting of a hole or notch in the end of a bullet causes it to spread out like a mushroom as it enters the body and to tear a large and irregular hole thru the flesh. The bullets get their name from the British arsenal at Dumdum, near Calcutta, where they were first made to stop the desperate onrush of the natives. Great Britain has always insisted that they were necessary for this purpose, but denies ever using them against Europeans

The New Haven Railroad

For several days a special Federal grand jury in New York has been making an inquiry concerning the criminal aspects of those acts of the New York, New Haven & Hartford Railroad Company which were recently the subject of a notable report by the Interstate Commerce Commission, and which have led the Department of Justice to take action for a dissolution of the combination of New England railroad, trolley and steamship companies. The investigation relates to the responsibility of officers and directors. At the beginning of it four directors —William Rockefeller, George F. Baker, Charles F. Brooker and James S. Elton—resigned. The only witness thus far has been Charles S. Mellen, formerly the company's president. He was indicted two years ago for conspiring to prevent the construction of a competing road by the Grand Trunk Company. He now files a plea for immunity in that case on account of his testimony before the Interstate Commerce Commission.

The company, by direction of its board, brought suit on the 6th, at Hartford, against John L. Billard, of Meriden, Conn.; E. D. Robbins, of New Haven, formerly the company's general counsel; Charles F. Linsley, of Meriden; Samuel C. Morehouse, Mr. Robbins' assistant; Henry Whipple, of New Haven; Samuel Hemmingway, of the same city, and ex-President Mellen, to recover $3,828,147, the profit acquired by Mr. Billard in those dealings in Boston and Maine stock which have been the subject of official reports and condemnation. Several of the defendants were directors of the Billard Company, a corporation organized in connection with the transactions in question. It is alleged in the complaint that Mr. Billard was a trustee acting for the company, and that he held the money in secret trust. The property of the defendants has been attached. The company's annual report, published a few days ago, sets forth the terms of the dissolution agreement with the Department of Justice, and says that a court decree to carry the agreement into effect will soon be filed.

The Situation in Mexico

Carranza's generals and Villa started on the 6th for Aguascalientes to attend the conference or convention to be held there on the 10th. Zapata had decided to send three delegates. The civilian delegates who had taken part in the convention at the capital voluntarily withdrew. Their presence had been opposed by the military officers. But Luis Cabrera, as the agent of Carranza, was permitted to speak at the conference, altho it was decided that he should not vote. Carranza's friends said that the selection of a provisional President could not be considered at the meeting in Aguascalientes, because Carranza had been chosen when his resignation was rejected at the capital. Villa had asked, however, that all questions relating to the government of the country should be taken up at Aguascalientes, and he was still insisting upon the retirement of Carranza.

Richard H. Cole, a friend of Carranza, who came to Washington asking for recognition of Carranza's government, predicted a reconciliation of the two factions. He asserted that Carranza was weary, desired to retire, and had promised to give five months to a tour thru the United States. In New Orleans, Felix Diaz and several exiled Mexican generals were plotting against the new Government, openly expressing their intention to overthrow it, and saying they could quickly assemble a force of 20,000 men. They were willing to make an alliance with Villa. But Villa had put to death two of their agents. These were José Sandoval and Augustin Perez. According to a

ERASING THE COLOR LINE IN WAR

So the London *Times* characterizes the employment of the Indian expeditionary force in France. These infantrymen are marching to camp, probably on their way from Marseilles, where the troops were landed, to the front. The number of these troops is not known. The native Indian army is made up chiefly of the Sikhs, or Singhs, members of a fighting brotherhood, into which select recruits are initiated with religious ceremonies; the Punjabi Mussulmans, only less numerous than the Sikhs in the army, and Mohammedans of mixed descent; and the Gurkhas, members of the army of the native kingdom of Nepal, and particularly companionable and efficient

statement signed by Villa's secretary, they were court-martialed and shot in Chihuahua because in their possession were found papers showing that they were "envoys of Felix Diaz and other Cientificos," seeking an alliance with Villa.

Villa's Forces in the North

Governor Maytorena continued to besiege General Hill and his soldiers, who were defending themselves in Naco, which touches the Arizona boundary. There was nothing decisive about this fighting, but many bullets fell in the streets of that part of Naco which is in Arizona. Two United States soldiers and one civilian were wounded by them, and one of the soldiers, a cavalryman, died. The people of the town in Arizona sent a protest to President Wilson, and demanded protection. Our patrolling force was increased, and preparations were made to fire upon Hill's men if they should cross the boundary in an attempt to turn the flank of the besiegers.

Villa's force was affected by desertions and additions. He suffered a considerable loss by the secession of Gen. Monclovio Herrera. It was reported that he had induced Herrera to return, but later dispatches said that Herrera was attacking a part of Villa's army, having been made a bitter enemy by the execution of his brother Luis in obedience to Villa's orders. Gen. Manuel Chao, recently Governor of Chihuahua, was another deserter. He went over to Carranza after Villa had sent him to fill the place held by Herrera at Parral. It was said that Chao and Herrera had cut the railroad and thus checked a southward movement of Villa's army. On the other hand, General Natera was said to have joined Villa and to have surrendered San Luis Potosi to him. Natera was the cause of Villa's first quarrel with Carranza. Some months ago, after Villa had won a series of battles and was about to attack Zacatecas, Carranza suddenly displaced him and gave the task to Natera, with promotion. Natera failed, and when Carranza ordered Villa to help him, Villa refused to do so and resigned. He was heartily supported by his army and by a signed protest from thirty of his subordinate commanders. After the quarrel had been temporarily adjusted, Villa captured Zacatecas.

Carranza is beginning to punish supporters of Huerta. By his order Javier Cuevas, the son-in-law of a wealthy American residing in Los Angeles, has been shot as a traitor. Javier's brother Luis, formerly Governor of San Luis Potosi, was put to death a few weeks ago. Both were condemned as traitors. Carranza has canceled all the mine titles and concessions granted by Huerta.

OFFICIAL REPORT: OUR OPERATIONS AROUND ——— WERE ENTIRELY SATISFACTORY

A LEAGUE OF PEACE—NOT "PREPARATION FOR WAR"

BY ANDREW CARNEGIE

THE writer has not failed to read with intense interest what has been published on both sides of the Atlantic upon the present lamentable conditions, created by the greatest war known to history, embracing nine countries, six of these among the greatest nations—Britain, France, Germany, Russia, Austria and Japan, engulfing in their train Belgium, Servia and Montenegro. That the former conditions can ever be restored seems improbable. Some part of the civilized world may have to undergo reconstruction.

Among the forthcoming results there is to be proven once again the fallacy that world peace can be secured thru preparation by each nation for war. On the contrary, there can be no possible escape from the conclusion that war can be abolished only thru a union of powerful, peace nations, resolved to preserve the peace themselves and also, if absolutely necessary, to enforce it upon others.

The present war gives us upon a small scale an illustration of the forthcoming union of nations to preserve peace, in the agreement executed by the allies, Britain, Russia and France, which binds them to act only in unison in all matters affecting peace. No one separate nation has power to act, only the three nations united have all power.

Preparation for war as a means of ensuring peace has been proven a failure. It has been tried for 2500 years and has always precipitated war, since one nation "preparing" compels her neighbor to do likewise —one fears the other, and both increase "preparation" until the inevitable struggle bursts forth. Not long since gentlemen went prepared against personal war, and this "preparation" resulted in continual danger of attack. Gentlemen actually practised shooting at dummies, that they might become better marksmen, hence more likely to kill than be killed. The more they "prepared" to meet this private war, the more likely they were to be called upon to meet it. The present Emperor of Germany found upon his elevation to the throne an average of 120 duels per year in his army, which he has reduced to ten. Only last year he took another step in favor of personal peace and "officers having religious objections to the duel were 'ordered' hereafter to be treated with the utmost forbearance." One officer had been dismissed from the army upon refusing to fight a duel, having religious scruples. But so great was the remonstrance that he was promptly reinstated. In France the duel creates laughter, so rare and ineffective it has become. It is now introduced successfully in comedy. So personal war fades rapidly away as men learn wisdom—national war must follow, as night follows day. So steadily grows public sentiment against war, national or personal. Against intemperance, likewise, the Emperor never ceases both by precept and example to wage war with decided success. And, above all, he has secured for Germany twenty-seven long years of unbroken peace.

In this day of hostile criticism against him as favoring the present unholy war, let it never be forgotten that there is another side to this. Not seldom the hereditary ruler has to yield to the permanent officials, for such they practically become under permanent crowned heads, a caste which in Germany is composed solely of military and naval officials who surround the throne. No one ignorant of its power can properly estimate its malign influence. The leading Germans of world-wide fame, who give their country high place in the world in the realms of knowledge, invention, discovery and science, are of secondary rank and outside of the Court. To assume that the Emperor has all power when war and peace are involved is a sad mistake. No country has today so commanding a military and naval caste. When peace or war is the question this should ever be borne in mind.

We have seen that "preparation for war" by one nation begets similar preparation by those nations which feel themselves endangered. The remedy for this is evidently one world-wide organization of as many peaceful powers as possible to prevent war and insist that differences between nations shall be peacefully adjusted by the Hague Conference, or other tribunal satisfactory to the contendents. In the last resort, if necessary, the World Peace Court could deliver judgment by a majority vote, which would be binding upon the powers.

Without separate armies and navies there could be no war, the world would be at peace. This fact cannot be gainsaid. It is therefore in this direction that men of peace should labor. One great step toward this, as I have said, has been made by the following announcement; here lies the germ which only needs development to banish war from civilized nations:

> The British, French and Russian Governments, on Saturday, September 5th, mutually agreed not to make peace separately during the present war, and no one of them shall demand conditions of peace without the previous approval of the others.

Here the allied nations combine and act as one. After the present belligerents agree upon peaceful settlement, Germany and Austria should be the first invited by the Allies to join in forming a League of Peace. Should they accept, then some of the other nations might be invited. At the first meeting of the League some general principles might be formulated: First, one general World Peace Commission shall be established to which each member shall contribute toward expenditure in proportion to its population and wealth. Their respective fleets shall be merged, controlled and operated under such management as the League may direct from time to time. No war policy, or attack upon any nation or fleet shall be made except by a majority vote of two-thirds of all the members of the World Peace League, and then only after timely notice to the nations threatened. The Commission shall exercize undisputed authority, always provided it is sustained and its action approved from time to time by two-thirds of the total membership.

An executive committee shall be elected by two-thirds majority of the Commission, a separate vote being taken upon each candidate. This committee shall elect a president and vice-president by a majority vote who shall each serve four years, but the vice-president shall serve six years for the first term, and his successor be elected for four years, thus preventing the simultaneous change of both the former high officials.

The difference between the proposed Commission and the present situation in regard to peace and war is fundamental. For twenty-five hundred years tribes and nations have warred with each other, inflicting such barbarities as make the flesh creep as one reads, and all these years it has been held by many that "preparation for war" prevents war, yet today we have the greatest outburst of war that this long history recounts. We submit that the day is past when we shall longer tolerate this inhuman sacrifice of human beings. The civilized world has tried "preparation for war" long enough. We now propose to render war impossible, at least between the best of those nations classed as civilized. When these lead, others can be compelled to follow, or ostracised, if this ever becomes necessary. The League would act upon the high moral stand-

and of world peace, determined to maintain it when necessary in the judgment of the two-thirds majority of its members. Even if success be delayed, sooner or later its triumph would be certain.

This slight sketch may serve to awaken interest which of itself is most desirable in this phenomenal crisis. If there be a surer way to peace, so much the better. Whenever and however the killing of men by men under cover of war can be prevented, let all promising modes be submitted and tried, for war is the world's greatest crime. One thing is certain, peace upon earth can never come from "preparation for war," hence let us discard that fallacy and try other means. It is submitted that a League of Peace embracing the chief nations is worthy of consideration.

War, as the guardian of international peace, after twenty centuries of trial, has proved a traitor thereto, waging as it is today, the greatest of all wars that ever devastated the earth and sacrificing thousands of men weekly to death in this, the Twentieth Century of Christianity.

I submit that we have tried this enemy of the Peaceful Brotherhood of Men too long. Now the hosts of blest World-Peace should be summoned to perform their stern duty, which shall cease only when the prophecy is fulfilled, "Men shall beat their swords into ploughshares and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more."

Any platform short of this fails to bridge the chasm between Peace and War. We must span the roaring torrent from side to side—and never rest until the day of blest peace returns.

We have abolished slavery from civilized nations, the owning of man by man. The next great step that the advanced powers of the civilized world should take is to abolish war, the killing of man by man. God speed that day!

WHAT I SAW IN GERMANY

A WONDERFUL SOCIAL ORGANIZATION WORKING AS SMOOTHLY AS IN PEACE

BY GEORGE W. NASMYTH

Mr. Nasmyth is one of the foremost leaders of the younger element in the American peace movement. He has been especially identified with the educational end of the propaganda. When he was a student at Cornell he and Louis P. Lochner of the University of Wisconsin were the prime movers in organizing the Cosmopolitan Clubs, which have already exerted a wide influence thruout American colleges and universities. He has recently spent two years in Germany doing postgraduate work at the German universities. No man has done more to bring the students of the world into the international movement. He was president of the World Students' Conference that met in the United States last year, and is now one of the directors of the World Peace Foundation of Boston.—THE EDITOR.

BEFORE I could begin to see anything in the right proportions in Germany, I had to become accustomed to the new atmosphere. Passing out of the partial vacuum of the English censorship, I drew a deep breath of free air in Holland, which receives news from all sources, and then plunged into the partial vacuum of the German censorship.

At the frontier town of Goch the German customs officials asked me politely if I had any English newspapers in my possession. I thought this rather strange at the time, but ascribed it to Prussianism in general, until on my return to free, liberty-loving England I was searched at Folkestone and all my copies of the German newspapers, the German White Paper and other official documents were confiscated. The establishment of Prussianism in England which the war has caused should make it easier for the people of the two countries to understand each other *after* the war, at least.

From the accounts of Germany which I had read in the English papers I expected to find everything in confusion, the whole economic basis of the country broken up, a half-starved population on the verge of revolution, the railway service suspended, cholera rampant in Berlin, and various other interesting manifestations of a general demoralization.

But I could discover none of these things. In outward appearance, at least, the Germany which I saw was the same Germany that I had seen at the end of July before war was declared or at any time during the past three years. A slightly smaller proportion of soldiers was visible in the streets, perhaps, and a slightly larger proportion of women and children. The streets were a little quieter and even a little more immaculate than usual, a tense air of solemnity and resigned sorrow had taken the place of the usual expressions of cheerfulness and happiness on the faces of the people, but otherwise life was going on much as usual. Instead of a suspended railway service, I traveled in the greatest luxury and comfort on one of the four express trains which are running daily between Cologne and Berlin, as between the other important cities. Instead of unemployment, I found a temporary scarcity of labor, so that women and boys had to be employed temporarily as ticket collectors in the subway and conductors in the street-cars. Instead of a scarcity of food, I found the whole available population, women, boy scouts and old men, engaged in bringing in one of the largest crops in the recent agricultural history of the country. Instead of cholera and disease raging everywhere, I found the most perfect sanitary arrangements and the highest medical ability in the service of the state, and a smaller proportion of disease than for many years past. Instead of revolution, I found an absolutely united people, resolved to stand together until the last against the whole world full of enemies, who, as the Germans believe, are resolved to crush the German people and their civilization and to dismember the German empire. Instead of hunger and bread riots, I found that the wonderful social organization of the country had been still further perfected thru the coöperation of the Government with the Social Democrats and the women's organizations, so that not a single man, woman or child of the whole 65,000,000 was suffering from hunger. The school children were being provided with nourishing food and 5000 people, largely refugees from East Prussia, were being supplied with nutritious meals at ten pfennige (about two cents each) or free of charge if they were without means. The soldiers of families at the front were being paid promptly and the prices of food were normal. During my three years of study in Germany I had never been able to find any slums, I had never seen a beggar or a drunken man, and the wonderful social organization which had produced this condition has been extended and perfected to meet the crisis. The war means a long step toward socialism, of course, for the rich must voluntarily or involuntarily supply the needs of the poor. From what I saw in Germany, however, I would judge that the war will produce there less actual suffering in the form of hunger and poverty than in any of the other countries engaged.

No moratorium has been declared in Germany, the banks have not been closed for a single day, and people were re-depositing in the savings banks the money which they had withdrawn in the first days of panic. Some persons were even paying their taxes for 1915 and 1916 in advance in order to help the Government and get the benefit of the four per cent discount which was offered. The extent to which the surface indications correspond or fail to correspond with the economic realities is very difficult to judge. When I asked business men in Germany about the underlying conditions they shook their heads and looked thoughtful, just as business men do in England. With the exception of the armament industries, it is certain that in Germany, as in all the other countries concerned, nobody is going to reap any economic gain from the war.

I talked with many of the Englishmen who had been held in Germany at the outbreak of the war, and brought back with me a score of letters from them to their friends in England; all testified without exception to the kindness and courtesy with which they were being treated in Germany—another blow to the impression which I had gathered from the English press.

For the prisoners of war, especially the French, there had been such an outburst of humanitarian feeling, especially on the part of women, that the Government was compelled to issue a proclamation which I saw posted up in Cologne and other cities forbidding the giving of flowers, champagne, or other luxuries, and stating that all the prisoners of war were being well cared for by the Government.

I saw the whole international situation suddenly turn upside down when I past from England into Germany. Thru English eyes I saw the war as an attack by Germany upon France and Belgium, with Russia almost entirely beyond the horizon; thru German eyes I saw the war as an attack by Russia upon Germany,

with almost all the other countries outside the horizon. In England I traveled in the train with Belgian refugees fleeing before the German invasion; in Germany I traveled in the train with German refugees fleeing before the Russian invasion along hundreds of miles of the eastern frontier. The balance of power, which I saw in England as a defensive alliance against the aggressive intentions of Germany, became there a plot compounded of the Russian determination to break up Austria, the French "revanche" and the English determination to smash the German fleet and German commerce. In English public opinion I saw the war lord as the new Napoleon, determined to bring all the world into subjection; in Germany I saw him as the representative of a united people, defending themselves against a ring of enemies who had long been planning to divide the German empire, but who had been forced by the assassination in Sarajevo to embark on their course of dismemberment a little earlier than they had intended.

A few things remained right side up. In Germany I found among the leaders of the four million Social Democrats a hatred of Imperialism and Militarism more bitter and more intense than in England or in America (it was strange to talk with men after reading the reports that they had been shot). "But militarism is the worst possible way in which to fight militarism," they said. "It has forced us to make this choice; either we must temporarily join forces with militarism or we must stand by and see our country overrun by the Russians. Prussianism is bad enough, but we prefer it to Russianism." The Social Democratic party had almost attained to power. It secured thirty-four per cent of the votes at the last election, in 1912, and has been gaining at the rate of more than one per cent of the total votes a year, for the past twenty years. In coöperation with the next most radical party, the Progressive People's party, the Social Democrats were looking forward to victory and the control of the Government at the next election, in 1917. What will be the results of the use of the crude instrument of military force no one can tell, but from what I saw in Germany I should say that if Germany is crushed and humiliated in this war, the overthrow of Prussianism and militarism in Germany will be set back for a generation. Prussianism must be destroyed, but the only people who can destroy it are the German people.

I heard everywhere in Germany, as I have been hearing everywhere in England and from America, "as far as is humanly possible, this must be the last war." From all the scores of Germans with whom I talked (business men, leaders in religion and education) I received the same reply to my question in regard to the German demands in case of German victory. "In case of victory we will not ask for one foot of territory in Europe" was the almost unanimous reply, "Alsace-Lorraine and Prussian Poland have been a lesson for us, and it is against the German principle to have an alien population within our borders." "We are fighting a war of defense, and our chief concern is to secure the integrity of our country."

In England and all the outside world I saw Austria and Germany looked upon as the aggressors and their policies as the sole cause of this war. In Germany I found that Russia and England were considered the aggressors and the cause of the war: Russia because of her intrigue with Servia to break up the Austrian empire, and England because without assurance of her support Russia would never have embarked upon her career of aggression. I believe that if delegates from all the countries concerned could be gathered together each one would declare: "We have no desire for aggression; we are fighting only in self-defense." A wise man presiding over this conference might say: "This is a war of mutual fear. None of you know what you are fighting for; you are as far apart as the poles from understanding each other. Return to your governments, tell them to call back their armies into their own countries, and order the soldiers to lay down their arms and go back to their families and their workshops."

During the past three years I have been in all the European countries engaged in the struggle, and I have found militarists and imperialists in all of them. Each has its own national type of Bernhardis, Treitschkes and advocates of Nietzsche's philosophy. But, I thank God, I have found in each of them, also, men who have recognized that the whole philosophy of force is false, that militarism must be destroyed, and that all social progress in the future depends upon the union of the forces of democracy and progress for the solution of the international problem, and the establishment of those ideas which will give the secure basis for a permanent peace. For the present need these men are the salt of the earth. Any solution of the present conflict which does not depend upon an intellectual revolution and which does not radically alter the present relations of the states of Europe must necessarily be a temporary one. I have found an increasing number of men in Germany, as in all the other countries, who realize this. Call it Utopia, if you will, they say, but the only alternative to another forty-four years of frenzied armament competition leading to another Armageddon is some kind of a concert or federation of Europe, leading to the Federation of the World.

London

A MOOD OF AUTUMN

BY RICHARD BURTON

Ah, Autumn, now that you and I must part,
  You linger, goldenly, your footstep slow,
Even as a friend, beloved of the heart,
  Seems doubly dear just ere he turn to go.

You pause by noon, deep-sighing thru the trees
  And in the spangled sunset hold your breath,
That I may note your splendid symphonies
  Of color, that the night shuts in to death.

Your leaves rain down and prank the forest ways
  With tapestries of yellow, red and brown,
And thru the glooming glory of your haze
  I glimpse the dreaming towers of the town.

October odors between sod and sky
  Remind me of the faith of earthly things,
As if you murmured, "Surely, by and by
  I shall come back, with birds and errant wings."

The sweet and strong communion 'twixt us two
  Is more than all the mouthings among men;
You are not beautiful alone, but true;
  I bide the season till you come again.

And O be sure of one fond heart, that waits,
  Loving and longing, midst of wintry fear,
Until, once more aglow, you ope the gates
  Of harvest, and fulfil the fruitful year.

THE STRATEGY OF THE GREAT WAR

GERMANY'S NAVY—A THORN IN THE FLESH

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

It is now known that the German submarine which destroyed the three British cruisers was helped by a dirigible airship which had previously discovered them and told the submarine where to find them. This is the first instance of direct cooperation between an airship and an underwater ship allied together against surface ships. Thus another epoch-making feature is added to the extraordinary episode which marks the beginning of the new naval warfare on the ocean.

It is far too early to forecast the consequences of this strange league of the fighters in three dimensions against the fighters in two; but, from this time on, the appearance in the sky of a hostile aeroplane will become a new source of apprehension to the battleship commander, for its very presence will always suggest the proximity of the dreaded submarine. Proximity only—not the whereabouts—not the quarter from which the attack is to come. Conceive the paralyzing uncertainty of such a warning. Precipitate flight is the only safeguard; but flight in what direction? No matter which one is selected, there is the possibility of running toward instead of from the danger. It may be almost a relief at last to discern the periscope of the assailant protruding above the waves, and to set the guns spitting their steel hail at it. Yet still there is no certainty. Such things exist as decoy periscopes—short lengths of pipe held upright on a float and looking exactly like the real periscope. The submarine sets them adrift for you to find—sometimes scatters several of them. When one is sighted you cannot stop to consider whether the little object dancing on the sea half a mile or so distant does or does not mean two hundred and fifty pounds of high explosive coming straight at you. Maybe you will see the aeroplane maneuvering over it in a way that carries conviction that it does. You don't dare to take any chances and so you train all the guns at it. Then the real submarine slinks up on the other side of the ship and with the swift rush of her torpedo, the latest of sea tragedies comes to an end.

There is a note of almost complacent optimism in the outgivings of the British journals concerning the future prowess of the fleet. That it will crush the German armada is treated as a foregone conclusion, and there is even a growing restiveness at the delay in beginning the crushing operation which has found expression in Mr. Winston Churchill's gasconade about "digging out the Teutons like rats."

Nevertheless there are some people who (having no fear of interrupted food routes and overhanging Zeppelins) are not so sure that the task of clearing the German infested North Sea will be altogether an easy one even for his Britannic Majesty's super-dreadnaughts. There is a certain appreh ision that the marine artillerist and mechanic who chiefly mans the modern naval battle line may not be quite the same individual as the British sailor whom Jervis and Rodney and Nelson led, and of whom Marryat wrote and Dibdin sang. Ninety-nine years is a long time, and it measures the interval since Trafalgar—England's last fleet action; and besides, out of the twenty-one fleet engagements which established her mastery of the sea, beginning with Keppel's fight off Ushant in 1778, no less than thirteen were indecisive and one was won by the French.

Perhaps it may be recalled that it is since Trafalgar and before he gave place to the modern artillerist and mechanic that the British sailor encountered so much that was surprizing in the behavior of certain fir-built, over-sparred and long-gunned craft called the "Constitution" and the "United States"; that in despite of their being, in his opinion, marine monstrosities, he nevertheless imitated them and kept on imitating them for the next fifty years, until another monstrosity called the "Monitor" startled him into first imitating that, and then heaping one thing after another on top of it, until he now has the Super-Dreadnaught — combined with a burning desire for something different, which aeroplanes and submarines can't sink.

This, however, is digression, the present question being in what proportion does the British seaman of the modern Dreadnaught mix the British tar of the early nineteenth century, imbued with Nelsonian traditions, with the artillerist and mechanic of the twentieth century who, as such, possesses no traditions at all. If the latter largely predominates, then what is there to choose between the men who handle the floating fortresses of Germany and the men who manage the floating fortresses of Britain? As technicians, as builders and designers and operators of great machines, the Germans yield nothing to the English. In fact, if you tie, metaphorically speaking, a German to a machine, he becomes very much more a part of it than an Englishman does. The chief indictment today against him is that his army is nothing but a too perfect machine. In battles of the past, wherein ships were maneuvered for the weather gage, wherein the guns were aimed at sails and spars to destroy the motive power, and wherein no captain could do wrong who placed his ship alongside the enemy and settled matters with cold steel, the British sailor vanquished the Latin six times and the Slav and Scandinavian once out of twenty-one battles. Does that prove that the British artillerist is surely going to win against the Teuton artillerist—his own cousin in the Germanic family — in ships which lie ten thousand yards apart?

No one save the British Admiralty knows where the British battleship fleet is just now, further than that most of it is in the North Sea and that it is blockading the German fleet with a greatly superior force. The Germans recognize this by remaining for the present probably in the peaceful basin of Wilhelmshaven, where they have made the greatest naval arsenal in the world. This is in accordance with long established strategic principles, and implies no "skulking" whatever, as the irate British editor is prone to insist. It is exactly what the British themselves would do were the conditions reversed, and exactly what the Germans said, before the war, thru von Bernhardi and others, that they were going to do. It is merely "watchful waiting" for the friendly winter gale which may scatter the British line, or the detachment of a part of it to defend Belgian or French ports inconveniently near to England or to try its fortune in the Baltic. A superior

force can be defeated if you can overwhelm it piecemeal, and for that opportunity the "Prussian generals" will continue sedulously to look out. Meanwhile, in the cobweb of shoals around Heligoland, in the mouths of the Weser and the Elbe and far toward the Dutch dunes, mines and mines and more mines are planted, a proceeding denounced by Great Britain as iniquitous and then copied by herself all the way from Goodwin Sands to Ostend. And in the places around Heligoland Bight where there are no mines, and amid sandbars and breakers, lurk the submarines and the destroyers and the small fast cruisers screening the great ships in the quiet harbors and bays. It will not be easy to dig the "rats" out, and when they do come out, which will not be until conditions suit them, we shall learn much about "the incontestable supremacy of the mistress of the seas."

This is speculative, of course, and the present refusal of the German fleet may be open to an interpretation so widely different as never to involve any Dreadnaught battle at all. Germany has steadily insisted that she went into this war to prevent Europe from being overrun by the Slav, and that ultimately Great Britain must join her in opposing the Russian hordes. That function seems necessarily to refer to the British navy, for the "Prussian Camerilla" and other "Huns" have never neglected a chance to call the British army "contemptible." In that event, the last thing Germany might desire would be any destruction of either the British capital ships or her own, for their combined power in seacoast operations against Russia would be colossal. A few cruisers or destroyers blown up or sunk would preserve appearances, or in any event the debate might be restricted to how long Germany can keep half a dozen "Alabamas" going in the Indian Ocean and South Pacific. The "Emden," at the very outset of the war reported sunk by the Russian "Askold," seems to have raised herself from the deep, in order to make endless trouble sweeping the Bay of Bengal, shooting at the shipping in Madras, upsetting the steamer service between Calcutta and Burma, and sinking British merchantmen galore—regardless of all that has been solemnly written by the strategists as to the utter futility of that sort of commerce destruction. The "Scharnhorst" and the "Gneisenau" and the "Nürnberg" continue their apparently unobstructed efforts to transplant German culture into the flower-laden islands of the summer seas, and the "Leipsic," the "Dresden" and the "Bremen" are demonstrating in the Atlantic how to dodge neutrality laws and get coal and supplies from nowhere, while unavailingly pursued by a couple of French cruisers which have escaped from Toulon.

And in Toulon—peaceful retreat—*saevis tranquillus in undis*—still continues the French navy, oblivious of the alarums and excursions which rack unhappy Europe. In its maneuvers of a year or so ago its submarines attacked its battleships and showed the vulnerability of the latter perhaps better than had ever before been done, except by the battleships themselves which had been automatically blowing up at irregular intervals for some time past; but some one apparently neglected to send the submersibles after the "Goeben" and the "Breslau" while these vessels were shelling the French bases on the Algerian coast. Occasionally, it is rumored, French assistance is given to the British cruisers which have been languidly bombarding Cattaro, off and on, ever since the war started, and spreading dismay among the Austrian battleships, which, safely ensconced in Pola, have been interspersing sarcastic comments on French enterprise with spreading mines in the Adriatic, until the gorgeously sailed feluccas of Venice no longer dare to go outside of the Lido and the market by the Rialto bridge is asking unconscionable prices for fish.

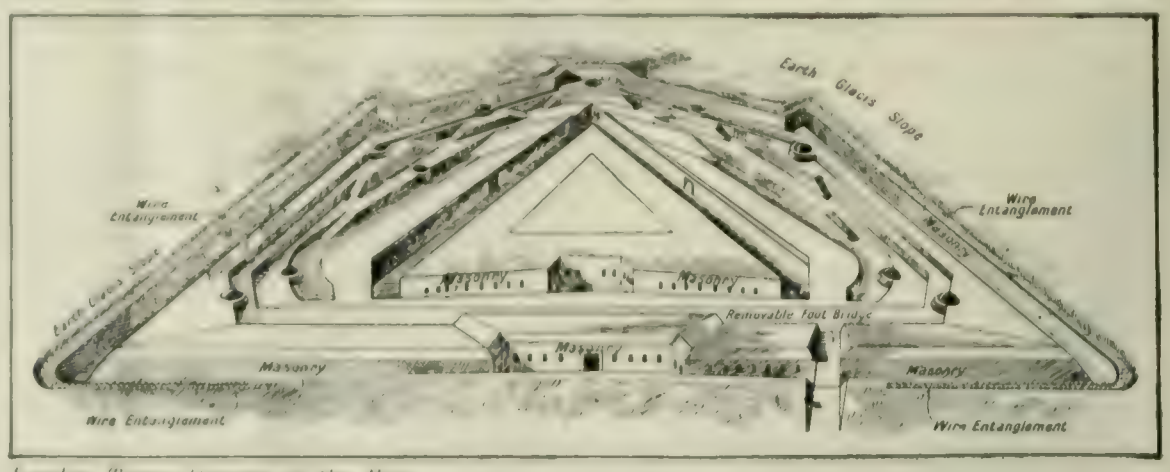
Three British cruisers have gone to catch the "Emden," if they can, for a stern chase is a long one and there is much room for needles of her type in the haystack of the Indian Ocean. Two more are just outside of New York Bay, hoping that something will turn up to induce the "Vaterland" to come out, or that the winter ice will hurry in driving the "Princess Cecilie" from her enforced refuge in Bar Harbor. Old liners converted into auxiliary cruisers are policing successive beats, three hundred or so miles long, all the way across the Atlantic. So comes about the clean swept sea which lets the "Lusitania" continue her regular trips, until some of Germany's 28-knot third-class flyers manage some stormy night to dodge the blockaders in what they call the German Ocean—and then the "Lusitania" will probably stop.

New York City

THE DUEL OF GUN AND FORT

A CRITICAL POINT IN THE LONG CONTEST BETWEEN THE OFFENSIVE AND DEFENSIVE

EONS before man appeared upon the earth and began to fight his fellow-man the rival policies of attack and defense had been engaged in the contest for supremacy. Our limestone beds are museums of prehistoric armor. The first instinct of life was to seek protection. The primordial mollusk sheltered himself behind thick stone walls of his own construction, but his search for safety was in vain. The starfish came and with his soft tentacles forced open the valves; the whelk came and bored a hole thru the shells. From the Cambrian Period to the present the strife of marine animals has taught the lesson exprest by the homely proverb "Don't be a clam."



But each new form of life had to learn for itself the lesson that it is a mistake to sacrifice mobility to invulnerability. The fortified fishes fell victims to their thin-skinned antagonists. The giant tortoise of the Galapagos may live for hundreds of years as an individual, but as a species it is perishing. The stegosaur sank in the mud of the Jurassic swamps from the weight of his armor plates. The reptilian dreadnoughts of the Cretaceous seas have vanished. The last of the mammoths were slain by the weakest and liveliest of their enemies, man.

But when man took up the spear in his right hand he carried a shield in his left, and in the course of time he was tempted to depend more upon his left than his right. The shield grew bigger and heavier from year to year until it had to be carried before the warrior by a slave. Each new material was employed for protection, leather, wood, bronze and iron, until at length the knight stood forth fully clad in steel, cap-a-pie, and invulnerable to arrow or spear propelled by human hands. But then the assailant called outside energy to his aid and with the advent of gunpowder on the battlefield the mediæval armor went to the scrap heap with the clamshells.

Altho the individual soldier has for the last four centuries discarded all armor that impedes his mobility, the custom of community armor, the fortification of towns, has continued to

the present in spite of the increasing difficulty of keeping up with the rapid advance in offensive power due to the discovery of new explosives. Nowhere has the art of fortification been more highly developed than in Belgium and northern France, and here the Germans have won their greatest victories. The German invasion swept over the fortresses of Liege and Namur, of Lille and Maubeuge, of Laon and La Fere, and was finally checked back of the last of these barriers by the impromptu earthworks and lines of living men on the bank of the Marne. For forty years the French have lavished their money and expended their engineering skill on the problem of rendering Paris impregnable, and yet when the time came for which they had prepared they saved their capital by abandoning it, and the baffled Germans had to turn aside to seek their enemy in the open field. A movable government is safer from capture than a government intrenched behind the strongest bastions.

No better crucial experiment in the value of fortifications could be devised than that of Belgium, for here were three modern fortresses designed by one of the greatest masters of the art for the express purpose of resisting a German attack. It happened that just at the time when the long-range guns were compelling a revolution in the established principles of fortification, a military genius arose in Belgium, Gen. Alexis Henri Brialmont, who died at Brussels in 1903, at the age of eighty-two. His treatises on fortifications, comprizing six volumes, were recognized as authoritative in all countries, even by those who contested his theories most strongly.

London Times History of the War

A TYPICAL BRIALMONT FORT

Liege, Namur and Antwerp were surrounded by rings of such fortifications, but they have been speedily demolished by the German siege guns

When it became plain that France was determined upon a war of revenge for the humiliation of 1871 and that Germany was likely to attack France thru Belgium, two policies were open to the Belgians; should they submit to the German invasion of their neutrality with only a formal protest and a show of force, or should they make their country a real barrier for the protection of France? It was largely due to Brialmont's influence and lifelong exertions that the Belgians decided upon the latter course and were induced to expend the immense sums necessary to put the country in a state to offer stubborn resistance to the anticipated invader. Between 1888 and 1892 Liège and Namur were fortified under his direction, and Antwerp was the object of his constant attention from 1859 to the time of his death.

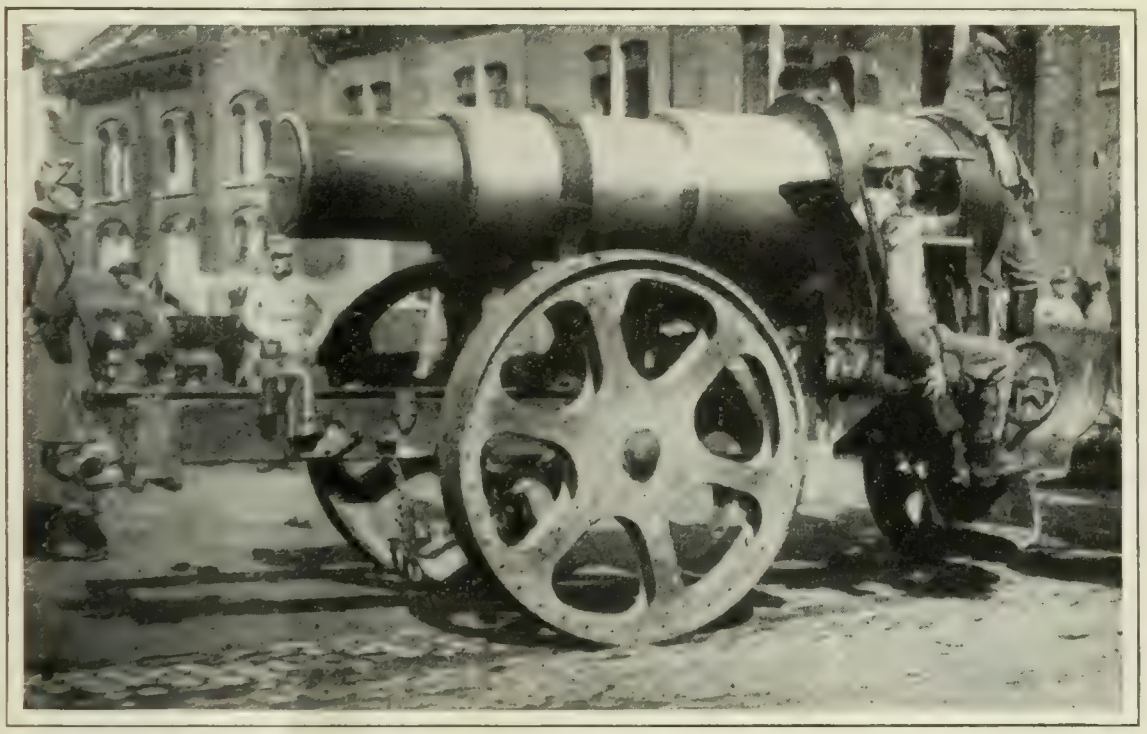
Since then the defenses of the three strongholds have been expanded and reconstructed until by November of last year they were declared ready for action, altho it was not then expected that the war would come until 1915 or 1916. By the army bill of 1909 universal conscription was introduced, and by 1913 the Belgian army had been more than doubled. Antwerp, with its outer ring of twenty-four forts at a distance of five to ten miles from the old city wall, was pronounced by British authorities to be "practically impregnable."

The Brialmont system of defense consisted in surrounding the city with a chain of detached forts and minor fortifications at a sufficient distance to prevent its bombardment. The ring about Liège consisted of six forts and six fortins or redoubts; that about Namur of four forts and five fortins. Liège had 400 guns ranging from 4.7 inch to 8 inch caliber, and Namur had 350.

The typical Brialmont fort as used in the defense works of these places consists of a triangle or polygon so contrived as to offer the utmost possible resistance to an assault. The assailants who succeeded in passing over the open ground in the face of the fire of the machine guns and ascended the slope of the parapet would find at the crest a barbed wire entanglement, perhaps charged with an electric current of high voltage, and beyond this a deep ditch with perpendicular walls of masonry. This ditch is under fire from the guns above as well as from the loopholes of the escarp and counterscarp galleries on each side. Beyond this there may be a second ditch and an inner fort or keep, partly roofed with concrete. Here are mounted most of the larger guns in armored cupolas or rotating turrets. These were originally made of the chilled cast iron produced in the Gruson works of Magdeburg, but later the Krupps took over the works and substituted nickel steel for the Gruson metal

© *International News*

AN EARTHQUAKE MADE IN GERMANY



The 11-inch shells of the Krupp siege guns demolished the Brialmont-Gruson cupolas of Namur in a few hours

in the cupola cover. The curve of this top is so shallow that it is difficult for a shell to strike it at an effective angle, and there are no vulnerable points except the two openings from which protrude the muzzles of the big guns, and these are usually turned away from the enemy. The steel cupola rests upon a collar of the hard Gruson cast iron 12 to 15 inches thick, and this is embedded in thick concrete, reinforced in the latest construction. The iron and concrete is stripped of its earth cover because it was found that this tamped the explosive and so increased its downward blow.

The Brialmont fort and Gruson cupola in their perfected form stood for the final word in fortification. They could scarcely be carried by assault if competently defended. The slow and sure method of attack by trenches advancing by angles, invented by Marshal Vauban over two hundred and fifty years ago and used by him in the siege of Lille, Namur and Mons, is almost impracticable. Horizontal and low angle fire are ineffective, because but little is visible above ground. There remains the possibility of dropping shells upon the steel and concrete roofs, but this was thought so difficult as to be out of the question. Sir George Clarke (Lord Sydenham), in his work on *Fortification*, published in 1907, cites the experiments made at Bucharest in 1885 on high angle fire directed at a cupola whose exact position was known, and says: "It must have been evident to the least instructed observer that to attempt to group six or eight shells on an invisible area of two meters square would have been absolutely futile." Another English authority, Colonel Jackson, Assistant Director of Fortifications in the War Office, said a few years ago: "The probability is that cupolas would hold their own against both direct and indirect fire for a long time."

English opinion has, however, long been skeptical of the value of the elaborate and expensive fortifications which the continental engineers were fond of designing and, when they could get some country to pay for them, constructing. The English experts argued that concealment is a better protection than armor and that it was wiser to put money into more guns than mere masonry. We can now see that they had the best of the argument, for the French and Belgian defenses have not justified the faith that was put in them. The offensive has again got ahead of the defensive, as it did when the cannon was first aimed at the castle, and the musket at the armored knight. It is a victory of dynamics over statics.

The Germans were able to bring into the field bigger guns than those in the cupolas and they succeeded, Sir George Clarke to the contrary notwithstanding, in dropping shells on this invisible target from a distance of six miles or more. And when they struck these shells would crack a steel cupola thru the middle, break up a mass of concrete twelve feet thick or dig a twenty-foot hole in the ground. Their present enemies, the Japanese, taught them how to do it, for it was at the siege of Port Arthur that eleven-inch guns were first brought into the field against fortifications. The Germans have beaten their example by employing seventeen-inch (42 centimeter) howitzers, which had been constructed for the purpose by the Krupps so secretly that the outside world did not suspect the existence of such a weapon until it learned of the havoc they had wrought. These require good roads for transportation and emplacement upon solid concrete foundations for action, so they are not readily brought forward or removed. It is rumored that the seventeen-inch guns used in the siege of Namur and Maubeuge were placed upon foundations built for them by the Krupp employees months before the war broke out on property leased by German agents some five miles from the forts they were designed to attack. The fall of Liege came so quickly, only six days after mobilization had been ordered, that it is doubtful if any of the 42 centimeter howitzers were brought into action. At Namur there was one and probably more, altho the forts were mostly demolished by the 24 and 28 centimeter howitzers (8.4 and 11.2 inch). At Maubeuge the Germans are said to have employed eight howitzers of 42 centimeter caliber. At Namur, according to a Belgian account, shells of various sizes fell on the fortifications at the rate of thirty per minute, and a bombardment of twelve hours was sufficient to reduce most of the batteries to silence. Then when the commandant tried to bring his troops together for a final stand to cover the retreat, he found that the underground telephone lines to the outlying forts had been cut, so half the garrison of 25,000 men were lost.

THE WINNER IN THE GREAT DUEL

A German mortar siege gun of a type probably used before Antwerp. Manned by Austrians

The Belgians have defended their three fortified cities with unquestionable courage and skill. That they have lost simply proves that the strongest defenses can be rapidly reduced by modern artillery. The evidence is plain; the dates speak for themselves:

LIÈGE.
Bombardment began, August 4.
City surrendered, August 7.
—3 days.

NAMUR.
Bombardment began, August 19.
City surrendered, August 23.
—4 days.

ANTWERP.
Bombardment began, September 29.
City surrendered, October 9.
—10 days.

Antwerp has suffered many sieges, but never one so swift as this. In the sixteenth century the citadel held out for fourteen months against the Spanish. In the nineteenth century it held out for two years against the Belgians. In the twentieth it succumbs in ten days to the Germans.

HOW THE UNITED STATES CONSUL GOT OUT OF ANTWERP

THIS IS THE ACCOUNT BY HENRY DIEDERICH, THE UNITED STATES CONSUL AT ANTWERP, OF HIS ESCAPE FROM THE CITY DURING THE SIEGE. IT IS FROM THE LONDON DAILY CHRONICLE

FOR days we heard the sound of heavy gun fire and were told of the fall, one after another, of the outer forts. It soon became apparent that nothing could avail against the great German cannon, and in conjunction with the other neutrals we endeavored to mediate with the Germans to spare, at any rate, some of the most valuable buildings of worldwide interest. But the negotiations failed to lead to a successful result.

I had intended to remain in Antwerp throughout the bombardment, which we saw was now inevitable, but I was told: "For God's sake, clear out of the city, as its destruction is inevitable."

I did not realize till almost too late the horror which was coming. At eleven o'clock at night we were going to bed when we were roused by frightful noises in the air, reminding us of previous visits of a Zeppelin.

Soon we realized that the bombardment had commenced, and then I had the most horrible experience of my whole life.

I went with my family to the basement, and we crouched there all night. The shells, falling every few minutes, came with a dreadful whistling sound, followed by a thunderclap of explosion and the collapse of some buildings.

Opposite the consulate is a home for old folks. Its front was torn out by a shell. Some of the debris was scattered over my house, and then a shell came over our roof and fell on a two-story building, crumpling it up entirely and setting it on fire.

After this another shell blew out the facade of a house lower down on our street. As the dawn came we were wearied out and my family collapsed utterly from fright and the strain.

So we decided to endeavor to leave the city. I succeeded in communicating with my chauffeur and got my car, but I did not know where to go, being left with nothing but what we had on and exposed every moment to exploding shells.

With my wife and daughter and two servants and a refugee's child I crost the pontoon bridge over the Scheldt. It took us four hours to do this, the street being filled with every kind of vehicle and a dense crowd of fugitives. The scene was indescribably dreadful, everybody being moved by the same desire to get away from the awful horror.

From Antwerp to Ghent the roads are a mass of fleeing humanity. As we left we saw vast volumes of smoke arising from Antwerp from the burning buildings and blazing petroleum tanks. Instead of two hours to Ghent it took us three, owing to the traffic. One of the German big guns situated near Vilvorde and a large number of comparatively smaller guns have joined in the bombardment.

GUIDED EVOLUTION

WHAT I BELIEVE AND WHY—THIRTEENTH PAPER

BY WILLIAM HAYES WARD

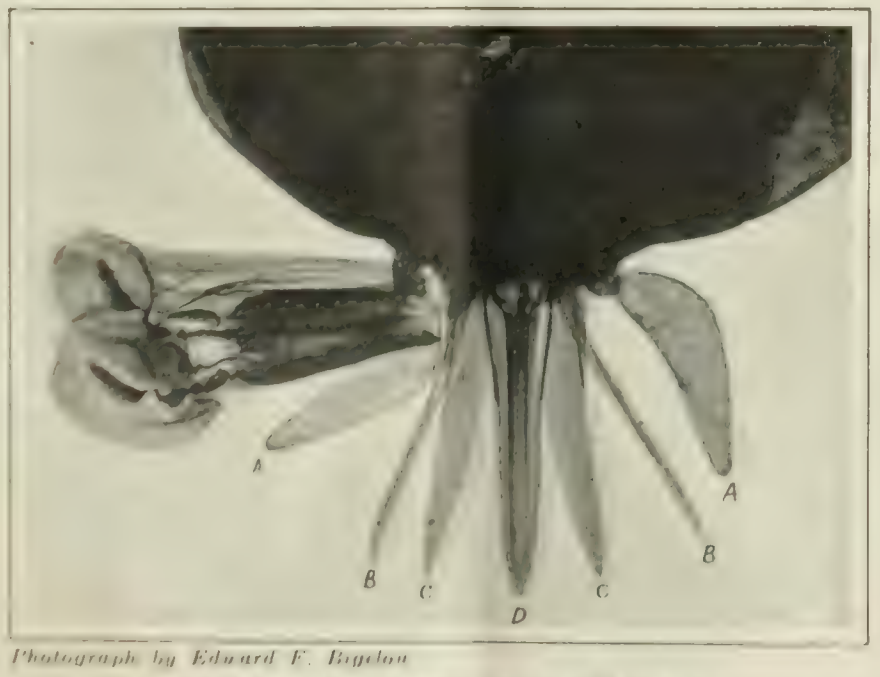
IT would seem impossible to explain how the parental instinct, and particularly the paternal, could have come by any sort of evolution in the case of certain of the lowest vertebrata, toads and fishes. Says the German naturalist, Dr. William Berndt:

> Among the toads there are fathers which apparently swallow their young, that is, the spawn; but the paternal gullet is the babies' cradle in which they merrily develop (*Rhinoderma darwini*); in the case of others (*Pipa americana*) the young pass their tenderest youth in honeycomb-like cavities on the mother's back, in which the spawn is supposed to be placed by the father. In others still (*Alytes obstetricans* the well-known obstetrical toad or nurse-frog), the father acts as midwife. He twines the chain of eggs about his hind legs and buries himself alive for nearly two weeks, until they are ready to hatch.

Another one of many remarkable cases of parental care is that of the Siamese "fighting-fish." They build for the eggs a nest of foam-bubbles, and the eggs are deposited in it to hatch. When the young fry appear it is the father first that devotes himself to their protection against even the mother, and attacks with fury any intruder. All this is what we call instinct, far above reason, a sacrifice and care which no science can explain. If it is "creative evolution" it has needed intelligence to guide the evolution.

Passing now from the parental instinct to that intuitional clairvoyance which has been noted in the case of the solitary wasps, we may take the case of the *Philanthus apivorus*, which has the same power. It feeds on bees and its story is told by Fabre. It meets the unsuspecting bee perhaps on a flower. With its weapon it stabs the bee, not anywhere it may happen, but at one spot, just under what may be called the chin, just where the head ganglia are, and the blow instantly paralyzes the bee, so that it can make no resistance with its more powerful sting. Then the brigand holds the bee for a minute or two, as if to make sure that the blow was effective, and then crushes the bee and forces out of it the honey it had swallowed, and makes its meal from it. This is not reason, it is instinct; but could that instinct have been reached by a slow process of reason and experience, after millions of trials by millions of bee-hunters which had struck their victims wherever it might happen, and had finally learned to choose the right spot for the deadly blow? It does not seem reasonable. That knowledge goes beyond the directive agency of chance.

One or two further illustrations of almost incredible instinct I take from Prof. J. Arthur Thompson. The liver-fluke consists of only a few cells altogether. It has no nervous system. "It is covered with cilia, and has energy enough to swim about for a day or two in the water-pools of the pasturage. It comes in contact with many things, but it responds to none until haply it touches the little fresh water snail, the only contact that will enable it to continue its life." Here it enters the breathing aperture and goes thru various modifications and multiplications until it is taken up by a



sheep and completes its metamorphoses. The response to the one stimulus of this very simple organism cannot be explained mechanically nor easily by evolution. It appears to have been bestowed on the liver-fluke.

Another case is that of the fresh water mussel. She carries her young in her outer gill-plate, and does not set them free unless there is a stickleback or the like in the immediate vicinity. "Then she liberates a crowd of pinhead-like larval mussels," "who rush out into the water like boys from the open school door." "They are aware of the stickleback; they fasten on it to begin another chapter of their life." This is instinct somehow imposed on the mother mussel and her infant brood. How came they to possess it? The best explanation I can find is that a Supreme Intelligence gave this instinct where reason could find no place to abide.

Yet one final illustration must be added, which I take from Bergson, following Fabre. There is a little beetle called the Sitaris. It chooses to lay its eggs on the underground passages of a certain sort of bee. But why does it seek that of all places? It is a long and intricate story, far beyond the powers of the accidental strivings of evolution. The young larva hatched from the beetle's eggs springs upon the male bee as it emerges from the passage, clings to him, is carried on his nuptial flight, when it passes to the female bee, and remains attached to her until she lays her eggs in the honey. It then leaps on an egg floating on the honey, devours it and develops, rests on the shell and undergoes its first metamorphosis. Now it eats the honey which had been prepared for the grub of the bee, and develops into the perfect beetle. I fail to make it seem possible that such a complex of apparent purpose, which seems to surpass reason, which amazes the biologist, could have come to be because one Sitaris out of a million happened in an accident of nature to have laid its egg in the tunnel of a certain bee, and the worm when hatched happened to jump on a male bee as it came out, and then happened to jump on the female bee, and then happened to light on the bee's egg floating on the honey, and that this happened often enough in its posterity until a sort of memory of this success was inherited in all the worms of the species. Am I told that this was not all achieved in one generation, or all at once? Then I ask, What was the use of inheriting any of it until the whole was combined in one achievement; and what likelihood that the second generation would inherit any of it? Here is a purpose which to my mind is more easily explained theistically. Bergson refuses to explain it on Darwinian principles, and is driven to the extraordinary assumption that in a sort of mysticism the invading insect has a sympathetic understanding of the insect it has invaded. That means that one insect has an intuition of the habits and intentions of another species; that an insect which has but a feeble consciousness of itself has an astounding consciousness of the mental workings and, as we see in the case of the wasps, even of the finest anatomy of other sorts of insects. The explanation is more amazing than the facts observed. To me it is more difficult to refer such mysterious intelligence to the insects than to God.

I do not in this discussion deny evolution, for to my mind it is proved beyond question. But in evolution I see what biologists can see, and all they can see, the orderly progress of higher and higher forms of life, and of new accessions of instinct and reason. But when it comes to the explanation of the causes of such progression we must consult philosophy, and the philosophy which thinks it discovers intelligent guidance of evolution cannot be peremptorily excluded. Darwin's philosophy rested on "gemmules," tho without denying guidance, and others have put "biophors" and determinants, as many as may be needed, in the compass of the blastomere of the ovum and sperm. But this does not make it clear how ancestral knowledge, memory, instinct, are transmitted to the successive generations of birds and fishes and insects. It is one thing, and a comparatively easy thing, difficult tho it is, to conceive of the physical elements of a bird's or animal's body concentrated as gemmules in the spermatic or ovarian cell to develop into the body, for they are physical. But the memory, the pregenital habit, the parental foresight, the wasp's surgical skill, the neuter bee's architecture—can we suppose that these can be broken up and transmitted by "determinants" and "biophors"? Or is it conceivable that Darwinian "gemmules" in the chromatin of the egg can carry a habit, an ancestral memory, which has been conceived of not as inhering in and dependent on cells, but as immaterial activities? To me it appears quite legitimate and very reasonable to seek outside of the aimless and casual movements of physical and vital forces for the intelligent guidance of some Superior Power. When we consider the realm of mentality, of instinct and reason, we may recur to the untaught wisdom of the man of Uz and say with him:

> Ask now the beasts and they shall teach thee;
> And the fowls of the air and they shall tell thee;
> Or speak to the earth, and it shall teach thee;
> And the fishes of the sea shall declare unto thee;
> Who knoweth not in all these
> That the hand of the Lord hath wrought this?
> In whose hand is the soul of every living thing,
> And the breath of all mankind.

Photograph by Edward F. Bigelow

THE TONGUE OF THE COMMON OX-FLY

The compound eyes show at the upper right and left. The proboscis for taking up liquids is swung off to the left. This can be turned aside at the will of the fly. When no hole is to be punctured this is brought around in perpendicular position and the many tubes on the end are used in quickly taking up a liquid. When a hole is to be cut the feelers (AA) are used to find the tender spot. Then a hole is cut with the scissors (CC). Of course, a tube is blunt and D is no exception. It is not a sharp point and the weight of the fly is not sufficient to drive it into the hole cut, so the "guy ropes" (BB) are inserted on each side of the hole. At the end of each (B) are fine barbs pointing upward. When these are pushed in the fly can pull up on these which push D down

THE NEW BOOKS

A BRITISH BERNHARDI

THE most surprizing thing about the Great War is that it surprized so many of us; seeing how numerous were the prophets who predicted it. Of the many Cassandra books which have appeared of late years in England and Germany one of the most interesting has been compiled from a series of lectures given by the late Professor J. A. Cramb at Queen's College, London, fifteen months before war was declared, and now published under the title *Germany and England.* Professor Cramb writes with an eloquence and a burning sincerity that reveals more plainly than his words themselves how imminent and menacing he considers the German peril. Curiously enough, he does not find his chief evidence for the coming attack in the usual data of the English alarmist: the growth of the German navy, the mailed-fist diplomacy of the Kaiser or the army of German waiters in London. He calls as his chief witness an old, deaf Saxon historian unread outside of Germany and for the most part still untranslated.

"Foreign critics do not like my books," said Treitschke when reproached with his indifference to the non-German reader. "That is natural. I write for Germans, not foreigners." Since the great German historian thus neglected an audience wider than that of his fellow countrymen it is not to be wondered at that the extent of his influence in Germany is unknown to other nations. He has become the Bible of modern Germany and his teaching has been spread and popularized by many ardent disciples of whom General von Bernhardi is only one, tho probably the best known to British and American readers. Treitschke's philosophy of history is simply an apologia for Pan-Germanism. The Germans are the noblest people on earth, the bearers of the only true culture, and it is their destiny, led by the organizing and military genius of Prussia, to spread this culture over the world. To this great ambition there is only one essential obstacle, vulgarminded, selfish, jealous Britain, which unhappily controls the most desirable parts of the earth. When the Germans were winning spiritual freedom for mankind in the name of Luther and of Kant, while France and the other continental powers were fighting among themselves for European dominion the British seized India and North America and the islands of the sea. Instead of civilizing the earth, they used empire as a means for enrichment. In India the British are despised because they have entered the caste-system, not as Brahmins or philosophers, not as Kshatriyas or warriors, but as despised Vaisyas—traders—a nation of shopkeepers! What they have won by luck and fraud and diligent lying they now hold by power of bluff and empty prestige, and it remains for Germany to end this false situation forever. *Britannia delenda est* is the moral that is to be read on every page of Treitschke.

We fear that Professor Cramb has studied his subject too much. Not only does he tend to overestimate Treitschke's influence, but he is deplorably imbued with his spirit. Indeed, *Germany and England* has exactly the same angry contempt for the pacifists that appears in Bernhardi's *Germany and the Next War,* as a few quotations will show:

> Christian morality is personal and social, and in its nature cannot be political. (Bernhardi.)
>
> And the peace which Christ came to proclaim was not the peace of the ending of battles; it was the peace within the soul, the spirit at one with itself. Islam, in the sense that Mohammed used it, a metaphysical peace altogether apart from political peace. (Cramb.)
>
> The individual must sacrifice himself for the higher community of which he is a member; but the state is itself the highest conception in the wider community of man. (Bernhardi.)
>
> The litigant appeals to something higher than himself, while no free state sees anything higher than itself. (Cramb.)
>
> The love which a man showed to another country as such would imply a want of love for his own countrymen. (Bernhardi.)
>
> I never can understand what meaning that kind of talk has—"friendly rivalry," "generous emulation." For the friendship of nations is an empty name; peace is at best a truce on the battlefield of Time; the old myth or the old history of the struggle for existence is behind us, but the struggle for power—who is to assign bounds to its empire, or invent an instrument for measuring its intensity. (Cramb.)

But whether universal peace be a day dream or a prophetic vision, one thing is certainly true, that it is better not to gain the world if it means the loss of one's soul. It is well that the British did not listen to Professor Cramb, true tho his warnings were, as the Germans did to Treitschke and Bernhardi, for it would be far better, if the choice had to be made, for Great Britain to have been conquered outright by Germany than by the worst thing in Germany, the domination of the state by a military machine, a militarist caste and a militaristic spirit.

Germany and England, by J. A. Cramb. E. P. Dutton & Co. $1.

BOOKS OF THE WEEK

Adventures of Missionary Explorers, by R. A. M. Ibbotson. Twenty-five stories of daring, graphically told and hideously illustrated. Designed to inculcate heroism in the young.

Lippincott. $1.50.

Harper's Every-Day Electricity, by Don. Cameron Shafter. Practical directions with many diagrams for making and using lighting, heating and motor apparatus. Useful in almost any household.

Harpers. $1.

Problems of Boyhood, by Franklin W. Johnson. Twenty-two practical studies planned for the use of boys' clubs or classes of high school age. Material for round table conferences on conduct and moral ideals.

University of Chicago. $1.

The Encounter, by Anne Douglas Sedgwick. The story of a self-exiled American woman and her daughter in Germany, told with all the subtle psychology and exquisite workmanship that marked "Tante."

Century. $1.30.

What Can I Know? by George Trumbull Ladd. A discursive examination of some of the elementary questions about the acquisition and limits of knowledge, the reality, value and application of truth. Popular and interesting.

Longmans. $1.50.

The Women of Egypt, by Elizabeth Cooper. Intimate descriptions of the present customs and characteristics, the economics, social and religious condition of Egyptian women. Glimpses of the confusion of change toward Western modes.

Stokes. $1.50.

Mirabeau, from the French of Louis Barthou. A conscientious analytical biography of the renowned orator and leader of the French Revolution, written with literary skill and political discrimination by the former Prime Minister of France.

Dodd, Mead & Co. $3.

THE CAUSE OF FORGETFULNESS

Psychologists had studied the question of why we remember things for many years before it occurred to them that the question of why we forget needed explanation just as much. Then the Viennese psychiatrist, Dr. Sigmund Freud, came forward with the startling theory that we forget things because we do not want to remember them. He believes that whenever we fail to remember a number or a name it is because we have some secret association with it that makes it distasteful to us, usually something that we are ashamed to admit. In his *Psychopathology of Everyday Life,* now translated by Dr. Brill, he endeavors to account in this way for all our peculiarities, the trifling tricks of the hands, the misplacing of objects, the reading of wrong words, failure to carry out intentions and the like. His explanations are often fantastic and incredible, his symbolism is sometimes absurd, but the exaggerated emphasis he has laid upon the influence of unconscious desire upon our thoughts has served the purpose of directing attention to a very real and much neglected factor in our mental life.

Psychopathology of Everyday Life, by Sigmund Freud. Macmillan. $3.50.

THE OCEAN LINK

Now that we are about to celebrate —by going to San Francisco or otherwise—the completion by the United States of the undertaking that baffled Spain and France, there should be renewed demand for Panama literature. One of the most popular of the many books that have been published during the progress of the work is that by Arthur Bullard, better known as "Albert Edwards." He describes vividly what

REDUCED ONE HALF

In Thickness and Weight—The India-Paper Edition

Webster's New International

with **New Gazetteer,** the supreme authority on the pronunciation of all geographical names, and with meaning of war terms, is of timely value while the whole world is following, with breathless interest, the making of European history

This New Creation

The *Merriam* Webster

has nearly 3,000 pages, with type matter equivalent to a **15-Volume Encyclopedia,** within the limits of **a single volume!** Only 2¾ inches thick, in Rich, Full Red Leather Binding, with Gilt Top.

1914 ATLAS (WITH WAR MAP) FREE

to readers of **THE INDEPENDENT** who take advantage of the offer here made to

DELIVER FOR $1.00

and easy payments thereafter of only a few cents a week, **either** the **India-Paper** or **Regular Edition** in full **Red Leather Binding.** (In United States and Canada.)

India-Paper Edition

Printed on ***thin, opaque, strong,*** expensive India Paper just imported for this edition. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the ***new Merriam Webster*** in a form so light and so convenient to use! This edition is ***one half*** the thickness and weight of the regular edition. Size 12⅜ in. x 9¾ in. x 2¾ in. ***Weight*** 7½ lbs.

Regular-Paper Edition

Printed on strong book paper of the highest quality. Size 12⅜ in. x 9¾ in. x 5½ in. Weight 16 lbs. Both Editions are printed from the same plates and indexed.

Over 400,000 Vocabulary terms, and in addition, ***12,000 Biographical Names,*** nearly ***30,000 Geographical Subjects,*** besides thousands of other References. Nearly ***3,000 Pages. Over 6,000 Illustrations.***

The only dictionary with the ***New Divided Page,*** characterized as "A Stroke of Genius."

"To have this work in the home is like sending the whole family to college."

THE ATLAS

Is the **1914** "New Reference Atlas of the World," containing nearly **200** pages with **128** pages of maps, beautifully printed in colors, with marginal reference indexes, besides illustrated description of **PANAMA CANAL,** all handsomely bound in red cloth, size **10¼ x 13⅝.**

To those who respond at once we will send a new War Map in colors, size 12 x 16, showing the European situation at a glance and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

he has found on his visits to the Isthmus and gives a good deal of its romantic history from the days of Balboa to De Lesseps. Two new chapters, "Finishing the Job" and "The Profit," bring the volume up to date.

Haskin's *Panama Canal* is a more serious-minded and impersonal work, confined to the Canal itself, and giving all the facts and figures necessary to a correct understanding of the engineering and the sociological features of the enterprise. This volume is even more abundantly illustrated than the preceding and has besides a colored bird's-eye view of the completed Canal.

Panama; the Canal, the Country, the People, by Arthur Bullard. New York: The Macmillan Co. $2
The Panama Canal, by Frederick J. Haskins. New York: Doubleday, Page & Co. $1.35

UNSETTLED MEXICO

Another "inside story" of Mexican affairs is given in Edward Bell's *The Political Shame of Mexico*. The author pictures very vividly the corrupt and hollow Diaz régime, redeemed only by the financial genius of Limantour; the tragic administration of Madero, living in the midst of plots and conspiracies, and the rise of Huerta, "vicious, unreliable, treacherous, bespattered with the blood of his predecessor," to the dictatorship. The most interesting part of the book tells of the overthrow of the Madero administration with the active connivance of the United States Ambassador, Henry Lane Wilson. In the author's opinion the Government at Washington could have prevented all the subsequent bloodshed by giving firm and decided support to Madero when he most needed our friendship. Of Carranza and Villa he has little hope. With some regret he concludes that since the failure of Madero Mexico has lost its chance for self-government and that at least a temporary occupation of the country by the United States will be inevitable.

McBride, Nast. $2

HOMELY ADVICE

The Science of Success, by Julia Seaton, M.D., is a book for growing men. It does not point out a royal road to success, nor does it attempt to, but it does present some thoughts that help to set one's brains in order. In clear, direct words it gives some very sound rules for "playing the game." Two phrases will illustrate: "Have a plan—then day and night live in full realization of this plan." "Do not hurry—take your time, and live each day for all there is in it." Homely advice, to be sure, but sound.

Edward J. Clode. $1.

RAMBLES WITH A CAMERA

That amateur photography may promote as invigorating exercize as golf, is, according to Mr. Charles S. Olcott, only one of the minor advantages gained by yielding to *The Lure of the Camera*. The search for worthy subjects takes one far and wide in rambles thru nature's choicest scenes and into the haunts made famous by the great spirits of the past. It is certain that the camera or some subtler force has given to Mr. Olcott a sure sense for artistic quality in the pictures he secures and

The Precious Promise Testament
WITH COMPLETE INDEX
The most helpful Testament published. It has all the precious promises in Red. It also has a COMPLETE INDEX to every subject in the New Testament. Descriptive Pamphlet Free.
Best Leather Binding only $1. Agents Wanted
GLAD TIDINGS PUB. CO., 602 Lakeside Bldg., Chicago, Ill

has directed his steps to places of special literary interest. His leisurely trips thru Great Britain, especially in the Wordsworth country and the vale of the Esk, and his tour of the Italian lakes are no less charmingly portrayed by pen and camera than are his pilgrimages to the literary landmarks of New England, his day with John Burroughs and his glimpse of the Yellowstone and the Grand Cañon.

Houghton Mifflin. $3.

EAST OR WEST

A start in the drab workaday world, a whirl thru days crowded with gayety and excitement—and *Saturday's Child* finally slips contentedly into the Great Adventure—home-making. For with the author of *Mother* all roads, however deviating, lead home, and it is in the pictures of everyday life—even in its homeliness delightfully adventurous—that Kathleen Norris really proves her art.

Macmillan. $1.50.

A GODDESS OF THE HILLS

There is something of elemental poetry in Tickner Edwardes' picture of *Tansy*, the shepherdess of Fair Mile, to whom the freedom and breadth of life on the hills have given a suggestion of the heroic womanhood of mythology. Sentiment, frequently so all-pervasive with Tickner Edwardes, is somewhat repressed and the more unique qualities of his characters given a fair chance.

Dutton. $1.35.

UNPLEASING ASPECTS OF MARRIED LIFE

It is evident that we are to be spared nothing of August Strindberg. In *Fair Haven and Foul Strand* we have another batch of tales based upon his own varied but always unhappy conjugal experiences. The worst thing about the Scandinavian misogynist is that he occasionally says something that has an ugly resemblance to the truth.

McBride, Nast. $1.25.

DATA UP-TO-DATE

In times like these we most appreciate the *Statesman's Yearbook*, for it answers more of the questions arising from the war and in shorter time than any other reference work. It gives for every country, the rulers, population, area, army, navy, fortifications, commerce and finance up to the spring of 1914.

Macmillan. $2

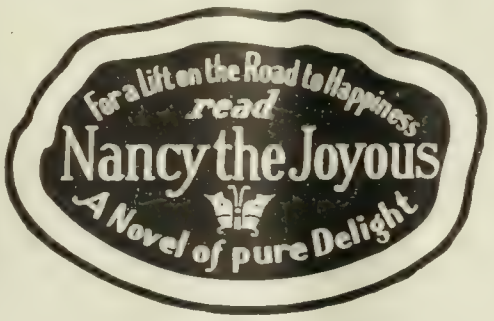
TEACHING NEW TESTAMENT HISTORY

The difficult task of writing a satisfactory volume on *New Testament History*, that could be used as a class book, has been accomplished by President Harris F. Rall, of the Iliff School of Theology. The modern view of the New Testament is accepted, and the maze of critical problems is threaded with discretion and insight.

Abingdon Press. $1.50

WRITING FOR THE MOVIES

Not all the playwright needs to know, but about all he can be taught, is contained in the little volume on *The Photodrama*, by Henry Albert Phillips. The directions for writing plays for the film are clear and illustrated by practical examples.



Stanhope-Dodge Co., Larchmont, N. Y. $2

A DELIGHTFUL BOOK TO READ—AN IDEAL BOOK TO GIVE A FRIEND

Nancy the Joyous

By Edith Stow

Simple and clean and true—natural and sincere—its optimism, its winsome simplicity, its intrinsic merit will win the love of readers. Here is "character" and heart interest and local color that is genuine, with a love interest that satisfies because it is the moving force.

Nancy is a real girl, a likable girl, and the love she inspires in her fellow creatures of the story is a real affection that shines outside the pages of the book and seizes hold of the heart of the reader.

Standard novel size. Beautiful cover and wrapper; frontispiece in color, decorative chapter headings, . . $1.00 net

(*Second large printing.*)

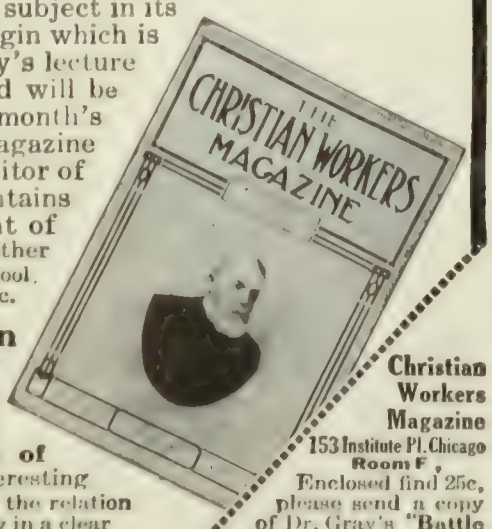
PUBLISHERS REILLY & BRITTON CHICAGO

Are We Facing The End of The World?

JAMES M. GRAY, D. D., Dean



Is the present European struggle the **Battle of Armageddon** mentioned in the Book of Revelation? What relation does it bear to the end of the age or to the second coming of Christ? These questions which have been stirring the minds of the people since the outbreak of the war are clearly answered in a recent lecture entitled

The Battle of Armageddon

By DR. JAMES M. GRAY, Dean

of The Moody Bible Institute of Chicago

Ever since Theodore Roosevelt figuratively spoke of the 1912 Progressive Party Campaign as "The Battle of Armageddon" considerable interest has been aroused regarding the subject in its true sense as a statement of Biblical origin which is to have its fulfillment on earth. Dr. Gray's lecture has been printed in pamphlet form and will be mailed for a short time only with a three month's subscription to the Christian Workers Magazine for 25 cents. Dr. James M. Gray is editor of The Christian Workers Magazine. It contains his notes on current events in the light of revelation and notes on Bible study. Also other contributions from Christian leaders. Sunday school lesson notes and missionary notes. Single copy 10c.

Address inquiries by mail to INFORMATION, The Independent, New York.

ART AND ARTISTS

Leonard Crunelle, a sculptor associated with Lorado Taft in Chicago, has completed a colossal statue of Dr. Mayo of Rochester, Minnesota, the father of two eminent surgeons of today, which is to be set up in a public park in that city.

An exhibition of pictures by the mural painters of the Panama-Pacific Exposition has been making a circuit of the Pacific coast cities. It comprises works by Frank Brangwyn, Frank Vincent DuMond, Jules Guerin, Childe Hassam, Robert Reid, Edward Simmons, and others.

The Boston Museum of Fine Arts, with the coöperation of several friends, has put in circulation among the settlement houses of that city a collection of fifty-eight prints interesting to children by Edmond Dulac, Maxfield Parrish, Randolph Caldecott, Walter Crane and Jessie Wilcox Smith. The prints are in color and in many cases illustrate favorite stories. They are a selection chosen by a jury of children from a "Children's Exhibition" recently held in the print rooms of the museum.

The American Federation of Arts, which was formed at a convention held in Washington five years ago, among other noteworthy achievements has introduced a new feature in art education in the form of illustrated lectures which can be circulated and effectively given wherever a good reader and stereopticon are obtainable. These lectures have been put to much service, one of late having made the journey by parcel post to Honolulu; others being freely used by schools, colleges, study clubs and other groups in all parts of the United States.

Among the indications of an unmistakable reawakening of interest in the art of etching is the fact that the second annual exhibition of the Association of American Etchers attracted so much attention in the keen competition of art shows in New York that it was permitted to occupy the Print Gallery at 707 Fifth avenue (Ehrich Galleries) for double the length of time originally allotted to it. This exhibition is now on a tour of the inland cities, and should be seen by all print lovers who have the opportunity, for it contains many beautiful plates, chiefly by young men of fresh outlook.

Art museums desirous of securing plaster casts of important works of American sculpture should communicate with the secretary of the National Sculpture Society, 215 West Fifty-seventh street, New York City. Original plaster casts of important works are occasionally available as a permanent loan to such museums as would care for them, and this amounts practically to a gift under copyright restrictions, the conditions of their acceptance being merely the cost of boxing, shipping and careful installation. The National Sculpture Society also offers enlarged photographs of notable works by American sculptors, at cost, to art museums, public libraries and educational institutions.

Giant Heater

Will Make a Stove of your round wick lamp, gas-jet or mantle burner. Requires no more gas or oil than for light; does not lessen the volume of light; utilizes the waste heat. Heat and light at one cost.

Will Heat Ordinary Room Comfortably in Zero Weather

On Gas-Jet

A river will run mills by concentrating its power—your lamp or gas-jet will heat a room by concentrating, intensifying and radiating the waste heat with a GIANT HEATER. This heater causes a circulation of the air, giving a uniform heat. No odor, dust, ashes or trouble.

You can heat any room, office or den; warm baby's food or your shaving water; make tea or coffee, and you can do these things quickly, for the heat is intense.

You know how hard it is to heat a room from a stove or radiator in a connecting room. The cold air drives the warm air back. The giant Heater will not only heat the cold room, but will mix and circulate the air in the two rooms, securing uniform heat in both.

On Round Wick Lamp

Price Black Iron - - - $1.00
Polished Brass - - $1.50
Nickel Plated on Brass $2.00

Send today for a heater—we will send it by mail or express, all charges prepaid. Use it in your room, if not satisfied return it in 10 days and get money back. Send for free book anyway.

Giant Heater Co., 767 Temple Street Springfield, Mass.

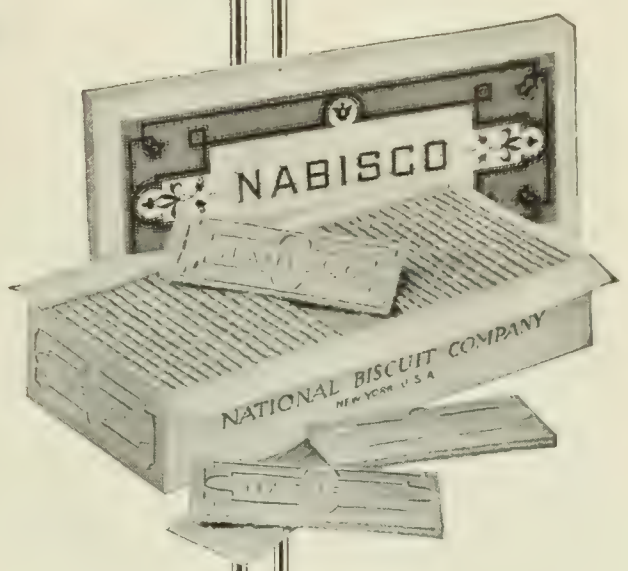
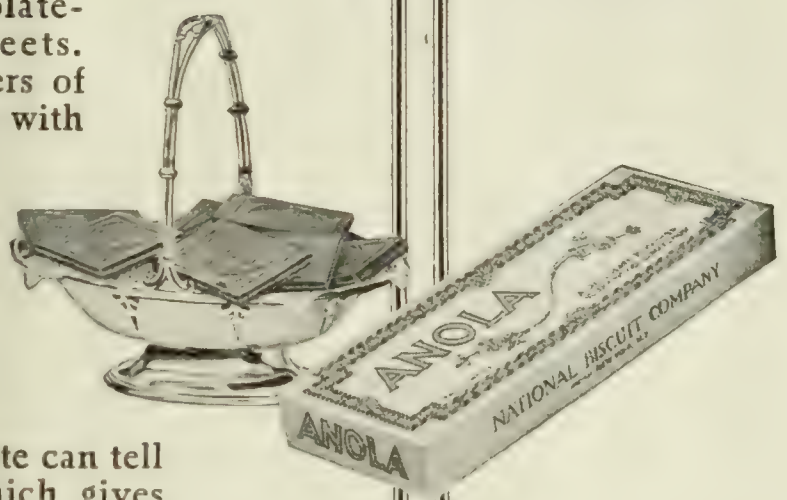
THE OTHER FRANCO-PRUSSIAN WAR



From The Independent, October 20, 1870

STANDING ARMIES DOOMED

It may be hoped that out of the manifold mischiefs and miseries which this Gallo-German war has caused to abound one good result may come. . . . Prussia has proved that an army composed of the population of a country, and taken from the various industries of life, is more than a match for any standing army of mercenaries. . . . It is safe to say that no dynastic wars, no wars of succession or of family compacts, will be possible when all the people are the soldiers.



NABISCO

THE MARKET PLACE

THE PLIGHT OF KING COTTON

In the picturesque words of Will Payne in the *Saturday Evening Post*, "The South had some nine hundred million dollars almost in its pocket when War suddenly leaned over its shoulder and laid a nailed fist on the pile."

A week before the end of July cotton was selling at thirteen cents a pound. Today it is selling—what little of it is being sold—at seven cents. There is a fifteen million bale crop, next to the largest in the history of the country. At the present price the South will lose nearly half a billion dollars.

It is a portentous problem for the American nation to solve. It bears most heavily upon the South, for there the effect is direct and immediate. The planter who has spent his money and his labor in making his crop of cotton, and what is more, borrowed money to do it, faces bankruptcy, if not destitution. He and his family must eat and be clothed thru the winter and until the next crop can be marketed. He must get somehow the seed for next year's crop and money for all the expense involved in growing it.

What are the factors in the problem? What can be done to meet each of them?

The first is the financial situation of the planter. The cotton crop is preeminently a crop raised on credit. Broadly speaking, the planter lives thru the year on credit and pays the bill when the cotton is sold. The planter owes money at the bank, the small planter owes money at the store as well. The average size of a farm in South Carolina, for example, shrank in the years from 1860 to 1910 from 488 acres to 77, and in South Carolina, Georgia, Alabama and Mississippi over sixty per cent of the farms are worked by tenants, largely in small parcels; so that the small planter is the exception rather the rule. The planter, then, must be helped, if he cannot market his crop at normal prices, to carry over his loans and to make new ones.

Prompt action was taken by Congress, just after war began, to meet this factor in the situation. A bill was past permitting the issuance, to banks who should form currency associations, of emergency currency based upon the security of promissory notes secured by warehouse receipts for cotton. By this means it was made possible for the banks to help the planters in their financial emergency without detracting too much from the ability of those institutions to make other loans.

The next question is the marketing of the crop and the price it is to bring. Only the closing of the Cotton Exchange has kept it from breaking further. But the Exchange must open some time.

The law of supply and demand, in a commodity like cotton, is inexorable. The South has fifteen million pounds of cotton to sell. The world's market for cotton is curtailed by the rude hand of war to perhaps ten million pounds, perhaps eleven million, perhaps only nine. If fifteen million pounds are to be thrown upon a market which is prepared to absorb only ten million, a smashing effect upon the price is inevitable. The equation is irresistible—lessened demand plus increased supply equals low prices.

The possibility of increasing the demand this year is remote. Violent and sudden changes in economic conditions such as this would mean are little likely to occur. How then, the question presents itself, can the supply be curtailed? The answer is obvious and simple. By storing the surplus until next year; for raw cotton can be kept indefinitely without deterioration. But the planter cannot afford to store his surplus. He "needs the money." So the answer does not look quite so simple.

Various schemes have been proposed which will bring about this desirable result—the storing of cotton and its consequent exclusion from the market. One such scheme is Government valorization. It has been tried with the coffee crop in Brazil with admirable results. The plan is in effect for the Government to buy the surplus and hold it until a future time when because of changed conditions, whether of increased demand or diminished demand, it can be released upon the market without disastrous effect upon the price.

There are serious objections to the plan of Government valorization which render it little likely that it will receive serious consideration in the present crisis. Not the least of these was that suggested by Secretary McAdoo in a letter to Congressman Henry, of Texas, commenting upon the latter's plan for a quasi-valorization scheme. The Secretary said: "Is it wise to issue $400,000,000 of Government bonds and greenbacks merely to lend on cotton? Tobacco, naval stores, copper, silver, lumber and other things have been hurt by the European war. All have applied to the Treasury for relief. If we disregard every suffering interest except cotton and make it the sole beneficiary of governmental favor what becomes of the democratic principle of 'equal rights for all, special privileges to none'?"

A sounder and more feasible proposal is that which originates in St. Louis for what may be termed "private valorization." It is proposed that a cotton loan fund of $150,000,000 be raised in those parts of the country where the grain and other crops are being marketed at good prices. Loans would be made from the fund at prevailing rates of interest to enable the planters to carry over their stocks of cotton to a

more convenient season. State valorization is also proposed; but the obstacles, constitutional and otherwise, in several of the cotton states are difficult to surmount.

But even if such a plan can be wisely made and effectively carried out another difficulty will soon present itself. Suppose that four million pounds of cotton are kept off the market now until next year. And suppose that next year another fifteen million pound crop is grown. Under any conditions of restored peace and reviving industry the demand for cotton will hardly reach nineteen million pounds in a year's time. The crisis will return. The thing will be to do all over again.

The apparent remedy is a curtailment of production, a cutting down of the acreage devoted to cotton.

Brazil found such a curtailment of coffee production by legislative decree a necessary part of its valorization project. It is evident at a glance that if more cotton is raised than can be used every producer will suffer in the price he gets for his crop. If, on the other hand, less cotton is raised than the world will use, every planter profits by the enhanced price. It is the only logical outcome of the law of supply and demand.

It has been proposed that the curtailment of acreage be enforced by governmental action, either state or federal. But it would seem well worth while to consider whether the solution of the matter does not lie in the hands of the banks. Since cotton is raised on credit, and the credit is obtained from the banks, a concerted move by those institutions ought to have peculiar efficacy in bringing about the adjustment of the supply to the demand. If the bank will not lend money to the planter except upon condition that he cut down his cotton acreage in a cerain definite proportion, the good work will be well on the way to being done.

Such a movement would have an added advantage. It is an indictment often drawn against the Southern farmer that he sticks too closely to cotton and refuses to raise anything else. With all his eggs in one basket, he is peculiarly susceptible to the fluctuating conditions that affect that basket. Anything that would encourage the cotton planter to add other crops to his output would help to put his prosperity upon a surer base.

He should learn a lesson from his experience in the present crisis. He will learn it more quickly and more surely if he is persuaded to it by those who finance his operations.

The following dividends are announced:

Westinghouse Electric & Manufacturing Company, common, quarterly, 1 per cent, payable October 31.

United Cigar Stores Company of America, common, quarterly, $1.50 per share, payable November 16.

American Light & Traction Company, preferred, quarterly, 1½ per cent; common, quarterly, 2½ per cent; also 2½ shares of common stock on every 100 shares of common stock outstanding, all payable November 2.

J. G. White & Co., Inc., preferred, quarterly, 1¼ per cent, payable November 1.

Federal Sugar Refining Company, preferred, quarterly, 1½ per cent, payable November 2.

"A half a loaf is better than no bread" is the tramp's proverb.

All-Weather Treads Should be on Every Fall Tire

Here is a tread which—when you know it—you will adopt for all wheels at all seasons. In fall and winter it's particularly essential.

It is an exclusive Goodyear feature. The tread is tough and double-thick. That makes it enduring and difficult to puncture.

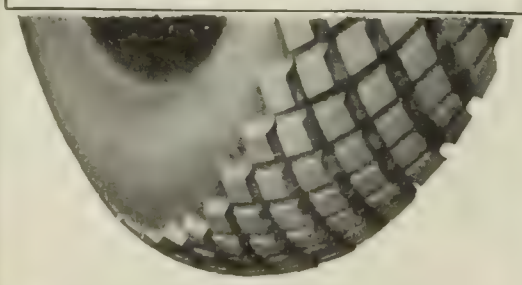
It is flat and regular, so it runs like a plain tread. It causes no vibration. Yet it grasps wet roads with deep, sharp, resistless grips.

In these important ways, no other anti-skid on the market compares with this Goodyear All-Weather tread.

Other Things That Go With It

Here are three other features—all exclusive to Goodyears—which you get in No-Rim-Cut tires.

Our No-Rim-Cut feature, which we control. It completely wipes out rim-cutting.



Our "On-Air" cure to save blow-outs. We alone employ that, at an extra cost of $1,500 daily.

Our patent method for combating loose treads. It reduces this danger by 60 per cent.

Goodyears are more than quality tires—more than the utmost in fabric and formula. In addition to that, they combat your four chief tire troubles in these four exclusive ways.

That's why more men buy them than buy any other tire. And legions of new users now adopt them every month. You will always insist on them when you know their advantages, and any dealer will supply you.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

WHO DOES THE PAYING?

Occasionally there go into the office of Insurance Commissioner in a few of the states public servants of a statesman's proportions. As may be expected, most of them are the products of party politics and totally devoid of insurance knowledge. Under the circumstances, it is astonishing that they perform their duties as efficiently as they do. Their average records are a credit to the intelligence and versatility of the American public man.

In the front rank of the Insurance Commissioners now in office is the Hon. Robert J. Merrill, head of the Insurance Department of New Hampshire. On most insurance subjects Mr. Merrill has the rare faculty of "thinking straight." As an example of this, we quote from his latest annual report what he has to say on the subject of taxation. Very few people, in public or private life, realize the source from which the tax money exacted of insurance companies flows. Mr. Merrill has a clear conception of the situation when he asserts that it is supplied by the citizens "who are thrifty enough to insure their future independence in some degree." He says:

> This department has turned into the state treasury during this fiscal year upwards of one hundred thousand dollars. The Legislature appropriated for its maintenance $6800, a clear profit of more than $94,000. This statement is not made for the purpose of asking that any particular credit be given on account of this showing. The revenue was collected because the law provided it should be. There is no reason why the state should exact these large sums each year, exacted not from the insurance companies, but really from the citizens of our own state who are thrifty enough to insure their future independence in some degree. But there seems to be little reason for expecting any change in this particular as long as taxation continues to be based upon the idea of securing as much as possible from convenient and defenseless reservoirs of funds, the tapping of which does not apparently interest the man with the vote. Theoretically, there is no justification for the taxation of insurance premiums. Practically, the present methods will continue until the public can be made to understand that it pays the tax.
>
> Entirely aside from taxes paid by insurance companies, they contribute between twelve and thirteen thousand dollars to the general revenue of the state in the shape of the excess of fees collected over the expenses of the department. For this there is absolutely no justification. From this excess there should be appropriated a sufficient amount so that the department may be able to render its proper service to the state, the insured, and the insurance companies. With its best endeavors it must be admitted that such service is not now being rendered.

These are truths, boldly proclaimed. They charge the state with rapacity in taking money without justification and of niggardliness in making return of service. Let us examine the details. There are two sources of revenue mentioned: taxes on premiums and insurance department fees. We find that in 1913 the state received from these sources the following aggregate sums:

Taxes on premiums	$89,283
For licenses and fees	19,150
Total	$108,433

The administration of the Insurance Department cost $6811. The Commissioner's salary is but $2000, and his entire force consists of a clerk at $1000 and a stenographer at $600. The miscellaneous expenses were $3211. So that balancing the receipts of the New Hampshire department against its expenses, we find that it yields a net profit to the state of $101,622. Is the making of profits one of the functions of any department of government? Why should those who protect themselves with insurance be compelled to bear this unnecessary burden?

The state does not even render the service it should in return for the munificent rewards it exacts. The Commissioner tells us that the work is constantly increasing, and he intimates that its volume surpasses the facilities to be purchased for $6800 a year.

In this respect, New Hampshire is but representative of the other states. All of them collect from two to ten times as much money from the insurance companies as it costs to conduct their insurance departments. Last year New York received in taxes, fees and licenses from these companies $728,894; its insurance department cost $386,582. In fees alone, Massachusetts had a total of $112,251, to say nothing of the tax receipts (a statement of which is not accessible as we write); while its department expense was $89,557. For taxes on premiums (no statement of fees obtainable) from October 1, 1911, to October 1, 1912, Connecticut received $186,535 and spent on its insurance department $32,999. North Carolina collected a total of $344,546 and expended less than $20,000 on supervision. Maine received in fees alone $25,555 and its total expenses were $7576. For the year ending December 31, 1912, Wisconsin collected $951,867 from the companies and spent $36,525 on its department.

The Insurance Commissioner of North Carolina naïvely observes in his 1914 report that his department "is not run for revenue" and that the state should, "with a collection of over $300,000 annually from insurance companies, spend more money for the enlargement and efficiency of the Insurance Department," adding, "This certainly can be done to advantage."

But, in a way, we have drifted from the main theme—the hard sense, the "straight thinking" of the New Hampshire Commissioner, who, upon the authority of his investigations and his experience, asserts that "there is absolutely no justification" for taxing the people "who are thrifty enough to in-

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY
Geo. E. Ide, President.
256 BROADWAY NEW YORK

Atlantic Mutual Insurance Co.
Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with 4 bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826 00
Received premiums thereon to the extent of	282,298,429 80
Paid losses during that period	141,567,550 30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640 25
On December 31 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued as fast as dividends of interest until ordered to be redeemed, in accordance with the charter.

sure their future independence in some degree." These exactions will average about two per cent of the premiums per year. So, reader, every time you should pay $100 on a policy, the state compels the company to collect $102.

NOTES AND ANSWERS

According to the report of Fire Commissioner Cole, of Boston, forty-one persons were killed and a loss of $3,225,000 incurred by fires in that city during the twelve months ending with December 31, 1913. He estimates that eighty per cent of the fire loss was preventable.

A number of Baltimore employers of labor have formed the Maryland Mutual Liability Insurance Company to undertake on the mutual plan the hazards incurred under the recently enacted workmen's compensation law of that state. It is the first mutual company of its kind in Maryland.

West Side, Chicago, Ill.—The term generally used in the department reports is "unearned premiums," and fairly describes the liability. The term "reinsurance reserve" is not accurate. It is a liability arising under the unexpired policies, the premiums on which have been paid in advance for one, three or five years, and represent the aggregate sum due if all the policies were cancelled on a pro rata basis on the day the statement was made.

R. W., Manhattan—The Prussian Life Insurance Company of Berlin, Germany, is the only foreign life insurance company actively transacting business in the United States, and it does a reinsurance business only. It has a cash deposit of $200,000 in Connecticut, and its financial condition (United States branch) on December 31, 1913, as shown by the insurance report of that state was: Total admitted assets, $586,047; total liabilities, $465,329; net surplus, $120,718.

The Automobile Protective and Information Bureau of Chicago has begun an organized campaign thru 40,000 agents to compile a census of uncalled for cars. Agents are to visit their local garages and make a list with descriptive information of all cars on hand. and send this information to the head office. Thru this method in a small way many cars have been traced, and it is confidently believed that thru this extension of the work a grand round-up of stolen cars will be effected.

The 1914 report of the Insurance Department of New York, covering the condition and affairs of the assessment and fraternal life insurance associations under that jurisdiction, closed the year 1913 with $6,200,064,879 insurance in force, a gain of $37,044,327. The total assets of the fraternals was $132,961,600, and of the assessment life and accident associations, $3,787,170. The total liabilities were, respectively, $17,464,131 and $2,078,093. The fraternals received from their members $88,790,947 and paid death claims of $65,721,192. The total fraternal insurance in force in New York state decreased $2 5,133 and the assessment kind $621,256 during the year.

JUST A WORD

If the reader's eye has by any chance fallen upon a little announcement with the heading "Teachers," hidden by the cunning hand of the make-up artist among other advertisements, he may have noted the statement that three hundred schools had placed orders with The Independent for classroom work during the past month. This is certainly a gratifying record, and, fine as it is, the daily orders indicate that it is only the beginning of the shower.

The Independent of November 30 will be an Efficiency Number. Among the contributors will be Judge Elbert H. Gary, Chairman of the United States Steel Corporation; Frank A. Vanderlip, President of the National City Bank; Louis D. Brandeis, Efficiency Counsel for the Great Railroad Systems; Dr. Charles W. Eliot, Former President of Harvard University; Harrington Emerson, President of the Efficiency Counsel for the United States Navy; F. C. Henderschott, Founder of the National Association of Corporation Schools; John Wanamaker, Former United States Postmaster-General; William Russell Wilcox, President of the Efficiency Society. This issue will also introduce to the readers of The Independent Mr. Edward Earle Purinton, whose writing on this general topic has attracted the attention of millions of people. Further details concerning this number will be given later.

Week before last, on this page, it was mentioned that the receipts from subscriptions for the month of September exceeded the receipts of the same month a year ago by two hundred and eighty-three per cent. This was the hasty report which came to the Publisher's Desk at the end of the month. It proves to have been a mistake. The official figures since transmitted show that the gain was five hundred and ten per cent —which it need hardly be added is equally satisfactory!

WAR TIME ADVENTURES

The newspaper correspondents have had varying experiences in Europe, many of them tragic. It is a relief to read something in lighter vein concerning these able and tireless personalities. From the special correspondence of the New York *Globe*, by Herbert Corey, we venture to make an extract or two on this page, to take the place of some of the arid facts that are usually presented here:

John McCutcheon, the cartoonist, tried to start for Belgium one morning on an 8:30 train. It is not the custom of the Savoy Hotel to serve breakfasts to persons who get up at such plebeian hours. So McCutcheon clamored in the breakfast room until he finally extorted a little mess of ham and eggs from the head waiter, and then fell upon a taxi and scooted for his train. A friend went with him.

"I'll put your bags aboard," said the friend. "You get your ticket."

But at one minute of train time McCutcheon had not appeared. The friend hurried back to see what had happened. He found McCutcheon in the clutches of the two fattest door porters of the Savoy. He was nervously searching his pockets.

"I forgot to pay my bill," he explained, "while I was worrying over not getting breakfast. These fellows traced me here and have held me up."

"I'll pay the bill," said the friend, "now."

"No, sir," said the fattest porter. "This gentleman here owes the bill, sir. He must pay it, sir."

It was so ordered.

Richard Harding Davis of the New York *Tribune* got into Brussels. It cost him all the money he had to get there, and in accordance with the invariable custom he was then detained by the Germans while they marched thru the town. He got a courier out with a plea for funds. The courier reached Davis' connection in London.

"Maybe the American Embassy can get some money in to him," said his connection. The American Embassy, on being queried, said it certainly could. So the courier was dismissed. Next day the connection went to the embassy with the money for Davis.

"Very good," said the embassy. "Now call in your courier and we will send this money to Davis."

"The courier has gone back to Belgium," said the connection. "We don't know him, anyhow."

"Then we can't help you," said the embassy.

An invaluable work of reference which no library should be without

The Standard Library of Natural History is Unique

Over 3000 illustrations, from actual photographs, taken in all parts of the world

Two hundred of the World's leading Naturalists contribute to the interest compelling stories

The ordinary Natural History is usually dry, often full of technical details and generally illustrated by hand drawn pictures which give no real idea of what the animals actually look like when they are at home.

Therefore, many people are deterred from the idea of buying such a work because they feel they have no use for it. In planning the **STANDARD LIBRARY OF NATURAL HISTORY** a very different idea has been followed.

The Difference

Here is a collection of actual photographs which could not be duplicated for many thousands of dollars, beautifully reproduced by the finest process of photo-engraving.

The wild parts of the world have been ransacked to gather the portraits of their inhabitants—often at the imminent risk of the life of the operator.

The descriptions are the work of men—each one a recognized authority on his subject—and they are written in a chatty, attractive, readable form, free from all technicalities such as make most scientific works so dry and unattractive. The result is such a work as has never before been published—a real live Natural History of real live animals.

Full of real interest

Something is always happening. We are introduced to birds, beasts and fishes of strange forms from all parts of the World, meeting them face to face, as it were, in their native haunts.

The gradual march of civilization has driven many of these animals into almost inaccessible wilds. There they have been tracked and followed, sometimes for many days, until a favorable opportunity arose of taking a photograph.

Never again

In the course of a few years more, many of these animals will probably become extinct, as has our own Buffalo. Then such records as the **STANDARD LIBRARY OF NATURAL HISTORY** will become of priceless value.

Although the original cost of assembling this material was many thousands of dollars, the **STANDARD LIBRARY F ONATURAL HISTORY** is being offered today at a bare profit on the cost of printing and binding. In other words, you get an extraordinary set of books at an exceedingly reasonable price.

The reasons for this are many. The principal one being our unique resources for the publication of such works—a business we have been connected with for over a quarter of a century.

OUR ATTRACTIVE FREE BOOK will tell you all about this wonderful library.

This beautiful book of specimen pages, many in colors, together with a set of splendid Duogravure reproductions of real Nature Photographs, will be sent FREE OF CHARGE, if you will fill in and mail the coupon. Every Nature lover will be glad to have these.

VOLUME 80 | MONDAY, OCTOBER 26, 1914 | NUMBER 3437

LOOKING BACKWARD IN 1920—AS IT MIGHT HAVE BEEN

AT the opening of the twentieth century Germany was in a critical position. France was mustering her forces to recapture Alsace-Lorraine, Great Britain was jealous and timid, Russia was expanding toward the China Seas and increasing her population with a rapidity which had no historical precedent. Germany had no true ally except Austria-Hungary and even in that nation barely a quarter of the population was German in race or sympathy and less than half favorable to German policy. Had militarism and imperialistic bureaucracy continued to dominate the country not fifteen years would have past without a domestic revolution, or, more probably, a great foreign war with an exasperated and terrified Europe in which the German power, so beneficial to civilization in so many ways, would have disappeared from *Welt-politik*.

FORTUNATELY the Emperor chose as his Chancellor a second Bismarck in policy but animated with more liberal views and more generous aims. Herr Schmidt, of the University of Jena, had been a close student of international relations and he formulated a plan with the thoroness and mastery of detail characteristic of his nation and held to it in the face of popular misrepresentation and opposition with all the stanchness of his famous predecessor. From the first he regarded the Russian despotism as the great enemy of German culture and indeed of all the free peoples of Europe. The Chancellor first made public his views on the floor of the Reichstag while Russia was busy with the Japanese war. "Whom do we fear?" he said. "Frankly, is it not France and Russia? But France has a specific quarrel with us, while the Russian peril is a limitless ambition. Let us sacrifice our pride and make peace on our western border because the Fatherland will be hard put to it to defend both frontiers and to the east is a foe whose claims are too indefinite to be compounded without war."

Before the astonished Reichstag he outlined a new constitution for Alsace-Lorraine, by which that province was to be made an independent nation, neutralized by the powers, a member of the Zollverein and pledged to make no discrimination against either the French or the German languages. "Let us solve the problem of our French frontier by abolishing it," he continued. "At one stroke we will abolish the only essential reason for French enmity that the opinion of the world will condone and we will build up a barrier of neutralized nations: Belgium, Luxemburg, Alsatia and Switzerland, which the French would have to violate to reach us. We cannot yield the Reichsland to France, for there are many Germans there and, besides, that would still leave us a common frontier with France whenever she chose to invade us. But if, in pure revenge for 1870, with no grievance of the present day, France should attack us she would have to do so across a barrier of broken treaties, of armed buffer-states and of the good opinion of the world."

Chancellor Schmidt found it the hardest task of his life to persuade German pride to the sacrifice. He played upon the opinion of the country and the court with war scares and threats of revolution, he subsidized the press, he even resigned for a while to show the Kaiser that he could not afford to have such a capable politician in the opposition. Finally he was recalled to office and carried his measure. But in order to make assurance doubly sure, he demanded of France as a condition of pressing the measure that "France pacify German public opinion by abandoning the Russian alliance." This done, he ordered the bulk of the army moved over to the Russian frontier. Russia, recovering from the Japanese war, watched with anger and amazement the grant of local autonomy to Prussian Poland which contrasted so strongly with her own repressions. Schmidt did not stop here. He restored Danish Schleswig to Denmark, exacting in return a military alliance with Germany. He threatened Austria with a repudiation of the Dreibund if the Slavs were not placed on an equal footing with Germans and Magyars in the dual empire. As Austria, isolated, would have been helpless against Panslavism, his demands were granted, tho not without grumbling. Finally, Schmidt brought Norway and Sweden into the alliance by deftly playing upon their fear of Russia.

SIDE by side with his foreign policies, Schmidt built up a far-reaching program of internal reform. This he did primarily because he was a good Liberal, but also because he found it necessary to win immense favor with the mass of the people to offset the opposition of the military aristocracy and the appeals of chauvinistic demagogs to the mob. The example of German freedom to the west and the open and secret encouragement given by Schmidt to the nationalist movements in Poland, Finland and northern Persia, placed the Tsar in a position where he was compelled to choose drastic reform, revolution or war. Egged on by the Panslavists, he chose the last of these courses and moved suddenly on Germany and Austria. But a surprize awaited the Russian Government. France and England, altho commercially hostile to Germany, dared not openly flout Liberal sentiment by supporting Russia against a nation dominated by the ideals of Chancellor Schmidt. The Balkan states and Italy remained neutral because with the cessation of the Austrian policy of expansion to the south they

[illegible] to hate or fear the German nations. Poland rose as one man to realize the promise of nationality which Schmidt had years before announced would be the result of a victory over Russia in the event of war. The Swedish troops occupied Finland. Thus, within a space of a few months, Russia was ready to sue for peace. The full strength of the magnificent German army had been hurled upon the half-mobilized Russian troops and supporting it came waves of Austrians, Magyars, Bohemians, Croats, Bosnians, Polish rebels and Scandinavians. And the peace which followed this great war of 1914 made reprisal impossible.

The victorious war raised the prestige of Chancellor Schmidt to the highest point of hero worship. He practically dictated the terms of peace without opposition. Poland was made an independent nation with a military and commercial alliance with Austria and Germany, under a pledge not to discriminate against the German language or restrict German immigration. This gave Germany not only a friendly buffer-state to the east, but room to grow in, industrially and culturally. The German speaking Baltic provinces were joined to the German empire with local autonomy, and Finland was created a republic under the protection of Scandinavia. The Zollverein and Alliance of Norway, Sweden, Iceland, Denmark, Finland, the German federation, Austria, Hungary, Bohemia, Croatia, Bosnia, Lithuania and Poland is impregnable from its size, its population and the enthusiastic patriotism of the people both for their own immediate Fatherland and for the Confederation of Central Europe to which they all belong.

Since the formation of the Confederation, it has been joined by the Balkan States, by the neutralized nations of Holland, Belgium, Luxemburg, Alsatia and Switzerland, and in no long time the present negotiations for merging this invincible power with the Latin Confederacy, the British empire, the Chino-Japanese union and the Federation of All the Americas will be completed and the last tariff walls and fortifications will disappear. Even the Russian empire will join in the World Friendship if the present revolution, which came as an immediate result of the crushing defeat of the autocracy in 1914, is successful.

THE FEDERAL TRADE COMMISSION

THE indefatigable administration has added to its legislative achievements in the tariff and currency and banking reform, the completion of two-thirds of its trust program. The Trade Commission bill and the Clayton anti-trust bill have been past by Congress and signed by the President. Next week we shall return to the second of these acts; it is the first that we here consider.

The Trade Commission act does five things:

First, it establishes a Federal Trade Commission similar to the Interstate Commerce Commission.

Second, it transfers to this Commission—and elaborates—the duties and powers of the Bureau of Corporations in relation to the investigation of the affairs of corporations, and of business methods and practises in general and in particular.

Third, it makes the Commission an accessory to the courts for the preparation and execution of their decrees in anti-trust cases.

Fourth, it empowers the Commission to make, thru the Attorney General, recommendations for the readjustment of the business of any corporation in order that the corporation may not violate the anti-trust law.

Fifth, it entrusts to the Commission the prevention of unfair competition.

The creation of a Trade Commission is good. In so far as it avails to substitute administrative regulation of business for regulation by lawsuit it is a substantial step in the right direction.

The provision for more thoro publicity in relation to big business is a recognition of the right principle—the corporation which is not willing to conduct its business under the full light of day has little claim to public consideration.

The attempt to avoid the necessity of suits under the anti-trust act by enabling the Commission to suggest methods of reorganization thru which a corporation may cease to violate or remain from violating the act is perhaps the most admirable thing in the present measure. But it does not go far enough. It should be made possible for the officer of corporations who have every desire to obey the law, but who are uncertain just what they may lawfully do and what they must not do, to seek of their own motion the assistance of the Commission with the certainty that they will get it.

Most business men are law abiding citizens not only in their private but in their corporate capacities. But it has long been subject for complaint that there is a broad twilight zone about the region where the Sherman act reigns in which even the most law-abiding corporation is likely to lose its way. Such a corporation should be able to secure from the Commission suggestions as to the modification of its business methods and practises with a view to compliance with the law. The adoption of those suggestions by the corporation should create, in the event that the corporation were proceeded against under the anti-trust law, a rebuttable presumption that the corporation was not guilty of violating the law.

The number of corporations whose operations tend to be detrimental to the general welfare thru the stifling of competition and the fostering of monopoly is but small in proportion to the whole. The way of the well-intentioned corporation should be made as smooth as the way of the evil-purposed corporation should be made rough. Encouragement and coöperation should be the portion of every corporation that is honestly seeking to do the right. Without that coöperation it cannot prosper; and unless business prospers we all are bound to suffer.

Lastly, the provision against unfair competition is sound. Competition is a natural force in the economic world, fast rooted in the very nature of man himself. Men compete because they seek prosperity. So long as they compete fairly, honorably, and with a decent regard for the rights of others, competition is eminently desirable. It is perfectly possible to compete fairly. But when men begin to ignore the rules of the game, to overstep the bounds of fair play and honorable dealing, competition quickly tends to become an instrument of oppression.

Recent events in the realm of trust development have shown how unfair competition may be used by the strong to put down the weak, by the unscrupulous to trample upon the honorable. Where could a man be found anywhere so unabashed as openly to defend unfair competition? Not even those who practise it in secret would

dare to commend it openly. Excellent as it is to have a giant's strength, it is tyrannous to use it like a giant.

With the categorical prohibition of unfair competition no right-minded man can quarrel. With the plan for enforcing the prohibition thru the Trade Commission every one who wants efficiency of regulation in the business world and deprecates the laborious processes of administration thru the courts will find himself in accord.

On the whole the Trade Commission act is a sound addition to the body of federal law dealing with corporate activities. It is conceivable that time will show directions in which it has gone too far. We are certain that it will presently appear, as we have already suggested, that in at least one direction it has not gone far enough. But in its general tenor, it is a good act.

OUR DEPENDENT PEOPLES

IT is a great thing for the country that two hundred and fifty men and women, deeply interested in our national problems, working earnestly for their solution, selected from the whole country and its possessions, can come together for four days to discourse and discuss, and then present their conclusions to Congress and the people. Such a company held last week its thirty-second annual meeting at Lake Mohonk to talk with each other about our Indian and Philippine problems.

One would think the Indian problem ought to be settled long before this time, and the Indians happily absorbed in the total population. There are only some three hundred thousand of them, what seems an almost negligible number, but they have been so robbed and coddled in turn, that it will yet be more than one generation before we can let them alone. At present the glaring evils that most need to be corrected are those that appear among the wealthy so-called civilized tribes of Oklahoma, where shark-lawyers, both white and Indian, are with too much success cheating them of their individual lands, while the white sentiment stands in the way of the aid given by their protectors and by the Indian Bureau. It is easy to fill an ignorant Indian with liquor and persuade him to sign away his possessions for a most inadequate consideration. Such cases have occurred by the thousand. Of course it is illegal to give the Indians liquor, but what cares a swindler for law? Yet another evil closely related to that of liquor is that of the comparatively new intoxicant, called the mescal bean, the use of which is spreading immensely among the Indian tribes. It is the fruit of a cactus, and its effects may be compared with those of morphine; it produces at first delightful hallucinations, but later ruins the constitution. The Indians have made a religion out of it, and worship the bean as the Holy Ghost. Its sale and use ought to be prohibited as well as that of alcohol.

But much larger questions are involved in our responsibilities for the Philippines; and the fact that they have entered into politics makes the discussion somewhat delicate in such a conference in which both parties are represented, and members of Congress on both sides, and this year particularly the Democratic. A leading Democratic Congressman, a defender of the Jones bill, was chairman.

That bill is on the whole a pretty good one. It is reported that it came, except the preamble, from President Wilson. The preamble makes the false statement that from the beginning it has been the intention of the people of the United States to give independence to the Philippines as soon as they are fitted for it. This is not true. They have not meant to clear our skirts of them when fitted for self-government, unless they wish it. It is not clear that they ever will wish it. They may and they may not. Mr. Quezon, their Delegate to Congress, said they do wish it, and the elements now in control doubtless do. So did the Boers in South Africa wish a few years ago to be free from Great Britain, but they do not wish it now. Native India does not wish to throw off the British rule. The new Jones bill does not set any date for independence, and if the Democratic party simply wishes to give independence when the people are fitted to create a stable government, then we need have no quarrel over the matter, for that time is not near.

Beyond this what needs to be done is to understand that our rule of the Philippines ought to know no partizan politics. No man from Governor-General down ought to be removed for party reasons, and each official who is honest and efficient, who is working first for the good of the people, should be allowed to make for himself a career. Officials, teachers and missionaries should unite to create a civilization based on intelligence and sound moral character. Especial attention should be given the uncivilized tribes to reduce them to order. Meanwhile it is incumbent on Congress to absorb something of that human interest in the welfare of the Philippine people which appears in so marked a degree in the American officials, teachers and missionaries in the Islands. It is a shame that our financial legislation of Congress has been directed to the benefit of American tobacco and sugar interests rather than to the benefit of the Islands. We ought to treat the Philippines at least as well as we treat Porto Rico and Cuba.

LOANS TO BELLIGERENTS

ON April 17, 1907, in an address before the First American Peace Congress held in New York City, Mr. Bryan said:

> There is nothing logical in saying that a neutral nation shall not furnish powder and shot but shall furnish the money, or may furnish the money, with which to buy the powder and shot. I hope the time will come when we shall be able to include money as contraband of war and thus make it impossible for the citizens of a neutral nation to grow rich by encouraging wars between other nations.

As far as we know, this was the first time that any such doctrine has been enunciated by a man of Mr. Bryan's position and standing. Mr. Bryan has been continuing to advocate it for the past half dozen years.

Accordingly when Mr. Bryan issued his statement at the beginning of the war that loans by American bankers to any foreign nation which is at war are "inconsistent with the true spirit of neutrality," we rejoiced that at last he was to have the opportunity of putting into practise what he had preached and that the United States was to take this advanced position.

Last week Mr. Lansing, Acting Secretary of State in the absence of Mr. Bryan, received certain inquiries as to the rights of the citizens of neutral nations in trading with belligerents. In reply he quoted the perfectly recognized rule of international conduct: "A citizen of the United States can sell to a belligerent or its agent any article of commerce which he pleases. . . ." He further applied this rule to the question of loans to belligerents. On that point he said:

There was no legal obstacle to loans being made by banks in this country. The only objection was that which from an idealistic point of view might lie against such transactions on the ground that by enabling nations at war to prosecute the conflict they were not in strict accord with the spirit of neutrality.

In this Mr. Lansing was perfectly right. But what he has said has been taken in some quarters to mean that the Administration has changed its attitude and will no longer use its influence against loans to belligerents. This we cannot believe. Mr. Bryan is not the man to retreat after having established such a splendid precedent in the practise of nations in time of war, foreshadowing, as it does, the day when neutral nations will automatically cease all intercourse with those who break the peace. He should receive the support of all American financiers in his advanced policy.

A CHRISTMAS HOLIDAY

IT has been suggested that fighting cease all over the world during Christmas Day in honor of the advent of the Prince of Peace nineteen centuries ago. That would be a good thing to do provided that the armies did not resume their deadly work on the morning of the 26th. Otherwise it would merely give both parties a breathing spell so they could fight harder next day.

The better the day the better the deed, and if these millions of men are all doing God service in killing one another they certainly could not conscientiously relax their efforts on this most holy day. That this war is really a crusade for God and humanity is attested not by one but by all religious faiths. The ruler of Protestant Prussia says it is and the rulers of Catholic Austria and Orthodox Russia say the same. The Christians of Belgium, France and England are equally convinced that this is a holy war. The Sikhs and the Shintoists, the Mohammedan Gurkhas and Turcos agree upon this one dogma, that they are fighting for the right. In the face of such a consensus who would have the presumption to call a halt in the name of religion even for a day?

FREE SPEECH AND LICENSE

ON another page the Reverend Bouck White presents his view of the circumstances which led to his imprisonment in jail. He believes that he has been unjustly treated.

A restatement of the events which led to his arrest will show, if not to Mr. White, at least to the unprejudiced observer, the fallaciousness of his contention, even if, as we believe, his sentence was excessive.

Mr. John D. Rockefeller, Jr., is a member of the Fifth Avenue Baptist Church. He is also a prominent owner in the coal mines of Colorado. Mr. Bouck White is the pastor of the Church of the Social Revolution. Mr. White and his associates disapproved of the actions of the coal companies in connection with labor troubles in Colorado, which had culminated in the killing of a number of strikers and women of their families.

Mr. White went with several of his associates to the Fifth Avenue Church and claimed the right to interrupt the service in order to present to the congregation a criticism of Mr. Rockefeller and the other owners of the Colorado mines. For so interrupting the service he was arrested and punished.

Mr. White's contention is based upon false premises. He confuses freedom of speech with licentiousness of action. He demands as a right what if it were admitted would make the holding of church services impossible.

The members of a congregation come together for worship. If any one at any time could with impunity interrupt the service in order to present to the congregation his personal criticism of a member of the congregation chaos would be the result.

A church is a public institution. Any one may use it, provided he uses it for the purpose for which it is intended—worship. But when he insists upon stopping others from worshipping in order that he may use the edifice for his own quite different purpose, he puts himself without the law.

The right of free speech does not mean that one may say whatever he please whenever he pleases wherever he pleases. No blow was struck at free speech when Mr. White was arrested. But a serious blow was launched at decency and good order and the rights of others when Mr. White demanded the right to interrupt their worship.

THE PARTIES

IN his campaign letter President Wilson predicts victory in the coming elections for the Democratic party. With characteristic literary skill he thus sets forth the grounds of his prediction: "The Democratic party is now in fact the only instrument ready to the country's hand by which anything can be accomplished. It is united, as the Republican party is not; it is strong and full of the zest of sober achievement, and has been rendered confident by carrying out a great constructive program such as no other party has attempted. . . . A practical nation is not likely to reject such a team, full of the spirit of public service, and substitute, in the midst of great tasks, either a party upon which a deep demoralization has fallen, or a party which has not grown to the stature that would warrant its assuming the responsible burdens of state."

Whether or not he is a true prophet, he is a keen analyst. The Republican party has yet to recover from the demoralizing effect of the Chicago convention and what came after. The Progressive party has yet to do a deal of growing. The Democratic party sails on a flowing tide of success.

And war time is a good time for the party in power.

THE DEMOCRATIC RECORD

THE President is perfectly justified in feeling gratification over the legislative record of the Democratic Congress whose session of unprecedented length is at last coming to a close. His campaign letter sums up the results of eighteen months of conscientious work on three subjects of commanding importance and many others that are overshadowed only because the three loom so large.

Under the leadership of Mr. Wilson, the Democrats have shown unusual and unexpected ability in constructive work and in team play. For this achievement the President gives great credit to his associates in Congress. The country, we suspect, will be inclined to give the lion's share to Mr. Wilson himself.

THE STORY OF THE WEEK

The Germans at Ostend

Relieved of the necessity of screening Antwerp, the Germans can now rest their right upon the North Sea and so occupy a stronger position than since the war began, for they are free from the danger of being outflanked on this end of the line. They are therefore marching down the coast toward Dunkirk, which is the first fortress in their way. The Belgian army from Antwerp succeeded in making its escape into France by way of Ostend without being intercepted, but the Germans followed them close and were permitted to occupy Bruges and Ostend without opposition. The only point in Belgium now held by the Allies is Ypres. The Germans, however, have possession of Courtrai, Menin and Lille to the east and south. They have also acquired Zeebrugge, the port of Bruges, which may prove as valuable to them as Ostend.

Sixty thousand fugitives had assembled at Ostend, and there was a panic when they learned that the Germans were approaching and that the Allies would make no attempt to defend the city. Boats of all sizes were hired to carry the refugees over to England, but there were not enough of them to accommodate the throngs. Thirty thousand men, women and children camped all night on the docks hoping to get away, but the Taube sailing overhead next morning found them still there.

As the siege of Antwerp was coming to a close the Germans made a strong effort to drive westward from Arras and Lille toward Calais, with the object of cutting off the retreat of the Belgian army, and of the Allied forces which had advanced to the Belgian frontier. This attempt, however, was frustrated thru the vigorous action of the French and English forces. Arras and Lille were lost by the Germans and a few days later regained. Both these cities have suffered seriously from this repeated bombardment.

On the Meuse the Germans still hold St. Mihiel, but the French are making such a strong attack on the north and south of the lines connecting with this exposed position that the Germans will soon either have to

THE GREAT WAR

October 13—Germans occupy Ghent. Belgian Government moves from Ostend to Havre, France. Boer revolt in northwest part of Cape Colony.

October 14—Ypres, Belgium, taken by Allies. Germans occupy all Poland west of Vistula. Germans take Bruges. Austrians regain Jaroslav in Galicia.

October 15—Germans occupy Ostend. Russians drive back German lines from Warsaw. Portuguese army mobilized to join the Allies.

October 16—British cruiser "Hawke" sunk by German submarine. Marquis di San Giuliano, Italian Foreign Minister, dies.

October 17—British cruiser sinks four torpedo boat destroyers. Japanese cruiser "Takachiho" sunk in Kiaochau Bay by mines.

October 18—Allies holding Germans back at Belgian frontier. Austrians and Russians fight along San River, Galicia.

October 19—Germans preparing for siege of Belfort. Austrian submarine destroyed by French cruiser.

By special arrangement with the London Graphic and Leslie's Weekly

THE GERMAN LINES

Showing how the tide of the German invasion receded from Paris and then spread over nearly all Belgium, its objective apparently changed from the French to the British capital

withdraw or to gain other points along the line between Verdun and Toul. But instead of pushing the attack on this line they are said to be getting their siege guns into position for the bombardment of Belfort, the strongest and most southerly of the barrier fortresses.

Antwerp After the Fall

The German headquarters report that in taking Antwerp they got four or five thousand prisoners, five hundred cannon, four thousand tons of grain and other booty of great value. These prisoners must be added to the number which, according to the official German estimates, had been taken up to October 1 as follows: British, 180 officers and 8600 men; Belgian, 470 officers and 30,850 men; French, 2050 officers and 123,000 men; Russian, 2150 officers and 92,000 men; total, 259,300. There escaped into the Netherlands after the fall of Antwerp 2000 British and 28,000 Belgians. They were obliged, under the rules of neutrality, to surrender their arms and remain interned till the end of the war. The rest of the British naval brigade which took part in the defense of Antwerp, more than 5000, were transported to Deal, where they were received with wild enthusiasm by the English.

The German governor of Antwerp is trying to induce the inhabitants who fled into the Netherlands to return and resume their business, by promising them protection, and threatening to seize the goods of shopkeepers who do not open up within twelve days.

The city did not suffer much from the bombardment, as the Germans abstained from using their heavy guns and avoided hitting historic buildings. The church of Notre Dame was in danger of burning at the time of the surrender, but the German soldiers, as soon as they entered, stopped the spread of the flames. According to German estimates, no more than twelve civilians lost their lives thru the bombardment.

The conduct of the Germans who occupied Bruges, Ghent and Ostend is commended by their enemies. The troops are quartered in the public buildings and the hostages are permitted to remain in their homes. Strict orders have been issued against looting and the sale of liquor to the soldiers. The schools of Ghent have been reopened.

The German Government has notified the Netherlands that the status of the Scheldt will be maintained, and that no attempt will be made to use it for naval purposes.

Winston Churchill, First Lord of the Admiralty, has been severely criticized in Parliament for his policy in regard to Antwerp. He should not, say his opponents, have encouraged the Belgians to resistance when by surrendering they might have got better terms and saved their city from bombardment, but having promised them support, he should have sent enough reinforcements to defend the city. Mr. Churchill's reply was that any military movement must be considered in connection with the campaign of which it is a part, and that it seemed worth while under the circumstances to delay the German advance even a few days.

Germans Advance on Warsaw

For some time past both Berlin and Petrograd have been silent about the great military operations known to be going on in Russian Poland, but now that the battle has begun the curtain has been raised and we can get a clear vision of the position of the contending forces and something of the significance of the strategy.

It is obvious that General von Hindenburg's aim was nothing less than a blow at the heart of Poland. His invasion of Russia from the eastern end of East Prussia was apparently either for the purpose of cutting the railroad between Petrograd and Warsaw, which here passes within fifty miles of the frontier, or for the purpose of drawing attention away from Warsaw, against which his main attack was directed. If the former he did not succeed, for he could not get beyond the fortress of Osowiec or the River Niemen. If the latter he seems to have been successful, for apparently the German armies invading Poland met with no serious opposition until they were within gunshot of the Polish capital.

The invasion of Poland was made along three lines converging upon Warsaw, up the Vistula, down the Vistula, and straight in from Breslau. The first or northern army is under the personal command of General von Hindenburg. The second or southern army is in charge of General Dankl, one of the few Austrian generals whose reputation was not lost in the disasters of Galicia. The third or center army is led by King Ludwig of Bavaria.

The forward movement all along the line from the Baltic Sea to the Carpathian Mountains was begun on October 4, and by the middle of the month all of Russian Poland lying east of the Vistula River, with the exception of the environs of Warsaw, was in the hands of the Germans. Their attempts to cross the Vistula were, however, foiled, for the Russians had destroyed the bridges and the river was too wide for the use of pontoons. On the east side of the river, however, another force of Germans is reported to be making its way down the railroad from Mlawa.

THE RUSSIAN CAMPAIGN

The Vistula and San Rivers now mark the front of the Russian armies except before Warsaw. The shaded territory is held by the Russians

on the East Prussian frontier, to approach Warsaw from the north.

According to the official statement of the Russian General Staff, the German force invading Poland consists of eight army corps, or about 400,000 men, and their advance columns had come within six miles of Warsaw and were already getting their siege guns into position for the bombardment of that city, when they were attacked and driven back to their entrenchments, twenty-three miles to the west. On account of the miry roads the Germans were unable to take their big guns with them on their retreat, and the Russians captured forty-two. They claim that the Germans lost 30,000 men in trying to cross the Vistula near the fortress of Ivangorod.

As will be seen from the map, the Russian lines of defense in Poland lying along the Vistula and Narew rivers come to a salient angle at Warsaw, or, more exactly, at Novo Georgievsk. The Grand Duke Nicholas is in charge of the Russian forces in Poland, which are said to number a million. They should, therefore, be able to hold this strongly fortified position against any attack that the Germans and Austrians are capable of making, so it is quite possible that the opposing armies will keep substantially their present positions along the Vistula all winter.

In Galicia it will be remembered that the Russians, after the capture of Lemberg, had invested Przemysl, and passing around had approached to within forty-five miles of Cracow, at Tarnow. Now the tide has turned, and the Austrians, reinforced and in part officered by the Germans, have driven the Russians back beyond the San River, recaptured Jaroslav and relieved the siege of Przemysl. To the south of Przemysl and in the passes of the Carpathians the Russians are also reported to have been defeated.

Portugal Enters the War

The republic of Portugal has mobilized its army in readiness to aid Great Britain in accordance with the treaty between these countries. The part assigned to the Portuguese is presumably to assist the South African Union in the conquest of the African possessions of Germany, and two expeditionary forces have already left Lisbon for Africa, one of them convoyed by English transports. The German colonies on both coasts lie between the Portuguese and the English, so the two can cooperate in a simultaneous attack from north and south.

WHAT IT MEANS TO BE BOMBARDED

The effect of a single shell on a dwelling house in Rheims. During the week the cathedral has again been under fire

The War on the Sea

The German policy of equalizing the fleets by keeping their own ships safe in harbor and reducing the naval strength of Great Britain by submarine sniping has scored another success. The British cruiser "Hawke" was struck by a torpedo on October 15 and sank in eight minutes without having a chance to fire a shot at her unseen enemy. One boat got off with twenty-one men and a Norwegian trawler picked up fifty-two floaters, but the rest of the crew, 387 men, were lost. The British cruiser "Theseus," which was close by, was attacked by the same submarine, but escaped harm. In accordance with the new Admiralty orders, she did not attempt to rescue any of the survivors of her sister ship lest she should share the fate of the "Hogue" and "Cressy," which in coming to the aid of the "Aboukir" were sunk by a single submarine. The "Hawke" was launched in 1891 and so belongs to the older vessels of the British navy, which are not of great value, but the latest dreadnought might well have fallen a victim to the submarine if it had been in its place. From the fact that the survivors were landed at Aberdeen, it is inferred that the disaster occurred not far from Scotland and that no part of the North Sea is safe from the German submarines.

The British got revenge two days later when the light cruiser "Undaunted" sank four German destroyers off the coast of Holland. Between two and three hundred of the Germans were drowned and thirty-two taken prisoners. The "Undaunted" is one of the new fast cruisers of the "Aurora" type, designed expressly for patrol duty. She has a speed of thirty knots an hour and was put into commission this year.

The Russian cruisers "Pallada," "Makarov" and "Bayan" were attacked in the Baltic by German submarines, and the "Pallada" was struck by a torpedo on October 10. She sank with all on board, over five hundred men. The Russians claim to have destroyed two of the submarines.

It was announced on October 15 that the British cruiser "Yarmouth" sunk the Hamburg-American steamer "Markomannia" in the vicinity of Sumatra.

THE RUINS OF PARIS

But this Paris was a café on the Rue de Rivoli in Papeete, the capital of the French island of Tahiti. The town was bombarded by two German cruisers on September 22

on the Adriatic, have been burned, doubtless by incendiaries.

The British Admiralty, which has hitherto refrained from laying mines in the open sea, has announced that the continued attacks of German submarines have compelled it to change this policy. A mine field has been established which covers most of the area between Ostend and the Thames. The free channels thru the proscribed area are known only to the Admiralty and the British pilots. The Germans have laid mines north of a line drawn between Harwich and Hook of Holland.

A Boer Revolt The British public had been so greatly gratified at the loyalty manifested in this emergency by all parts of the empire, and especially by the attitude of the South African Government, that they were shocked to learn that the Boers were not as unanimous in this sentiment as had been supposed. When Premier Botha and General Smuts proposed that the South African Union should take part in the war by invading German Southwest Africa, he was opposed in the parliament by General Herzog, who argued that the fate of the German colonies in Africa would be settled by the war in Europe, and that therefore it would be useless for the Union to enter upon this difficult and expensive war. When the vote was taken the Government was supported by a vote of 92 to 12.

General Beyers resigned from the command of the Union forces rather than take action against the Germans, who had given no provocation. He could not, he said, regard the war being waged by England as the defense of civilization against barbarism, for he could not forget the barbarities perpetrated by the English against the Boers, when they made a Louvain of every farm.

Christian de Wet, instead of going to France to aid his former enemy, General French, as was reported to be his intention, declared his opposition to the determination of the Botha government to take the offensive.

Following the resignation of General Beyers, symptoms of disaffection were manifested by Lieut-Col. Solomon Gerhardus Maritz, in command of the forces in the Northwest Cape Province, and when an officer was sent to remove him he declared his intention of re-establishing the Boer republic with the help of the Germans. He had been in communication with the Governor of German Southwest Africa, who had promised to provide him with all the guns, ammunition and money necessary, and guaranteed the independence of the republic. Most of the Boer troops under Colonel Maritz went with him over to the German side, and those who were unwilling he arrested and sent as prisoners into German Southwest Africa. Colonel Maritz was sent by the British Government to the aid of the Germans of this colony in 1904, when they were in danger of being massacred by the Hereros. Now both the Germans and British are arming the natives and encouraging them to attack the whites.

The Germans of the Southwest African colony have an army of about 5000 regular troops and as many more reservists and volunteers. The force includes about 500 cavalry and a camel corps of 500. The Germans are said to have sixty-six batteries of machine guns.

Against these the Union Government can bring into the field over 70,000 experienced troops. Martial law has been declared over the whole Union and the pro-German propaganda will be put down with a strong hand.

Canal Closed by a Slide The passage of ships thru the Panama Canal was prevented, on the 14th, by a slide at the Culebra Cut that filled a thousand feet of the channel with a great mass of trap rock and loose earth. There were two or three ships in the Canal. Two days later, fourteen were waiting at the terminals. Colonel Goethals says he expects to have the channel open again on the 27th for a width of 100 feet. It is said, however, that there must be months of dredging before the full width of 300 feet and a depth of forty-five feet can be regained.

Before this unfortunate interruption, the traffic of the first month and a half had exceeded the expectations of Colonel Goethals, altho it must have been affected by the war in Europe and the interference of warships with the merchant vessels of the belligerents. On October 7 the number of ships that had past thru the Canal was 100.

Government of the Philippines In the House, last week, the Philippine Government bill was past by a vote of 211 to 59. No Democrat was counted against it, and it was supported by seven Republicans and four Progressives. All the amendments offered were rejected. Among these was one proposed by Mr. Towner, of Iowa, providing that the terms of the bill should not apply to the territory occupied by the Moros and other non-Christian tribes; also that the Moros should be permitted to maintain a tribal organization and government under the supervision of a commission. With the bill was past the preamble, which virtually promises independence "as soon as a stable government shall have been established." In the course of the debate Philippine Commissioner Quezon warmly commended the administration of Governor-General Harrison, which, he said, was economical, just and sympathetic. He read a cablegram showing that 50,000 Filipinos had taken part in a parade in Manila on the 11th, to celebrate the anniversary of Mr. Harrison's arrival.

The bill will not be taken up in the Senate at the present session. It provides for an elective Senate, thus

making both branches of the Legislature elective, gives a qualified veto power to the Governor-General, and an absolute veto power to the President at Washington. It has always been the purpose of the people of the United States, the preamble says, to withdraw their sovereignty over the islands. The bill, says the author of it, Mr. Jones, of Virginia, "creates such a degree of autonomy as will enable the Filipinos, by demonstrating their capacity for self-government, to hasten the date of final separation."

Alaska's Coal Fields Unlocked

The Senate and the House accepted, last week, the conference report on the Alaska Coal Land Lease bill, which was sent to the President for his signature. "Eight years ago," said Secretary Lane, "the coal lands of Alaska were locked up. Now they are to be opened under conditions that will prevent monopoly and, I trust, insure development." The Bering River and Matanuska coal fields will be the first to be surveyed. In the first the Government will retain 5120 acres, and in the second 7500, with one-half of the coal areas in other districts. It reserves the right to mine coal for the army and navy, or for the use of the Government railroads which are soon to be built. Leases to bidders will be made for blocks of 40 acres or for multiples of 40, but one lease cannot cover more than 2560 acres, and its term is not to exceed fifty years. Royalties must be at least 2 cents a ton, and the money thus received will be used in reimbursing the Government for the cost of the new railroads.

War Taxes in the Senate

When the Senate took up the War Revenue bill it was known that there would be a sharp contest over an amendment for the relief of the cotton growers. This amendment, offered by Mr. Smith of Georgia, provided for an issue of $250,000,000 in bonds, to be used by the Government in buying 5,000,000 bales of cotton at ten cents a pound, the cotton to be held a year or two and then to be sold at a price not below eleven cents. This was to be accompanied by a tax designed to reduce the planted area and the crop by one-half. Eight Democrats, it was said, had agreed to join the Republicans in voting against the bill if the amendment should be rejected. It was known that the President would veto the bill if this cotton relief project should be added to it. The amendment was rejected by a vote of twenty-one to forty. There were twenty-two Democrats in opposition. When the defeated Senators moved to lay the bill on the table, they were checked by a ruling on a point of order. A motion to postpone action was then lost, twenty-five to thirty-two, only five of the group of eight supporting it. The bill was past by a vote of thirty-four to twenty-two. In the negative were counted all of the Republicans and two Democrats.

The Senate made ninety-eight changes in the House bill. Several of those which were ordered by the committee or the caucus were mentioned here last week. In the Senate the tax on proprietary medicines was stricken out. The tax to be paid by manufacturers of tobacco, cigars, or cigarets is graduated in the Senate bill from $3, $6 and $12, respectively, to a maximum of $2496. In the House bill the maximum was $24. It is estimated that the graduated tax on theaters will yield $1,000,000, and that $750,000 of this will be paid by moving picture houses.

THE WAY OF ESCAPE FROM TROUBLED BELGIUM

A pontoon bridge over the Scheldt by which thousands of refugees fled to Holland, where there are no Germans

Mexico's Peace Convention

The convention of Mexican Constitutionalist Generals and Governors at Aguascalientes was organized on the 10th, when General Antonio Villareal, Governor of Nuevo Leon, was made permanent chairman, but it had taken no decisive and final action when, on the 15th, it adjourned for five days to await the arrival of twenty-two delegates who were to represent Zapata. Upon motion of General Eduardo Hay, both Carranza and Villa were directed, or ordered, to release their political prisoners. Villa's associates and agents insisted that he controlled the convention. They caused to be published a false report that Carranza's resignation had been presented and accepted, and that Villareal had been nominated for the provisional presidency, without serious opposition. This, they said, was a victory for Villa, because Villareal had been one of his two candidates, Calderon being the other. But it soon became known that Carranza's resignation had not been considered by the convention and that there had been no definite movement for the selection of a Provisional President.

It had been decided by vote that "the convention was the supreme power" in Mexico. Some thought that there should be government by a commission of seven until the elections, and a considerable number preferred Villareal, but a decision as to the form of government was postponed until after the 20th. There were reports after the adjournment that Villa, who had recently received $800,000 worth of ammunition, would fight, because Carranza had not been required to withdraw. He would appeal to the convention delegates, it was said, and would seek a peace agreement, but was not confident of success. His ally in the North, Governor Maytorena, continued to attack the Carranza garrison at Naco, ignoring the formal notice sent by the convention that an armistice had been agreed upon, to be in force during the sessions. On this account the convention appointed a commission to make an inquiry into conditions at Naco.

Paul Thompson

THE MOTOR BUS TURNED MILITANT

The big supply trains of the Allies' vehicles have been taken freely from the streets of London and Paris, and long lines of transformed omnibuses are now seen most in France. "The first London 'bus to be fired on in the history of the world" was proudly exhibited by its driver in London after it had escaped, bullet-scarred, from Antwerp

At Naco and Vera Cruz

Maytorena, with 3500 men, a majority of them Yaqui Indians, was besieging General Hill and 2500 Constitutionalist soldiers, intrenched in the town, which lies half in Mexico and half in Arizona. Bullets and shrapnel and cannon balls have been falling every day in the Arizona half, where there is scarcely a house that is not marked by them. To gain some advantage, the Indians have repeatedly crost the boundary. Many of them have been arrested and disarmed. On one occasion the United States troops fired about 100 shots at them. Thus far, seventeen Americans in Naco, Arizona, have been wounded. Eight of these were cavalrymen, one of whom has died of his injuries, while the wounds of two more are fatal. Not far away, an occasional attack upon the Carranza garrison at Agua Prieta has menaced in the same way the residents of the adjoining town of Douglas, Arizona. Owing to the protests of the people, Governor Hunt, of Arizona, ordered his militia to be ready for service. The correspondence between him and the Secretary of War has been published. Mr. Garrison assured the Governor that there were already at Naco and Douglas as many soldiers as could be used. "We are doing all we can," said he, "short of invading Mexico and driving the combatants away." He pointed to the complications that might follow the interference of state troops. Whereupon the Governor let it be known that he had decided not to send the militia to the boundary. The incident recalls the belligerency of Governor Colquitt.

Some time ago President Wilson, having in mind a withdrawal of our troops from Vera Cruz, asked Carranza several questions, virtually demanding guarantees that he would not collect a second time the taxes and customs dues already paid to our forces, or seek to recover a customs fund of $1,000,000, on which France has a lien, or punish the refugees, the clergy and the foreigners in the city. Carranza failed to answer. But General Aguilar, in command near Vera Cruz, has now assured Mr. Silliman, the President's representative, that his action with respect to the subjects of the questions will be what our Government desires. General Herrera, who recently turned against Villa, has issued a proclamation, urging all Mexicans to assist him in driving the Americans at Vera Cruz into the sea. Carranza's army has seized the property of the street railway company at the capital, because the cars were idle, owing to a strike by the employees, who demanded that their pay be doubled. The company is associated with a great light and power company, and in the two corporations about $100,000,000 has been invested by foreign capitalists.

THE PRINCIPLE IS SOUND

BY JOHN BASSETT MOORE

THE utmost space that could be allotted to a mere comment on your editorial, "The Way to Disarm: A Practical Proposal," would not suffice for the expression of a full and reasoned opinion upon that very interesting and able paper. The tendency and general objective are altogether commendable; the principle is sound. It is possible, however, that some of the passages in your argument may be interpreted more broadly than perhaps was intended.

You remark:

> Peace follows justice, justice follows law, law follows political organization. . . . The world has already achieved peace thru justice, law and political organization in hamlets, towns, cities, states and even in the forty-six sovereign civilized nations of the world. . . . The peace problem, then, is nothing but the problem of finding ways and means of doing *between* the nations what has already been done *within* the nations.

If this means that political organization and the regular administration of justice have, by creating legal peace within the state, diminished the use of violence and tended to prevent war, we all must concur; but, if we are asked to go farther, and to assume that the imposition upon nations of a central authority or their entrance into a league will, besides creating legal peace, efficaciously assure the maintenance of actual peace, we ought, before answering, to reckon with certain obvious facts. Altho municipal law furnishes within the state the most ample safeguards of organization, conditions not of legal but of actual warfare, such as the killing of men, the destruction of property and the prostration of legal administration, now and then disturb our hamlets, towns, cities and states. In reality, when we come to consider war and peace, we are brought face to face with the sober fact that the tendency of large masses of men (as lately illustrated, shall we say, in the progressive community of Colorado and the ancient community of Ulster?) to oppose the law, whether because they believe it to be unjust, because they reject its official interpretation, or because they seek to effect some quick or radical change, is a human element of fundamental importance, which has caused civil wars to occur during the past century with remarkable frequency. Of these perhaps the most serious is that which befell our own "League of Peace"—a conflict generally believed to have been accelerated by a judicial decision and unquestionably precipitated at a moment when we had substantially neither army nor navy. Only last year we recognized with many congratulatory phrases the Republic of China, in whose origin and maintenance, just as in the case of many other revolutions, military force has been an appreciable factor. The same tendency or impulse of large masses of men to gain their ends by force likewise produces international wars.

No doubt one of the best assurances against the indulgence of this propensity is a regulated governmental control, and for this reason I applaud your advocacy of a practical step toward international federation for the attainment of that end, without intending, however, to countenance the supposition that we may slumber upon any contrivance, parliamentary, judicial or otherwise, municipal or international, as an all-sufficient safeguard against outbreaks of violence. In a small volume which I published two years ago I exprest my profound conviction, which reflection and subsequent events have served only to confirm, that questions of war and of peace must continue chiefly to depend "upon the cultivation of the spirit and habit of justice, of self-control, of reciprocal recognition of rights and of forbearance," and that "outside the state, just as within the state, peace will be permanently preserved only by carrying into our dealings one with another the sentiment of fraternity and the spirit of conciliation."

New York City

UNION AGAINST WAR

BY DAVID STARR JORDAN

I HAVE read with great interest and sympathy Mr. Holt's proposition of a League of Peace against war and against armament. No one can tell what the future will bring, but it is not impossible that some such scheme will come within the range of practicable politics.

The people of the civilized world have been roughly divided into two classes, the Imperialists and the Democrats—those who believe that force is the foundation of government, and those who believe that that government should be a form of coöperation of the people concerned. Both classes are represented in every civilized nation, with a large residuum of a third class, those who take what comes and ask no questions, becoming thereby the allies or the tools of the first of these groups.

In the movement of history, the second class has grown steadily at the expense of the third, for popular education means democracy. The voice of the people is potent in the nations of western Europe, and it is suppressed only for a time in the others.

In the imperial nations the man is, in theory, the chattel of the state. The existence and the righteousness of privilege is taken as a matter of course, for authority which does not spring from the people must arise thru privilege. If government rests on force as the expression of imperial will, this force must be measured in terms of armies. If armies are the foundations of government, they must be inherently righteous and their activities a necessary function of the state. The only function of an army is war. Hence a state founded on imperial will must be at war, active or passive, all the time.

Passive war is the threat of active war. By such threat, the will of the imperial state is enforced on all other states, which thru weakness, prudence or fear, may fail to assert themselves. And as the essential features of the imperial state is the absence of checks and limitations, the condition of war may be reached suddenly, almost automatically, if unexpected resistance should arise.

The philosophy of the imperial state has been in recent years brilliantly expounded by the historian, von Treitschke, and by his many recent echoes and dilutions. The resultant action finds recently cold-blooded exposition in General von Bernhardi, and in hundreds of his colleagues in the propaganda of Pan-Germanism. The events of the last two months, from the attempted seizure of Servia to the desecration of Rheims, are all part of a program pre-arranged on the theory of the right of imperial overlordship, and of the expansion of Germanic culture thru the force of German military efficiency.

In the democratic nation, the government exists for the needs of the people concerned. The people possess the government and whatever machinery, temporary or permanent, the government may find necessary for its own continuation of security. A democracy cannot consistently make war, either active or passive war, except in self-defense, against the menace of uncontrolled neighbors. It cannot exult in war for war's sake, nor can it cringe before a special military caste, privileged above other citizens.

It is conceivable that, out of the havoc of the present war, there may arise conditions favorable for the establishment of a League of Peace. This hopeful possibility has been admirably stated by Mr. Holt. It is the duty of every friend of democracy to work for

all movements which favor permanent peace.

There are many side currents in the present war, for no war was ever free—even at its inception—from selfish influences. But in its essence it has become a revolt against the rule of force, a rebellion against all divine right of kings or of armies, of all devices designed to uphold privilege against freedom and of personal will over law.

It was once said that our "Union could not endure half slave, half free." In like fashion, Europe could not exist half democracy, half autocracy; the divine rights of kings and of armies, alongside of the diviner "right of man, the million trained to be free."

It is natural for the people who do not want war, neither active war nor passive war, to combine against those who do. Their formal union for peace may mark the beginning of the federation of Europe, for the benefit of Europe's own people. In such a federation Germany should be an honored member whenever the time shall come for the German people to take charge of the administration of Germany.

Stanford University

NOW IS THE APPOINTED TIME

BY THEODORE MARBURG

THE world will be especially ripe for Mr. Holt's suggestion of a League of Peace after the present disastrous war. Unfortunately it seems that each generation must learn anew its lesson of war. After the present struggle so many lands will have had that bitter experience that we may naturally look for a long era of peace such as followed the protracted and widespread Napoleonic wars. But it is while the picture of this cataclysm is still throbbing in the minds of men that action should be had on the subject of setting up institutions which promise to make wars more difficult. Mr. Holt has aptly pointed out that "Peace follows justice, justice follows law and law follows political organization." It is therefore organization of various kinds for which the world should strive when this awful contest is stilled. His suggestion of a group of nations organized for peace might prove fruitful if the group in question should represent a combined power sufficient to overawe the lawlessly inclined.

When, after blocking in various ways the movement for the better organization of the society of nations, Germany disdainfully brushed aside Mr. Churchill's proposal for a "naval holiday," a suggestion which brought forth a resolution of hearty approval from the Congress of the United States and with which other powers sympathized, some of us began to feel that perhaps the only way to stop militarism and the armament craze was for the rest of the world to combine against Germany and if necessary overthrow the system by overthrowing the bureaucracy and the military class of Germany. It is this task of putting down the law-breaker which England and her allies have now set themselves.

England saved Belgium in 1870 by notifying both France and Germany that she would take up arms against the country that violated Belgium's neutrality. When, in response to England's inquiry at the beginning of the present struggle, France declared her intention to respect that neutrality and Germany declined to do so, England declared war on Germany. Where would English honor be and where the chivalry of the world if Germany had been suffered to trample Belgium to death without a protest?

If we could secure a promise now from the allies, Great Britain, France, Russia, Japan, Belgium and Servia, to join a League of Peace, formed somewhat on the lines indicated by Mr. Holt, as a condition precedent to our doing what we ought to do anyway, namely, vent our righteous indignation at the way in which Germany has outraged Belgium and has trampled under foot the law of nations and the moral law alike, we should be accomplishing the double object of helping to crush militarism and of setting up an institution which might bring about a marked decline of war.

Are we not again at a turning point in history? And will it not be for good or accentuated evil accordingly as the right-minded nations see their duty?

Baltimore, Maryland

A TANGIBLE GOAL

BY RICHARD OLNEY

THE disarmament required of the members of the suggested League of Peace must, I think, be a condition of the League's becoming operative at all. The parties to it will be nations armed and equipped for war against all enemies. Their good faith as Leaguers should be evidenced by their simultaneous disarming as required by the provisions of the League. They can do so by disposing of all excessive armament, either to the League itself or in some other proper and effective method. They will do so, of course, only if first satisfied that their action will not imperil national safety.

By what process will they reach a conclusion on that point? They will no doubt give due effect to logic and theoretical reasoning. But the governing influence, I think, will be the practical results shown by the operation of that international League of Peace which in its nature and scope comes nearest to the proposed League. That League is found in the Constitution of the United States, a League universally deemed to be the best devised and the most important and successful of all similar leagues. It has been in operation for a century and a quarter. What is its record as a preventive of war? It did not prevent the war of secession, the longest and bloodiest of civil wars. On the other hand, but for the Constitution the history of this country since 1789 would probably have been a continuous chronicle of incessant wars.

But a Constitution, or international League of Peace, which, during 125 years has caused the parties to it to be at peace with one another with a single exception, has a right, even tho that exception be a momentous one, to be deemed a most powerful conservator of international peace. On the whole, therefore, the merit of your proposal is affirmed by the experience of the people of the United States under their national Constitution—not as being a certain preventive of war but as clearly tending in that direction. As compared with the League of Peace established by our national Constitution, a League embracing all the great powers of the world presents enormous difficulties. But enormous difficulties are not necessarily insuperable, and it is an additional merit of your proposal that, leaving the realm of mere aspirations and dreams, it presents something definite and tangible as a goal which the peace-lovers of all countries may unite in seeking to reach.

Boston, Massachusetts

AN INTERNATIONAL COURT, BACKED BY FORCE

BY CHARLES W. ELIOT

IT does not seem to me that universal disarmament is likely to be one of the effects of the present European war. Possibly the world may get out of it the conversion of the standing armies of Europe into well-trained militias of the kind which Switzerland maintains. Speculations on that subject seem to me premature. An International Court, backed by an International Force, does seem to me a possible issue of the present catastrophe. The only results of the war I venture to hope for now are constitutional government all over Europe, with the military power subject to the civil, an increase in the number of states of moderate size, whose territories are guaranteed by treaties not to be broken on grounds of military necessity, or for any other reason, and the abolition and invalidity of all secret treaties and understandings, every treaty to be discussed and acted upon by a representative body, as in the United States.

At present, it seems to me highly undesirable even to discuss peace proposals. No peace ought to be talked about either by the combatants or by outsiders until Germany expresses a desire for the cessation of hostilities. In particular, America and Americans should be careful how they intrude into the discussion of the terms of peace. They are taking no part in the actual struggle, and are entitled to no share in the conference which shall invent terms of settlement. It will be for the nations that shall have done the fighting to settle the terms of the peace. The main influence of America will be exerted thru the force of its example, and of its candid goodwill.

Asticou, Maine

DYNAMITING THE PEACE PALACE

BY ARTHUR T. HADLEY

I HAVE read with great interest your article on "The Way to Disarm." I wish it were possible to proceed in the manner suggested; and I am consoling myself for the evils of the present war by the thought that at the end of it we may see something of the kind put into effect.

Frankly, I have my doubts whether the attempt of the United States to take the lead in the matter will promote the result desired; but it will be time enough to consider that question after the war is over and we know what are the feelings of the different parties toward us. As a rule belligerents who have fought a contest to a finish dislike to have people who have not been fighting interfere in the negotiations; and if there is anything which is hated all thru Europe just now, independently of national affiliations, it is the Hague Conferences. You would be surprized to know how many men say that the first step toward the establishment of peace is to blow up the Peace Palace with dynamite. They may change their mind in a year, and pretty certainly will change it in ten years; but the name "Hague Conference" is just at present like a red rag to a bull.

THE GLORY THAT WAS RHEIMS

WHAT IS KIAOCHAU WORTH?

BY TOYOKICHI IYENAGA, Ph.D.

Dr. Iyenaga is an Oberlin graduate holding a Johns Hopkins Ph.D. He was for five years professor of political science in Waseda University, then becoming a secretary for the Japanese Department of Foreign Affairs. He served as professorial lecturer at the University of Chicago from 1901 to 1912, and has since lectured at Columbia. Dr. Iyenaga visited Kiaochau on a recent trip to the Orient.—THE EDITOR.

KIAOCHAU lies on the southern coast of the Shantung Peninsula, which juts out between the Yellow Sea and the Gulf of Chih-li. The name, Kiaochau, stands for the entire German leased territory, including the Bay of Kiaochau and the land on both sides of the entrance and shore of the bay, with an area of about 117 square miles, where Germany has complete control of the government and administration. It is bounded on the north by the Paisho River. But beyond the river there is, further, a neutral zone of some thirty-two miles, measured from any point on the shore of the bay, over which the Chinese Government cannot issue any ordinances without the consent of Germany.

The so called lease of the territory, nominally for ninety-nine years, was secured by Germany in 1898. Her pretext for advancing such a claim was the murder of two German missionaries by a Shantung mob in 1897, but the real cause and motive must be sought elsewhere.* In brief, it was Germany's desire to secure a good naval base for the prosecution of her Far Eastern policy that led to the occupation of Kiaochau.

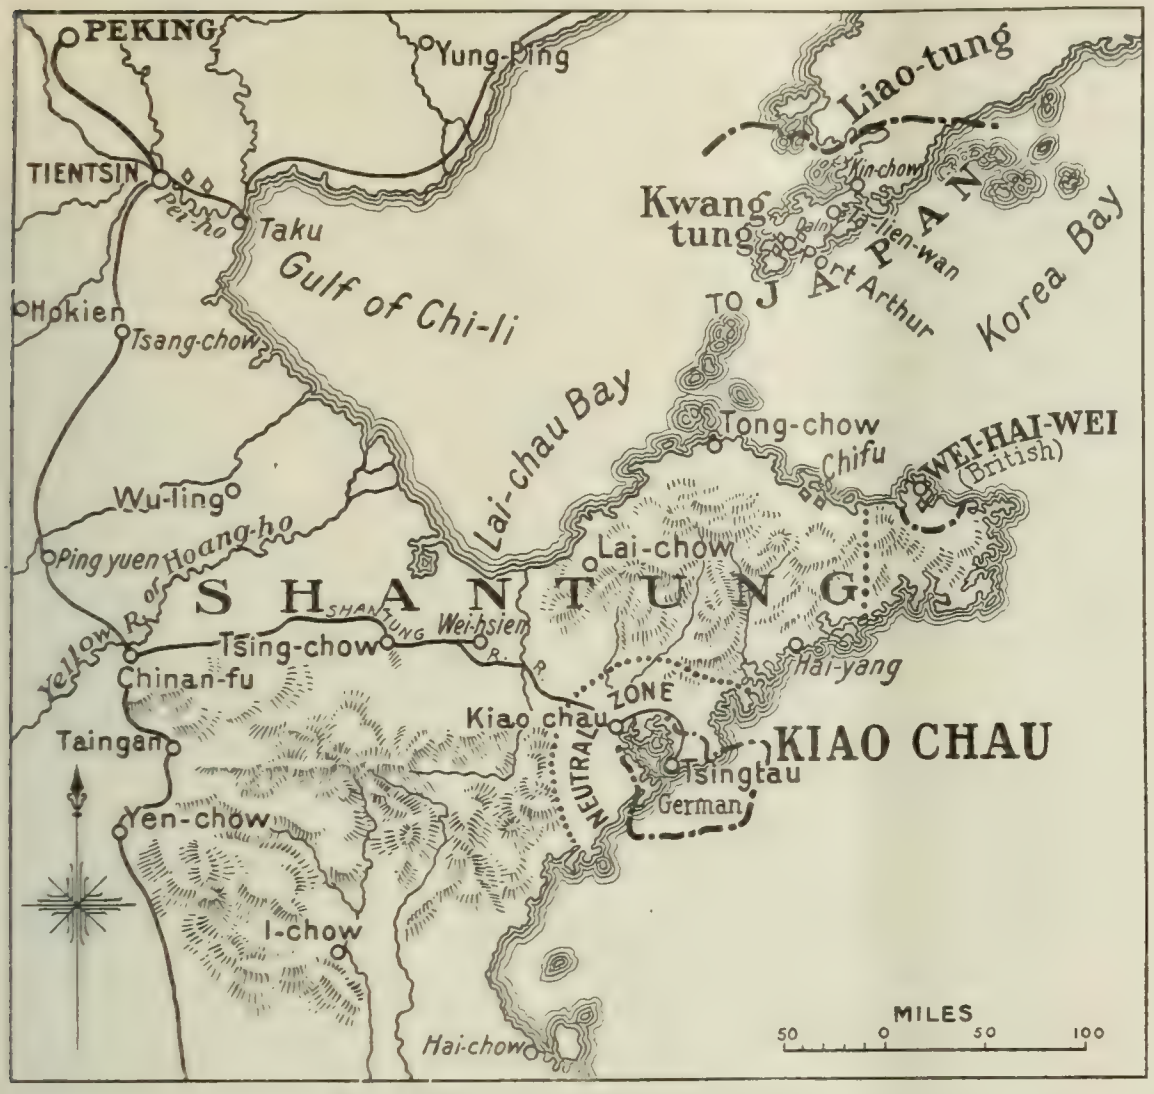
The Bay of Kiaochau is a broad and well-sheltered sheet of water. Unlike the restricted Port Arthur, it has room enough to accommodate any fleet of the world. The entrance to the bay is, however, narrow, tortuous and treacherous, which, while a drawback in time of peace, makes it in time of war almost impossible for any hostile fleet to force it. Within the harbor, therefore, the German warships are secure from direct attack by any hostile fleet, however formidable. The destruction of some of the warships within the harbor already reported has only been effected by the field guns of the Japanese army operating from the land side.

The water of the bay is not so deep as Dairen-Wan (the Russian Dalny) and is silt laden. To mend this drawback and make it a splendid naval base, Germany has undertaken a vast scheme of harbor construction at great cost. The Shantung Railway comes near the great stone piers, so that cargo can be expeditiously handled. Within the harbor an immense floating dock, with the lifting capacity for a vessel of 16,000 tons, is moored.

About a mile from the wharf there spreads out, abutting the bay, the beautiful city of Tsingtau. It needed, indeed, all the magic wand of the Kaiser to create this town, for everything is adverse to such an enterprise. The land is sterile, uninviting, and there are no rich communities near by upon which the city can feed and grow. It is a typical German town, built and run in the pure German fashion—"pure West thrust upon pure East without compromise." Its streets are broad and lined with noble edifices. There is a fine block of government offices.

In and around the city fruit culture has been encouraged, afforestation attempted on a large scale, and many industrial establishments built. The Standard Oil Company and the Asiatic Petroleum Company have both established facilities for oil storage not far away from the harbor. A number of local enterprises have also been started, such as a silk filature, saw mills, brick and tile factories, and breweries. The population of the city was, in 1907, 35,441, of whom 31,509 were Chinese.

The fortification of Kiaochau kept pace with the harbor construction and the building of a model city. The writer can, however, describe with no authority the Tsingtau forts. It is said that "German engineering genius at its best is shown in the fortification of Tsingtau." When Germany acquired by the Kiaochau Convention the right to fortify the place, she proceeded with the work methodically and thoroly, expending annually an enormous sum of money on it. It was her intention to make it the German Gibraltar of the Far East. And this much is certain, that Kiaochau is now the best fortified place owned by any European power in the Far East. Two or more lines of fortification, consisting altogether of twelve forts, guard the leased district on the land side.



Indeed, Kiaochau may easily prove a second Port Arthur, if not more formidable. The operations of the Japanese army, hitherto conducted, are nothing but skirmishes on the outer edge of the main defense line. The storming of the fortress will, therefore, entail heavy losses on both sides, unless the garrison surrenders early. It is now defended by a force of 7000 to 10,000 men. Various barracks for housing the sea-battalion, the marine artillery, the mounted and colonial infantry, and the fortress artillery, were long ago constructed in the vicinity of Tsingtau, some four or five miles away. For all these undertakings above described, Germany must up to date have expended a sum of nearly $100,-

THE HARBOR OF KIAOCHAU

The Bay of Kiaochau is a broad and well-sheltered sheet of water, with room enough to shelter any fleet of the world

*The history of the German seizure of Kiaochau and the causes that led Japan to participate in the present war are given in the writer's article, "Why Japan Went to War with Germany," in *Europe at War*, just published by the Review of Reviews Company.

THE GERMAN FOOTHOLD IN CHINA

Behind the leasehold of Kiaochau lies a neutral zone stretching thirty-two miles from the shore of Kiaochau Bay, and behind that in turn the province of Shantung, whose rich mineral and agricultural resources German trade is tapping thru the Shantung Railway, which connects at Chinan-fu with the trunk line from Tientsin to the Yangtse

000,000. In addition to the extraordinary expenditures for fortification and harbor construction that extended for years, the Reichstag has proved itself to be an exceedingly generous godmother to the *protégé* of the Fatherland, voting annually the sum of two and one-half to three million dollars for the upbuilding of Tsingtau.

Side by side with the work of building up Tsingtau, Germany has spared neither money nor trouble to develop its hinterland. The province of Shantung, marked as the German zone of influence, has an area of about 56,000 square miles. It is, therefore, one-third the size of Japan proper. The physical features of Shantung are plainly marked, its center and eastern part being mountainous, while its western and southern portions form part of the great deltaic plain of North China. Between the mountain ranges there lie extremely rich and fertile valleys and plains. The chief wealth of Shantung consists in its minerals, the principal of which is coal. But the main occupation of the inhabitants is agriculture. The products are wheat, barley, millet, maize, sorghum, cotton, and many varieties of fruits and vegetables. Sericulture is also an important industry. What has made "Shantung" silk famous is the product from the oak-fed worms, which is known as *pongee* or Chifu silk, a fabric remarkable for its solidity and cheapness.

The estimated population of Shantung is 37,500,000, about the same population Japan had at the time of Perry's advent. Shantung is, therefore, the most densely inhabited part of China, with 600 inhabitants per square mile.

Shantung is again noted for its antiquity and as the native province both of Confucius and Mencius. Numerous noted figures in Chinese history from the Chin Emperor, Shih-Huang-ti, who flourished during the third century B. C., the Builder of China's Great Wall and its first unifier, to Genghis Khan and down to Yuan Shih-kai—who began his career as a policeman in an insignificant district of Shantung—have left their footprints there.

It is worthy of note that Shantung, because of its long existence, has stored a great amount of wealth. It is regarded by the Peking Government as a treasure house.

The resources of Kiaochau's hinterland Germany has been most active in tapping. She obtained by an appendix to the Kiaochau Convention valuable railway and mining concessions in the province. The railway from Tsingtau to Chinan-fu for a distance of 246 miles was built between 1899 and 1904. It has branch lines to the Poshan and Fangtse coal mines. It has a paid-up capital of 54,000,000 marks, out of which 53,000,000 marks have been expended on the existing lines, which have standard equipment. At present it is worked largely for what can be drawn from Chinese travelers. So far as freight is concerned, it consists chiefly of the output of the Poshan and Fangtse coal mines. These are valuable mines and have contributed greatly to the growth of Tsingtau. The yield in 1910 of the Poshan mines was 223,400 tons, while that of the Fangtse reached

"PURE WEST THRUST UPON PURE EAST"

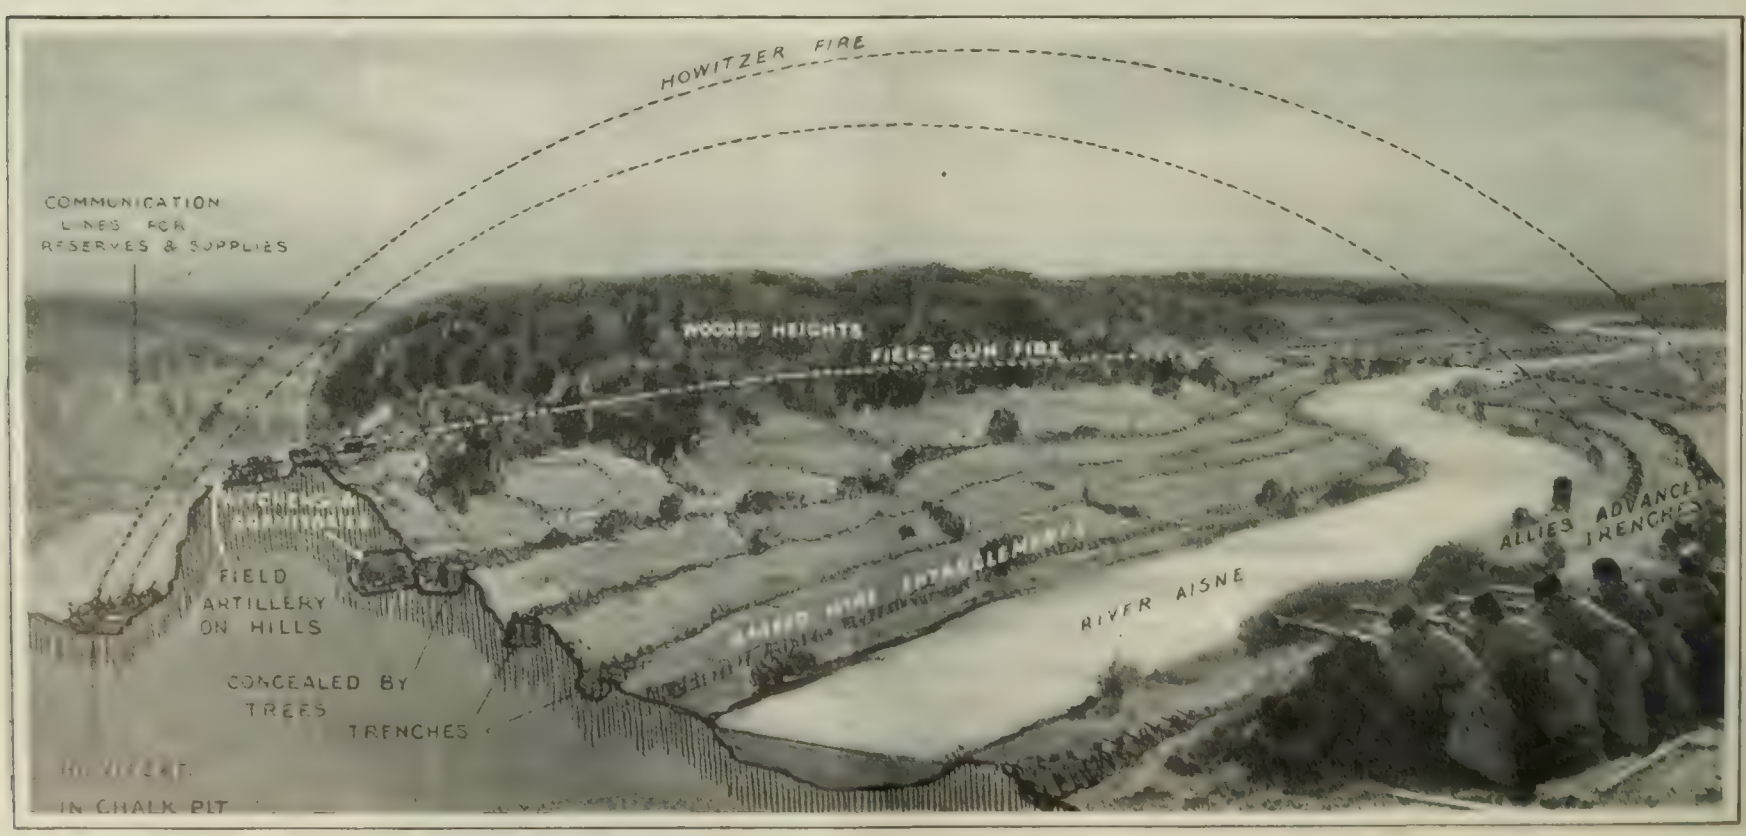
A street in the residence section of Tsingtau. The city is much favored as a summer resort for residents of Shanghai, Hankow and the other sweltering Yangtse ports.

[illegible] tons. These coal mines are reported to have been flooded or destroyed as the Germans abandoned them on October 9th. These railway and mining enterprises, altho worked under the names of private concerns, were initiated by the German Government, and their concessions formed an important part of the Kiaochau leasing agreement.

The growth of German trade in China has been phenomenal. Within the last three decades Germany increased her Far Eastern trade from practically nothing to one billion marks in value. Since 1905 Germany has increased her exports to China fifty per cent. "For the three years following 1873 the annual average of the number and tonnage of German ships which entered into and cleared from the Oriental ports beyond India were only forty-eight and 25,000 tons." In 1910, 5496 German vessels of 6,585,671 tons entered and cleared Chinese ports. The intense commercial activity of Germans in Hankow, Shanghai, and other Yangtse ports, as well as in Tientsin, is patent to those who have visited those places. As to Tsingtau, after its short life of a decade and a half, it enjoys today a trade of $45,000,000 or so.

Kiaochau, then, is the center and base of German activity in China, politically and commercially. It is the beginning of the vast imperial-colonial-commercial program which Germany has doubtless formulated to carry out in China. Already the Shantung Railway connects at Chinan-fu, the capital of the province, with the trunk line from Tientsin to Pukou on the Yangtse-Kiang. By its northern half, Kiaochau is in touch with Peking, and, via the Manchurian, Trans-Siberian and home railways, joins hands with Berlin. By the southern half of the trunk line, the Chinan-fu-Pukou line, Kiaochau can exert its influence upon South China. To quote the author of *The Reshaping of the Far East:* "The German program is as clear as the light of day. In a few years another naval base somewhere in the region of Swatow will be required, and, then, linked by a system of German railways, a huge slice of Northern, Central, and Southern China will be practically ruled from Berlin. It may seem nebulous and vague to those who sit in the darkness of blissful ignorance far away, but it is patent to those whose business it is to follow audacious empire plans. Tientsin will mark the extreme northern limit of these ambitions; Kaifengfu, the northwestern; Hankow, the central west, and Swatow, the extreme south."

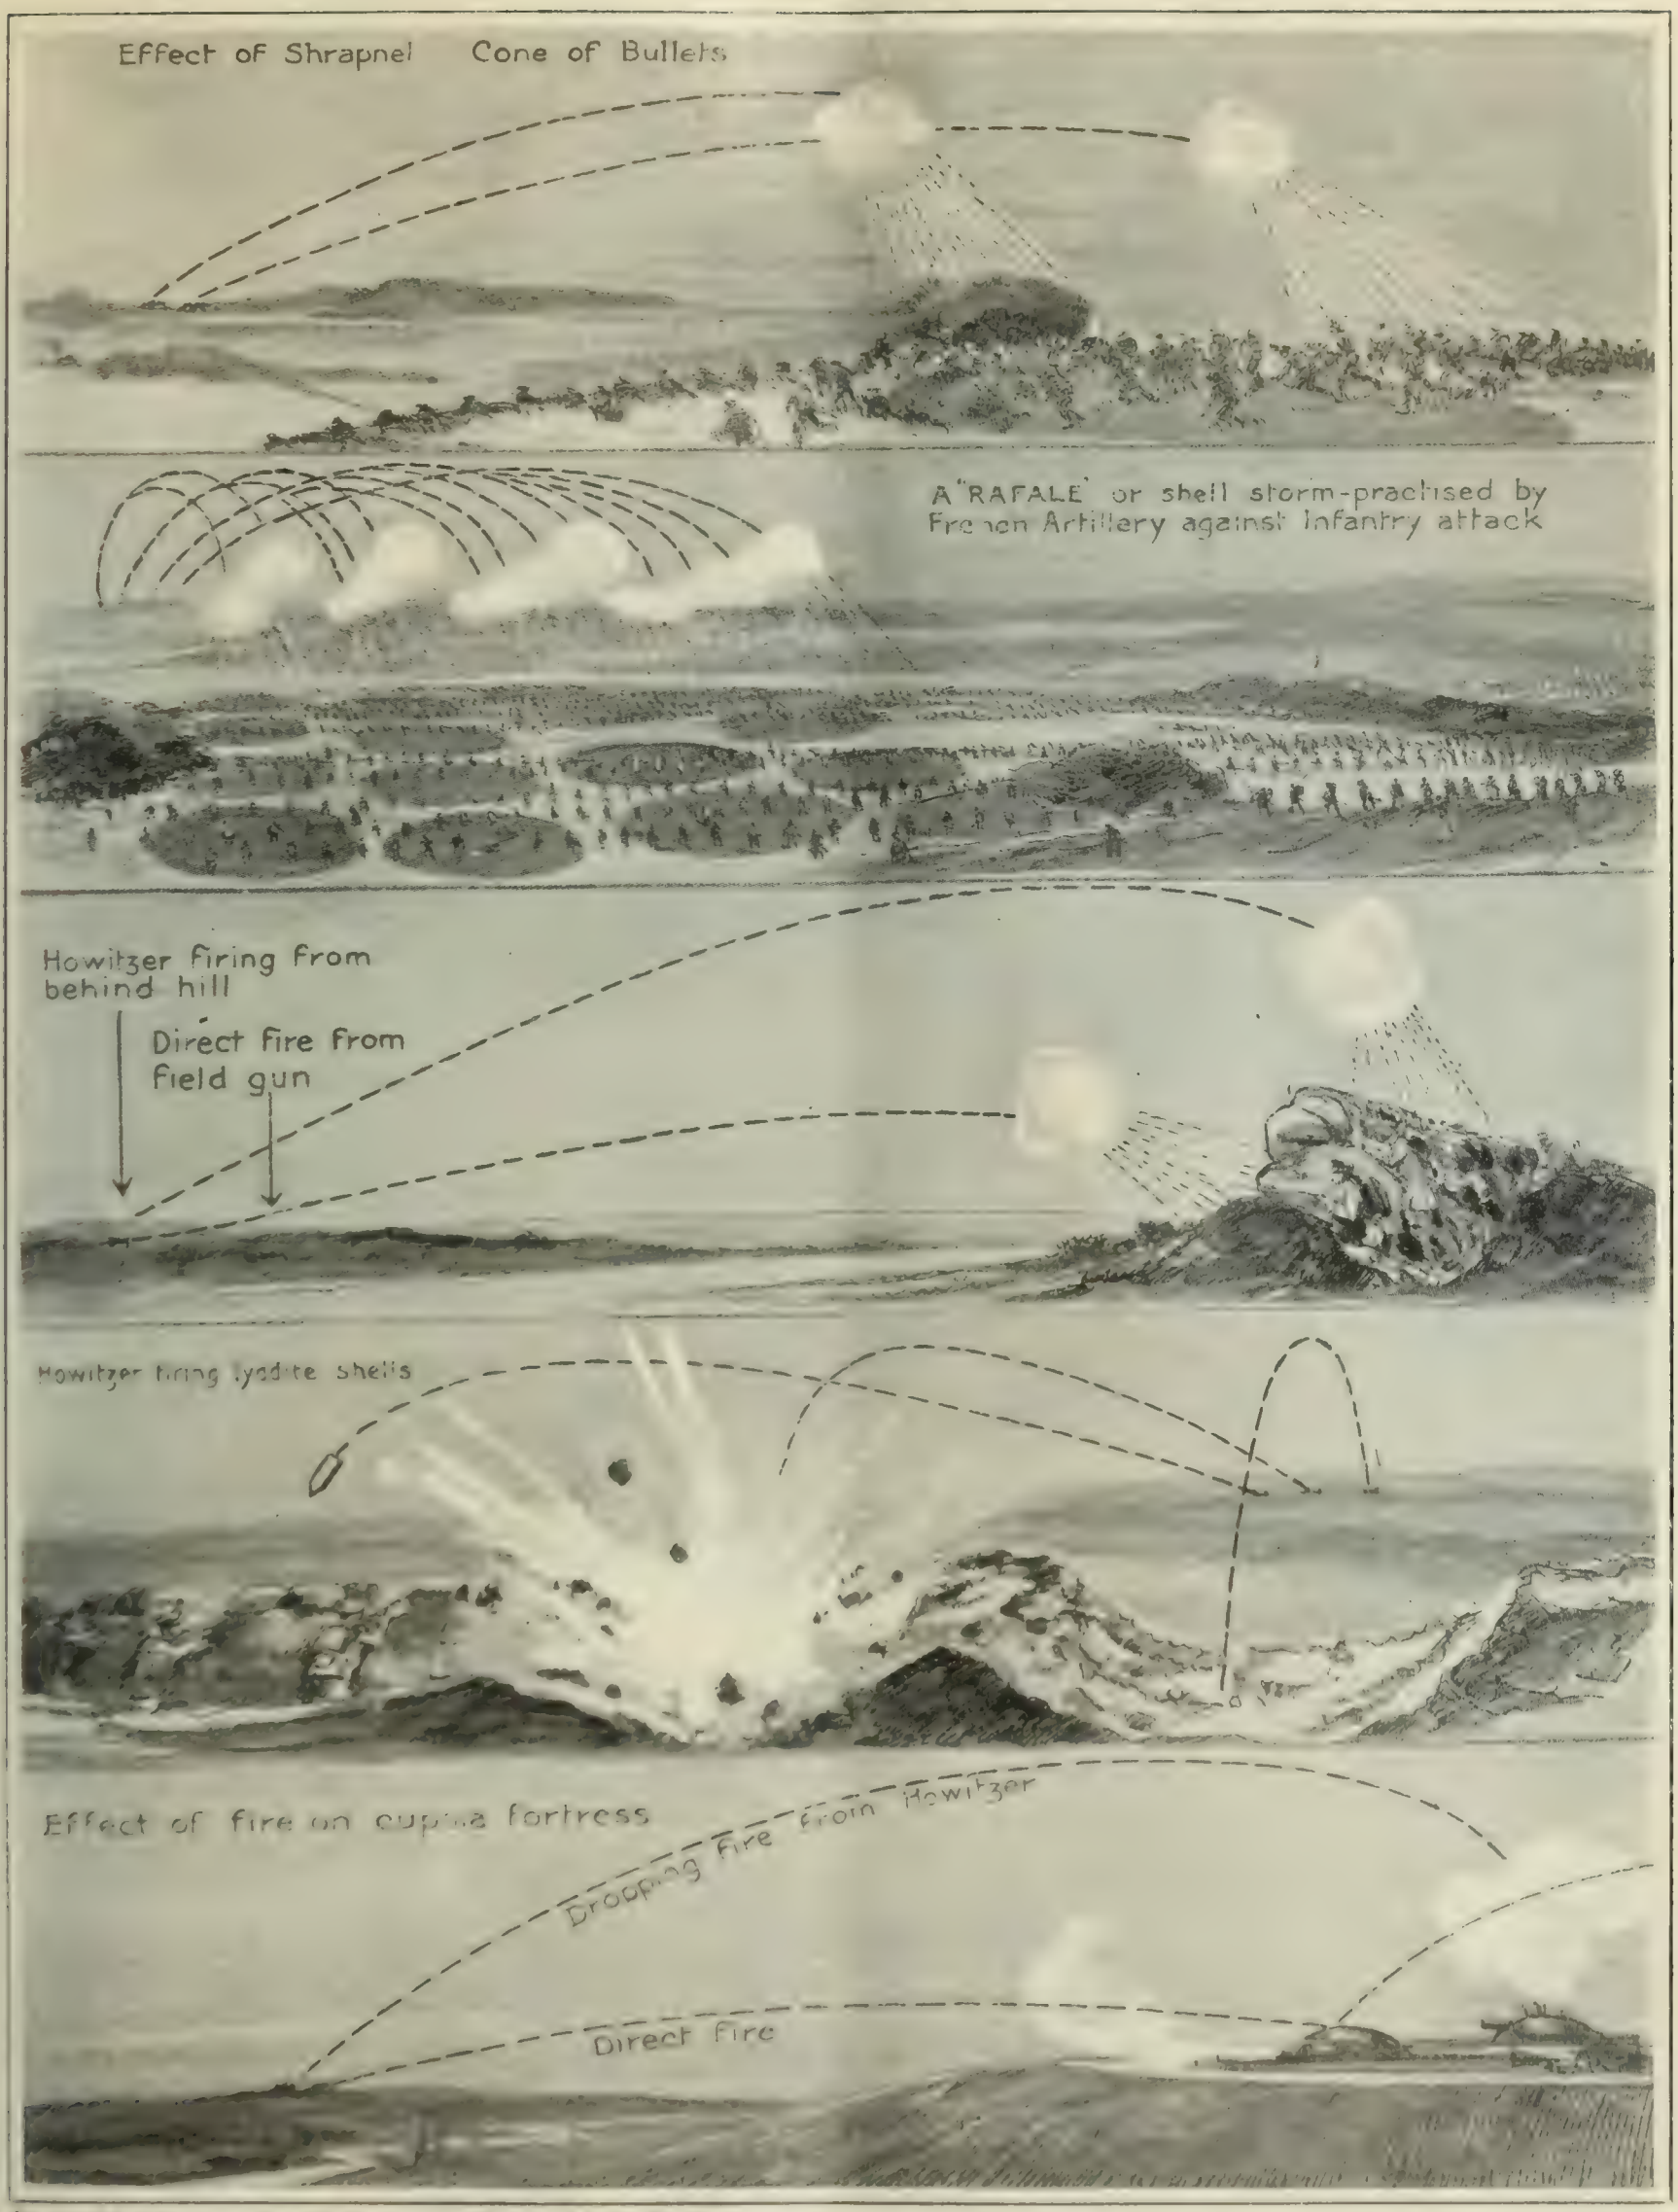
New York City



GUNFIRE AND TRENCHES

THE diagram below pictures the way in which the opposing forces deadlocked along the Aisne made military use of the river banks. On the north bank are the Germans, with three lines of trenches. The open advance trenches of the French on the south bank are just visible. Of the German works a correspondent of the London *Daily Mail* writes:

"They are very elaborate, these German trenches. . . . They are floored, many of them, with cement; they are roofed over with boards, covered with sod that serves both to keep out the rain and to hide them from French or British aeroplanes. They are divided into chambers communicating by doors. . . . There is a most advanced trench in which the outposts mount guard at night, then two or three hundred yards behind that the main line of entrenchment and behind that again are great pits dug out of the ground to serve as kitchens or dormitories."



The first diagram on the opposite page illustrates the effect of shrapnel fire. Shrapnel is a shell filled with bullets and carrying a bursting-charge which explodes it at a certain predetermined distance from the gun. Bursting in the air, it rains bullets and fragments of shell on its mark, in this case an advancing body of infantry. The same effect on a larger and deadlier scale is produced by the "rafale" or "shell-storm" of French field guns. This is a method of fire favored by the French artillery as a check to the enemy's infantry. A number of shells are fired at a high angle to burst well above the ground, so that the air is filled with a wide-spread deluge of missiles.

The field gun sends its shell with a relatively low trajectory, while a shell fired from a howitzer rises high in the air and drops after describing a great curve. Hence the latter is particularly useful against well-built entrenchments. The field gun throws its shell against the

THE REPERTORY OF MODERN ARTILLERY

earthen parapets of the trenches and does little damage, while the howitzer drops shrapnel or high explosives on the heads of the men behind the parapet, making fearful havoc in the trenches. The same difference in fire makes the howitzer necessary against cupola fortresses like those at Liège and Namur. The field gun shell strikes a glancing blow on the steel turret, but the howitzer shell may be made to fall squarely on the top and so demolish the steel and concrete structure. The lyddite shell explodes only on contact, and when it is accurately fired the effect is terrific.

THE MESSAGES

BY WILFRID WILSON GIBSON

"I cannot quite remember. . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me . . ."

Back from the trenches, more dead than alive,
Stone-deaf and dazed, and with a broken knee,
He hobbled slowly, muttering vacantly:

"I cannot quite remember. . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me . . ."

"Their friends are waiting, wondering how they thrive—
Waiting a word in silence patiently. . . .
But what they said, or who their friends may be

"I cannot quite remember. . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me . . ."

WHEN NICHOLAS ANSWERED WILHELM IN FRENCH

BY POULTNEY BIGELOW

AUTHOR OF "THE GERMAN EMPEROR AND HIS EASTERN NEIGHBORS," "THE BORDERLAND OF CZAR AND KAISER," "HISTORY OF THE GERMAN STRUGGLE FOR LIBERTY"

TWENTY-FIVE years ago the present Czar of Russia was guest of the present German Emperor during the imperial maneuvers near Hanover. To be more precise, it was in September of 1889. Another guest was there who also made many mental notes, the then Major Fukushima, who was one of the leading spirits in the Chinese war of 1894, who was chief of staff in the war against Russia, and who at this moment is probably directing the operations whose object is to hand back to China her bay of Kiaochau and her authority in the sacred Province of Shantung.

The German Emperor had a particularly brilliant court in Hanover. It made me think of that glittering Congress of Erfurt in 1808, when Napoleon ordered his favorite actor to come from Paris and perform before a *parterre of kings!*

There would have been havoc in royal families had some anarchist treated the Court Theater of Hanover in 1889 as the German guns did the Cathedral of Rheims in this year of peace conferences and suffragistic effeminacy. There were two gala performances, wearisome to all but those capable of securing immunity thru sleep. Each was intended as a glorification of Hohenzollern ancestors. The characters had none but military characteristics, the stage was like a barrack yard, and the parterre not much better. Shall I name these plays? You may already have guessed that one was called *Das Testament des grossen Kurfürsten* and the other *Prinz Friedrich von Homburg*. At any rate, I managed to sleep thru the better part of both, and my waking moments were occupied in studying the extent to which royal and diplomatic training can for a season overcome the natural effect of spiritual and physical weariness.

Among the illustrious sufferers on these two classic occasions were Prince Albrecht of Prussia, then governor of this conquered province; the Grand Duke of Hessen, the Grand Duke of Oldenburg, Prince George of Saxony, Prince Charles of Sweden, Prince Baldwin of Flanders, the Grand Duke of Wurtemburg, the Hereditary Grand Duke of Saxony, the Hereditary Grand Duke of Oldenburg, Prince Maximilian of Baden, the Prince of Lippe, the Hereditary Prince of Schaumburg-Lippe, the Prince of Hohenlohe-Langenburg; but most important of all—Nicholas of Russia, then ally and honored guest of William II, now in battle against him, and so personal in his warfare that he has even forbidden his officers to retain any German decorations.

Yet in 1889, on the 13th of September, came a written order to all guests at the grand banquet that only Russian or Prussian decorations were to be displayed.

Nothing was omitted on the part of William II to show his affection for Russia, so far as official acts are concerned. But the important things of this world rarely reach the newspapers, which is one reason why war generally comes as a surprize.

At the grand banquet in the Palace of Hanover my seat was at the same table as that of the Romanoff Crown Prince, and I could see without assistance that there was between the imperial host and his august cousin Nicholas a something that was far from reassuring to the apostles of peace. Nicholas was conspicuously bored—he was obviously yearning for Paris. All the others present exercized the military self-control which is cultivated in the royal nursery and is proof against every test, even a gala ballet at the Berlin Opera.

Nicholas found fault perhaps with the imperial menu, which was not only in German, but in the offensively obscure script affected by latter day Prussian patriots. The well known Printanière soup was printed as „Frühlings Suppe mit Klösschen." No wonder Nicholas looked cross and remained so thruout the meal. Prussia has not yet invented a patriotic equivalent for *salade* or *mayonnaise*, but on my menu of September 13, 1889, both of these were so disguised under their cacographic garb of patriotism that none but those of Spree water baptism could tell what was to come next.

Nicholas looked bored—there was no Russian or French dish for him. The music played incessantly and correctly, but there was not a single Russian or French composer in the list, nothing but German names and these all zigzagged across the card in running long hand script!

Finally the host arose with a full glass and said some lofty words touching his illustrious friend and ally in St. Petersburg, whose son Nicholas he was vastly happy in toasting at this moment. The words rang out bravely in German, but in order to reach a forensic climax commensurate with the love he bore to Nicholas, he suddenly burst forth with a peroration in Russian and concluded with the usual "Hurrah! hurrah! hurrah!"

What was the import of that final

phrase in the Slav tongue? Was it rather a Parthian shot? It was officially calculated to call forth Russian reciprocal effusiveness. The banqueting hall hummed with well-disciplined semi-tone exclamations of praise for the master stroke of Demosthenic diplomacy which should forever separate Russia from the French Republic and hold her forever the fast and firm support of Prussian military ambition.

It was now the turn of Nicholas to rise and reach if he could the hights to which his imperial host had triumphantly soared. But Nicholas declined to soar. He may have felt so, but he utterly declined to share in any attempt to lift this banquet above the level of the orthodox official ceremony, which is deadly dull save to the waiters and caterers. So Nicholas arose and with the expression of a chief mourner at the funeral of a relative whom he did not particularly dislike, he recited a few memorized paragraphs that had probably been composed in the Petrograd foreign office and approved by his august father, Alexander III. In what language did Nicholas seek to honor his host of Hohenzollern? G rman, of course, you say! Not at all. Not even in Russian, for which the Emperor himself might have been deemed constructive encouragement! No, neither Russian nor German crost the lips of Nicholas on that fateful evening. He spoke only the language of France!

Never shall I forget that evening. There was not a dull moment after that! Of course, the outward behavior was conventionally correct and uninteresting, but little groups whispered and compared notes; and German officers close to the imperial person could not restrain expressions of indignation at the audacity of a guest so grossly insulting to an amiable—a long-suffering—host and kinsman.

After the dinner Nicholas sauntered thru the saloons which before 1866 were the property of the blind King of Hanover. He no doubt took mental note of many things, for his mother, was she not sister to the rightful Queen of Hanover, then exiled in the Austrian Alps at Gmunden? These two sisters loved each other dearly and they never forgave Prussia this act of usurpation. So Nicholas made notes in the palace of his aunt, but they were not the notes to please his host, who wished him to note the ladies of the court who had assembled in his honor. But Nicholas stared over the heads of these Brandenburg beauties after the manner of one who says: "We have better looking ones at home!"

It was a sad rejoicing for those who had builded high hopes on the new Invincible Germany, whose strong foundation was Russian friendship.

Malden on Hudson, New York

SCIENTIFIC MANAGEMENT IN WARFARE

HOW THE EFFICIENCY OF THE SOLDIER IS MAINTAINED

SUPPOSE Mr. Garrison, of Washington, were suddenly called upon to convey the entire population of New York City into Canada and support them there for four months or more. Americans pride themselves upon being equal to any emergency, but we may imagine that such an undertaking would prove a severe strain upon our resources and ingenuity, and would not be carried on without great confusion and delay. Yet this is something like what has devolved upon General von Falkenhayn of Berlin, M. Millerand of Paris, and General Suchomlinow of Petrograd, and has been accomplished with marvelous celerity and smoothness. The tourists returning from Germany tell of their astonishment at finding all the railroads suddenly monopolized by the mobilization, and how day and night the troop trains would rumble by every fifteen minutes with clock-like regularity. It is said that 3,000,000 men from all parts of the empire were transported to the frontiers within the first ten days without an accident. A month later, when some of these troops were being rushed from France to East Prussia to check the Russian invasion, one of the trains did run off the track, and it was commented upon by the German press as a surprizing and deplorable affair, altho in the United States it would be regarded as one of the inevitable incidents of railroad travel.

The detraining of the troops at the Belgian frontier was accomplished without glut or confusion. As each train arrived the soldiers were served with hot soup and marched off to their predestined station before the next arrived. This difficult operation had all been planned out long before, and the necessary terminal facilities provided. For some years the German Government has been developing the railroad lines to the Belgian border and furnishing them with more sidings than the traffic demanded, and it was chiefly this that made their enemies aware of their intention to enter France thru Belgium. The Allies underestimated, however, the completeness of these preparations. It was calculated by the French military experts that the Germans would be ready to begin the siege of Liège on the twelfth day after mobilization. As a matter of fact, the city was captured on the sixth. Consequently, the French troops who were expected to support the Belgians did not get to Liège in any considerable force, and only reached Namur in time to take part in the retreat. A similar miscalculation was made in the case of Antwerp. In the London *Times*, under

BAKING BREAD IN THE FIELD FOR THE GERMAN ARMY

The employment of skilled cooks and the use of camp kitchens have made a great improvement in camp life

date of September 26, the statement is made that:

It is computed by the authorities that the Germans can only obtain access to the city at the expense of losing 100,000 men killed and six times that number of wounded. The Germans probably know how formidable is the task before them, but they have decided to try and occupy the capital even at enormous sacrifice.

It is not known how many men the Germans lost in the capture of Antwerp, but it was considerably under the 700,000 estimate, since the entire force engaged in besieging the city is thought to be less than 100,000.

That the European railroads were adapted to military purposes is evident to the tourist who has noticed that every freight car is marked with the number of soldiers or horses it can hold. The reason why the German Government has been rather slow in substituting electric traction for steam is because it was thought that the steam engine would be more reliable in war time.

It is a sad commentary on our stage of civilization that in every government the war and navy departments are the most efficient and progressive. None other has been so ready to listen to science; none so quick to take up new appliances calculated to promote efficiency. The man who had invented something of benefit to humanity might knock in vain at the door of every branch of the government devoted to the promotion of commerce, industry or sanitation, but as soon as he turned his discovery to the harm of humanity the governments of the world would bid against one another to get hold of it. What would aeroplanes, dirigibles, wireless telegraphy or protection against yellow fever, malaria and typhoid fever have amounted to if it were not for the encouragement given by the military? The civil engineers of France and the United States failed to complete the Panama Canal, but the first army officer called upon succeeded. General Funston's occupation of Vera Cruz has doubtless saved more lives than were lost in the capture of it. The Germans claim that the towns they have taken in northern France are cleaner and better protected from disease than they ever have been before. An army is one of the safest of places in time of peace, and even war is hardly to be classed among the extra-hazardous occupations The death rate among the recruits in France before the war was less than half that of young men of the same age outside.

So far all the armies with the possible exception of the Austrian has kept free from the cholera, typhus and other pestilence which formerly were more fatal than the weapons of the enemy. That it has been found possible to comply so completely with the injunctions of medical science in the chaos of a campaign shows what might be done for public health in times of peace if the authorities were equally efficient and the people equally obedient. The Japanese were the first to attempt such field sanitation, and in this way they avoided the disgraceful conditions of our concentration camps in the Cuban war. The Germans have been still stricter in their precautions against the microscopic enemies of man. A bacteriologist goes forward with the scouting party and selects a hygienic camping place, the water is examined for pathogenic bacteria, and so far as possible no soldier is allowed to drink water until it has been boiled, filtered and cooled. When a town is occupied a supply of bottled waters is among the first things demanded. The amount of water lost by evaporation from the skin and lungs has been calculated to be a quart for every six miles marching, and every effort is made to see that the troops are furnished with germ-free water at this rate.

An old Belgian who had been drafted in to serve as assistant to the camp cook to the Germans was greatly surprized at their sanitary precautions. He was not allowed to wash potatoes in any but germ-free water, and after every meal all the dishes and utensils were cleaned in boiling water and packed ready for instant departure, even when there was no prospect of changing camp. The stew pans were of aluminum, nested so as to occupy little more space than the largest of them. Every noon, as a rule, the cook made a meat and vegetable stew which he heated up again for the evening meal. Beef were slaughtered and carved up scientifically.

The introduction of skilled cookery and camp kitchens has made an immense improvement in campaign life. When we get a veteran of our civil war to talking he is sure to tell us of the squabbles in his squad over who should use the frying pan and coffee pot, and how often, after a hard day's fighting or marching, he had eaten his rations raw because he was too tired to cook them. In the present war it is the intention to provide every man with a hot meal before he starts out in the morning to fight or march, however early that may be, and the men in the trenches have their food brought to them as regularly as if they were harvest hands. In case of a failure of the culinary department the soldier can fall back upon his "iron ration" of canned food, his pea sausage, his evaporated potatoes and his tea cubicle, which consists of tea comprest between two dominoes of sugar. But no doubt these admirable arrangements sometimes break down in the rush and tumult of the campaign.

It is a gigantic game of hide and seek that is being played in the hills and dales of northern France. Invisible men are firing upon invisible enemies from invisible fastnesses.

Shells may be dropping out of clear sky upon a given position for days before its defenders can ascertain even with their aeroplanes from which of the innocent looking groves or ravines within a radius of eight miles these projectiles proceed. The steel Taube, the German dove of war, is colored a sky blue so that it can fly unseen in the day time. In days of old the warrior borrowed from bird and beast their gaudiest feathers or furs in order to make himself as conspicuous and imposing as possible. Today he still imitates the lower orders of the animal world, but chooses other species for his models. He has discarded the plumed helmet and leopard skin targe, and adopted the protective coloration of the quail and the hare. The British soldier is clothed in the dust colored khaki; the German in the *feldgrau* said to be still more elusive to vision. The French alone use the uniform of the gorgeous days of the first Napoleon, and their blue coat and scarlet trousers can be seen half a mile farther than the field gray of the Germans. The French Government made an attempt some years ago to put the army into a uniform of neutral tint, but the first soldiers to appear on Paris streets in the new rig were so laughed at that most of the troops still wear the old costume.

Every German soldier as he responded to the call to arms found ready a new suit made to his measure, with his name stitched on it. Particular attention has been paid to the footwear, formerly a weak point with the German army. Now a serviceable shoe has been made and a new pair will be furnished every month to troops in active service. According to the German papers the bill appropriating money to buy shoes for the French army did not pass the Chamber of Deputies until after war was declared, and the prisoners captured by the Germans have on ordinary shop shoes and even patent leathers.

Another thing on which the Germans pride themselves is the cut of the collar on their new service uniforms. This leaves the neck free, but the nape can be protected from the sun by the loose neckcloth, which may also serve as a sling to support a wounded or a tired arm. It reminds one of the bandanna of our cowboys, and possibly the Germans got the idea from the Wild West movies of which they are so fond. Certainly it is a great gain in freedom and efficiency to get rid of the tight collar which constricts the vital link between brain and body at its weakest point, and perhaps we may live to see the fashion spread outside the army, as has often happened in the history of costume.

True efficiency cannot be attained by trying to make men into machines. Soldiers are not in good health unless they are in good spirits. There must be song and laughter in the most tragical situations. Our Rough Riders carried San Juan Hill to the tune of "Fair Harvard," "There'll Be a Hot Time in the Old Town Tonight." The author of "It's a Long Way to Tipperary" has added strength and elasticity to the march of the British troops. We cannot imagine Germans anywhere without "that little German band" and we don't have to now. The band is there in the firing line and gives daily concerts between bombardments to the men lying in the trenches. And in their dugouts back of the trenches the German soldiers, as we learn from their letters, spend their leisure studying French grammar and listening to phonograph records. It's hard to crush the human spirit.

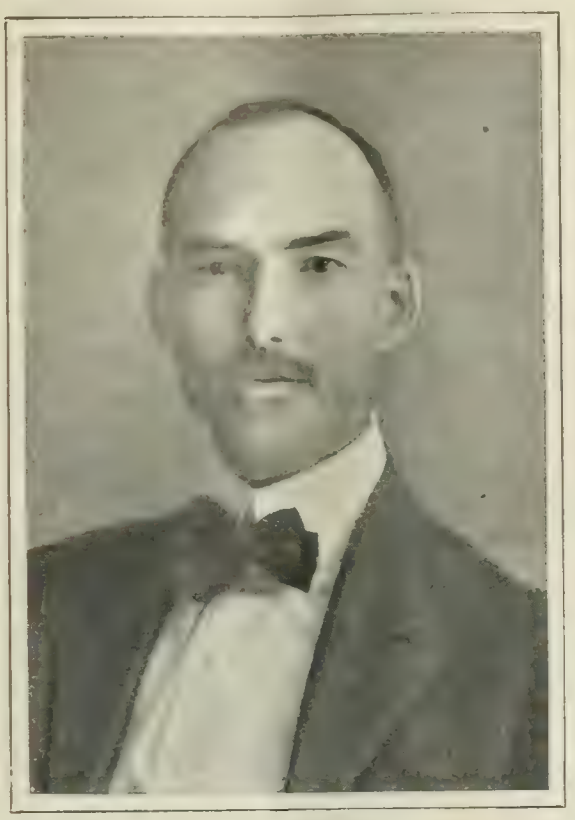
WHY I AM IN PRISON

BY BOUCK WHITE

The Rev. Bouck White, author of "The Call of the Carpenter," "The Mixing" and "The Immorality of Being Rich," is a graduate of Harvard and of Union Theological Seminary. On Sunday, May 10, 1914, accompanied by members of his "Church of the Social Revolution," he interrupted the morning service at the Fifth Avenue Baptist Church, in New York, of which John D. Rockefeller, Jr., is a member, with an attempt to discuss certain questions growing out of the Colorado strike situation. He was ejected and arrested for disorderly conduct and subsequently sentenced to six months' imprisonment. Comment on this article will be found in our editorial pages.—THE EDITOR.

ISSUES of some magnitude were involved in my visit to the Fifth Avenue Baptist (the Rockefeller) Church, and for which I am now in prison stripes.



The exemption of church property from taxation, the rights of the public in a tax-exempt church, the status of absentee landlordism, in the light of our country's official ethics, were some of the questions interwoven with the affair.

Yet Magistrate Campbell, in a New York police court, entertained no doubt of the competency of his tribunal to pass upon these issues. He devoted the whole of nearly twenty minutes to the trial. He found me instantaneously and heinously guilty; pronounced me "a dangerous man" because I had dared to raise these questions into the glare of publicity.

I have been sloughed into a prison cell. Appeal to a superior court has been hilariously denied me. My finger prints have been taken. I am numbered with the felons. For the space of 185 days I am being fed with the bread of affliction and with the water of affliction.

Some passages from the letter I sent Dr. Woelfkin, the pastor, preparatory to my visit to his church, will be informative to the reader:

> I am sending you this, my dear Dr. Woelfkin, in order to assure you of the very real friendliness with which we are coming to you. We are quite aware that a visitation from a church to its neighbor is a bit unusual. And that the presentation of a greeting in open service is out of the ordinary. But we submit that the times just now are extraordinary and demand extraordinary modes of meeting the issues present for solution. The topic in our meeting Sunday afternoon is to be "Galilee and Colorado." That will open up the entire question of riches and the industrial situation in our country. You will agree with me that the findings of the Congressional Investigation Committee connect some in your church membership in a quite intimate way with the Ludlow massacre.
>
> I am one that holds that the arbitrament of this entire revolutionary upheaval should be lifted into the religious realm. There alone can it find constructive treatment. To that end the church of which I am pastor was formed. The Carpenter of Galilee was never more needed in the world than at the present moment. We are organizing with the purpose of making him the avowed leader and inspiration of this labor agitation. Inasmuch as your church and ours together bow before the same Master, it surely would be advantageous if we could establish a fraternal relationship one with the other. It is not at all true to say that the industrial troubles of our time are due to the personal cruelty of the masters in control. At our Church of the Social Revolution we proclaim that the present deplorable situation is not due to individuals, but to the system wherein individual rich men are hopelessly enmeshed. We feel that if they could be made to see the situation from this point of view, together with the economic message of the Galilean, it might be the means of winning them to the cause of social reconstruction. Not all of them are wedded to their dollars. And these would prefer the riches of fellowship to riches of silver, if persuaded that the Master unconditionally—and for statesmanly reasons—demands it.
>
> This friendly visitation of our church to yours might be the means of a conciliatory work of far-reaching consequences. We are very near neighbors. Our church holds divine service at West Fourty-fourth street; yours, at West Fifty-seventh street. We represent the downmost man; your church represents the wealthiest of the world. Therefore in this social crisis that is gathering its thunder so menacingly, it is entirely thinkable that, by some relationship that will permit an interchange of views, a friendliness of feeling could be brought about that might be the means of a happy issue out of all our social afflictions.
>
> We are bold to go to you this Sunday morning for a further reason. Words have reached us from more than one source that some of the wilder spirits in the revolutionary movement are planning some kind of concerted affront to you and your church. We of the Socialist Church deeply regret these turbulent committees that so evilly obscure the large principles and drag the issue into the mire of personal animosities and vituperations. We are offering you our assistance in quelling any wildness. The Socialist movement has everything to gain by being kept in the realm of orderliness and constitutional procedure.
>
> We come to you in all comity. The hand we hold out bears no weapon; but is open in an earnest desire to clasp that of a sister church in all friendliness and courtesy.

BOUCK WHITE

It was necessary to quote here the letter in some fulness. For it is alone the evidence in the case—in the church I was permitted to utter not more than five words before being arrested. I sent the letter to Dr. Woelfkin; the daily papers also mentioned it with headlines. Receiving no reply from him,* I went to his church the following Sunday morning. At the time in the service devoted to "Notices" I arose and started to convey the greeting sent by my church thru me. Then it was found that the rooms surrounding the auditorium were packed with squadrons of police. The bulldogs of the law were turned loose upon me. I was arrested—and beaten. I am now doing time.

Did I have a right in that church? That depends in part upon the announced — somewhat ostentatiously announced—policy of brotherliness by the Baptist Church to other congregations. (I am a minister ordained by the Congregational denomination.) It depends also on the legal standing of the public in tax-exempt churches. The consolidated property of the Baptist church in question amounts to well toward a million dollars. Its freedom from taxation now thru long years of its life means that all the people of New York City have been compelled by statutory enactment to contribute to the support of that church a sum aggregating many ten thousands of dollars. For years, therefore, I have been a financial contributor to the upkeep of that place of worship. In return for my monetary support (I mentioned this fact in my letter) I asked the right, once in a lifetime, to bring before that church a

*In fairness to Dr. Woelfkin, his published statement to the effect that he had not received this letter in time to read it before the Sunday service in question should be remembered. THE EDITOR.

matter which I deemed of ethical and spiritual import I am in felon stripes.

A convict locked in a cell near to mine was arrested for selling fraudulent butter. Brought before a police court, the magistrate informed him that the case would have to be tried before a higher court. Police courts are adapted for "drunks," horse beatings, window breakings and vagrancy cases. In an affair involving several pounds of butter, the law provides that the accused is entitled to be heard in a court whose procedure is sufficiently majestic to give him a patient and respectful hearing. Since my imprisonment, also, I have seen pickpockets come in, stay a few days, and be released by writ, or go for a new trial. The law notoriously is tender toward butter cases and pickpockets, dignifying them with a hearing at the bar of an august and learned tribunal. In public interest, at least, the deed for which I am jailed was not inferior to theirs. It was telegraphed very widely. It even got onto the cables and was sent to far coasts of the earth. But the only hearing that has been permitted me was twenty minutes in a police court, amid a calendar of "drunks" and "found sleeping on doorsteps." I understand that the magistrate who so expeditiously found me guilty and sonorously sentenced me is being put forward this fall for the Supreme Court, by a political party that is peculiarly tender to magnates of the Colorado Fuel and Iron Company sort, and grateful to "serviceable" handlers of the law.

A debate between our church and the Rockefeller church on the thesis, "Did Jesus teach the immorality of being rich?" was a suggested form of the relationship we coveted to establish, and for proposing which I am in jail. The query presents itself, Would it not have been wiser in Dr. Woelfkin to give the knockout to religious radicalism once for all, by accepting the challenge? The debate would have furnished him a resounding platform from which to triumph over us and establish for all time henceforth scriptural sanction of vast private possessions. Of a surety the occasion would have been dignified with considerable publicity. The mere challenge to it—as I stated—got onto the ocean cables. The event itself would have opened to the Rockefeller theologian a wide auditory. It would have made the New Testament a news item of double column, front page importance. And his demolition of our arguments would have been a historic event, incalculably buttressing the conservative school; 'twould have asserted the divine right of riches in the hearing of tens of thousands reached by Associated Press despatches.

Can it be that Dr. Woelfkin and his supporters feared the issue? Some of the facts in the case give color to the suspicion. Platoons of police, the extreme sentence of the law, and now a triple row of prison bars between me and freedom, suggest in them a state of mind far from one of poise; yes, one of near-panic. Hardly could the pastor of that church contemptuously have accounted me an antagonist unmeted for a learned man to encounter. The pronunciamento of the magistrate against me is clear on that point: "A man the more dangerous because of his education and churchly orders." My books on the economic interpretation of the life and message of the Galilean bear the imprint of publishers one of whom is America's ambassador to England. My academic standing is officially certified by our country's oldest university and her premier school of divinity.

The inference is unavoidable that organized Christianity is afraid of the Bible. Modern scholarship is making that book, in these times of social break-up, what James Russell Lowell declared it to be toward the slave system, "the most revolutionary book in literature." To dampen down the explosiveness so thickly strewn thru it, the pulpiteers who preach for hire and look to million-airic support, are put to more and more desperate shift, stopping not at bonds and imprisonment of those who ask embarrassing questions. No one more than they realizes the extent to which the churches today are honeycombed with doubt and open skepticism. I have a letter recently sent to me by a member of the Baptist church in question, in which he admits the hollowness of the whole institution. I quote: "Christianity (when it produces anything, for it usually leaves a person with his moral, intellectual and spiritual aspirations untouched, or in a state of decay) produces weaklings, people not interested in government, poor fathers, missionaries doing ridiculous things, people who have never had their proper development of mind." I am quoting one of the milder passages in his letter, lest I should seem to be overstating. And the writer of it is not only a member of the Rev. Dr. Woelfkin's Baptist church, but is a teacher of a class in the Sunday school there, John D. Rockefeller, Jr., being another of the teachers.

To this pass of insincerity, the established religion of Christendom is come. It has long been known, even conceded, that the Church of Rome operated on a principle of suppression, permitting only the portions of truth to percolate to the masses which she thinks safe and expedient. It may come, however, as a surprize to many to learn that the Protestant Church—she who was founded to blab the words of truth utterly—has switched over and is now a zealous adjutant of Rome in keeping the verities of scholarship from the populace. And the Baptists are not alone in the business.

"We are due for the greatest spiritual crisis in the history of mankind," states Professor Eucken, of Jena. To prepare for that crisis, by organizing the new order of intelligence and the new spiritual understanding that will be requisite in the world of tomorrow, is the purpose of the Church of the Social Revolution, of which I am the pastor. We hold service in a hired hall in New York, for we own no sanctuary. A quality of fearlessness, so visitors say, attaches to our meetings and activities. Over two hundred new members have been added since I have been behind prison bars. This is the covenant we take: "I enlist under the Lord of the blood-bright banner, to bring to an end a scheme of things that has enthroned Leisure on the back of Labor, an idle class sucking the substance of the poor. I will not be a social climber, but will stay with the workers in class solidarity till class shall have been done away in fellowship's glad dawn. I will seek recruits for the Church of the Social Revolution, unto the overthrow of present-day society and its rebuilding into comradeship." We hold that religion and economics are terms that have grandest agreement; conjoined, they make a live organism; divorced, they are a soul without a body and a body without a soul. On my release, November 12, I shall resume my work as leader of this church; to lay the mudsill, as it were, for the new heaven and the new earth that are preparing. I shall go out of the prison gate with more endurance for the task than when I came in. And with more certitude likewise. The breaking down of present-day civilization, in the catastrophic clash in Europe, tells that we have no moment to lose in beginning preparations for the new spiritual order. Tho prison continue to menace me, I cannot give up my work.

Queens County Prison, New York

A PEACE PLAY'S PREMIERE

MRS. KATRINA TRASK'S *In the Vanguard* is an interesting and impressive peace argument, and as a drama it had a most favorable première at the Academy of Music in Northampton, Massachusetts, on October 12. Produced by the Northampton Players before a notable audience, it opened brightly the third season of this significant dramatic experiment. The play itself was reviewed in these pages on July 17, 1913, and needs no further description here. It is a succession of conversations connected by a thread of plot, in which the militaristic position is step by step demolished and the "hero of the durable"—who dares not to fight—put in place of the hero of carnage. The company made good use of their opportunity and threw as much dramatic feeling into the play as possible.

There was a festival flavor to the evening. Mayor Feiker welcomed the audience, which contained many peace leaders and a gallery full of Smith College girls, and made definite announcement of the generosity of Frank Lyman, of Northampton and Brooklyn, who has given fifteen thousand dollars to the support of the theater in its two seasons of drama for the community's sake. The international peace song, "Let Us Have Peace," was sung between the acts, and after the curtain was rung down, President Burton of Smith college made an address.

CITY FORESTRY

THE "get-big-quick" type of American city with its unshaded and blazing hot streets is fortunately giving place to the type planned and forested for permanency and pleasure.

The city forester is, in most large municipalities, an active man in close touch with the people, a teacher as well as a planter and trimmer. Tree nurseries owned and managed by American cities are no longer uncommon. The park board of Indianapolis thru its forestry department has begun a campaign of education in municipal forestry and the local press has lent its aid.

To guard against reckless planting of unsuitable varieties, of which the citizens were guilty ten or twenty years ago, strict rules have been made. The shade tree of the future, according to the park board, must be selected for permanence as well as beauty, hence soft wood, quick-growing varieties must be avoided. Thousands of poplar, cottonwood, soft maple and catalpa trees planted in enthusiastic ignorance a decade or so ago are now being removed by the hundreds each year because of rapid decay.

The only trees that may now be planted on any street, alley or street lawn in Indianapolis are the Norway maple, scarlet maple, sugar maple, white ash, European ash, sweet gum, tulip tree, cucumber tree, European sycamore, American sycamore, white oak, chestnut oak, English oak, red oak, pin oak, black oak, American elm and English elm. These varieties are selected because they are symmetrical, need but little trimming and suit the soil and climate of Indianapolis. The sugar and Norway maples and ash are adapted to clay loam, while the elms and sycamore are best suited to black or sandy loam, well-watered. It is especially desirable that single blocks or a series of blocks should have but one type of tree, if possible, in order to secure attractive uniformity.

The park commissioners give detailed instructions as to the planting of young trees, a delicate operation to be performed when the trees are dormant in late fall or early spring.

Since there must be cities, why not have beautiful ones?

A BIRD'S TRAVEL-LUNCH

SEVERAL bobolinks killed in Cuba last spring were found to have living specimens of the small, grass-inhabiting snail, *Succinea riisei*, clinging among their feathers. This mollusk lives in Porto Rico and St. Croix, but not in Cuba.

A similar circumstance has since been observed in the case of the upland plover (so called), a migratory sandpiper; and it appears to be a regular occurrence with that bird. This sandpiper arrives on the coast of Louisiana from its winter home in the tropics during the third week of March and is shot as game by sportsmen, altho that is poor policy. Those killed immediately after their arrival are often found to be carrying beneath their wings from twenty to forty small snails of the freshwater genus Physa, which the birds are accustomed to eat. These snails abound in tropical America as well as in the United States, but cannot be obtained here until the warmth of early summer brings them out of their winter retreat beneath the mud.

In both these cases the fact of the birds transporting food-mollusks clinging to their feathers is certain and the inference is that they are eaten soon after arrival, for a few days later none is to be found. Were they put there as a provision for the long journey across the water? No one knows, nor can say how the snails got under the wings.

Light is thrown on the query, however, by recalling a note, published some years ago by Grace Ellicott, of an incident in blue jay life observed at New Castle, Indiana. Miss Ellicott noticed a blue jay fly down to a disturbed anthill in her garden and begin to pick up the big ants, which were running about in great excitement over the catastrophe that had befallen their city. The bird apparently realized that the ants were too many to be eaten at once and that he had the chance of his life for savings. Working as fast as possible, he picked up ant after ant and tucked them beneath his wing, now on one side and then on the other. Ants have a propensity for grasping with their jaws and holding onto anything they touch, when treated in such a way as that, and the bird seemed to know this and devoted himself to stowing away as many as possible. At last he (or she) flew away, perhaps to feed the insects to hungry young.

These incidents make a very interesting addition to that well-remembered paragraph in the *Origin of Species* in which Darwin relates the surprizing number and variety of plants he raised from seeds in the caked mud clinging to the feet of visiting birds, and they increase our knowledge of the methods of dispersal of animals.

JUGGLING WITH A MASTERPIECE

AMONG the art treasures of the late Mrs. John Hay, widow of the great Secretary of State, is an example of the ingenuity of the restorers of damaged masterpieces of painting.

Mr. Hay had a Madonna by Botticelli that was painted upon a wooden panel at least four hundred years ago. The wood had begun to crack, and it was feared that the painting would be ruined, but a restorer was found who said he could save it.

The first step was to paste thin strips of tissue paper on the face of the picture, pressing the paper into the uneven surface of the paint. Layers were added until a thick body of paper concealed the picture.

Then the picture was turned over and the restorer began to sandpaper the board away. After many months of careful work he had all the wood removed, and nothing but the paint adhered to the paper. A piece of linen canvas was then glued to the paint, and the work of removing the paper from the front of the picture was undertaken. It required nearly a year to complete the work; but when it was done the painting was left in shape to last four more centuries.

THE NEW BOOKS

SEEING CALIFORNIA

PEOPLE are making timely books about seeing California. Here are three of them together. It is just as well to "see America first," not only because Europe can't be seen at present anyway, but because America is really worth the seeing. Moreover, when we have a standard of comparison we may avoid servile worship of Europe's scenery while leaving off to boast idly of our own. In *California* Sutton Palmer has painted the country at its most beautiful—which it isn't always—and Mary Austin has written the text and both of them have seen that "in the presence of that vast plain (the Valley) palpitating with heat, the sluggish, untamed water, the white-fanged Sierras combing the cloudless blue, beauty becomes a poor word." The leisurely pages are quite as colorful and appreciative as the delicately toned illustrations—thirty-two of them.

Mr. Beasley takes us on *A Tramp Thru the Bret Harte Country* with knapsack on back and kodak in hand. Not to have loitered thru the real heart of California—its mining camps—not to have watched in the blazing sunlight the solid old stone buildings of the Forty-niners, or at the very next turn, perhaps, their deserted shanties, or, beyond, the whole earth bare and red to the bones from their frantic digging, is, according to Mr. Beasley, not to have understood the magic of the word "California," nor how it stirred the "blood and imagination thruout the civilized world."

Mrs. Wood has written *The Tourist's California* and done it fully and well, from "where the Stockton steamboat lands" to "what clothes to wear," that any prospective visitor who intends to see something of the state outside of 'Frisco itself will find the book invaluable. It is a question whether anything has been left out, and, what is more, the information is exact.

California, painted by Sutton Palmer, described by Mary Austin. The Macmillan Co. $4.
A Tramp Thru the Bret Harte Country, by Thomas Dykes Beasley. Paul Elder & Co. $1.25.
The Tourist's California, by Ruth Kedzie Wood. Dodd, Mead & Co. $1.25.

CATHEDRALS UNDER FIRE

In these days when any cable may bring us the news that a cathedral spire has become the most conspicuous target in a great artillery duel a special interest is attached to the two profusely illustrated volumes on the *Cathedrals and Cloisters of Northern France*, which complete the splendid series undertaken some years ago by Elsie Whitlock Rose and Vida Hunt Francis. Some of the most renowned and beautiful churches of the northern region, such as those of Rheims and Amiens, were for the sake of comparative study included in the earlier work devoted to the glories of the Isle de France, but the new volumes cover the scarcely less perfect and original artistic creations of Le Mans, Nantes and Chalons-sur-Marne. Many of the buildings described are found in Brittany, Maine and Normandy, outside the present war zone, but a few are further eastward in a section where it seems almost certain that the destruction of war will not leave them entirely unscathed. Right in the line of severest fighting lie the cathedrals and cloisters of Arras, Verdun and Saint Dié, the latter said to have "one of the most lovely and impressive of the cloisters of France." Only a little behind the firing line is Toul with its magnificent front and "charmingly executed tower," while just over the border, in territory that France is now struggling for as a former possession, are the splendors of Strassbourg and Metz, which are briefly described in these volumes. If any of these monuments of artistic power and religious aspiration *must* be damaged or destroyed it would be well if the unhappy lot might fall to Cambrai, which is stamped as "the ugliest cathedral in France."

Cathedrals and Cloisters of Northern France, by Elsie Whitlock Rose and Vida Hunt Francis. Putnam. $5.

BOOKS OF THE WEEK

Selected Articles on World Peace, compiled by Mary K. Reeley (Debaters' Handbook Series). An unsystemized collection of peace essays of uneven merit. Best recent literature ignored.
H. W. Wilson Co. $1.

Historic Homes of New England, by Mary H. Northend. Readable and sympathetic description of a score of New England's most beautiful Colonial homes. Sumptuously illustrated.
Little, Brown. $5.

Training the Girl, by William A. McKeever. Based on wide study and experience. Every phase of the life of the growing girl receives attention. Excellent in judgment and insight.
Macmillan. $1.50.

Jesus and His Parables, by George Murray, B.D. Fresh, able and vigorous expositions of the Parables arranged in groups. Based on the best modern literature.
Scribners. $..

Europe Revised, by Irvin S. Cobb. Crusades against the superstitions and traditions of Europe as they exist for the average American. Humor that finds its basis in common sense. Inimitable cartoons by McCutcheon.
Doran. $1.50.

Republican Rome, by H. A. Havell. The second volume of the "Great Nations" series, revising history according to modern ideas. Less of wars and kings, and more of the manners and institutions of the past. Briskly written and handsomely illustrated.
Stokes. $2.50.

The Fleets at War, by Archibald Hurd. A comparison of the British and German fleets, with sketches of their various commanders and a summary of the naval rivalry preceding the war. Authoritative and timely.
Doran. 50 cents.

DO WE NEED PRISONS?

Two books on prison life appear simultaneously: *The Man Behind the Bars*, by Winifred Louise Taylor, and *The Subterranean Brotherhood*, by Julian Hawthorne; the first a tenderly sympathetic account of the friendships formed between convicts in the Joliet Penitentiary and the woman who has spent her life in trying to help them; the other an account of his year in the Atlanta Federal Prison by Julian Hawthorne. The spirit animating the two books is unlike. Miss Taylor speaks from long experience and intimate knowledge of her subject, her sympathies are keen and her genuine humanity abundantly manifest, yet she does not advocate such drastic reforms of our penal system as does Mr. Hawthorne, who would abolish prisons entirely as useless and cruel anachronisms. We cannot see how society could protect itself from danger without some system of segregation, yet we heartily agree with both authors in their plea for out-of-door labor, hours of recreation, opportunity for study and as much freedom as possible under parole of good conduct. Cruelty and injustice are indeed inexcusable, yet, it must be remembered that Mr. Hawthorne's informants may have been sometimes untrustworthy witnesses embittered and distrustful in their attitude toward the prison officials. Miss Taylor writes enthusiastically of the new honor system of Colorado and Illinois prisons. In an extended knowledge of the men in one penitentiary, the writer found the convicts invariably grateful for kindness and responsive to just treatment. Severe discipline was not resented, but injustice always rankled. *The Subterranean Brotherhood* lacks the poignant feeling of Oscar Wilde's *De Profundis*, and, except in a few pages, the sincerity of that remarkable cry of the spirit, but it is a contribution to the literature of the prison problem which legislators and penologists would do well to ponder.

The Man Behind the Bars, by Winifred Louise Taylor. Scribners. $1.50
The Subterranean Brotherhood, by Julian Hawthorne. McBride, Nast & Co. $1.50.

NAPOLEON'S COURT AND CAMPAIGN

The Decline and Fall of Napoleon, by Field Marshal Viscount Wolseley, K.P., a third reprinting since 1895 of a series of articles originally published in the *Pall Mall Magazine*, treats with admirable clearness and impartiality of the campaigns and policies of Napoleon from 1811 until his downfall. In *The Celebrated Madame Campan*, Violette M. Montagu, from the memoirs of a court instructress and from other journals of the times, draws a gossipy picture of the courts of Louis XV and Marie Antoinette, and of Josephine and her favorites in the days of the Directory, the Consulate and the Empire. Major Arthur Griffiths' *Life of Napoleon*, a second edition of which has been

issued in 1914, concerns itself with the great Corsican as a despot and an adventurer, a murderer and a brigand. Several contradictions and useless repetitions in the text have escaped correction. The book contains many excellent portraits.

Lippincott's. $1.25, $3.75, $1.75.

MOUNTAIN, DESERT AND JUNGLE

With South America asking for goods that Europe cannot send, with many Latin-American students deflected to our schools, it is the appropriate time for learning more about the history and physical aspects of the continent as well as its commercial opportunities. Miss Millicent Todd in her *Peru* almost makes us see it as if we were there. She does not discuss commerce, estimate the gold output, nor consider guano, save to say that on the richest islands of the world not one sprig of green can grow—one of Peru's antitheses—but she knows her Peru—which is better—the dazzle of its deserts, the biting cold sunlight of its mountains, and the plunging storm of its jungles, the "land of the rain shadow." In incisive and vivid language she gives us pictures with rarely a touch too much—scenes suggestive and dramatic.

Little, Brown. $2.

LOVE IN THE HAPSBURG CITY

With an old chateau of the Empress Maria Theresa and the streets of music-loving Vienna as its setting, *The Street of Seven Stars*, by Mary Roberts Rinehart, is a story of poverty and hope, of the struggle between ambition and the love of two American students. Into an effective, faithful atmosphere it sets down an unconventional situation, and characters that are the product of an intimate knowledge of student life abroad. It is a very fresh and human tale, told engagingly. Not without realistic strength, the story has withal a lively humor and a wholesome optimism.

Houghton Mifflin. $1.25.

A DIFFERENCE OF OPINION

The publishers say of Edwin Arlington Robinson's play *Van Zorn:*

A spirited story is here told by one who has a keen sense of the humorous and dramatic. Mr. Robinson knows the art of holding the reader's attention as well as the technique of playwriting. His comedy scores heavily both for the brightness and cleverness of its dialog and for its ingenious and thought provoking plot.

We regret to say that we cannot agree with the publishers on any of these points.

Macmillan. $1.25.

GOOD SENSE IN ART CRITICISM

When Mr. Kenyon Cox, dropping for a while the painter's brush, takes up the critic's pen the resultant product is always something valuable and delightful. In *Artist and Public and Other Essays on Art Subjects*, just from the press, we welcome again those high qualities for which The Independent has been glad to commend to its readers Mr. Cox's earlier volumes: large technical knowledge (never paraded for its own sake), breadth of judgment, catholicity of taste, and above all a wisdom of good, sound sense, set forth with the charm of a felicitous style.

Books of Unusual Value

Go with Dr. Covert
INTO THE
Heart of the Mountain Woods

He makes his readers eager to go to the North Woods where he has used his ears and eyes to such good advantage; and satisfies the hunger of those who long for touch with the wild woods yet are unable to make the journey except by the aid of one who possesses the wonderful power to portray nature, as in this, his latest book.

Wild Woods and Waterways

By William Chalmers Covert

Author of "Glory of the Pines" Illustrated, $1.50 net

The little stream, with its gentle and artistic accompaniments, is a kind of microscopic masterpiece that while inviting our closest scrutiny, defies it. It presents us an alluring invitation to fellowship, all the while beguiling us with a beauty that is born of mystery and silence. The nerves of a tired man * * * * * * will find more recreating rest in a little, vivacious stream that lures him with rod and creel down its noisy and shady length, than in any of the ordinary diversions sought by the weary.—*William Chalmers Covert.*

Living Bread from the Fourth Gospel

By William Hiram Foulkes, D.D. $1.25 net

The author, who is the General Secretary of the Presbyterian Board of Ministerial Relief and Sustentation, has written for his first book a unique devotional commentary upon the Fourth Gospel. A verse a day for every day in the year, taken in order, appears upon each page. The Scripture text is followed by a vivid epigrammatic and in many cases original exegesis, concluding with a brief devotional application and a prayer. The volume will be attractive as a gift book.

The Growth of the Christian Church

By Robert H. Nichols, Ph.D.

Professor of Church History, Auburn Theological Seminary

Two Volumes $1.00 each net

Volume I.—Ancient and Medieval Christianity Volume 2.—Modern Christianity

The writing of this history was undertaken at the request of the Committee on Religious Education of the General Assembly of the Presbyterian Church in the United States of America. It is a presentation of Church history suitable for the use of classes of young people of high-school age.

The completeness and authoritativeness of its treatment will commend the volumes to individual readers.

The Pew and the Pupil 75c net

By Rev. R. P. D. Bennett

Author of "What I Tell My Junior Congregation"

Here in the thoughtful and convincing introductory chapters Mr. Bennett speaks of the need of bringing the pupil into the church, and then—in thirty or more simple and suggestive object-sermons for children—he shows how he talks to the children of his own church.

By-Products of the Rural Sunday School 60c net

By John M. Somerndike

Viewing the Sunday school as one of the greatest factors in the building of Christian character, this narrative calls for a recognition of the far-reaching influence and results of this work. Scores of interesting illustrations are given in which the by-product of the rural Sunday school is seen in the permanent centers of religious education developed, the transformation of social conditions, etc.

The Triumphant Ministry 40c net

By "Timothy Kilbourn"

With an Introduction by Chas. R. Erdman, D.D.

A gripping presentation of the life of the devoted minister of the gospel written in the form of letters from a minister of experience to a younger brother, who is just beginning his work.

GREAT BIG NEW BOOKS

EUROPE REVISED. By Irvin S. Cobb Quaintly illustrated by John T. McCutcheon

Never was Cobb so humorous—never have *the peoples of Europe, now at war*, been so revealingly pictured; for Cobb's humor is a search-light that bursts through prejudice. **Net $1.50**

CHARLES STEWART PARNELL. By Katharine O'Shea (Mrs. Parnell)

"The most widely discussed book of the moment."—*Boston Transcript.* The story of Parnell, "Ireland's uncrowned king," told with sensational frankness by his wife, with political leaders unmasked. **With 18 illustrations, 2 vols., octavo. Net $5.00**

FROM DUBLIN TO CHICAGO. By G. A. Birmingham

The author of GENERAL JOHN REGAN tells honestly and breezily what he thinks of America—from Pullman cars to Irish-Americans. **Net $1.50**

THE AUTHOR'S CRAFT. By Arnold Bennett How and why writers write

"Bennett is a detached connoisseur, and this utterance will provoke interesting discussion. His style stands out with striking perfection."—*Public Ledger.* **Net $0.75**

LETTERS OF AN OLD FARMER TO HIS SON

By William R. Lighton

Every one to whom the soil is a present occupation or a promise of future freedom will find here a sympathetic picture of modern farming. **Net $1.00**

THE SOUTH AMERICAN TOUR. By Annie S. Peck

New edition, especially enlarged and revised to meet America's tremendous need of South America, created by the Great War. The standard for both travelers and exporters.

Many maps and illustrations, octavo. Net $2.50

FOR THE COMFORT OF THE FAMILY. By Josephine Story

A practical solution of the Servant Problem. **Illustrated. Net $1.00**

The Fiction of the Hour

THE LAUGHING CAVALIER

By Baroness Orczy

Fighting spirit—gallantry—love—in the story of the perfect hero of romance—the ancestor of THE SCARLET PIMPERNEL. **Net $1.35**

THE DUCHESS OF WREXE

By Hugh Walpole

England's battling aristocracy and the new spirit of Empire, in a great drama of today, by the author of FORTITUDE. **Net $1.40**

THE HOUSE IN DEMETRIUS ROAD. By J. D. Beresford

Atmosphere, haunting and dramatic, hung about the old house and gives to Beresford's realistic romance exciting suspense and driving force. **Net $1.30**

YOU NEVER KNOW YOUR LUCK. By Gilbert Parker

Not merely the "best seller" for months, but everywhere rousing a deep affection by the charm of its heroine and its virility. **Net $1.25**

THE FAKERS

By Samuel G. Blythe

The comedy of Hon. T. Marmaduke Hicks, who loved the pee-pul, combines Blythe's humor and inside knowledge of politics. **Net $1.35**

GRAY YOUTH

By Oliver Onions

At "The Lettuce Grill" met all the faddists whom Onions satirizes in a novel that is not only amusing but a searching picture of the modern trend. **Net $1.50**

THE LITTLE HOUSE. By Helen S. Woodruff **Net $1.00**

Love of children, humor of darkies, color of the magic South, tenderness toward all the world, make this charming romance THE TALE FOR ALL WHO LOVE CHILDREN and LAUGHTER and LOVE.

THE ONLY BOOK WHICH SETS FORTH CLEARLY THE REAL CAUSES OF THE WAR

By J. A. CRAMB, *$1.00 net* Published by

E. P. Dutton & Co., 681 FIFTH AVE. NEW YORK

WHAT 15c WILL DO

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that gives all the news of the world and that tells the truth and only the truth; now in its 22d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

SONGS AND VERSES FOR A BABY.

Pretty verses, old and new, for little children. Every mother should have a copy of this dainty booklet. 73 pages. Price fifty cents, postpaid. Address L. A. MARSH, Belleville, New Jersey.

AUTOGRAPHS BOUGHT & SOLD

CORRESPONDENCE SOLICITED

Goodspeed's Book Shop, Boston, Mass.

The "Other Essays" include appreciative estimates of Jean François Millet and of Raphael, and a fine paper on Augustus Saint-Gaudens, the American sculptor, whose work "is a noble example of art fulfilling its social function in expressing and in elevating the ideals of its time and country."

Scribners. $1.50.

A PACIFIST ABROAD

We wish the peace societies would put into the hands of every church member in the English-speaking world Rev. Frederick Lynch's modest little narrative, *Thru Europe on the Eve of War*. Tho but a plain record of personal experiences, it will touch any heart. Dr. Lynch was the man perhaps more than any other who conceived the idea of the first World Conference of Churches for International Peace. The book has the eloquence of conviction and the inspiration of faith.

Church Peace Union. Free.

INTEREST IN THE CLASSICS

Two new volumes have come to us from the charming Loeb series of classics, which have the original opposite the translation. One of these is the second and concluding volume of Suetonius's *Lives of Emperors and Illustrious Men* (Latin); the other the first of two volumes of *Xenophon's Cyropedia*. We have before said that this will be the only complete series with English translation of the entire body of classics, and ought to be in every considerable library.

Macmillan. $1.50 per volume.

THE BIBLE FOR STUDENTS

Professors Irving F. Wood and Elihu Grant, of Smith College, have produced an excellent text-book for the study of *The Bible as Literature*. It is designed for the use of college classes and will be of value also for advanced study in Sunday schools. The method of presentation is concise, the information given is in harmony with the generally accepted views, and the language is untechnical.

Abingdon Press. $1.50.

ECHEGARAY IN ENGLISH

The Great Galeoto, from the Spanish of José Echegaray, is the third volume chosen for the Drama League Series of plays. It was originally adapted for the stage some years ago by Charles Nirdlinger under the title, *The World and His Wife*, and was excellently presented by William Faversham.

Badger. 75 cents.

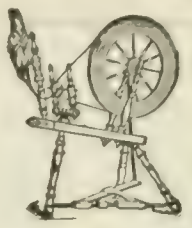
WHAT WE BELIEVE IN

American Public Opinion by James Davenport Whelpley is the general title given to a number of essays interpretative of public opinion in the United States on subjects of international importance. Written, as half of them were originally, for publication in the English *Fortnightly Review* by a man well versed in the international aspect of political and economic problems, the essays have the virtue of showing America to Americans as others see it, and yet by one so thoroly in sympathy with American qualities and ambitions that there is no sense of the unfitness of the author for his task.

Dutton. $2.50

FOR THE AID OF FRANCE

The many lines of relationship between the United States and the warring peoples of Europe result, naturally, in a variety of channels thru which American aid is now flowing. For those whose sympathies with the French are strong, there is the *Secours Nationale*, an organization formed in France "to help the women and children of the entire country who have been left destitute by the departure to the war, and in many cases by the death of their men, and also to help the Belgian refugees, of whom some ten thousand have fled to France bereft of everything." The organization is already providing 80,000 "soupes" or meals a day to the starving at a cost of six cents a meal. An American committee is responding to the appeal of M. Gabriel Hanotaux for aid, and subscriptions will be received by Mrs. Whitney Warren, 16 East Forty-seventh street, New York.



NEW RED CROSS MEMBERS

Each Contribution of Two Dollars or more constitutes the giver a Member of the American Red Cross for the current year, with a free copy of the October issue of the *Red Cross Magazine*. The Independent will send—by authority—to each contributor a Certificate of Membership and a Red Cross Button.

The following list covers the contributions of the past week:

Mr. J. C. Baker, Peru, Ind.; Mr. William Baker, Peru, Ind.; Miss Mildred Bankes, Oak Park, Ill.; Mr. Henry Barnes, Santa Ana, Cal.; Mr. J. J. Bassett, Maryville, Tenn.; Mrs. P. W. Bates, Lincoln, Neb.; Mr. G. A. Bock, Silverton, Ore.; Miss Esther Bowen, E. Duluth, Minn.; Mrs. J. E. Brown, North East, Pa.; Mr. F. F. Carwile, Ridge Spring, S. D.; Mrs. R. S. Secretary Bryan has evidently revised the adage to read, "In times of war prepare for peace." Every time a lull comes in emergency legislation he pops thru a new peace treaty.—*Nashville Southern Lumberman*

THE MARKET PLACE

THE INTERNATIONAL SITUATION

Sir George Paish, the eminent editor of The Statist, of London, has come to this country with Mr. Basil H. Blackett, a British Treasury official, for the purpose of discussing the international financial situation with Treasury officials at Washington and financiers in New York. Sir George, since the war began, has been acting as adviser of the British Treasury, and his visit here has undoubtedly a semi-official character.

Sir George's mission has presumably to do with the crucial problem of the payment of our debts to Europe. We want to pay our debts promptly and fully and we shall, but the question is how it can be done without so depleting our national gold supply as to deprive ourselves of the capital we need for our own purposes.

Our foreign debts are in the ordinary course of events taken care of by our exports, chiefly of raw materials. In the present condition of this export trade are to be found both the discouraging and the encouraging factors in the situation.

The government figures for our export trade for September throw a strong light on this point. Our exports of breadstuffs for the past month amounted to over $45,000,000, as against not quite $18,000,000 a year ago, an increase of over 150 per cent. It is evidently our mission, and will be for some time to come, to feed the nations of Europe. As we do it, we will build up a credit balance abroad which will go far to pay those debts which we must not and will not repudiate.

But the September figures show the other side of the shield as well. Our exports of cotton amounted to just under $6,000,000. In September of last year they were $65,000,000. This is a drop of nearly ninety-two per cent. While during the month our credit situation abroad gained $27,000,000 over last year because of breadstuffs, it lost nearly $60,000,000 because of cotton.

Will the foreign demand for cotton speedily increase? Will the foreign demand for foodstuffs continue to grow? And how fast? The answers to those questions—answers veiled in the mists of the future—are of tremendous importance to our national well-being.

A third factor of great weight is the question of American securities held abroad. When the Stock Exchange reopens, will there be a rush of liquidation from abroad? Sir George Paish is reported as having said on landing that he sees no reason for expecting such heavy liquidation. But the possibility hangs like a storm cloud over Wall Street, and turns every eye toward Washington, where the Interstate Commerce Commission is reopening the railway rate case. Of one thing the financial world is assured. A favorable decision by the Commission on the plea of the railways for the once refused advance in rates would be a welcome bulwark against the dread flood of foreign selling. Will the favorable decision be forthcoming?

This is the array of question marks that Wall Street is facing. Meanwhile there is slow but continued improvement in the general tone of things. General confidence has not yet arrived, but the first mood of black despondency is slipping away.

THE SECRETARY OF THE TREASURY

A correspondent in Colorado writes to take us to task for something we said in the issue of October 5. His words are these, "You sharply criticize Secretary of the Treasury McAdoo for using his official position to restrain the banks from oppressing the people."

With all respect to our correspondent, we did nothing of the sort. The words of ours to which he presumably refers are these, "It is regrettable that the Secretary of the Treasury should have made publicly an accusation which was based on erroneous information."

This is hardly sharp criticism, and we are sure that Mr. McAdoo would be the quickest to acknowledge its justice.

We have always liked Mr. McAdoo. When he came to New York and with splendid imagination and energy put under the Hudson River the tunnels which now connect New York and New Jersey and which have made the ferryboats on that stream well nigh obsolete as carriers of passengers, we liked him. When he put into practise in the Hudson Tunnels his conviction, entirely new in the rapid transit experience of New York City, that the term public service meant exactly what it said, the service of the public, our liking increased. We liked his paraphrase of the cynical motto attributed to one of New York's pioneers in railway management, "The Public Be Pleased."

It is a good thing to have as Secretary of the Treasury a man who believes that in the Government's dealing with matters financial the public interest is the first thing to be considered.

But in this particular case Mr. McAdoo spoke too quickly, and in making an accusation founded on erroneous information, he made an unfortunate mistake. He was quick to acknowledge the mistake when he found it out, and for that we like him. But in his high position, he ought to have been painstakingly careful to make sure that his criticism was justified before he uttered it. This is a critical time in the financial

Meat Substitutes

By feeding your family meat substitutes and other vegetable substances, you can enrich your table and reduce the cost of living. Miss Lenna Frances Cooper—Chief Dietitian of the Battle Creek Sanitarium, leading vegetarian institution of the world—tells you how to do this in a book of over 700 recipes for vegetable, fruit, nut and cereal dishes.

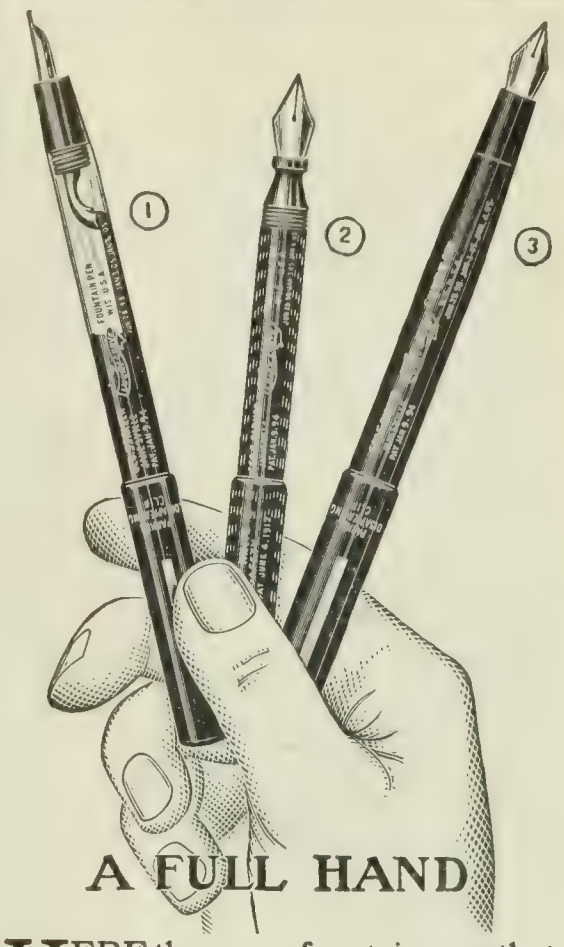
world. It is preëminently a time for co-operation and mutual understanding among those who must work out the financial problems arising out of the Great War. Hasty and ill-founded criticism was never more to be avoided.

THE AMERICAS

The National City Bank has undertaken the publication of a periodical entitled "The Americas," which it is hoped "will be of assistance in bringing the business men of the United States and South America closer together, and to provide an instrument for the interchange of ideas regarding the aims and projects of Pan-American commerce.

To the first issue, which has just appeared, Mr. Frank G. Vanderlip, the President of the bank, contributes an article on "Opportunities and Responsibilities of Trade Expansion," which may be read with profit by any one who is seriously interested in the undoubted opportunity for the extension of American trade which exists in the "other America."

Some of the points which Mr. Vanderlip makes are worth especial emphasis.



As a people we have not a highly developed genius for foreign trade. The opportunity for industrial and commercial development at home has been and still is so great, the things that are directly at hand for us to do are so many, and the home opportunities for the investment of our capital have been so attractive that we have been satisfied to see other nations take the place in foreign trade that we might have occupied. Our scale of wages has been on a plane that has made competition with European markets difficult. Our failure to develop American shipping has been a barrier. The lack of direct banking relationships and the consequent necessity of clearing nearly all commercial transactions thru old world centers has been a serious obstacle. . . .

We may as well understand at the very threshold that we are not to enter upon an easy conquest. There are serious difficulties inherent in our own national character, industrial conditions and political attitude. There are difficulties in the deprest financial position in which we find many of our South American neighbors and in the fact that their point of view in commercial matters is in many instances at a different angle from our own. Nor must we forget that while the ability of our own great competitors in these markets has been seriously hampered for the time being, those abilities in the past have been demonstrated to be in many ways superior to our own, and there is no reason to believe that they will permanently relinquish their efforts to hold the lion's share of this important trade.

Whoever thinks to accomplish great results in this field with ease, without special preparation, and without great patience and sincere and continued effort to master the difficulties of the field, is certain of disappointment. . . .

We will have to do more, however, than merely to sell our goods in a hospitable market. The life of foreign trade is the exchange of commodities, and we must use our earnest endeavors on both sides of the foreign trade sheet.

But more than that. If we are to take really first place in commercial relationships with South America, we will have to assume the responsibility ultimately of financing many developing enterprises. South America needs capital, as we have needed capital. Heretofore Europe has been a cheaper market for capital than the United States, and the capital has naturally flowed from there, while the advantage that falls to the creditor has been theirs.

A FULL HAND

HERE they are—fountain pens that contain the big ideas in present day fountain pen efficiency. Just consider the following exclusive features, plus the ***Lucky Curve***—the invention that took the leak out of fountain pens.

PARKER FOUNTAIN PENS

LUCKY CURVE

The Independent for Christmas

Why not send a subscription to THE INDEPENDENT to each of your friends, instead of tramping from store to store thru jostling crowds trying to secure appropriate gifts for your friends. Just send us their names and addresses with your check, and we will do the rest.

An attractive Christmas card will be mailed to each of your friends, announcing the gift, and the name of the giver. We will make every effort to have one of these announcements bearing the name of the person who orders the subscription, as well as our special Christmas number, in the hands of the recipient on Christmas Day.

Many thousands of orders will be received between now and Christmas. Kindly send your subscriptions now to avoid the usual Christmas rush. The easiest way, in this case, is the best way.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

SECURITY OF OUR FOREIGN COMPANIES

Replying to the criticisms of a reader who bases his conclusions on a series of unfounded statements promulgated and circulated by the management of a small domestic casualty company, to the general effect that there is risk in buying the policies of foreign insurance companies transacting business in this country, we wish to say most emphatically that the public need have no misgivings on this point. This assurance is particularly applicable in connection with all the foreign companies regularly admitted by, and under the supervision of, the state insurance departments. We understand that the domestic company mentioned above has made, among others, the following assertion:

> Foreign companies are required to deposit with some state or states the sum of $200,000 before they are allowed to operate here. This is the only condition imposed by law on foreign casualty companies and this is the only security back of the vast business transacted. Any and all other assets owned and held here are subject to removal or recall at the whim of alien company officials.

Excepting the statement made in the first sentence of this quotation, it is wholly wrong. Domestic companies are required by law to have a capital, the minimum amount of which is specified, before they may commence business; foreign companies coming here must make a deposit corresponding to the native company's capital. Nor is this deposit "the only condition imposed by law on the foreign . . . companies," for, just as do all the domestic companies, they are required to maintain ample reserves to cover all their liabilities. They are not permitted to remove or recall any assets held here. In proof of this, we quote from a notice issued in August by the Superintendent of Insurance of the State of New York, following the precipitation of hostilities in Europe. He said:

> Under a provision of the trust instrument, you will note that no securities deposited with the trustees may be released or transferred to the company without first obtaining the consent of the Superintendent of Insurance. In this connection it seems desirable to advise that the Department holds that the trustee or trustees cannot release any securities or cash, other than interest earnings, to the manager or managers for any purpose other than to meet United States claims.

In the face of this ruling the hostile criticism of a small competitor goes to pieces, and becomes an evidence of managerial ignorance not often found in American insurance offices.

There are seven foreign casualty companies transacting a direct business with American policyholders: Employers' Liability Assurance Corporation, London; Frankfort General Insurance Company, Frankfort-on-Main, Germany; General Accident Fire & Life Assurance Corporation, Perth, Scotland; London Guarantee & Accident Company, London; London & Lancashire Guarantee & Accident Company, Toronto, Canada; Ocean Accident & Guarantee Corporation, London; Zurich General Accident & Liability Insurance Corporation, Zurich, Switzerland. The first six have cash deposits in this country of $250,000 each; the Zurich has $500,000. Each has a good surplus over total liabilities. The combined assets, liabilities and net surpluses of the seven are as follows: Assets, $23,018,138; liabilities, $15,918,605; surplus, $7,099,533. And, as we have learned on the authority of the Insurance Department of New York, these funds (excepting interest earnings) cannot be removed by any of the trustees or officials of the companies without the consent of the Superintendent of Insurance.

NOT AN UNUSUAL CASE

The information following is in answer to a reader (S. H. V.), at Jamaica, N. Y.:

The only existing corporation doing business under the title, American Union Life Insurance Company, is a small assessment organization located at Charleston, S. C.

The American Union Life Insurance Company of New York, organized and commenced business in 1894, reinsured its policies in the Security Trust and Life Insurance Company of Philadelphia, on February 18, 1901. The financial condition of the American Union on December 31, 1900, was as follows: total admitted assets, $251,110.86; total liabilities on policyholders' account, $273,565; deficit, $22,454.14. On January 10, 1903, Albert B. Ovitt, New York City, was appointed receiver.

The Security Trust and Life of Philadelphia was incorporated in 1871, and commenced business in 1895. For a while the prestige of Robert E. Pattison, who was one of the few Democrats to be elected Governor of Pennsylvania, and who, succeeding his retirement from that office, was elected president of the Security Trust and Life, advanced the fortunes of the company; but it was at last compelled to retire from the field.

SHORT-STORY WRITING

A course of forty lessons in the history, technique, and writing of the short story taught by Dr. J. Berg Esenwein, for many years Editor Lippincott's Magazine. 72-page catalogue free. Please address
THE HOME CORRESPONDENCE SCHOOL
Dept. 804, Springfield, Mass.
Dr. Esenwein

Its business was taken over by the Pittsburgh Life and Trust Company at the end of 1906. The financial condition of the Security Life and Trust, December 31, 1906, was: total admitted assets, $2,912,135.91; total liabilities (including capital stock of $500,000), $3,135,096.33. As the capital was policyholders' security, however, there was a net surplus of $277,039.58. The statutory reserve maintained by the company for the protection of its policies at the time of its retirement was $2,502,889. This sum was probably paid over to the Pittsburgh Life and Trust for assuming the Security's policy liabilities. In the Pennsylvania Insurance Department's report for 1906, we find the Pittsburgh Life and Trust charged: "Ledger assets, other than premiums, received from other companies for assuming their risks, $2,614,768.66," and we conclude that this includes the sum received from the Security.

In 1909 the Pittsburgh Life and Trust also acquired the stock and business of the Washington Life Insurance Company of New York, the assets of which were $21,773,364. On December 31, 1913, the admitted assets of the Pittsburgh Life were $23,810,617; its net surplus, $869,362.

If our correspondent holds a policy issued by the American Union and that policy was in force at the time the company was reinsured in the Security Life and Trust, he may secure desirable information by addressing the Pittsburgh Life and Trust Company, Sixth street and Liberty avenue, Pittsburgh, Pa.

If there is a policy equity involved in this matter it serves as an illustration of the necessity of dealing with well established life companies. Here is perhaps a case in which a risk past thru the fortunes of two poorly conducted companies and twice suffered the reinsurance process. The best in life insurance is not too good for any man.

NOTES AND ANSWERS

S. E., Boston, Mass.—Writes accident and health insurance only on members of the Independent Order of Odd Fellows. It is in good financial condition and excellently managed.

O. B. R., Philadelphia, Pa.—The company has a small surplus and may become thoroly established. You have the facts and must use your judgment. See closing paragraph to article "Not An Unusual Case," in this issue.

A policyholder in the Kentucky Central Life and Accident Insurance Company has filed an action against the president and secretary, alleging fraudulent practises, and demanding that the books of the company be produced in court.

The national association of state insurance commissioners recently held their annual convention at Asheville, North Carolina, the sessions lasting three days. John S. Darst, Insurance Commissioner of West Virginia, was elected president for the ensuing year. F. H. McMaster, Insurance Commissioner of South Carolina, was chosen secretary.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429.80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

JUST A WORD

A reader in Jamaica writes: "The Independent is a most excellent paper. My copy is read by almost every member of the British colony here, and all are agreed upon its superb editorial skill."

The Dean of the University of North Dakota, writing of The Independent as a classroom textbook, writes: "No student can fail to be benefited by the weekly perusal of such an excellent periodical. Its careful editing, its sane presentation of perplexing problems, its liberality toward all men, combined with its firmness as regards the fundamental principles of righteousness, cannot fail to help and inspire the youth of our land." And from the superintendent of a small country school comes a letter expressing briefly the concurrent opinion, "I am perfectly delighted with the magazine."

From a subscriber on the Pacific Coast comes the following: "The editorial 'Culture and Democracy' in your issue of the 5th October impresses me as a fine bit of work. It has very greatly helped to clarify my own thinking, at least, and I venture the opinion that it has done the same thing for many others. I set a higher and higher value on The Independent as the weeks go by. Really, my subscription is no longer regarded as merely an investment paying large dividends. It should seem a privilege for your subscribers to help maintain a journal characterized by such clear thinking and definite expression on subjects of essential importance."

A subscriber in the northern reaches of New York State writes: "I find it very hard to get along without The Independent, even in ordinary times, but in the present state of affairs in Europe it is indispensable. I know no magazine, amongst those which I have had the opportunity of seeing, which presents anything like the sane, comprehensive grasp of the European situation, or which enables its readers to come so quickly and so closely to the gist of things, as does The Independent." And from Kansas comes the echo: "In its treatment of the war The Independent is far superior to any other magazine which I take, for it alone gives a clear, definite comprehension of the issues at stake."

THE FALL OF METZ

From The Independent, November 3, 1870

The one great fact to be recorded this week in connection with the Franco-Prussian war is that Metz has surrendered—army, fortifications, and all—unconditionally. The articles of capitulation were signed on the night of the 27th, and the Prussians occupied the city and fortifications on the 29th. The immediate cause of the surrender was starvation. Many of the inhabitants had already died from want of food, and the condition of Bazaine's army was deplorable indeed from the same cause. In fact, it is stated that the French could not have held out three days longer without universal starvation in the army. They had already killed and eaten all their army horses; and this food, from the emaciated and overworked condition of the animals, caused immense sickness among the partakers. The whole number of prisoners is represented to be 3 marshals, 66 generals, 6,000 officers, and 173,000 troops. There were in the city some 19,000 sick and wounded soldiers at the time of the surrender. During the siege 35,000 persons died in the town alone, mostly from lack of food and proper care. 3,000 guns and 40,000,000 francs of French war funds and 20,000,000 francs of French civil government funds also fell into the Prussian's hand.

CALENDAR

The National Horse Show will be held at New York, *November 7-13*.

The twenty-fifth annual exhibition of the New York Water Color Club will be held at 215 West Fifty-seventh street, New York, from *November 7* to *November 29*.

The American Association for Study and Prevention of Infant Mortality meets at Boston, *November 12-14*. An exhibition in connection with the convention will be held in the Boston Public Library. Gertrude B. Knipp, 1211 Cathedral street, Baltimore, is executive secretary.

The National Suffrage Association holds its annual convention at Nashville, *November 13-17*.

The Yale-Princeton football game will be played in the Palmer Stadium, Princeton, on *November 14*. Yale meets Harvard in the Bowl at New Haven on *November 21*.

Medical missionaries meet in conference at Battle Creek, Michigan, from *November 17* to *20*.

The National Board of the Young Women's Christian Associations of America holds its fifth biennial convention at Los Angeles, *May 5-11, 1915*.

The Corda Fratres Association of Cosmopolitan Clubs will hold an international students' reunion from *July 1* to *15, 1915*, at San Francisco and Berkeley, California.

The next World's Sunday School Convention will be held in Tokyo from *October 18* to *26, 1916*.

MINISTER TO A GOVERNMENT IN ABSENTIA

BRAND WHITLOCK, LONG MAYOR OF TOLEDO, OHIO, NOW MINISTER TO BELGIUM. WHEN THE COURT AND THE DIPLOMATIC CORPS REMOVED TO HAVRE, HE AND THE SPANISH MINISTER REMAINED IN BRUSSELS, WHERE MR. WHITLOCK NOW HEADS THE AMERICAN RELIEF COMMITTEE

The Independent

VOLUME 80 MONDAY, NOVEMBER 2, 1914 NUMBER 3438

THE LONG CONGRESS

THE Congress has finished its work after a continuous session of one year, six months and seventeen days. This is without precedent. Congress met in extraordinary session on April 7, 1913. It sat thru the summer and the fall. On December 1 the extraordinary session melted into the regular session without a break. Congress sat all winter, all summer and into the fall. It finally adjourned October 24, 1914, to meet again on December 1, for the regular short session. The Sixty-third Congress has surely qualified for the sobriquet, The Long Congress.

The continuous session just closed was remarkable in many important respects.

It was remarkable for its length.

It was remarkable in that it signalized the return to complete power, after sixteen years of opposition, of the Democratic party.

It was remarkable for the efficiency and unanimity with which the Democratic majority—in complete reversal of a time honored reputation for ineffectiveness and internal dissension—proceeded with the great task before it.

It was above all remarkable for the body of substantive legislation put upon the statute books.

THE great subjects upon which the Long Congress legislated were four: The tariff; the income tax; banking and currency; the trusts.

In the field of foreign relations four acts stand prominent: The repeal of the Panama Canal tolls exemption; the renewal of twelve general arbitration treaties; the ratification of twenty-two of the new Bryan "breathing spell" treaties; the approval of the use of the armed forces of the nation in Mexico.

To meet the emergencies brought on by the Great War, four measures were enacted: The war revenue bill; the act admitting foreign built ships to American registry; the War Risk Insurance Bureau bill; the bill for large increases of emergency currency.

Measures of only lesser importance because of the overshadowing nature of the greater acts were enacted in relation to these subjects: Federal construction and ownership of railways in Alaska; use of Hetch Hetchy Valley as a water supply for San Francisco; the regulation of dealing in cotton futures on cotton exchanges; leasing of Alaskan coal lands; limitation to eight hours of women's labor in District of Columbia; regulation and taxation of imports of opium; Rivers and Harbors appropriation cut from $53,000,000 to $20,000,000 to be spent by War Department on unfinished projects.

Among the subjects considered during the session but not completed, were several. Some were definitely laid aside. They included the Seamen's bill; Nicaragua treaty; Colombian treaty; Federal owned merchant marine; immigration bill, with literacy test; Philippine government bill, with preamble promising independence; conservation measures, dealing with water powers and mining lands; farm land banks; Federal regulation, thru the Post Office Department, of the Stock Exchange.

APPARENTLY, the Sixty-third Congress is another Billion Dollar Congress. The final figures are not at hand, but it has been admitted by Democratic leaders in both House and Senate that the appropriations for 1915 are well over the billion mark. This is worthy of notice in view of the scathing words of the last Democratic platform:

> We denounce the profligate waste of money wrung from the people by oppressive taxation thru the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

We cite this failure of the Democrats to realize their platform pledge as a criticism not so much of their legislative record as of their pre-election promises. It is very easy for the opposition to charge extravagance and promise economy. It is very hard for the party in power, burdened with the responsibility of carrying on the multifarious activities of government, to be economical. It was entirely natural for the Democrats, following time-honored custom, to make solemn promise of retrenchment in their platform. It was foolish of the people to take them at their word. There is always a great deal of buncombe talked on both sides of the question of economy and extravagance. Blanket promises are as little to be trusted as blanket accusations are to be believed. The fact is that it costs a great deal of money to run a government like ours. The people are willing that the money should be spent. They only demand that it shall not be wasted. It is time that the fact was clearly recognized that we have Billion Dollar Congresses because this is a Billion Dollar Country.

Thruout the work of the session the influence of the President has been weighty. The addresses which he has from time to time made to Congress—in the old fashioned but long disused method of oral discourse—have set the keynote of the party program. At intervals he has brought the pressure of his high position and of popular opinion to bear upon his associates in Congress for the redemption of party pledges and the expedition of important measures.

Mr. Wilson has fully recognized three things. He has recognized that the President is a coördinate part of the

law-making power; that the President, the one Federal officer elected by all the people, is the logical representative of the general opinion of the nation; and that the President is the natural leader of his party.

These three points of view, when they have been held by other Presidents, have often been combatted with earnestness approaching virulence. But the jealousy of members of Congress for their prerogatives does not alter the fact that Woodrow Wilson is essentially right in these convictions. He has held to them as tenaciously as ever did Theodore Roosevelt, and has put them into practise with as firm a hand; but he has been more fortunate in the submissiveness with which his leadership has been acknowledged.

The President and the Democratic party are to be congratulated upon the record of the Long Congress. They have attacked with boldness and zeal the problems which the country wanted attacked. They have found solutions for them which, taking into account the essential fact that they are, as they ought to be in the given conditions, Democratic solutions, are thorogoing and admirable.

The country wanted the tariff revised downward in order to eliminate special privilege and aid the general consumer. It has been so revised.

The country needed additional revenue to make up for revenue lost thru the tariff revision. The income tax was enacted.

The country wanted the banking and currency system revised, so as to make credit more flexible and introduce the principle of coöperation. The Federal Reserve Banks have been created.

The country wanted the Anti-Trust Laws supplemented, in the interest both of business and of the public. The Federal Trade Commission has been established and the Clayton Anti-Trust bill enacted.

The country wanted the selfish and short-sighted provision exempting American vessels from the payment of Panama Canal tolls repealed. It has been repealed.

The country wanted the resources of Alaska at the same time developed and protected. Government railways for Alaska were created, and a system of leasing for coal lands adopted.

From a partizan point of view there would naturally be much to criticize in the Democratic record. The opposition is never at a loss for points of attack. From the point of view merely of wise legislation we would have no difficulty in finding room here and there for criticism. But our purpose here is not to criticize. It is to appraise, in the light of the mission with which the Democratic administration and the Democratic Congress were entrusted at the polls, the measure in which they have fulfilled that mission.

They have undoubtedly made mistakes in some particulars. They have unquestionably fallen short in some directions. They have probably gone too far in others. They have failed, as any sensible man must have known they would fail, to carry out their campaign promises of economy. But on the whole, considering the mandate, as the British say, given them in their election, the Democrats in Congress have performed their task well.

Their fellow Democrats may well be proud of their achievement. The country may congratulate itself that in the work of the Sixty-third Congress it has on the whole been remarkably well served.

THE CLAYTON ANTI-TRUST ACT

THE Clayton Anti-Trust Act is an omnibus measure. It combines various provisions for curbing trust activities with others for relieving labor from too severe restrictions. To this latter phase of the act we shall return at another time.

On the trust side the act deals with price discriminations, exclusive trade agreements between manufacturer and retailer, private damage suits under the anti-trust laws, holding companies, interlocking directorates, commission regulation of corporate activities, and personal responsibility for corporate misdeeds. Its provisions in these directions may be briefly summed up as follows:

1. No concern may discriminate in price between purchasers of its commodities, where such discrimination may have the effect "to substantially lessen competition or tend to create a monopoly." Exceptions are made in the case of price discriminations on account of quantity or quality, on account of difference in the cost of selling or transportation or on account of the necessity of meeting competition. It is a serious question whether the last exception does not specifically open the way to the very evil this provision is primarily designed to prevent, reckless price cutting.

2. It is made unlawful for a manufacturer to sell his goods to a dealer on the stipulation that the dealer will not handle the products of any other manufacturer where the effect of such stipulation is "to substantially lessen competition or to tend to create a monopoly."

3. It is provided that in the case of private damage suits under the anti-trust laws, the decree in any Government suit against the same defendant shall constitute prima facie evidence for the purposes of the private suit. It is further provided that in the case of such private suits, the statute of limitations shall begin to run only from the entering of the decree in the Government suit.

4. The holding of the stock of one corporation by another is prohibited where the effect of such holding is "to substantially lessen competition" or to tend to create a monopoly. This prohibition does not apply to a corporation holding the stock of another corporation solely for investment.

5. It is provided that no person shall be an officer or director of more than one bank; that no person shall be a director in two or more large corporations if the corporations are competitors. Common carriers are forbidden to deal with corporations with which they have in common directors or officers, except by a system of competitive bidding.

6. The Federal Trade Commission is entrusted with the execution of the provisions against price discrimination, exclusive trade agreements, holding companies and interlocking directorates.

7. The violation of any of the penal sections of the anti-trust laws is declared to be an offense not only of the corporation but of the individual director, officer or agent of the corporation authorizing or ordering the act in question.

On the whole the purpose of the Clayton Act is obviously to strengthen the Sherman Act by greater definition and more specific prohibition. In so far as it shall succeed in making it clearer to those engaged in business just what is forbidden and what is permitted, it will perform a useful function.

But in attempting to carry out this purpose the framers of the act have taken a step which may have serious consequences.

The Sherman Act sets up as the test of illegality in interstate commerce the old time common law conceptions of "restraint of trade" and "creation of monopoly." The Supreme Court has interpreted the former conception by the addition of the word "unreasonable."

The Clayton Act adds the further conception, "substantial lessening of competition." To do this is to make the serious mistake of considering competition as sacrosanct. Competition is a natural force of useful effect, so long as it exists and acts thru the natural sequence of events, as a bulwark against monopoly. But the mere fact that it is a natural force does not make it sacred.

Gravitation is a natural force. But aviation—a plain violation of the law of gravitation—is not sacrilege. For the lifting power of hydrogen and of inclined planes driven at high speed is no less a natural force.

No more is combination in the business world sacrilege. For combination is another natural force. And since the entrance of combination means by so much the elimination of competition, it is as absurd as it is unsound to denounce combination in the act of exalting competition.

On the other hand, the Clayton Act takes a step in the right direction, as did the Federal Trade Commission Act, in entrusting to the Trade Commission the regulation of certain forms of trust delinquencies. Regulation by lawsuit is cumbersome, tedious and unsatisfactory. Regulation by administrative action is the proper substitute for it.

WHERE PORTUGAL COMES IN

THE active participation of Portugal in the war brings the number of the enemies of Germany and Austria-Hungary up to eight. If the Allies are ranked according to population Portugal would come sixth, but it is doubtful whether she could turn out as many good fighting men as Servia with half her population. So far as numbers go Portugal does not stand far below Belgium, for she has 6,000,000 to Belgium's 7,500,000, and military service is obligatory between the ages of twenty and twenty-five, but while King Albert has been bringing up the military strength of his kingdom to the highest pitch during the last few years, the army of the republic has presumably become somewhat demoralized thru the revolution and the exile of the royalists. The Portuguese army has a peace strength of 30,000 and a war strength of 120,000, to which might be added 140,000 reserves and a territorial army of 10,000, mostly Africans.

It was evident from the start that Portugal would not remain neutral, for on August 8, only three days after the British declaration of war, she declared her intention of supporting her ancient ally. Ten thousand troops were to be held at the disposal of Great Britain at any time they were needed. Now the time has come and Portuguese troops have been shipped to Africa to take part in the campaign against the German colonies and perhaps assist in crushing the incipient Boer rebellion. It is reported from Lisbon that 26,000 Portuguese troops are aiding the French and English in France. Ex-King Manoel and the royalist leaders have also offered their services to the Allies.

Of all the alliances which have brought about the present alignment of European powers that between Portugal and Great Britain is the oldest. In fact, the first alliance with a foreign power ever made by England was the treaty of Windsor, May 9, 1386, when Richard II and John of Portugal mutually agreed to aid one another against all enemies and to make no alliances without each other's knowledge. In the following year "Old John of Gaunt, time-honored Lancaster," consummated the connection by marrying his daughter Philippa to King John.

Many times in the five centuries since has this promise of mutual aid been fulfilled. Portuguese crossbowmen helped Henry V to win the battle of Agincourt, where the Allies are now holding the Germans in check. English sailors assisted Henry the Navigator in extending the Portuguese power in Africa and so opening a way to India for both the powers.

But the greatest service of England to Portugal was rendered about a hundred years ago when France and Spain agreed to divide up Portugal between them and would have done it but for Wellington. It was a gloomy time for both countries. England had sent an expedition of 40,000 men to capture Antwerp and had left half of them in the marshes of Walcheren. The United States had declared war upon Great Britain to secure freedom of commerce and six days later Napoleon on his way to Moscow had crost the Niemen River which the Germans this month failed to do. Then it was that Lord Wellington with a force of 40,000 Englishmen and 20,000 Portuguese started on his victorious march from Lisbon to Madrid.

In the partition of Africa during the latter part of the nineteenth century the conflict of claims led to more than one clash between the Portuguese troops in Africa and the forces of the British South Africa Company, but the dispute was settled by the treaty of 1891, and ever since the British Government has protected the Portuguese colonies from all interference in spite of the outcry against the misgovernment and corruption in the Portuguese administration, especially because of its toleration of slavery and rum-selling to the natives.

During the Boer war the British treated the Portuguese possessions almost as their own; British officials were established in the custom house of Lorenzo Marques and the troops under Lord Carrington were sent from Beira thru Portuguese territory into Rhodesia. The Portuguese Government consented to this, but it was nevertheless a violation of neutrality, which the Germans are now quoting as a precedent for Belgium.

That the Germans have long coveted the Portuguese possessions in Africa is no secret. It will be sufficient to quote from what was said on the subject by General von Siebert, former Governor General of German East Africa, in the Berlin *Post* of two years ago:

> Germans must enter these territories, establish plantations there, cultivate the land, establish missions and build railroads. The Government will then be compelled to complete the political occupation of a land which the people have already conquered.
>
> The bad financial plight in which the new republic finds itself and the condition of its colonies oblige us to take this course. The stupid and corrupt sovereignty of the Latin has lasted for four centuries in these regions. It is time to substitute for it the sane and intelligent sovereignty of the Saxon.

It was rumored at that time that the Portuguese Gov-

minent was willing to sell Angola to the Germans for cash but that England intervened to prevent the transfer. Whether this be so or not it is so believed by the Germans and their failure to secure this rich territory of half a million square miles, largely high table land suitable for white colonization, is added to the long score of grievances charged to England's "dog in the manger policy."

So the alliance between Albion and Lusitania stands on the triple basis of history, sentiment and mutual interest. Englishmen helped the first King of Portugal to wrest his country from the Moors eight hundred years ago; English money now supports Portuguese industries, and the old-fashioned Englishman still sticks to his port wine, doubtless more from loyalty to tradition than from personal taste.

WHEN TAMMANY IS OUT

NOT long ago the following advertisement appeared in several New York papers:

WANTED—Business Manager, 35 to 45 years of age; able to superintend large force of employees; direct extensive construction work; organize and direct purchasing and distribution of enormous quantity of supplies; only men of marked executive ability and good experience need apply; salary $5000 a year; highest references required.

It looked usual enough. There was nothing to indicate that the second city of the world was advertising for the purpose of filling an important administrative office.

But that is precisely what was happening. New York City needed a Third Deputy Commissioner of Charities. So it advertised for applicants; and it got three hundred of them. Out of the number the Commissioner and the Mayor picked the man they wanted.

Think of it! New York City, of all places in the world, actually advertising for a man to fill a five thousand dollar job! It was enough to make Tweed turn in his grave, Croker on his Irish estate shed tears of regret for the good old times, and Murphy gnash his teeth with impotent rage in his Fourteenth street sanctum.

Where were the office-seekers? Were there no "boys" to be rewarded for stalwart political service in the campaign? Had the Mayor no friends, the Commissioner no one he was indebted to?

What are we coming to when city officials hunt for a good man for the job, instead of looking for a good job for the man?

A COMMISSION ON TRIAL

WILL the Interstate Commerce Commission rise to the opportunity before it and by helping the railways in their present crisis help the whole country as well?

It is profoundly to be hoped. But it must be confest that the tone adopted by some of the commissioners in the hearings now going on raises a menacing doubt.

It is not the railroads that are on trial. It is the commission. If its members can realize that an extraordinary situation confronts them and that it is their duty to apply more than ordinary remedies, it will be well for the country, and well for them. If they do not recognize these commanding facts, if they decide the case before them as tho times were peaceful and conditions normal, they will have done tremendous harm not only to a great industry, but to the common welfare. They will have struck a serious blow at the principle of regulation by commission.

This is no time to consider whether some American railroads have issued water stocks—tho the fact that the capitalization per mile of American railroads is far below that of the railroads of any other great country in the world should not be forgotten. It is not the time to assert that American railroads are not managed with the highest efficiency or the strictest economy. These are important questions. At the proper time they should be raised and the truth about them sought painstakingly and fearlessly. But the time is not now.

Extraordinary times demand extraordinary measures. American railroads face a crisis. Before the war their condition was discouraging; with the Great War raging, crippling trade and dislocating credit, their condition is grave indeed.

It is not merely a condition which affects some impersonal corporations and some rich "railroad men." It affects every holder of an American railroad security—and there are hundreds of thousands of them; every depositor in a savings bank and every holder of an insurance policy—and there are millions of them.

The Interstate Commerce Commission has before it the opportunity to do a vital service to the great investing public—and to do it now.

BID THEM COME IN

AMERICA has from the time of its discovery been a haven of refuge for the persecuted and oppressed of all nations, regardless of race or religion. We have of late been obliged to impose certain restrictions on immigration, but we have not abandoned our policy of hospitality. To prove it, let us now relax these restrictions in favor of the Belgians, men, women and children, whether they come with skilled hands or empty hands, whether they are likely to get good wages or to become dependents. Little Holland is said to be sheltering a million refugees and surely the richest country in the world can take care of a few hundred thousand without putting too much of a strain upon its industrial system. Our universities, colleges and academies should grant free tuition and, so far as possible, support, to the young men and women of Belgium whose studies are now interrupted. The English universities are doing this.

We have never repented of such hospitality yet. The Puritans driven out from England, the Huguenots expelled from France, and the German revolutionists of 1848 have contributed valuable elements to our population and we shall find that the later immigrants have also brought a blessing upon their city of refuge.

The Belgians are good stock. They have done marvels with their limited resources in agriculture and manufacturing. They are industrious and enterprising, peaceable and orderly. About the responsibility for the war we do not all agree. Some blame most the Emperor of Austria; some the Emperor of Russia. But nobody blames the Belgians. Some sympathize with the French; some sympathize with the Germans. But everybody sympathizes with the Belgians.

Open wide the gate! Give them a heartfelt welcome and help them across the threshold.

THE STORY OF THE WEEK

THE GREAT WAR

October 20—Cossacks attack Germans in rear and drive them back from Warsaw. Revolutionary rising in Portugal quelled.

October 21—Saxon army forced to retire from Ivangorod on the Vistula. Serbs and Montenegrins defeated near Sarajevo.

October 22—Desperate but indecisive fighting on Belgian border near coast. Boer rebels defeated. Japanese begin bombardment of German port of Tsing-tau.

October 23—British fleet shells German entrenchments along Belgian coast. Austrian and German forces trying to hold Radom against Russians from Warsaw.

October 24—Fighting centers about La Bassée and Armentières. Austrians recapture Czernowicz, capital of Bukowina.

October 25—Germans cross the Yser River between Dixmude and Nieuport. Germans advance again toward Augustowo.

October 26—Austrians and Russians continue combat along San River in Galicia. Bloody struggle in Flanders continues with no apparent result.

The Battle of the Belgian Border

For the first time since the war began the campaign is concentrated at a single spot, a place no larger than the battlefields of earlier wars. From the four hundred mile line between Belfort and Ostend troops have been withdrawn and fire has slackened, while the forces of both parties are brought to bear upon the critical point on the French and Belgian border, near where the North Sea narrows to the English Channel. Here, in an area less than thirty-five miles square, as many troops have been massed as can be brought together and the fighting has been continuous ever since the fall of Antwerp, with no decisive gain for either side. The remnants of the Belgian army escaped from Antwerp the night before the surrender and made their way down the coast by way of Ghent and Bruges. The German troops released from the siege pursued the retreating Belgians beyond Ostend and within gunshot of Dunkirk, when they were halted at the French boundary by the Allied armies in such force that the Germans were not able to hold the ground they had gained, but have been driven back step by step as far as Roulers, twenty miles from the frontier.

It is amphibious fighting. Here the British navy and the German army have for the first time come into conflict. The country is cut up with canals and creeks, and the heavy rains have converted the lowlands of the coast into a morass. There are no large cities in this region and no fortresses except Dunkirk and Lille. Dunkirk has not yet been reached by the Germans. Lille, a first class fortress, which might have been expected to hold out as long as Maubeuge or Verdun, surrendered to the Germans at sight without a struggle. Now, two months later, it is being fiercely fought over.

Why the desire for the possession of this particular bit of coastal territory should call forth the greatest exertions of the contending powers is evident from the map. If the Germans can break down the resistance of the Allies and push forward along the coast they will doubtless be able to capture the fortress of Dunkirk and the ports of Calais and Boulogne. This will give them a straight line of defense from Arras to the coast and free them from the danger that has threatened them ever since they came into France, the turning of their right wing. They would then be in position, if they can gather strength enough, to make another dash toward Paris, which is still within fifty mile of their lines. Or if, as seems likely, they are disposed to turn their attention to London rather than Paris, they would be within twenty miles of England. From this point their Zeppelins and Taubes could easily raid the English cities and ports, or if they should get control of the sea, an actual invasion of England might be attempted.

On the other hand, if the Allies should push forward in the direction of Antwerp and Brussels, as they are now trying to do, they will either get behind the enemy's line or compel the German forces to withdraw from France and Belgium. The Allies greatly outnumber the Germans, and the odds against them increase with every week, as England and Russia draw upon their vast resources. Estimates of the forces now in the field are very uncertain, but it is supposed that Germany has now about

THE SEAT OF WAR IN FLANDERS

The fiercest strife of the war has been concentrated upon the little corner of Belgium which still holds out against the Germans. Here French, British and Belgian troops are contending with German and Austrian among the canals and rivers, while the British and French warships and the airships and aeroplanes of both sides take part in the fray. The shaded area shows the territory held by the Germans October 26

© *International News*

ANOTHER REFUGEE PICTURE

But this cartload of little Antwerp expatriates on their way to Holland with such a makeshift team as could be secured is too good to pass by

1,500,000 in France and Belgium, while the Allies have more than twice that number. According to a German estimate the total losses of the French, British, Russians and Belgians in killed, wounded and prisoners amount to 750,000. The loss of the Germans is probably greater.

'Twixt Sea and Land

The British fleet was able to give material assistance to the Allied armies in their effort to stop the advance of the Germans down the coast toward the Straits of Dover. They had occupied Ostend and Nieuport and had approached within about five miles of Dunkirk when the navy took a hand in the fight at daybreak of October 19. The principal agents in this attack were the three light draft monitors built in England last year for Brazil, but purchased by the British Government and renamed the "Severn," "Humber" and "Mersey." These carry two six-inch guns forward and two 4.7 inch howitzers astern. They steamed up and down the coast and first from port and then from starboard shelled the entrenchments which the Germans were digging near the coast. The Germans had no guns in position of long enough range to reply to them, and the German submarines which had made their way along the Dutch coast were not able to accomplish anything. A Belgian coast village was demolished and Ostend was bombarded, without provocation, according to the Germans.

Forced to abandon the shore, the Germans were for many days no more successful in forcing a passage along the Yser and Lys, which here run parallel to the coast and are connected by a chain of canals with the ports of Ostend, Nieuport, Dunkirk and Calais. The heavy guns which the Germans were bringing up to bombard Dunkirk got stuck in the mud, and their cavalry and armored automobiles were of little use. The fighting was mostly done at close range or with the bayonet, and the casualties are estimated by the ten thousand. Certain positions have changed hands eleven times. The Germans have evacuated Lille three times, but have come back. On October 6 the French were in Lille; on October 10, the Germans; then the French drove them out, the Germans bombarded the city and entered it again on October 13. The city was then in flames, but the Germans put out the fires with the aid of firemen from neighboring towns. The fiercest fighting has been about Dixmude, Ypres, Roulers, Menin and La Bassée. It is the army of Duke Albrecht of Württemberg which is fighting in this corner of Flanders, for General von Kluck, who has been on the German right, is holding his old position on the Aisne near Soissons.

GERMAN DEFENDERS OF TSINGTAU MAKING CAMP

In the background, one of the hills which command the city's defenses. The Japanese have taken some of these heights, including Prince Heinrich Mountain, and planted siege and naval guns there which are shelling the city

Little is heard of the fighting along the rest of the line in France, but the only activity of importance seems to be the attack on the terminal fortresses of the eastern barrier, Verdun and Belfort. The Germans still hold St. Mihiel, one of the intermediate forts between Verdun and Toul, tho the French are making desperate attempts to cut off St. Mihiel from Metz by an attack from the south. The Germans claim to have reduced some of the outer forts of Verdun, but the French have learned by experience how to meet the German tactics. Instead of relying for protection on their concrete casements and steel cupolas, they have concealed their batteries and move them about so that the Krupp howitzers, even if they find their mark, do not do any such fatal damage as before.

It is reported that the Germans have got their big howitzers in position before Belfort, and that the siege of that stronghold has begun in earnest.

The Galician Campaign

The news mostly comes to us in a negative form from the admissions of the opposite sides. For instance, the Austrian General Staff announces the capture on October 21 of Jablunka Pass and the complete expulsion of the Russians from Hungary. But Jablunka Pass is southwest of Cracow, on the railroad leading from Breslau to Budapest, and it had not previously been supposed that the Russian advance in Galicia had gone further than Tarnow, forty miles to the east of Cracow.

The Russians now, it appears, have been driven from the Vistula to the head tributaries of the Dniester, south of Lemberg. Along the San River, between Przemysl and the Carpathian Mountains, the fighting has been terrific, but no decisive result is yet reported.

The fate of Przemysl is also still in doubt. This is the strongest fortress in Galicia and has been under fire since September 18. On October 2 the Russians sent a white flag to demand the surrender of the city, and when this was contemptuously refused they made repeated attempts to carry the fortifications by storm. One of the outer forts was taken by a night charge over the walls when the searchlights were out of order, but the garrison succeeded in defending the casements with their rifles and machine guns until the arrival of the reinforcements they had telephoned for. Altho the approach of the German and Austrian forces from Cracow removed the Russians from the rear of Przemysl, they still hold the eastern bank of the San and continue the bombardment from that side.

The Austrians claim to have reoccupied Czernowicz, the capital of Bukowina, which was taken by the Russians early in the war.

HOW HOLLAND WELCOMES HER BELGIAN GUESTS

A temporary dormitory in the diamond cutting works of M. Asscher at Amsterdam, who is providing room for hundreds of refugees

Attack on Warsaw Repulsed

The Petrograd dispatches give very full and circumstantial accounts of the rout of the Germans in Poland, and altho there is no confirmation of the news from Berlin, it seems evident that the German attempt to capture Warsaw has suffered a severe setback. The advance upon the Polish capital was begun early in October, and by the 7th of the month almost all of Poland west of the Vistula was held by the German and Austrian forces, said to number 600,000 men. According to the plan, Warsaw was to be approached simultaneously from four directions. One Prussian army was to come south from East Prussia, on the east side of the Vistula, along the railroad from Mlawa. The second Prussian army, under General von Hindenburg, invaded Poland along the left bank of the Vistula from Thorn and Posen. The third army, under the King of Saxony, advanced from Czenstochowa toward Ivangorod, while a mixt force of Austrians and Germans, under the Austrian General Dankl, came down the left bank of the Vistula from Galicia. The fall of Warsaw seemed imminent and the American consul there telegraphed to Washington to know what he should do when the city surrendered.

All seemed to go well and by October 7 the advance guard of General von Hindenburg's army had come within five or six miles of the outer defences of Warsaw. On the other side of the Vistula were massed a million Russian soldiers, under the command of the Grand Duke Nicholas. The water-filled entrenchments in front of Warsaw were held with great valor by troops from the Caucasus while a flanking movement was being carried out. Ten divisions of Cossacks from Novo Georgievsk were sent down the right bank of the Vistula, crost the river and on the 18th surprized the Germans by appearing in their rear. The Germans, unable to withstand this combined attack of cavalry on the west and infantry on the east, retreated

WHERE NATURE, NOT WAR, HAS WRECKED THE VILLAGES

Japanese soldiers on their way to attack Tsingtau marching thru a ruined hamlet of Shantung, where recent disastrous storms have made it difficult to feed the troops

rapidly to the south, abandoning many of the heavy guns which had been brought up to bombard Warsaw. The Prussians were driven beyond Lowicz and Skierniewice and rallied only south of the Pilica River. Here the Saxon troops had been vainly endeavoring to cross the Vistula at Ivangorod, where are the only bridges south of Warsaw. On the 21st they were forced to give up the bombardment of Ivangorod and retire toward Radom.

The Balkans While the Great War is raging all over the world, bringing suffering and death to millions of all races, the men who precipitated the catastrophe have been tried and convicted at Sarajevo, which was the scene of their crime. Gavrilo Princip, the young Serb who fired the shots that killed the Archduke Francis Ferdinand and his wife on June 28, willingly owned to and gloried in the deed. The accomplices of the assassin admit that the plot was hatched in Belgrade and that Major Tankosic, a Servian officer, supplied the revolvers and bombs to kill the royal couple.

The Serbs have been making every effort to rescue the conspirators by capturing Sarajevo before the trial was over, but it appears that they have been driven back after getting within a few miles of the city.

Albania, which has been left without a pretense of government by the departure of Prince William of Wied from Durazzo, is in a state of anarchy and distress. Smallpox is raging and bands of various races are ravaging the country at will. These brigands or patriots are more or less openly supported by the five nations which have aspirations in Albania. Turkey is trying to get control over Albania again thru the Mohammedan bands. Servia is arming Albanians against Austria. Austria is supplying rifles to the Roman Catholic tribesmen of the north. The Epirotes in the south are again agitating for annexation to Greece. Italy has taken possession of the seaport of Avlona.

The new King of Rumania seems no more disposed to enter into the war than the late King Carlos. His people will not consent to take the side of Germany, while if he joins the allies Rumania is liable to an attack from Bulgaria by land and Turkey by sea. A trainload of artillery and munitions, on their way from Germany to Constantinople, has been seized by the Rumanian Government as it was being shipped from Bucharest to the Danube. Germany protested in vain against this violation of neutrality.

The War on the Sea The most important of the naval operations of the week is the bombardment of Ostend and the German positions on the Belgian coast, but there are minor engagements all over the world.

The British submarine "E-3" was sunk on October 18 by German warships in the North Sea. This was one of the latest models, having been completed in 1913.

The British destroyer "Badger" reports having rammed and sunk a German submarine off the Dutch coast.

The German submarine "U-9," which sank four British cruisers, the "Hogue," "Aboukir," "Cressy" and "Hawke," has returned in safety to her home harbor. Her commander, Captain Weddigen, has received the decoration of the Ordre pour la Mérite for his unparalleled exploit.

The German cruiser "Emden" has sunk or captured twenty-six British steamships in East Indian waters and is still at large.

The British light cruiser "Undaunted," with the assistance of four destroyers, the "Lennox," "Lance," "Legion" and "Loyal," cut off four German destroyers, "S-115," "S-117," "S-118" and "S-119," near the Dutch coast, and sent them all to the bottom within an hour and a half. The Germans kept up their fire to the last, but without inflicting any serious damage upon the British vessels. Of the four crews, 197 were lost and 31 taken prisoners by the British.

It appears that the Japanese cruiser "Takachiho," which was sunk in the harbor of Kiaochau on October 17, was not blown up by a mine, as first reported, but by a torpedo from the German destroyer "S-90." Only twelve men out of the cruiser's crew of 456 were saved.

Opening the Reserve Banks Secretary McAdoo gives notice that the twelve Federal Reserve banks will be opened for business on November 16. At the recent conference of reserve bank directors with the Reserve Board, a majority of those present preferred a later date, and the directors by resolution recommended that the opening should not take place until November 30. The Secretary has taken an earlier date because of the condition of the South, and for the reason that he believes prompt opening will be helpful not only there, but also in other parts of the country.

He points out that the new re-

Paul Thompson

AN AVALANCHE OF ABANDONED BAGGAGE

Trunks by the thousand which American travelers had to leave in Germany when they fled at the outbreak of the war have been gathered at Hamburg under the direction of the American consul and shipped to New York on a Holland-American steamer which brought no passengers. She was compelled to dock at Staten Island because the company's New York docks were all crowded by steamers held in port by the fear of capture

quirements as to reserves will release on November 16 more than $400,000,000 of reserve money, and thus increase the banks' credit facilities. He also says that the larger powers granted to the Secretary of the Treasury will permit him to deposit in the reserve banks a large part of the Treasury's general fund. This will enable them to extend greater credits to the member banks, and thus serve the interests of the banks' customers.

Three thousand presidents of banks in the cotton states have signed a pledge to extend financial aid to farmers who reduce their cotton acreage by one-half next year and use for food crops the half thus released; also to discourage vigorously the planting of more than one-half of the present cotton area.

Adjournment of Congress

Congress adjourned on the 24th, thus ending the longest continuous session in the history of our national legislation, for there was no interval between the special session beginning April 7, 1913, and the regular session that opened in December. It was thought for a time last week that there could be no adjournment, and that the session must continue until the first day of the December session. There was persistent filibustering by the advocates of the proposition (already rejected in the Senate by a vote of 21 to 40) that the Government should issue $250,000,000 of bonds to be used for the relief of the cotton-growers, and of two bills which would serve their interests. One of these provides for the Federal inspection of cotton warehouses, and the other permits reserve banks to make loans on commercial paper up to 100 per cent of unimpaired capital and surplus. The bond bill was rejected in the House by a vote of 91 to 123. Leaders of the filibustering movement were Mr. Henry, of Texas, in the House, and Mr. Hoke Smith, of Georgia, in the Senate. It prevented adjournment on the 22d, after the House had voted to go at 6 p. m. The departure of many members left both branches without a quorum. Only by unanimous consent could business be done, and Congress was idle on the following day.

It was suggested that the President, using the power granted to him by the Constitution, might cause adjournment. He decided, however, that the situation was not one in which that power could properly be exerted. Many Democrats severely criticized their filibustering associates for thus prolonging the session when they knew the measures which they supported could not be past. Opposition to adjournment was withdrawn on the 24th, and the necessary resolution was then past. There is an understanding that the bills in question shall be taken up promptly at the beginning of the next session. In the House a committee of seven was appointed to make an inquiry about cotton.

The Convention in Mexico

No final action concerning a provisional government had been taken by the convention at Aguascalientes on the 25th, altho the adjournment ordered on the 15th had been for only five days. It was said that those who had assembled were waiting for Zapata's delegates. This was true, but the delay was also due to the attitude of Carranza, to whom General Obregon and other representatives of the convention were addressing arguments that were ineffective. Carranza resented the convention's assumption of supreme power, and asked by what right it claimed supremacy. He also resented the convention's appointment of a committee of five to assume the duties of five Cabinet offices. Altho he had referred to the convention our Government's demand for guarantees concerning Vera Cruz, he declined to obey the convention when it instructed him to comply with the demand, saying that this would establish a dangerous precedent. Referring to the convention's declaration that it was the supreme authority in Mexico, he said that he would deliver his executive authority only to a man elected by the people. Zapata sent twenty-eight delegates. They came to Aguascalientes with General Angeles, the intimate friend of Villa, whom Carranza has denounced. Just before the convention reassembled it was reported that by a combination of Villa and Zapata delegates Carranza would be ousted.

Villa attended the early sessions of the convention and made a speech in which he promised to be governed by its action. He was applauded and praised. He assured our Government that hostilities were at an end, adding, however, that he would not accept Carranza as Provisional President. He had a large military escort. There were reports that his soldiers intimidated and insulted delegates; that he had an army of 18,000 men near at hand to coerce them, and even that he had made all the delegates prisoners. These stories were false. In an ultimatum to Carranza, Villa said he could no longer endure the caprices of an old man who seemed to have no more lofty motive than his own selfish ambition. If Carranza should not be removed by the convention, he promised to go to the capital and remove him by force. In reply Carranza reviewed the career of Villa, pointing to the Benton case, the expulsion of Spaniards and Villa's approval of the harsh treatment of priests by Antonio Villareal when the latter (now president of the convention) was Governor of Nuevo Leon. It was said that Carranza was willing to retire if he could be assured that Villa would not gain by his withdrawal.

Hostilities in the North

The orders of the convention for a suspension of hostilities were ignored by Hill and Maytorena at Naco, on the northern border, until the 23d, because neither would recognize the convention's authority, but on that day a truce was made there and Maytorena's troops took a position ten miles from the town. The besieged Carranza commander had received four cannon and a supply of ammunition. Preparations for siege were continued at Agua Prieta, also on the border. The armistice agreement was not respected by General Monclovio Herrera, who recently deserted Villa to support Carranza. In the night he attacked the Villa garrison at Parral. After a fierce battle his forces were routed and driven to the hills, but not until he had put to death nearly 100 prisoners who had fallen into his hands at the beginning of the fight.

At the capital three civilians who assisted Felix Diaz at the time of the revolt against Madero were shot by Carranza's orders, and two grandsons of General Terrazas were court-martialed and put to death. One had been an officer of the Huerta Administration and the other had served in Huerta's army. General Alvaredo and several other Carranza men whom Villa and Maytorena had imprisoned at Hermosillo were released, in obedience to the convention's order, but a majority of them were arrested again before they reached the border. Villa warned Carranza secret service men that if they should be found in Juarez they would be shot.

A protest and an appeal have been sent to our Government by the Federation of Catholic Societies. Attention is directed to a long list of offenses—the imprisonment or expulsion of priests, the looting of churches, etc.—and it is asserted that several priests have been put to death or tortured. The present generation of Mexican revolutionists, says the Federation, is thoroly anti-Christian and hostile to religion of any kind.

A CHANT OF HATE AGAINST ENGLAND

BY ERNST LISSAUER, IN "JUGEND"

ABRIDGED INTO ENGLISH VERSE BY BARBARA HENDERSON IN THE NEW YORK TIMES

French and Russian, they matter not,
A blow for a blow and a shot for a shot;
We love them not, we hate them not,
We hold the Weichsel and Vosges-gate,
We have but one and only hate,
We love as one, we hate as one,
We have one foe and one alone.

He is known to you all, he is known to you all,
He crouches behind the dark gray flood,
Full of envy, of rage, of craft, of gall,
Cut off by waves that are thicker than blood.
Come let us stand at the Judgment place,
An oath to swear to, face to face,
An oath of bronze no wind can shake,
An oath for our sons and their sons to take.
Come, hear the word, repeat the word,
Thruout the Fatherland make it heard
We will never forego our hate,
We have all but a single hate,
We love as one, we hate as one,
We have one foe and one alone—
ENGLAND!

In the Captain's Mess, in the banquet-hall,
Sat feasting the officers, one and all,
Like a saber-blow, like the swing of a sail,
One seized his glass held high to hail;
Sharp-snapped like the stroke of a rudder's play,
Spoke three words only: "To the Day!"

Whose glass this fate?
They had all but a single hate.
Who was thus known?
They had one foe and one alone—
ENGLAND!

Take you the folk of the Earth in pay,
With bars of gold your ramparts lay,
Bedeck the ocean with bow on bow,
Ye reckon well, but not well enough now.
French and Russian they matter not,
A blow for a blow, a shot for a shot,
We fight the battle with bronze and steel,
And the time that is coming Peace will seal.
You will we hate with a lasting hate,
We will never forego our hate,
Hate by water and hate by land,
Hate of the head and hate of the hand,
Hate of the hammer and hate of the crown,
Hate of seventy millions, choking down.
We love as one, we hate as one,
We have one foe and one alone—
ENGLAND!

WHY DOES GERMANY HATE ENGLAND?

BY SYDNEY BROOKS

LONDON CORRESPONDENT OF THE INDEPENDENT

EVEN the fog of war cannot hide one thing. It cannot disguise or conceal the peculiar bitterness and intensity of Germany's hatred of England and the English. The German officers and men in the field, the German people at home, the Kaiser in his references to "French's contemptible little army," the unanimity with which German professors and publicists and ambassadors single out Great Britain as "the enemy," the German press in their foaming diatribes—all show that while the Germans fear the Russians, are infuriated with the Belgians, and feel for the French no more than the traditional enmity of old antagonists, they detest the British from the very bottom of their souls. The British prisoners in Germany are jeered at in the streets and lampooned in the comic papers with the relish of sheer venom. The opening rush of the German armies into France was hailed with all the more delight because the British troops had to bear the brunt of it. The fall of Paris itself could hardly have sent Berlin into wilder paroxysms of joy than did the reports that the British army had been destroyed. Whatever the Germans are destined to suffer, they feel just now—they will grow saner later on—that any damage they can inflict on our navy or army or by Zeppelin raids on our towns will bring them ample compensation. The whole country and all its people are united in a personal, frenzied, transcendent passion of hostility against Britain and all things British.

It is a curious phenomenon, but not a sudden one. It does no more than put the coping-stone on a transformation that has been going on for more than fifty years and with a gathering rapidity for nearly twenty. As late as 1850 Germany was not only Great Britain's admiring friend, but in some sort her pupil. On almost all points of political, economic and constitutional theory and practise the bulk of the German nation, with the most liberal and intelligent men at their head, looked to England as their guide. The enthusiasm for the British Constitution which Montesquieu set ablaze thruout Europe was shared nowhere more heartily than in Prussia. The debt England owed to Germany in philosophy, science and classical poetry, was amply repaid by Adam Smith and his successors, and by the example Great Britain afforded of a nation at once self-governing, united and powerful. British freedom and greatness became the theme of German panegyrics and the British Empire in those halcyon days was not even grudged. That was the time when Englishmen and Germans were perpetually reminding themselves that they came of common stock and had fought out together the battles of the Reformation and of European liberty against Louis XIV and Napoleon. For a while it even seemed as if the whole movement of German destiny might develop along English lines. The gifted, if somewhat impractical, National Liberals of the day looked forward to and worked for a peaceful union of all German states under Prussian leadership that should closely follow the English model. Centralization, militarism and the semi-paternal theory of government were equally abhorrent to them. What they aimed at was a liberal constitution and a popular monarchy, based upon the federal system and buttressed by a real and adequate representation of the people, and above all by a responsible executive. Such a system, they argued, if erected in Berlin would ultimately vanquish the stubborn spirit of particularism and draw to Prussia all the states of Germany in a durable federation. This was the party and these the views with which the Kaiser's mother, herself an Englishwoman, was identified, and their triumph or failure meant also the tri-

umph or failure of English influence. As we all know, they failed. Bismarck, Moltke, Roon and ultimately King William convinced themselves that only thru war could German unity be secured. The result is a matter of history. Bismarck's masterly and masterful policy, and the brilliant successes it led to, swept all before it, crushed the Liberals out of existence, and hopelessly discredited the English notions and sympathies they represented. From the moment he began to get the upper hand the disparagement of all things English became a political necessity. When Sedan and the proclamation of the Emperor at Versailles brought full and final success, the whole nation was converted to the Bismarckian *Staatsidee*. The altars at which it had worshipped were overthrown and those which it had formerly turned from in high intellectual disdain were installed in their place. Universal military service became the popular idol and a strongly centralized, half-absolutist and intensely active government completely ousted the old ideals of constitutionalism and individual self-reliance. Never was a mental revolution so speedy and comprehensive. England fell rapidly in the German estimation. To deride British institutions and exalt by implication the Hohenzollern system, to belittle the British voluntary army in order that Germans might be still further convinced that conscription alone was compatible with military efficiency, grew to be the favorite pastimes of German politicians, journalists and professors. It is hardly too much to say that within the past fifty years the whole tale of English history has been rewritten to suit the change in German sentiment.

All the touchiness and bumptiousness that past into the German character with the achievement of unity thru war found vent in the systematic writing down of everything British. It was only in part a spontaneous campaign; officialdom had much to do with guiding and feeding it; and in the hands of passionate historians and teachers, of the Junkers and the Court, it colored the whole atmosphere of politics, society and education. While we in England still clung to the philo-German traditions of the past, the German people were being steadily and insidiously prepared to see in Great Britain the ultimate foe. I do not by any means intend to imply that the Germans had no ground of complaint against us. I think they certainly had. We did nothing to help on, even if we did nothing positively to thwart, the attainment of German unity. The disappearance of a weakly, divided Germany and the rise of a powerful, aggressive empire in its place, did not greatly appeal to British sympathies or to the popular view of British commercial interests. From the moment that Germany became united she became England's rival, not only in trade, but in political ambitions; and in neither direction was she a welcome competitor. Moreover, German truculence and assertiveness were more than matched by the British genius for an irritating condescension. The Germans complained, not without reason, that Englishmen never fully gave them their due; still affected to regard them as interesting prodigies rather than as a matured and responsible nation; would persist in that "lecturing" attitude which Americans have long learned to know, but hardly to love, in their kinsmen; and never brought themselves to the point of admitting that Germany had grown out of British tutelage. There was thus induced a tension and a want of sympathy to which the defects in the national character of both peoples contributed their inevitable share.

In such an atmosphere of latent ill-will it did not take Germany long to discover that she had serious grievances against us and that we had monstrously wronged her. When the colonial fever began to influence German foreign policy the fact had to be faced that so far as all hope of a Greater Germany that should spread the German idea and receive German colonists and extend German trade was concerned, the Empire had been born too late. Wherever Germany turned she found England comfortably settled in her path. The cake, as Herr Richter once remarked, had been divided long ago and nothing was left for the latest comer but the crumbs under the table. This was and is a source of the bitterest resentment; and as the stress of rivalry in other spheres grew fiercer, as the Germans, duplicating British experience, began to change from a mainly agricultural to a mainly industrial basis, and as they woke, or were prodded awake, to the desirability of a strong navy and a large mercantile marine, the discovery was made that here, too, Great Britain had been before them. While we in England during the past two decades have been chiefly imprest with the great advance made by Germany in sea-power and foreign commerce, the Germans have been chiefly imprest with the still greater leeway they have still to make up. That we should have acquired such a start at so trifling a cost, while Germany was struggling thru blood to attain the indispensable condition of unity, appears to Germans so flagrantly unfair as to afford a strong presumption of trickery. From that to convicting Great Britain of hypocritical duplicity, of stirring up strife among her rivals while she quietly carries off the booty, has proved a very short step. It was only by urging the supreme necessity of being always everywhere on guard against Britain and her wiles that the Kaiser was able to launch and popularize his naval program.

The Germans have never disguised from themselves or from the world that they want what we have—colonies, supremacy at sea, a world-wide commerce and carrying-trade. What is more, they regard themselves as far worthier of these possessions than we are. They have come to look upon us as a somnolent, decrepit, worn-out people, socially diseased, incapable of sacrifice, mere bungling amateurs in an age of experts, certain to topple over when resolutely attacked; while they themselves, in their own opinion at any rate, are the Romans of the modern world and its natural, deserving, predestined rulers. On this persuasion of British decadence have been built up one knows not how many fantastic hallucinations. That in the event of a European war the self-governing Dominions would leave England in the lurch, that South Africa would proclaim its independence, that India would plunge into rebellion, and that Islam could be successfully, and even easily, aroused against the rulers of Egypt—these have been among the many miscalculations fostered and believed in by the dreamers of Berlin. Well, India has risen, but not against the British; and the commander in chief of the British and Boer forces in South Africa is General Botha, with whom a bare twelve years ago we were ourselves at war; and Canada, New Zealand and Australia appear from their lavish outpouring of men and money and gifts, to be almost vindictively bent on giving the lie to the German visionaries. There is a sound and stubborn core at the heart of the British people that the Germans may perhaps begin to appreciate when our troops are marching thru Berlin. Hitherto they have neither realized nor acknowledged that it existed. One of the jewels of American slang is that incomparable word "front." The Germans for the past twenty years have been persuaded that Great Britain is all "front," with nothing behind.

And this forcing-bed of jealousy and hatred, of envy and contempt, has been fertilized for a decade and a half at the very least by an acute political antagonism, superadded to

the progressive tension of naval and commercial rivalry. Here, again, I am far from holding the Germans solely to blame for the developments that have poisoned Anglo-German relations. The warfare in the press, the scares and counter-scares, the fusillades of almost identical charges, the mare's nests and suspicions and railings—Great Britain has had as full a share of all this as Germany. On both sides of the North Sea the consciousness has steadily deepened that one day the issue between England and Germany would have to be tried out. There have been moments of tense crisis in the past ten years as well as periods of comparative calm. Sometimes, to judge by the British press, one would have thought that the invasion of England was a matter of hours only. Sometimes, to judge by the German press, one would have thought that Great Britain was on the point of initiating the "preventive war" to crush the German navy before it grew too strong. At other times the journalists have been moderately quiescent, the governments amicably coöperating, and it has really looked as tho the two powers might continue to live side by side, armed to the teeth, without much pretense of good-will, but also without any positive rupture. But thru all the ups and downs of their relationship the feeling has persisted that Germany's bid for sea-power and the character of her governing caste were pushing the two nations nearer and nearer to a collision. What strengthened this foreboding more perhaps than anything else was Great Britain's entrance a few years ago into the arena of continental politics from which for nearly two generations she had stood aloof. In his candid and illuminating book on *Imperial Germany,* Prince von Bülow remarks that "the alpha and omega of English policy has always been the attainment and maintenance of English naval supremacy," and that in pursuit of this end Great Britain has allied herself against whatever power chanced to threaten her ascendency at sea. That is the ex-Chancellor's explanation of the Anglo-French and the Anglo-Russian *ententes* and of the various Mediterranean agreements concluded by Downing Street with Spain and Italy.

Probably it is the case that behind British diplomacy of the past decade there has been a double motive. The first motive unquestionably was to make an end of the insensate antagonisms that had for so long kept apart England and France and England and Russia. That was a goal well worth seeking for itself alone. But while seeking it no British statesman could have been blind to the fact that the nearer England drew to France and Russia, by so much was Germany's preponderance diminished and the possibilities of an anti-British coalition reduced. The *ententes* were never aimed at Germany, but undoubtedly they were welcomed by a large body of British opinion as being, at the least, a precaution against Germany. To the Wilhelmstrasse, however, they appeared in but one guise—as a determined effort to hem Germany in, to hamper her diplomatic freedom and to restrict her expansion. Nearly all the crises since 1904, apart from those that have arisen in the Balkans, have been due to German attempts to disrupt the Anglo-French *entente.* There have been times when the very right of either England or France to form any European friendship at all except by permission of the Wilhelmstrasse has been disputed and denied. The Germans have never been able to accommodate themselves to the fact of Anglo-French amity. It was an unaggressive amity that threatened no one until Germany's pistolling diplomacy thruout the Morocco question gave it a significance that neither its British nor its French authors had anticipated. The more Germany tried to break it down the firmer it became, and with every fresh proof of its solidity the more furiously was Germany incensed against us. To those who have lived on the spot amid the detonating fears, the strain, the successive crises, and the passionate suspicions and mistrust of the past ten years, the actual outbreak of war came almost as a relief.

But it is, of course, our part in the struggle that has brought German Anglophobia to boiling-point. The reason is simple and has nothing whatever to do with any "betrayal of Teutonic culture." It is that against Russia and France, Germany believed she had a fighting chance, but that against Russia and France and Great Britain she knows she has none. Our navy, our incomparable resources in men and wealth, have turned the scales against her and made her task impossible and her failure certain. The British navy has swept German commerce off the seas and keeps its thumb hard prest on the enemy's economic windpipe. Imagine for a moment what the situation would be today if Great Britain had remained neutral, how in every single particular it would be infinitely more favorable to Germany, how her fleets would be free to operate against the northern towns and coast of France, and her commerce and food supplies would be following their normal routes. More than that, the German troops might now be in Paris. The best military opinion, German and French as well as British, seems at any rate to agree that the worth of the British troops on the left wing when the Germans made their initial rush into France was what really saved the French army from sheer disaster. If Great Britain can be thus effective in the first two months of the war, what will she be when she really begins to fight—say next spring—when her trade has become almost normal, when army after army is being prepared for the field, when her navy has had six more months in which to make its grip felt, and when she will still be raising money as easily as she is raising it now? Only some disaster that would destroy her navy and leave her shores open to invasion can prevent the final push which will bring Kaiserism clattering to the ground, from being administered by the power of Great Britain. That is why Germany hates us beyond any of the Allies and with a quite peculiar ferocity. We do not reciprocate it and therefore it comes all the easier to us to grin and bear it. There is hardly a trace of hostility in the sentiment of the British people toward the Germans. There is on the other hand a strong and just antagonism against the German war caste and its spirit and its leaders. But Anglophobia in the Fatherland appears to embrace all sections of the German population and to be directed against all sections of our own. We realize in England that it is futile to hope for any change till the madness of militarism has been exorcised and till it is proved by the uses to which we put our distant but inevitable victory how clearly we distinguish between the panoplied brutality of Prussian arrogance which we abhor and the German people whom we sincerely respect.

London

THORN AND ROSE

BY HENRY VAN DYKE

Far richer than a thornless rose
Whose branch with beauty never glows
Is that which every June adorns
With perfect bloom among its thorns.

Merely to live without a pain
Is little gladness, little gain.
Ah, welcome joy tho mixt with grief,—
The thorn-set flower that crowns the leaf.

LA CROIX-ROUGE DE FRANCE

WHAT THE RED CROSS IN PARIS IS DOING IN THESE DAYS OF DARKNESS

BY LOUIS LIVINGSTON SEAMAN, M.D.

STAFF CORRESPONDENT OF THE INDEPENDENT

WE have been in Paris a week—Paris the bright, frivolous City of Light, where in happier days the crowded boulevards resounded with revelry. It was ten in the evening when we drove from the station, and what a change! The moon lighted our way thru dark, deserted streets, while bars of white light flashed their penetrating rays across the heavens searching some unseen enemy of the sky. It was like a city of the dead.

Since then, I have visited many hospitals—more than twenty of the largest—and have seen more than a thousand of the wounded, the wreckage of the policy of insanity that is responsible for this frightful war, eighty-seven victims of which we saw buried today in this city.

The blackest chapters of this atrocious onslaught on civilization have not yet been written, nor will they be for many a day, for the participants are still comparatively fresh, notwithstanding the terrible battle of the Aisne; and the grim specter of disease, that claims by far the largest share of the mortality, is only beginning to gather his own. It is therefore with special interest that one can turn from this dark picture to a brighter one, the work of reconstruction—what is being done for the saving of life, rather than its destruction and wreckage—and to know how the people of this great city are proving their humanity, and facing one of the gravest problems in its history of over 2000 years.

First and foremost is *La Croix-Rouge Française*, organized over half a century ago, which today extends its beneficent influence over every section of this beautiful land. It is governed by a central committee of fifty members presided over by the Marquis de Vogüé. It includes three principal societies, *La Croix-Rouge Militaire*, which formerly admitted only men; *L'Union des Femmes de France*, with only woman surgeons and attendants, presided over by Madame D. Perouse; and *Les Dames de France*, whose membership is composed mainly of the wives of Government officials, of which Madame Carnot is the president.

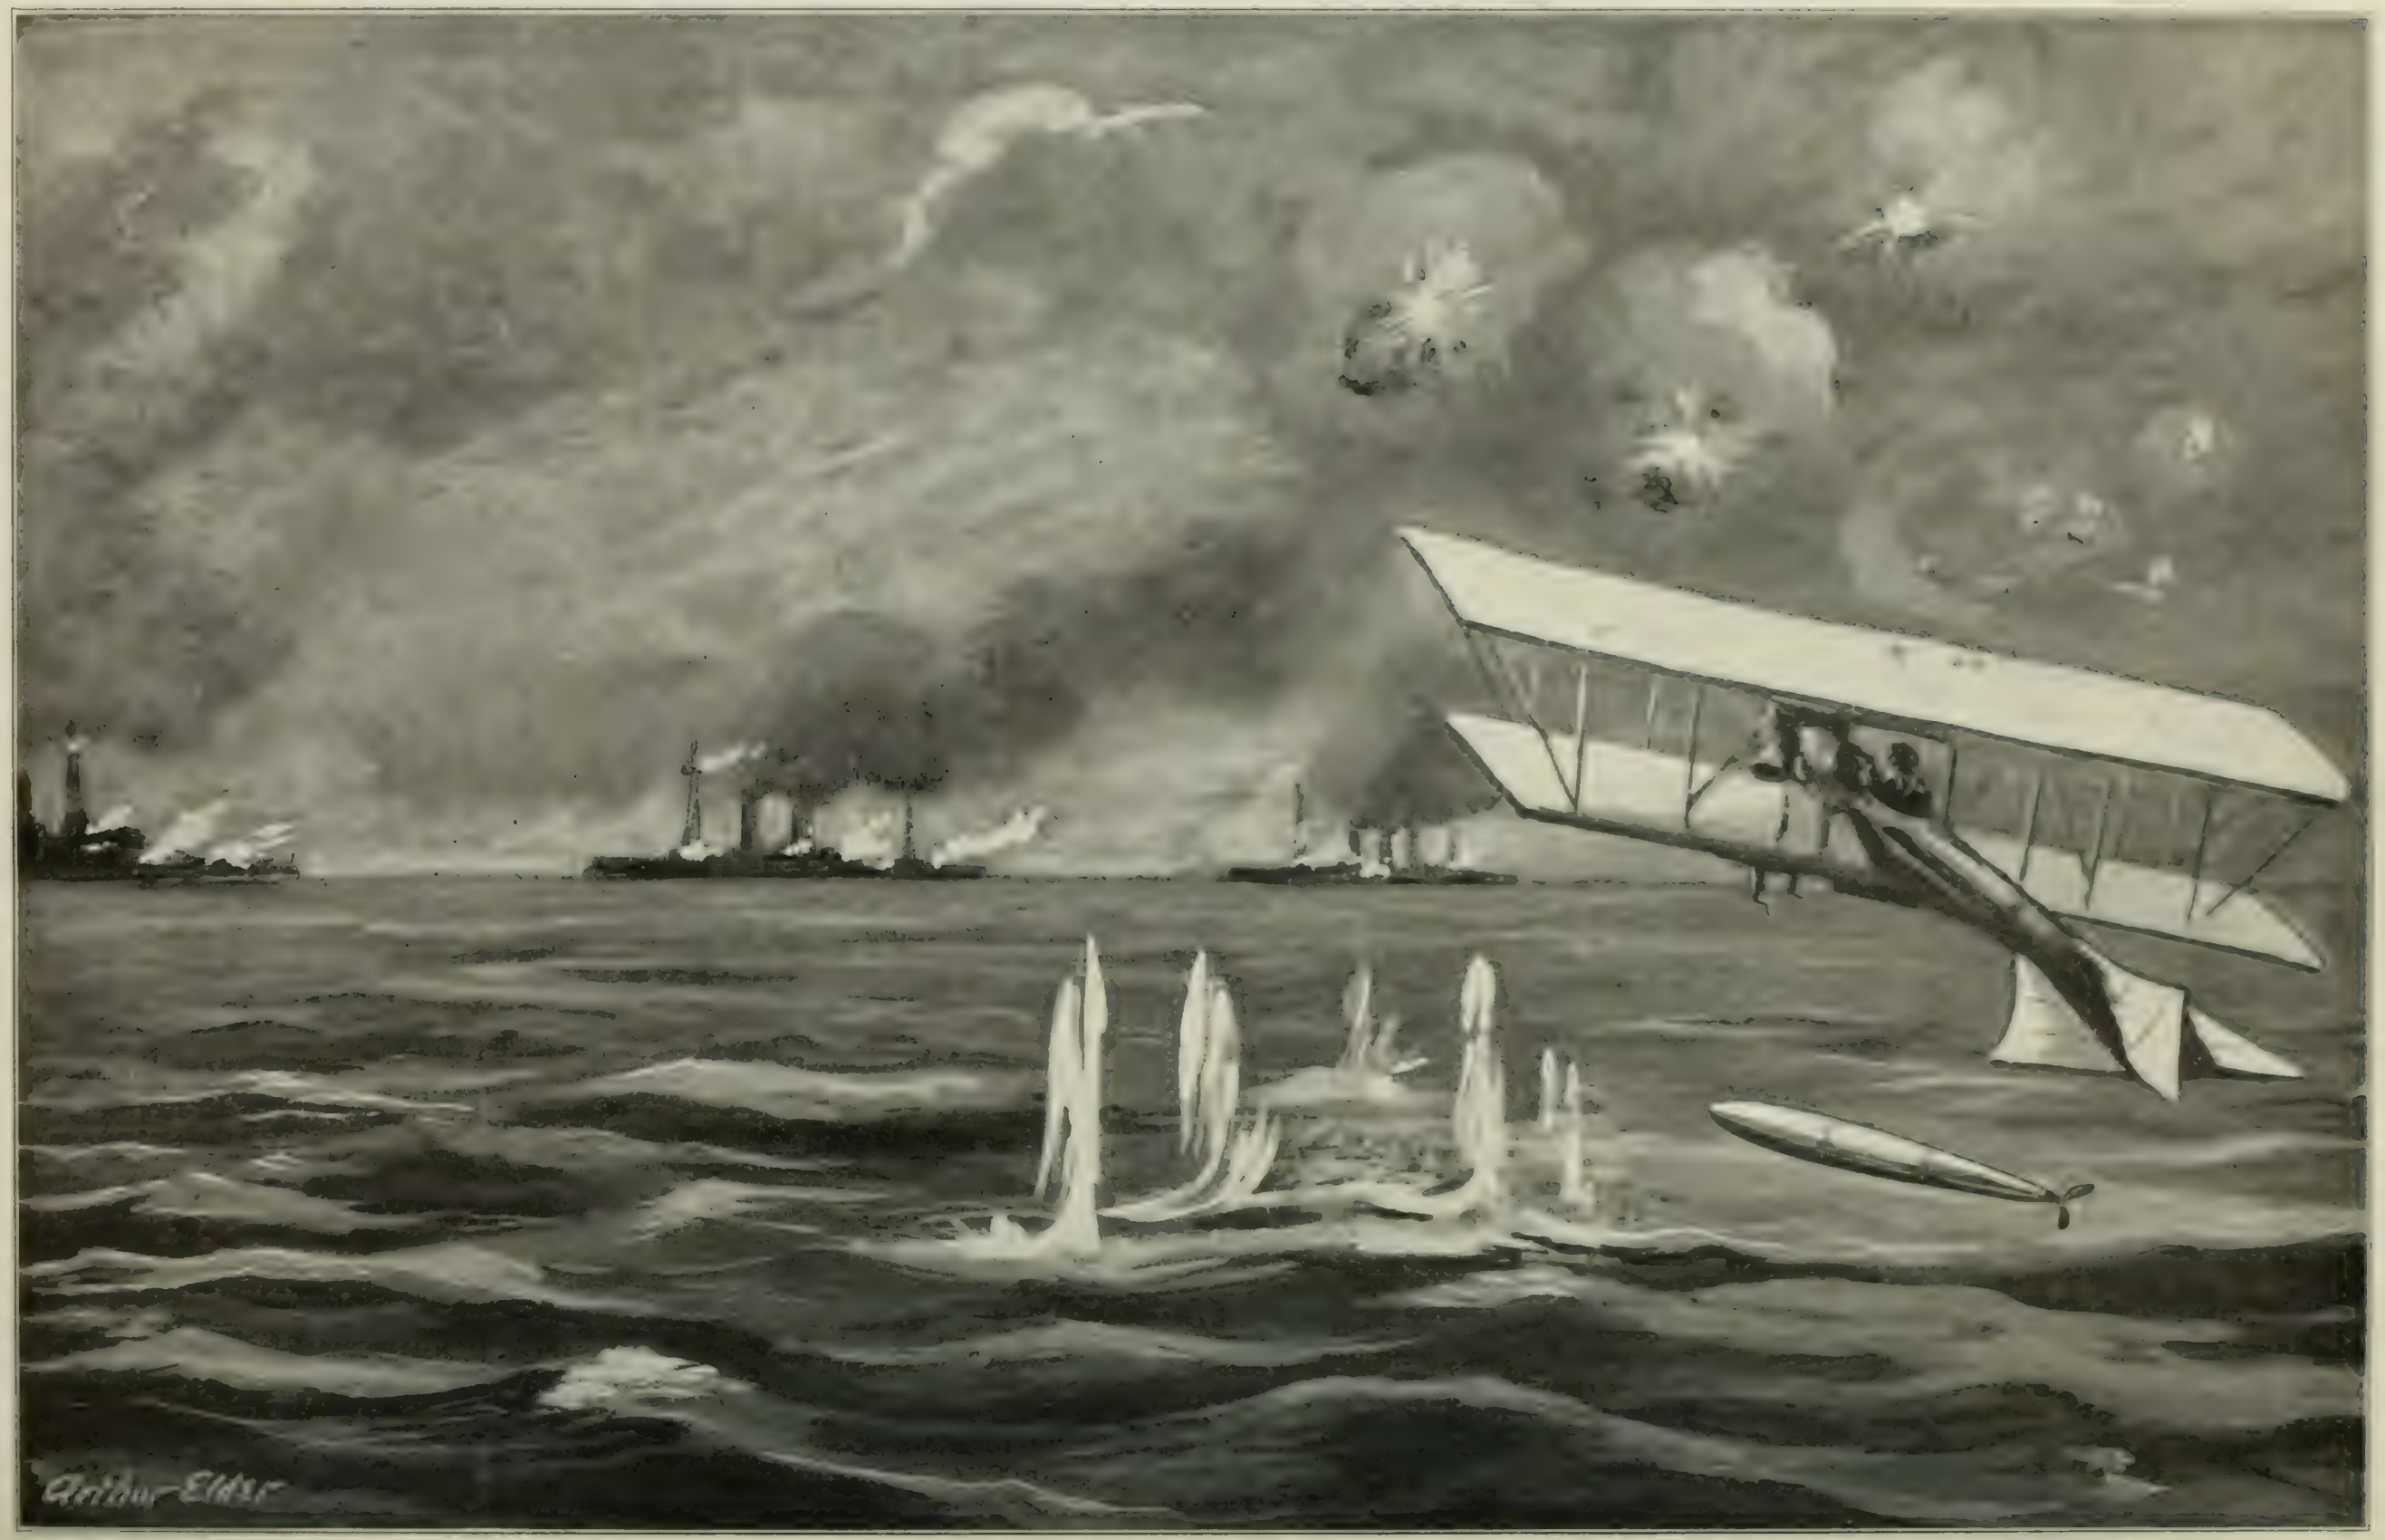
The fifty delegates composing the committee and subcommittees are chosen from these three societies and from the delegates accredited to the Military Government of Paris and the twenty army corps of France, thus insuring harmonious action between the military and civil authorities. The society has a membership of over 110,000 and 400 committees, and its humanitarian work goes on in time of peace as well as war.

The committee of a single arrondissement of Paris, established only two years ago, has to its credit 3056 free surgical dressings, 33 operations and 1322 consultations, while that of Compiègne had 5988 consultations and 22,757 dressings, and Rheims, 1072 consultations, 6188 dressings and 700 operations. It also distributed 20,000 bottles of sterilized milk, many provisions, and clothing to the families of soldiers; and in hundreds of other ways is realizing the beautiful ideals for which it was founded.

At the outbreak of the war it had 365 sanitary units or "foundations" ready for immediate service, with a capacity of 20,000 beds. These have been enormously increased, and today there are over 30,000 *vacant* beds in the city of Paris alone, awaiting the arrival of the wounded. There are also over a hundred "Railroad Hospitals," thirty field hospitals and over 500 auxiliary hospitals, among which may be mentioned the palatial residences of Baron Rothschild and his brother. Many have not yet received a single patient.

Under the flag of the Red Cross, along the Rue de Rivoli, the Champs Elysées, Rue St. Honoré and Avenue du Bois de Boulogne, on the fashionable boulevards as well as in the Quartier Latin, private residences and convents, lycées and splendid hotels, including Claridge's, the Majestic, the Bristol and Astoria, are now being utilized as hospitals, where I have seen wounded French and British, Senegalese and Irish, Arab and Scotch, Turco and German promiscuously mixed.

During the Franco-Prussian war the *Croix-Rouge* cared for over 110,000 sick and wounded soldiers and repatriated over 26,000 refugees, at an expense of 12,000,000 francs. At the time of the Boxer war in China it sent a hospital ship to Taku, distributed many gifts to the expeditionary troops and built a 200-bed hospital at Nagasaki; and during the Moroccan campaign its nurses cared for the sick and wounded in Casablanca, Marina, Fez and other localities. Last year during the war in the Balkans it sent five units, surgeons and nurses, some of whom I saw there doing efficient service. It continues its munificent work by caring for old soldiers and their families, and instilling patriotism thru its gentle ministrations. Over 2,250,000 francs have been distributed to the wounded veterans of the Crimean, Italian, Mexican, Franco-Prussian wars and colonial expeditions. The society also owns many convalescent homes at Hyères, Vichy, Rabat and Chateau d'Ariboise, where invalided colonial or other soldiers, convalescing from anemia or tropical fevers, can regain their vigor. In 1910 thousands of victims of the flooded districts of Paris and the surrounding country were fed, clothed and cared for thru this agency.



During the past week, thru the courtesy of Madame Lejars, wife of the Chef de Medecin de l'Hôpital Militaire de St. Martin; Madame Perouse, M. Peret and others in authority, I have visited many of the hospitals and *ouvroirs* under the management of this wonderful institution and seen much of the practical work it is accomplishing. Thousands of women, wives of soldiers, seamstresses, stenographers and others who have been deprived of work on account of the war, many of whom are threatened with destitution, are being employed in knitting warm garments and making clothing for the wounded in hospitals or on the line; thus is their labor twice blest.

Another organization contributing to the work of the Red Cross is the *Société Française de Secours aux Blessés Militaire*, which is equipped similarly to the three already mentioned and is working on parallel lines.

The general bureau of distribution for the hospitals is presided over by Madame Lejars. It is liberally stocked with medical and surgical supplies, as well as hospital equipment—beds, blankets and clothing—so that an "ambulance" can be supplied for installation at the front or elsewhere on demand.

Paris is enthusiastic over this work. Its people are awakened to the gravity of their situation. A quiet dignity and determination everywhere prevails. The recent victories of the Allies are not shouted from the housetops, but the people are inspired by hope and a consciousness of success that thrills them with patriotism. Their patience while waiting the result, be it victory or defeat, is most remarkable and indicates a patriotism of the highest character.

Paris, October 5, 1914

LAUNCHING A TORPEDO FROM AN AEROPLANE

THE AVIATOR, WHO HAS VOLPLANED DOWN WITHIN RANGE OF HIS TARGET, HAS JUST PULLED THE LEVER WHICH FREES THE TORPEDO AND SETS ITS MECHANISM GOING. THE TORPEDO IS ADJUSTED TO STOP SINKING AT A CERTAIN DEPTH AND HURL ITSELF IN A STRAIGHT COURSE AT THE ATTACKED SHIP

THE FLYING-FISH TORPEDO

A NEW AND TERRIBLE FORM OF ATTACK ON THE HIGH SEAS OR IN HARBORS

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

REAR Admiral Bradley A. Fiske of our navy has pointed out the feasibility of delivering automobile torpedoes from aeroplanes or airships, instead of from submarines or torpedo boats, and has invented a means for carrying it into effect. As the scheme is now under consideration by the Navy Departments, its details, for obvious reasons, cannot be made public, but enough can be said to show the general character of one of the most formidable attacks against the battleship and battle-line which has yet been devised.

To drop bombs from aeroplanes or airships is, of course, old, and as is well known has been freely practised during the present war by both belligerents in their assaults upon cities or isolated buildings. No attempts have yet been made to destroy battleships by these dejectiles, nor does it seem that for that purpose they are likely to be of much use. This because of the difficulty of hitting a ship in motion by an object dropt upon her deck from a point directly above her. To obtain the largest target the aeroplane must fly not only immediately over but hold a parallel course at the same speed as the ship. This is very difficult owing to the air currents aloft which constantly tend to divert the aeroplane from a straight course, and also because of the high altitude which must be maintained in order to keep out of the range of guns especially constructed to throw shrapnel at high elevations. The higher the aeroplane flies, the smaller, of course, is the target, and if the path of movement of the aeroplane intersects that of the ship, the target area is still smaller because only a portion of the deck becomes endangered. Naturally the attacked ship in such circumstances will herself steer an irregular course and keep the atmosphere above her as full of shrapnel bullets as possible. Furthermore, the bombs —even if they hit—reach only the superstructure, and with a velocity due simply to gravity—therefore with little penetrative effect, especially against the heavily armored turrets.

The problem which Admiral Fiske has solved is a very different one from that of successfully dropping bombs. In nearly all lay discussions of attack by the automobile or fish torpedo, the assumption is made that the torpedo has already been transported by some sort of movable platform to a point from which it can be delivered, and also that in getting to this point the platform has not been destroyed by the defensive weapons of the ship attacked. Those, however, whose business it is to study torpedo warfare know that the difficulties of "getting there" are often greater than those of hitting the target after arrival. A torpedo boat or destroyer on the surface must encounter the projectiles of her quarry, and may find herself engaged by the screen of protecting boats of her own kind which surround the capital ship. If a number of destroyers could, by eluding the protecting craft, or in the absence of them, get within fifteen hundred yards or so of a battleship, it is possible that one might send her torpedo home, even if all the others were sunk. But there is so little likelihood of their getting there that torpedoes are made with motive power sufficient to impel them over five sea miles at very high speed, so that their carrying boat or platform can project them from distances of 10,000 yards; or in other words, from a position so far off from the enemy that the boat or ship makes but a very small target.

The submarines, as has already been shown in these columns, are under special difficulties of their own, notably slowness of travel, blindness when submerged, and also the extreme discomfort of human beings living in them while under water for any protracted length of time; this owing to the nerve-racking din of the machinery, the limited air-supply and the vitiation of the atmosphere by the storage battery fumes. None of these difficulties are insuperable, but invention has not fully caught up with them.

Admiral Fiske's bold conception is the conversion of the aeroplane into a torpedo platform, for which he regards it as especially suitable because of the possibilities of getting it to a delivery point for its torpedo much nearer than is practicable with the torpedo boat or destroyer, and with far greater swiftness and certainty than the submarine. In fact, there seems to be no reason—except the necessary elaboration of details —why it is not now within the bounds of possibility to deliver an automobile torpedo carrying 250 pounds of the most powerful explosive from a point within 1500 yards of an enemy's battleship or battle-line. Inasmuch as after the torpedo is launched it automatically adjusts itself to the desired immersion and also controls itself to keep the direction in which it is aimed over distances nearly five times greater than this, the chance of its hitting its mark is immensely increased.

How the thing is done is easily grasped by considering the torpedo and aeroplane unitedly as a flying-fish, which when it dives leaves its wings in the air. No essential change is made in the torpedo as now constructed. No essential change is made in the aeroplane—that is, any type may be used, subject to the limitations of its special employment. The torpedo is held rigidly below the aeroplane frame with its war-head pointing forward. A single lever at the right hand of the aviator, when pulled, first trips the pin which always protrudes from the wall of the fish-torpedo and thus opens the air valve from the flask of comprest air which supplies the motive power, and then frees the torpedo from its clamps, so that it falls into the water. This is all there is to the substantial mechanism. The way the attack is delivered is, however, of importance.

It has been determined that an aeroplane can be successfully launched from the deck of a ship at sea. We have repeatedly so launched aeroplanes from our scout cruisers. For present purposes it is assumed that our scout, tho out of sight of the enemy, has been keeping in touch with his fleet or squadron which is cruising at normal speed in the usual single file or column, ships five hundred yards apart. A starless night is picked out, and the flying-fish rises to an elevation of about 2000 feet and steers directly for its target. At this hight it is practically invisible in the darkness. It can see the enemy's ships even if all their lights are out, for the hulls make black blots on the sea, always darker than the water. As soon as the aviator estimates his distance from the enemy to be about 1500 yards, he volplanes down—diving in spirals—as swiftly as possible, until he gets within ten or fifteen feet of the water, and he regulates matters so that when he reaches this point he is properly aiming at the ship he means to strike. Then he pulls his lever. The torpedo drops horizontally, takes the depth for which it has already been adjusted and shoots forward,

like a swordfish, in a straight line, covering the intervening distance in a fraction of a minute. The gyroscope gear in the fish torpedo keeps it true in its aimed path. The element of uncertainty in torpedo projection is not inaccuracy of travel of the torpedo, but the difficulty of estimating the speed and direction of movement of the vessel fired at. Up to a range of 2000 yards—about one mile—an expert torpedo officer can now hit a battleship six hundred feet long every shot—always providing that the boat from which the torpedo is launched can get so near to her target. With the flying-fish torpedo capable of safely reaching a distance of but 1500 yards, hitting of the mark is practically assured. If a division of four battleships of similar length, five hundred yards apart, is a still bigger target, the chances of the torpedo getting one of them are easily calculated. The explosion and the downward plunge of the victim close the scene.

For the attacked ship to see so small an object as an aeroplane 2000 feet high and at night—even if the attack be anticipated and searchlights be kept going—is next to impossible. To hit an aeroplane when it is dropping rapidly downward is beyond the capacity of the guns, which cannot be changed in elevation and sighted quickly enough. To destroy the aeroplane after it has done its work, would have to be done amid the awful stress of discovery in the time the torpedo is rushing home, and would be perfectly futile, anyhow. One man *plus* an aeroplane is a cheap exchange for a thousand men *plus* a battleship.

If the Navy Department's conclusions result in the adoption of the flying-fish torpedo, a new auxiliary —the aeroplane ship—will be added to the "train" which now includes the hospital ships, colliers, repair ships and ammunition ships attendant upon the fighting fleet. This vessel besides carrying a supply of aeroplane and torpedoes will have all the necessary launching means and a crew of skilled aviators, officers and men. She will be of high speed, so as to be serviceable as a scout.

The reduction in torpedo range may lead to a corresponding decrease in weight of the torpedo mechanism, and thus bring the weapon within the lifting capacity of existing types of aeroplane. Or it may be found desirable to keep the torpedo as it is, and devise aeroplanes of increased lifting power.

While a night attack would probably involve less danger to the attacker than would a day attack, yet the difficulty of pointing the heavy guns of a rolling ship at an approaching air craft, which is changing not only its range but its hight with great rapidity, is so great that a day attack, especially from a distance of 10,000 yards, would seem to give a higher probability of success than is given by any method now existing.

Formidable as is the Whitehead or fish torpedo when directed against ships at sea, it becomes even more dangerous when attacking vessels moored in harbors or basins. A bomb dropt in such a confined area, if it misses its mark, explodes where it lands, possibly in the mud at the harbor bottom. A fish torpedo, on the other hand, runs under the surface until it strikes something, and where a basin is crowded with shipping is almost certain to cause injury not only to the vessel which it may hit, but to those in the immediate vicinity. That it will be dropt from dirigibles by one or both of the contending parties of the present war is within future probability, since the British and German airships are already capable of raising the necessary weight. It is reported that British dirigibles are under construction which will carry nearly nine tons. The German "L-3," a Zeppelin air cruiser built for long distance flights and operations against the enemy's dock yards, supports about 8½ tons. Either of these great ships could take up a fish torpedo—perhaps three or four. If the Germans adopt the plan, flying-fish torpedo attacks on the British blockading fleet may be in prospect. On the other hand, the British may use it against the German ships bottled in Wilhelmshaven or other harbors.

As it was openly stated by German authorities before the war began that prior to a grand action with the British fleet the Russian navy would be disposed of, the recent appearance of a squadron of battleships maneuvering in the Baltic probably presages the beginning of the disposition process. This indicates a division of the German fleet, the remaining capital ships being, it is said, in the Kiel Canal as well as at Wilhelmshaven. One fish torpedo dropt in the waterway of the canal and running along it until it strikes a ship might not only destroy that ship but also, for the time being, disable the canal itself, thus preventing junction of the divided German force or the retreat into the Baltic of the North Sea vessels in case of defeat.

Since the foregoing was written, it has been reported that the Germans are practising with Zeppelins, firing torpedoes at rafts in Lake Constance—and as mention is made of "torpedo tubes" being installed on these airships, it may be inferred that they have already appreciated the efficacy of Admiral Fiske's invention.

New York City

THE MOAT RIVERS OF EUROPE

THE STRATEGY OF THREE MONTHS' CAMPAIGN ON THE RUSSIAN FRONTIER

IT is to John Ruskin that we owe the most striking statement of the military situation in eastern Europe. While reading the sermons in stone written in "the Bible of Amiens," for which the French and German armies are still contending, his mind flew to the opposite frontier, where now the German and Russian forces confront one another. He intuitively perceived that the logical line of battle was not in France, but along "the two moat rivers of Europe":

> Count them together for a thousand miles of moat between Europe and the Desert, reaching from Dantzig to Odessa, . . . two rivers, little thought of by common geographers, but of quite unspeakable importance in human history, the Dniester and the Vistula. . . . The two of them together divide Europe, properly so called—Europa's own and Jove's, the small educationable, civilizable and more or less mentally rational fragment of the globe—from the great chaotic space, occupied datelessly by Scythians, Tartars, Huns, Cossacks, Bears, Ermines and Mammoths in various thickness of hide, frost of brain and wo of abode—or of unabiding. Nobody's history worth making has anything to do with them.

Turning now to the map, we see both armies halted on Ruskin's line. In the north, during the first month of the war, the Russians marched thru East Prussia until they reached the Vistula; there they were checked and driven back. In the south, during the second month of the war, the Russians conquered Galicia until they reached the gap between the Dniester and the Vistula; there they were checked and driven back. In the center, during the third month of the war, the Germans conquered Poland until they reached the Vistula; there they were checked and driven back. It seems likely now that the opposing armies will settle down for

the winter along this thousand mile moat of the Vistula and the Dniester, which runs between the Baltic and the Black.

But one thing Ruskin did not foresee: that in the coming conflict his England would be found on the Asiatic side of the Vistula. When Clemenceau, a born revolter and a professional overturner of governments, became at last Premier of France, he put down revolutionary disturbances with a strong hand. This aroused the resentment of his former associates of the malcontent faction, and one of them called at the ministry to remonstrate. When he quoted to Clemenceau some of his former insurgent utterances, the Premier replied, "Yes, my friend, but now, you see, I am on the other side of the barricade."

Great Britain is now on the other side of the barricade, and no Englishman would now write of Russia as Ruskin, Swinburne and Kipling did. This change of sentiment is not to be hastily attributed to hypocrisy or self interest. The world has grown older and incidentally wiser in the last thirty-five years. We are not so cocksure as Ruskin and his generation on questions of art or ethnology. It may be true that the history of the region east of the Vistula has had little of interest for us, but it is already quite evident that the Scythians, Tartars, Huns and Cossacks are going to have a good deal to do with the making of history in the future, and not merely military history either. Not a little art and science comes to us from the Trans-Vistula. Russian and Polish novels are popular in America; Slavic music, dances, costumes and decoration pervade our theaters. The eternal conflict between altruism and egoism is now carried on in the west under the opposing banners of Russian Tolstoy and Polish Nietzsche.

When we come to look closely at Ruskin's partition "between Europe and the Desert," it becomes more hazy. Where the Vistula enters into the Baltic it divides the Germans on the *east* from the Poles on the *west*. And Germany itself, is it not dominated by that corner of the empire where Slavic and Teutonic blood have most commingled, and has it not taken its politics from Treitschke, a man of Slavic name?

But race theories do not have to be scientifically accurate in order to be influential, and Ruskin was right when he put his finger upon the Vistula divide as the seat of the real conflict. If the English had heeded his words they would have now a clearer comprehension of the forces with which they have to deal. Every war is based on a misunderstanding. The misunderstanding at the bottom of this one is the failure to realize that German enmity is directed toward the east rather than the west. France is fighting Germany, but Germany is fighting Russia. When the Germans advanced on Paris they felt themselves marching toward St. Petersburg.

This misunderstanding shows itself in the polemic between English and German savants in a way that would be amusing if it were not so tragical. Some of the English papers accuse the German Chancellor of deceiving his people because he talked about making war upon Russia and ignored France. We Americans who are more familiar with German thought thru immigration and education can appreciate the German point of view, however little we may sympathize with it, so we have no difficulty in realizing that the reason why so little was said about the war with France was because little was thought about it, altogether too little, as the Germans now see for themselves. It is difficult, however, for the Briton to comprehend that the Germans regarded the trampling of Belgium, the conquest of France and the crippling of England as merely the removal of obstacles in the way of the performance of their divinely appointed mission of crushing the Slav.

How the Germans became obsessed with this idea is apparent from their history. The egg from which hatched out the Prussian kingdom and the German Empire was laid in East Prussia eight hundred years ago when the Pope took the Teutonic Knights of Saint Mary's Hospital from Jerusalem and stationed them on the Baltic coast to stand as the outpost of Christendom in face of the heathen Slavs. Like a sentry whom his commandant has forgotten to relieve, the Prussian still stands at his post and faces the same way, regardless of the fact that there are now many Christians in front of him and many heathen behind him. He has repudiated the authority of the Pope, but he still believes that he is called of God to this duty. He has the soldier's temperament.

This is why the war on the eastern frontier, which we care little about, receives a large share of attention in the German press. The names are hard, the places unfamiliar and we can't see what difference it makes who takes them. But the Germans are vitally interested in the war with Russia, for her alone they really fear. France and England have been losing population, France absolutely, England relatively to Germany. But Russia outnumbers Germany nearly three to one and is growing in geometrical ratio like a big snow ball. If the Germans should wage perpetually war on the Russians and kill three millions of them every year, the population of Russia would remain undiminished. To contend against such an enemy is, the Germans feel, a big enough job in itself without having seven other nations attack them in the rear.

The Germans regard Russia as the aggressor, not only because of her provocative mobilization on the German frontier, but because of an actual invasion of German territory on the afternoon of August 1, the day after the Czar in his telegram to the Kaiser had given his "solemn word" that his troops would "undertake no provocative action." The Russian invasion of East Prussia in the first few weeks of the war, the siege of Königsberg, where the Teutonic Knights built their citadel in 1255, the tales of Cossack atrocities heard from the Prussian refugees, the disastrous defeats of the Austrians in Galicia, incensed still more the German mind and made it imperative to take action on the eastern frontier. So as soon as the Germans saw that they had been baffled in their hope of capturing Paris by a rapid raid, they entrenched their lines in northern France and dispatched such forces as they could to East Prussia under General von Hindenburg.

The first military genius that the Great War has made prominent is General von Hindenburg. It is no wonder that the Germans are all wearing his portrait button and that the Kaiser proposes to make a prince of him, for his advent has entirely changed the condition of things along the five hundred mile line of battle. On the north the Russians had taken the greater part of East Prussia and were besieging Königsberg. On the south the Russians had taken the greater part of Galicia and were besieging Przemysl. In the center the Russians from Warsaw were likely to invade Germany in the direction of Berlin or Breslau.

Now the situation is reversed. On the north the Russians have been driven from East Prussia. On the south Przemysl has been relieved. In the center Warsaw is attacked. Whether these successes be permanent or not they are sufficiently striking to deserve consideration. General von Hindenburg first formed his army on the line between Osterode and Allenstein from the beaten remnants of the two or three army corps which had been stationed in East Prussia, when the war began, to check the Russian advance, reinforced with troops drawn from France and

with artillery from the Vistula fortresses. On August 27 he struck southward, driving the enemy back into the swamps and lakes of the Mazure district where, if we may give full credit to the German reports, 70,000 Russians were taken prisoners. Then he turned northwest, marching ninety-four miles in four days, and attacked the main Russian force under General Rennenkampf, which, however, eluded him and escaped across the frontier. The faculties of the University of Königsberg in their delight at being rescued from the Russians conferred upon the victorious commander all their degrees, so General von Hindenburg became in a single day a doctor of law, medicine, theology and philosophy. He was hailed as "the Preserver of Prussia," and statues are already erected in his honor.

Such exuberance of gratitude is natural enough on the part of the Germans, but to the indifferent observer it is apparent that Hindenburg's successes, striking as they are, do not constitute a triumph. We read that the Germans who had come within six miles of Warsaw have been driven back thirty, and in the north that the Russians who had been driven back into their own country as far as the Niemen are again invading East Prussia in the neighborhood of Lyck. Already Russia's chief dependence, "General Winter," the veteran who defeated Napoleon, has entered the field and active campaigning is becoming difficult. Conditions here are very different from those in the western field. Belgium and France are provided with plenty of railroads and excellent highways. In Poland and Russia railroads are rare and wagon roads are miserable. The big Krupp howitzers which the Germans handled with such celerity in the west, on trains and motor trucks, are an embarrassment in the mire of the Vistula valley. In Belgium and France the strongest fortresses fell with surprizing swiftness. On the east during the same period no fortress of importance has been taken. The Russians in East Prussia got within reach of Königsberg, Thorn and Graudenz, but failed to capture them. In Galicia they met with their first fortress at Przemysl and it still withstands them. So, too, the Germans invading Russia were defeated at their first fortress, Osowiec. It remains to be seen whether they will make as short work of the fortifications along the Vistula, if they get to them, as they did with Liège, Namur and Antwerp.

A glance at a recent railroad map of eastern Europe will show the difficulty of carrying the campaign into Russian territory. Germany is covered with a network of railroads, but across the border they suddenly dwindle to a few trunk lines. Besides this the gage is changed at the frontier from the standard of Europe and America, 4 feet 8½ inches, to 5 feet and ½ inch. The Russian gage is undoubtedly the better for commercial purposes. It has always been an annoyance to our engineers that they are obliged to restrict their gigantic locomotives and palace cars to the width of the old stage coach. But the principal motive of the Russian Government in adopting a different gage from the rest of Europe was to prevent German engines and cars being used in such an invasion as the present.

But however inadequate the Russian railroad system may seem to foreigners the Russians have a way of using it that disappoints their enemies. During the war with Japan it was the general expectation of the outside world that the Trans-Siberian railroad would soon break down thru the congestion of traffic and the assumed incompetence of the Russians. But on the contrary this single track line carried troops and supplies for eighteen months from Moscow to Manchuria, over five thousand miles, and was in better condition at the end of the war than at the beginning.

In the present war the Russians again showed surprizing efficiency. The Germans counted on the slowness of Russian mobilization to give them time enough to reach Paris before they would have to turn their attention to the more serious struggle in the east. But within three weeks the Russian invasion of East Prussia was threatening Königsberg and troops had to be withdrawn from France to meet it. Siberian troops appeared on the frontier so quickly as to give grounds for the German suspicion that the Russian Government had started mobilization in the Far East even before Austria declared war on Servia, July 25.

It was the Siberian troops that saved Warsaw when the Germans came within gunshot of the Polish capital on October 12. Warsaw lies on the left bank of the Vistula, that is, on the wrong side of the moat. The river as it runs by the city, separating it from its eastern suburb Praga, is about five hundred yards wide. Above and below the Vistula spreads out wider, very much wider at times when the floods cover the low and marshy land alongside. In case the Germans capture Warsaw, the Russians would still be within their first line of defense, the fortified angle which has its apex at Novo Georgievsk, where the Narew joins the Vistula. This is the real frontier of Russia, and it matters little what happens to the country west of it. If the Russians take Cracow they open a road to Vienna. If they take Thorn they open a road to Berlin. But if the Germans take Warsaw, it will, except for the loss of prestige, not seriously impair the integrity of Russia.

Paul Thompson

FAME COMES PROMPTLY TO GERMAN SOLDIERS

Busts of the Crown Prince—"the conqueror of Longwy"—and General von Hindenburg—"the victorious leader of the Army of the East"—with the British Lion at bay between them, unveiled in Berlin, before the Eberlein Museum. Said the London *Times* of this immortalized "victory" of Longwy: "Aug. 28—Longwy, an obsolete fortress, surrenders after a gallant and wholly unexpected resistance of twenty-four days"

DIARY OF THE WAR ON THE RUSSIAN FRONTIER

The numbers in parentheses refer to places on the above map. The shaded area shows the territory that has changed hands during the war.

July 30. Russia begins mobilizing.
July 31. Germany sends an ultimatum to Russia to stop mobilization.
August 1. Germany begins mobilizing.
August 1. Russian troops invade Prussian territory in the night and take Johannisburg. August 2. (1)
August 3. Germans occupy Kalisz. (2)
August 9. Austrians invade Russian Poland along both banks of the Vistula. (3)
August 17. Russians advance toward Königsberg. (4)
August 18. Germans occupy Mlawa. (5)
August 20. Russians defeat Germans at Gumbinnen. (6)
August 20-23. Austrians defeat Russians at Krasnik, 20,000 taken prisoner. (7)
August 24. Russians attack Thorn fortress. (8)
August 25. Austrians advance down Vistula toward Radom. (9)
August 25. Russians invest Königsberg. (10)

"WITHIN THE WAVE'S INTENSER DAY"

One tires of hearing Jules Verne's name attached to every new marvel of science, but here is a genuine approximation in moving pictures to the wonders of which Captain Nemo was overlord

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

THIRTY LEAGUES UNDER THE SEA

THOSE of us who in early youth had the privilege thru the courtesy of Jules Verne of voyaging with Captain Nemo in the "Nautilus" for *Twenty Thousand Leagues Under the Sea* will remember with most pleasure our glimpses of deep sea life as seen thru the window of this precursor of submarines. Now we are able thru the magic of the movies to realize in part the visions of our youthful imagination. Two ingenious and energetic young men, the Williamson brothers, have constructed a spherical steel chamber which can be let down from a boat into the water to a considerable depth so moving pictures may be taken thru its plate glass window. This submarine camera was first used in the vicinity of the Bahamas where the water was so clear and the sunlight so bright that it was found possible to make pictures with the same exposure as in the air. In some of these under-water landscapes objects can be clearly discerned at a distance of 125 feet.

These ocean meadows and forests look very different from the pictures we have seen in books and the specimens we have seen in museums, for we realize that it is life we are looking at. The fans and the ferns, the branching coral and the streaming anemones are all in motion, waving back and forth in the wind—we should say the current. The curious tropical fishes which dart about thru this animal foliage are mostly familiar to us from the aquarium, where they come up to the glass and open their mouths at us in the same funny way, but one of the fishes caught by the camera is a strange one, and while waiting for the zoologists to confer upon him a double-barreled Latin name he has been informally christened "Old Glory" because of his resemblance to the star-spangled banner.

But to see the sharks in their native wilds and to assist—in the French sense of the word—in a fight between a diver and a shark is a unique privilege and an exciting experience. The combat seems so unequal; the fourteen-foot man-eater is in his element. He can swim better than the man and he is armed with a quadruple bank of sharp-angled teeth. But the man, who can only stay under water a minute and has no weapon but the knife between his teeth, is the victor in the fight.

The films are so arranged to show exactly how the pictures were taken and how sponge-fishing is carried on and how the diving suit is used. With a competent lecturer to explain the forms of sea life it is an interesting and instructive entertainment. (*Submarine Film Company, New York.*)

THE VIRGINIAN

In discussing the motion picture version of Owen Wister's *Virginian* the present reviewer is at a disadvantage of knowing too much about the scenes and the characters of the story. He has heard the incidents before they were booked, he has seen the real Medicine Bow, and he is personally acquainted with one of the exchanged babies. Consequently he is too much disturbed by the deviations from verisimilitude to do justice to the film. He finds the country too tame and well grassed for Wyoming and the cowboys such as were never on sea or land. He wishes that the producer could, like the author, have had Governor Barber at hand to give him points.

But when the reviewer tries to throw off this hypercritical attitude he recognizes that *The Virginian* is miles above the ordinary Wild West film, that Dustin Farnum is an actor of real ability and great sincerity and that it is impossible to spoil so good a story no matter what you do to it. (*Jesse L. Lasky Feature Play Company, New York.*)

ANIMATED GEOGRAPHY

Schools and lecture centers that are in search of educational films will be interested in the "Scientia" series now being prepared. Among the recent releases are *Thru the Streets of Old Biskra,* giving tinted views of the scene of Hichens' *Garden of Allah; Scenes in Milan* showing details of the Cathedral; *Tea Culture in Ceylon,* which is not calculated to enhance the desire of the fastidious for that beverage, and *The Life of the Orchid,* a sugar-coated lesson in botany. (*Eclair Company, New York.*)

WOOD WORKING

The film of *Wood Carving and Turning* at Saint Claude, Haut Jura, shows in detail the various steps in the making and decorating of clock cases and the like. Altho most of it is familiar shop-work, still it might be used for illustration in a manual training course. (*Pathé Frères, Jersey City.*)

And now the screen is done away with and the moving figures appear upon an ordinary stage, passing from one wing to another and walking to the front or rear. The means employed are the same as the old illusion known as "Pepper's Ghost." The actors (in white) play their parts in front of black-velvet background, and the photographs of these scenes are projected against a large plate-glass occupying the entire front of the stage and set at an angle of forty-five degrees to the audience. The figures photographed therefore are reflected by the glass and appear to the audience to be moving on the stage, which is seen thru the glass. The elimination of the screens gives roundness and perspective.

A DIVER FIGHTING A MAN-EATING SHARK

A remarkable scene from the moving pictures taken at the sea-bottom in clear tropical water by the Williamson brothers.

THE NEW BOOKS

THIRTY-SEVEN MILLION LEFT

The Last Christian, by George Kibbe Turner, begs the question in its title. And in the publisher's foreword on the slip-cover we find this question: "Why are churches falling into decay and congregations dwindling every year?" Before asking such a question it would have been well to have ascertained whether it postulated a fact. *The World Almanac* for 1914 gives the total of church membership for 1912 in the United States as 36,668,165 with a footnote to the effect that "the larger of the Protestant bodies may claim twice the number of their communicants as nominal adherents." The Jewish congregations have 143,000 members. *The International Year Book* gives 37,280,370 members of churches in the United States in 1913.

In the Sunday schools, a comparatively new movement, are twenty-six million children; the Christian Endeavor, still newer, has a membership of nearly four million. Add to this the Y. M. C. A., with 597,857 members in America; the Y. W. C. A.; the Epworth League; the Young People's Union of the Baptist and of other churches, and it will be plain to an unprejudiced mind that congregations are *not* dwindling nor churches decaying. In 1913 over 2000 new churches were built. The percentage of increase in Christian churches is greater than that of the population.

The Last Christian is a story of the death of a White Church in New England. The confident reply to its pessimism is the knowledge of the numberless White Churches sown all over the West and filled with the children and grandchildren of that same New England. The individual church may wither, but its seed sown broadcast is the spiritual food of the nation.

The Last Christian, by George Kibbe Turner. Hearst's International Library Co. $1.25.

SONGS OF THE OUT-OF-DOORS

It is a thankless task to make anthologies of out-door verse with Kipling's poems—the classics of the school—tightly locked up by copyright restrictions. So in *The Gypsy Trail* it is disappointing to find not even the charming song which might be thought to have given the book its title.

And there are other omissions: of Masefield's "I Must Go Down to the Seas Again" and "It is Good to Be Out on the Road," for instance. Bliss Carman is well represented, and Whitman, but there is too much Emerson and Shelley; in general the frankly outdoor verse of contemporaries has been too little recognized while the secondary sources—the poems of meditation and fancy with a slighter hold on real countryside—have been ingeniously worked. There are many more poems than in *The Open Road*, and several new and happily conceived groupings, "Sursum Corda" and "Comradeship," for instance. Lovers of verse and the trail will find abundant pleasure in the book, but the Golden Treasury of outdoor verse is still to be made.

The Gypsy Trail, compiled by Mary L. Hoskins and Pauline Goldmark Mitchell Kennerley. $1.25

FROM CHAUCER TO YEATS

Mr. G. H. Mair, who wrote a notable little book on *Modern English Literature* for the "Home University Library," has now expanded that successful essay into a larger volume in which he goes back to Chaucer and from the "father of English poetry" to the present day covers pretty much the whole range of those English authors whose work can be read without the intervention of the philologist or the professor of dead dialects. By maintaining thruout an individual point of view he succeeds in imparting freshness and interest to a subject hackneyed by much disquisition, altho there is bravery to the point of rashness, perhaps, in devoting the final chapter to an attempt to indicate the general trend of present-day literary effort and to anticipate the verdict of posterity on such living writers as Kipling, Wells, Shaw, Masefield, and Yeats.

Modern English Literature from Chaucer to the Present Day, by G. H. Mair. Henry Holt & Co. $2.

BOOKS OF THE WEEK

Japan, Today and Tomorrow, by Hamilton Wright Mabie. The genius of the Japanese, as found, not in their adaptation from the west, but in the fields and homes of the people. Interpreting the new Japan thru the customs, ideals, the courage and self-sacrifice of the old.

Macmillan. $2.

The Theater of Today, by Hiram Kelly Moderwell. The forces that have revolutionized the theater, raised the standard of its art, and increased its usefulness to society, during the past ten years. Scant attention to the developments of the American stage.

Lane. $1.50.

Quinney's, by Horace Annesley Vachell. Being a queer, lovable creature with an art shop and fake antiques, a wife—and above all, a new baby. Sentimental, but genuine.

Doran. $1.25.

London Survivals, by P. H. Ditchfield. The story of the thousand years that men have lived on the banks of the Thames told from the landmarks that still survive in the imperial city.

Stokes. $3.50.

The Grand Canyon, by Henry van Dyke. Characteristic verses, with much beauty in the title poem and others, two or three delightful trifles, and a number of smooth commonplaces.

Scribner. $1.25.

Half-Hours, by J. M. Barrie. For the first time putting in book-form the four famous one-act plays, "Pantaloons," "The Twelve Pound Look," "Rosalind" and "The Will."

Scribner. $1.25.

A DEFENSE OF MILITANCY

In spite of Mrs. Pankhurst's popularity in America as a brilliant lecturer, militancy has found little sympathy even among suffragists. But fair-minded men and women, however much they may disapprove of her tactics, should be glad of this chance to hear the defendant's side from a woman who has thrown herself whole-heartedly into the struggle for woman suffrage. *Mrs. Pankhurst's Own Story* is undoubtedly prejudiced, but she relies for appeal not on sensational pleading but on statement of fact, giving the history of the militant movement from peaceful demonstrations to open revolution.

Hearst's International Library Co. $1.

LINKS IN A GRACEFUL CHAIN

Fashioned of rare clay is Diane and acquaintance with her is all too brief in Arthur Sherburne Hardy's whimsical dramas of *Diane and Her Friends*. Inspector Joley is but one of the delightful characters within that charmed circle of friendship, and if a leisurely style results in a somewhat nebulous solution of mystery, one forgets it in appreciation of the quaintness of sentiment and setting.

Houghton Mifflin Co. $1.25

THE OPEN SESAME OF YOUTH

A vague impression that Richardson Wright's cleverness at times comes perilously near a mere striving after unique effects mars the reader's complete absorption in the first pages of *The Open Door*. Novelty of subject—a woman living in complete solitude as a sort of medieval penance—and a certain word-ingenuity give the author a promising start, but the working out of his theme slips into an obvious effort to avoid the rut of dulness.

McBride, Nast & Co. $1.35

FLICKERS OF PHILOSOPHY

Two things stand out when one knows William J. Locke: his whimsical fancies and his shrewd epigrammatic criticism of human nature. This latter quality makes possible the *William J. Locke Calendar* which Emma M. Pope has compiled. Most noticeable in the random collection of quotations is the frequency and pungency of Locke's comment on woman.

John Lane. $1

THE REVELATION REVEALED

Now that the exploiters of the apocalyptic portions of the Bible are overworked in pointing out the special foreshadowings of the Great War and the near approach of the final world cataclysm, it may be of interest to the more commonsense students of scripture to read and digest the *Studies in the Apocalypse* by Dr. R. H. Charles, canon of Westminster. The four lectures, somewhat expanded in publication, include a systematic survey of the methods and history of the interpretation of the book of Revelation, a scholarly discus-

Neurasthenia
-Symptom NOT Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment.

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book—nor couched in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, get this book and study it. It shows the way out—teaches you how to obtain relief from the dread fangs of nervousness.

The book contains 250 pages, printed with plain type on fine book paper. There are several full page illustrations, diet tables and valuable instructions as to exercise, relaxation, rest and sleep. The regular price of the book is $2.00 but, to give the work widespread distribution, Dr. Kellogg has permitted us to bind an edition in library paper covers and, while these last, we shall sell them at only $1 a copy. Send your order and remittance today. You take no risk. If you are not entirely pleased and satisfied with the book, it may be returned and we will promptly refund your money. Order at once and get relief from nerve suffering. Address

sion of the Hebraic style, and finally an original reconstruction and exposition of chapters seven to nine. The mere reading of the volume would add materially to every clergyman's power to deal reasonably with a difficult biblical book, the ignorant distortion of which has always worked, and is still working, incalculable harm.

Scribners. $2.75.

A SENTIMENTAL JOURNEY IN ART

Miss Emma Louise Parry's rather fantastically named *The Two Great Art Epochs* is a compilation from the standard authorities on the historical development of art from ancient Egypt to the end of the Italian Renaissance. The author lays no "claim to originality," except "in the arrangement of the two great epochs of art history in connection, by which emphasis is laid on the unity of history, for the great art of the Renaissance was a return to the spirit of the great age of Greece." But the arrangement is chronological, and the connection between the Age of Pericles and the High Renaissance is lost sight of in a dozen intervening chapters. Undoubtedly a deal of labor went into the making of the book, but it is a thoroly pedestrian achievement with touches of sentimentality.

McClurg. $2.

A GUIDE TO ITALIAN PAINTING

The task set themselves by Alice Van Vechten Brown and William Rankin in preparing *A Short History of Italian Painting* was to provide in a volume not too big and bulky a guide to the study of Italian painting sufficiently clear and detailed for the beginner and yet embodying the results of modern criticism. It was a difficult task, beset with many pitfalls, but it has been accomplished with signal success. We know of no other book that in such brief compass covers the whole subject so thoroly and satisfactorily. The many illustrations in half-tone are a real help, and the full index to artists and paintings mentioned, giving places, is valuable.

Dutton. $2.25.

HOPE TO ASPIRING DRAMATISTS

Louis Evan Shipman's *The Adventures of a Play* is an interesting account of a dramatist's trials. It records the diverse ways of *D'Arcy of the Guards* among actors and managers, giving the true facts and the correspondence. It is a frank confession, with many flashes of keen wit, of sage advice and of well-founded criticism.

Kennerly. $1.50.

EIGHTEENTH CENTURY ENGLAND

Arthur D. Innes, in the third volume of his four volume work, *History of England and the British Empire*, covers the period from 1689-1802 not only for England and the Empire, but to a large extent for continental affairs as related to Great Britain. The critical century which established parliamentary government as an ineradicable part of the British constitution, won an Indian empire for England and lost an American one, practically destroyed the old class of land-owning peasants and created the first community in history based upon machine industry, is treated by Mr.

What Can I Know?

An Inquiry Into Truth, Its Nature, the Means of Its Attainment, and Its Relations to the Practical Life

By **George Trumbull Ladd, LL.D.,** Emeritus Professor of Moral Philosophy and Metaphysics, Yale University. Crown 8vo. Pp. viii+311. $1.50 *net* (Weight, 20 oz.).

"The question that underlies every system of philosophy, the definition at which every philosopher has made a try is discussed sanely and with a good deal of humor by Prof. Ladd. He writes in the simplest and clearest of English and makes himself perfectly intelligible to even careless readers."—*N. Y. Sun.*

Life of Walter Bagehot

By his Sister-in-Law **Mrs. Russell Barrington.** With 4 Portraits and 4 Illustrations. 8vo. Pp. viii+478. $4.00 *net* (Weight, 34 oz.).

Life and Human Nature

By **Sir Bampfylde Fuller, K.C.S.I., C.I.E.** 8vo. $3.00 *net* (Weight, 30 oz.).

This work is an attempt to construct a natural history—or science—of human nature by tracing behavior of mind or body to impulses which actuate more or less definitely all living creatures, and may be regarded as life's manifestations of itself.

Christianity and Economic Science

By the **Rev. W. Cunningham, F.B.A.,** Fellow of Trinity College, Cambridge, and Archdeacon of Ely. Crown 8vo. Pp. viii+111. $0.90 *net* (Weight, 12 oz.).

The author endeavors to trace in current thought on economic questions the elements which are due to Christianity, even though they may have ceased to be consciously religious.

The Book of the Blue Sea

By **Henry Newbolt.** With 8 Colored Plates and numerous Illustrations in Black and White by Norman Wilkinson. Crown 8vo., gilt top. $1.50 *net* (Weight, 26 oz.).

Messrs. Longmans have pleasure in announcing publication of the above book in succession to the Fairy Book Series, by the late Andrew Lang, published by them every Christmas season for the last twenty-five years. These stories are not fiction, but pictures of real naval life in the days of Farragut and Nelson as seen through the eyes of boys, each one of them a record of a boy's career from the moment of his first going to sea.

Modern Industry

In Relation to the Family, Health, Education, Morality

By **Florence Kelley,** General Secretary, National Consumers' League; formerly Chief State Factory Inspector of Illinois. Crown 8vo. $1.00 *net* (Weight, 12 oz.).

"A compact little volume which covers a great deal of ground in a most admirable fashion. Knowledge of facts is here, and the open-minded attitude of investigation. Here is a definite standpoint and message, too."—*Chicago Evening Post.*

Innes in all its fulness, but from the author of *England's Industrial Development* we should have had a rather more extended account of the Industrial Revolution.

Macmillan. $1.

THRILLS THAT PETER OUT

With such an abundance of good material Maurice Leblanc might have made *The Teeth of the Tiger* a big detective story. But an over-use of the element of chance and a tendency toward melodrama weaken the story, tho there is action and excitement enough to spur the most jaded taste. After holding one's breath thru such intricacy of plot in anticipation of a conclusive snap of the whip, the anticlimax is disappointing.

Doubleday, Page. $1.25.

TRAGEDY PALLS

Story-telling must be second nature to Margaret Turnbull; under her touch the everyday happenings of *Looking After Sandy* assume dramatic color. The big-hearted family that adopts the little foundling makes life so merry that one resents the entrance of tragedy, especially since it tends to deaden the story's spontaneity, and the impetus that swept the author along in the first part seems to need a little prodding toward the end.

Doran. $1.30.

A SODDEN HERO

The House in Demetrius Road is a remarkable analysis of character, ruthless yet not without fineness of feeling and insight. Robin Greg is a haunting figure, degraded by drink, but possest nevertheless of brilliance and a paradoxical force of character. J. D. Beresford stamps both material and treatment with a striking individuality. Absolutely fearless, he hits from the shoulder, with never a softening for effect.

Harper & Bros. $1.35.

N'YAWK LOVE STORIES

Romance flourishes like a green bay tree even in the infertile soil of the great city, at least to the seeing eye of Fanny Hurst. She ventures *Just Around the Corner* and sketches very human folk with a humorous twist, a genuine democracy and understanding, and an occasional bit of rare imagery. Brevity would have made the stories better yet.

Harpers. $1.35.

NO SUSPENSE HERE

The veriest novice at novel reading could not conjure up a thrill of mystery in *Big Tremaine*, by Marie Van Vorst. The plot—a man falsely accused and sacrificing his life to shield another—has been overworked, yet the book is almost saved by a few good character sketches. Why use such talent to veneer hackneyed material?

Little, Brown. $1.35.

FOR THE LOVER OF OLD FURNITURE

An old-fashioned furniture book that has escaped becoming the usual illustrated descriptive catalog is *The Charm of the Antique*, by Robert and Elizabeth Shackleton. Its literary merit and human touch will appeal to all collectors.

Hearst's International Library. $2.50.

IS INSURANCE AGAINST WAR PRACTICABLE?

BY W. E. UNDERWOOD
INSURANCE EDITOR OF THE INDEPENDENT

IN his essay, *War and Insurance*,* Professor Josiah Royce, of Harvard University, suggests the instrumentality of insurance as one of the hitherto untried mediums of reducing the probabilities of war between nations. The task is "to discover, if we can, methods not yet tried, whereby the wars of the nations may be gradually rendered less destructive and less willful." The greater part of the essay is devoted to a philosophical analysis of human relations, or, as the writer himself modestly observes, to "an account of some of the familiar, but too little heeded, and too ill defined reasons why wars are, despite our civilization, so fatally recurrent incidents of our international life." Out of these studies we are led gradually to the definition of certain principles bearing on the law of war and peace, until finally we have an application of these principles which the author believes to be, and which indubitably are, new. Out of these comes the proposal of a method of furthering the gradual growth and reinforcement of the cause of peace on earth. It is the review of this feature only of Professor Royce's essay that will be undertaken in this article.

I shall endeavor to present as fully as my space permits the salient features of Professor Royce's proposition, as contained in the sixth section of his paper under the heading, "Mutual International Insurance." Commencing with the observation that "No adequate effort has yet been made to further the cause of peace thru the deliberate application of the form of the insurer's community to international business," he sets himself the task of examining that instrumentality of modern intercourse as exprest in an effort at "mutual international insurance against some of the common calamities to which all mankind, or certain large portions of mankind, are subject." He then reduces his proposition to the following form:

"Apply to international relations, gradually and progressively, that principle of insurance which has been found so unexpectedly fruitful and peaceful and powerful and unifying in the life and in the social relations of individual men."

Begin to make visible the community of mankind, he advises; not merely in the form of ambiguous alliances or fragile arbitration treaties, "but in the form of a sufficiently large board of financially expert trustees, whose membership is international, whose services are duly compensated from the funds of the trust, and whose conduct is guided by plainly stated rules which have the substantially unanimous consent of all the nations concerned in the plan of mutual insurance which is in question."

The duties and powers of this international board are to be rigidly restricted, excluding all questions of state, all

THE EYES OF THE WORLD

Harold Bell Wright's Greatest Novel

Illustrations in Colors by F. Graham Cootes

Cloth 12mo $1.35 Net

A Real Love Story with bigger plot and more action, deeper mystery and greater love, sweeter sentiment and stronger passions than any novel the author has yet written. A delightfully wholesome romance among orange groves and mountains of Southern California It is more masterful than "Barbara Worth" and more romantic than "The Shepherd of the Hills." The real charm of the story is its style, color, conception and fancies.

Harold Bell Wright has told this delightful romance so convincingly and has so clearly defined the underlying purpose of the story that it is stamped with the truthfulness of a chapter out of real life. The theme, **"the ministry of art and letters,"** is most opportune for the cause of more wholesome books. "The Eyes of the World" is **Delightfully Wholesome, Stirring in Action and Sweet with Sentiment for Christmas Giving.**

Buffalo Evening News—It is pleasant to commend work that already has created so great an interest in its coming and find that it makes good on the promises of the publisher.

DICKENS PICTURES

A Wonderful Collection of 240 Van Dyke Gravures on French Cream Japan and Plate Paper

Reproductions of the best examples of Cruikshank, Phiz, Barnard, Seymour, Townley and Charles Green, Sir Luke Fildes, Pinwell, W. P. Frith, Leech, Stone, Buss, Mahoney, Maclise and Cattermole.

These gravures are 8½ by 5½ inches, and are suitable for framing or extra illustrating any existing edition of Dickens. Descriptive captions are at the bottom of each plate, and the entire collection is retained and preserved in a neat and artistic portfolio.

Dickens created a world of his own and peopled it with nearly 2000 characters whose faces and forms were moulded by these contemporary artists whose work is collected here. The portraits they drew of Pickwick, the Wellers, Dombey, Nickelby, Captain Cuttle, Little Dorrit, Oliver Twist, Fagin, Quilp and all the host of others are indelibly stamped upon the mind of the world, and will remain forever as dearly loved as the stories themselves.

PRICE $2.50 POSTPAID

With every order received from this advertisement we will send Free one beautiful hand-colored Van Dyke Gravure on French cream Japan paper, a Dickens subject

The assembling of a collection of the originals of these pictures by search throughout the print-shops of the world would mean the expenditure of years of time and hundreds of dollars.

Greece is getting ready to sit on the Ottoman.—*Columbia State.*

Well, anyhow, the war is developing a lot of new names for Pullman cars.—*Washington Post.*

These magnificent promises to the Poles must sound mighty familiar to the colored voter.—*Boston Transcript.*

When Nick promised to treat the Jews just as he treats his other subjects he didn't promise so much after all.—*Houston Chronicle.*

features of politics. But it is to be supreme in its province as the administrator of a vast fund contributed by its members—the subscribing nations. After sketching the organization and outlining a method of procedure, occurs the question: "Against what evils should this mutual international insurance company, when once organized, attempt to insure its clients?" Omitting the evil of war, Professor Royce suggests the following "brief and inadequate list of calamities: 1, destructive earthquakes and volcanic eruptions; 2, certain of the migratory pestilences, and in particular certain of the tropical diseases; 3, some of the destructive storms of the type which follow, in general, known tracks, but strike special localities by chance (such, for instance, as the West India hurricanes and the China Sea typhoons); 4, recurrent famines and great crop failures; 5, marine disasters. (For the ocean exacts a statistically definable toll from the commerce of the whole world.)" Then varying the type he adds: "6, the destruction in war time of the private property belonging to the subjects of unquestionably neutral states."

Professor Royce finally expresses the belief that in time such an organization could insure its members against any of the evils of actual war. Of course, he provides the conditions under which such an undertaking would be entered upon, defining all the duties, obligations, restrictions and privileges of the insured nations. For example, the nation, party to the agreement, proved to have committed the first act of war would thereby void its contract and forfeit its equities. Other safeguards are suggested.

"My thesis is," says Professor Royce, "that whenever insurance of the nations, by the nations, and for the nations begins, it will thenceforth never vanish from the earth, but will begin to make visible to us the holy city of the community of all mankind."

If practicable, such a scheme, properly and fully developed, next to the invention of printing, would be the grandest single beneficence ever inaugurated among men. I would not pronounce it impracticable; but I am afraid it is impracticable. It assumes a degree of altruism highly transcending that which inheres in all the forms of insurance as now practised, and greatly in excess of any demonstrated human capacity.

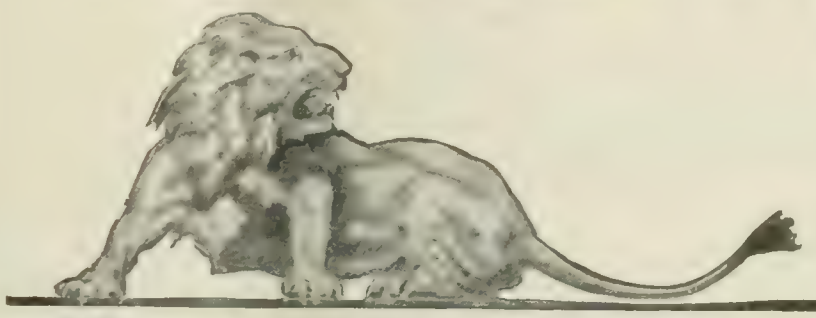
That the money loss of all natural recurrent evils which afflict the human race can be indemnified thru the system of insurance is undeniable. It is wholly a matter of cost. Insurance only distributes losses. It does not restore. The ceased life, the burnt building, have disappeared forever from the world's stock. The losses incurred are irretrievable, and each member of the insured community is, by his proportion of them, so much the poorer.

The persons constituting an insured community are drawn and held together by an identity of interests. That is to say, they unite for protection against dangers to which every one of them is subject. Those who are not exposed to the hazards, or whose for-

tunes are above serious impairment by them, hold aloof and save the expense of a protection they do not need. To use but one illustration, only those whose interests would be injured by fire, seek the protection which insurance against that element affords.

The questions now arise: should the people constituting a nation, occupying a territory immune from destructive earthquakes and volcanic eruptions, contribute money to an international fund devoted to indemnities against such losses? Would they not regard such an expenditure as unbusinesslike? From an insurance viewpoint, would that nation have anything in common with the inhabitants of territories subject to such hazards? To state the matter in another way: Why should a nation purchase protection against the effects of a contingency so remote as is one which in its whole history has never occurred?

Applying these reflections to the proposal Professor Royce makes, we find that many of the evils he mentions are circumscribed as to locality and peculiar to particular peoples. The hazards named are not common to all nations, and so fail to provide the essentials for an equitable scheme of insurance.



Of course, I am proceeding on the assumption that this international scheme of insurance would be founded and operated on approved business principles; that each participant would bear his just share of the entire burden, and no more, and receive his just share of the benefits—no more, no less. If that is true, each nation would buy protection against only such hazards as menace it, saving the expense incident to protection against all others. The contributions of each nation to the fund would be regulated by considerations of that nature. This would result in impairing the effectiveness of the scheme as an international coöperative effort.

Per contra, if the subscribing nations are to waive all these considerations and pay full "premiums" on the "policy" covering all hazards, including those not incurred by some of them, then the enterprise evades the jurisdiction of business customs and attempts to establish itself in the realm of altruism. It becomes an international charity, supported by the stronger and wealthier nations.

Dismissing consideration of localized evils—which do not provide a basis for a world-wide insured community—let us ask: Is war a universal hazard? We must admit that it is; that all nations are within its menace. It may be precipitated at any moment. It can passionately occur without the deliberate direct procurement of a nation. It may be the work of an incendiary, injuring in greater or lesser degree every nation. It is a hazard which provides a sound foundation for an insured community under an agreement uniform in its terms and equitable in its operations. As to its practicability, I can venture no opinion, principally because of the limited number of units constituting it. The results possible of achievement by thousands of individuals may be unattainable by a half hundred nations.

Power of Will

Why is this man master? He is unarmed. The lion has the physical strength to tear him to shreds—his mouth is watering, yet he dares not. He is cowed—cowed by the man's POWER OF WILL.

How to Develop Mental Power.

Anyone Can Have an Indomitable Will

It has long been known that the Will can be trained into wonderful power—like memory, or like any one of the senses—*by intelligent exercise and use.* The trouble with almost everyone is that they do not *use* their wills. They carry out other people's wills, or drift along with circumstances.

If you held your arm in a sling for two years, the muscles would become powerless to lift a feather. That is exactly what happens, in most people, to the faculty we call "will-power." Because we never use the Will, we finally become *unable* to use it. We degenerate into beings little more than slaves—unhappy, discontented, envious, hoping blindly that "some day"—without any effort—we will attain what we most want in life.

"Power of Will," by Frank Channing Haddock, Ph.D., M.S., is a scientific course in Will-Training which has helped over 25,000 people. This great work provides a thorough course in Will-Training, consisting of 28 lessons. It reveals the secrets as to how great men train their wills into wonderful power.

For Master-Men

Master-Men like Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieutenant-Governor McKelvie of Nebraska; General Manager Christeson of Wells-Fargo Express Co.; Asst. Postmaster-General Britt; E. St. Elmo Lewis, formerly of Burroughs Adding Machine Company—and literally thousands of other men of action and ambition like them read, use and praise "Power of Will."

Its readers talk of it as of a Bible. It has made decisive men of actors and the most irresolute "down and outs." It has cured victims of drink and other vices. It has made big men bigger by showing them how to use their brains better. It is a goad to old and young alike. It has re-awakened ambition in men and women who have been turned from their life purposes and shown its students how to carry forward their ambitions into consummation.

Is YOUR will Dormant?

Look back upon your life. Once upon a time, no doubt, you created great visions of what you were going to make of yourself. [illegible] Why are they not accomplished? Is it not because you failed to develop strong, powerful, determining, indomitable WILL? You have allowed it to control and influence you to their ends, instead of controlling others

What Readers Say

"The first thing I happened upon when I opened this book was 'Some diseases of the Imagination' and I tell you that chapter alone is worth ten times the price of the book. I wish such a volume had come into my possession 25 years ago." *Thos. O'Connor, 276 Precita Ave., San Francisco.*

"It is the greatest book I ever looked into. The testimonials regarding it are inadequate as to its merits. It has startled me already—though I have read only a few chapters." *Rev. A. Talbot, Beaumaster, Ohio.*

"One of the greatest books ever written." *Jno. H. Beacock, Sault Ste. Marie, Ont., Canada.*

"If you had all the correspondence courses on the market and if you studied them for ten years you could not succeed in mastering the system discovered and laid bare by this twentieth century Genius." *Wm. W. Long, Colorado Springs, Colo.*

"The book backs up every statement and claim made in your advertising." *J. Mercein, 150 Broadway Corporation, Inc.*

"I find that this book is really more than you claim it to be and I consider that I have received a bargain." *H. K. Fenton, Gordon & Ferguson, Trust Co. of New York.*

"I shall not call this a 'book'—but a 'universal key to the latent talents of the human mind.'" *W. E. Benson, Publication Accountant, Hamilton Bank Building, New York City.*

YA-LI

BY AMOS P. WILDER

FORMERLY CONSULAR AT HONG KONG AND SHANGHAI

Like the strange animal that used to be seen in the Deer Park south of Peking and known as ssŭ-pu-hsiang, "the four unlikes," is the institution found almost at the geographic center of China, locally called Ya-li—a Chinese attempt to pronounce Yale. It is like a regular missionary college in that its faculty is strongly Christian and the underlying objective is in keeping with that of all missionary colleges of the Republic. Yet it also has its "four-unlikes" which differentiate it from similar institutions of Asia.

It differs from others in its genesis. It was founded twelve years ago to demonstrate the possibility of enlisting in a foreign altruistic service the students and graduates of a single university, in the hope that besides benefiting physically, educationally and religiously a great people, it might likewise implant in Yale the missionary spirit more intelligently and practically than that spirit exists in other institutions. It has succeeded in this effort and has attracted into the same line of activity Harvard, Princeton, the Universities of Pennsylvania and Michigan, each of which has its foreign educational institutions, largely because of Yale's initiative and object lesson.

It is unlike most missionary organizations in the emphasis which it places upon brotherhood. Its missionaries are not in China to lord it over a group of rather submissive Chinese assistants, but rather to face China's varied tasks, and after understanding them and the Chinese, to join forces with selected men to aid in serving a great nation in a time when all things are becoming new. Its practise is to place any Chinese trained in the United States on the same footing as Americans as to salary, various allowances and status in the college. Its less trained Chinese teachers are likewise made to feel that they are part of the brotherhood with the privilege of exemplifying that spirit. That it is appreciated is evident from the attitude of the province in which the college is located, and from the cordial protection given the institution at the time of riots and during the Revolution.

Its emphasis of brotherly coöperation has attracted to it eminent men, including the President of the Republic and the Governors of the Province of Hunan, who are just about to unite with Yale's Medical Department in an important medical educational enterprise conducted mainly by Chinese funds from sources indicated. It has made members of the faculty influential in the development of forward educational and philanthropic movements, and in every way China's Yale is appreciated as an exemplification of international and Christian unity—the college serves all Hunan missionary societies as their common center for higher education.

It is also unlike other missionary enterprises in the subtle something which is known in America as the Yale spirit and which it imparts to its students and

You Can Weigh Exactly What You Should

You can I know it, because I have reduced 32,000 women and have built up as many more—scientifically, naturally, without drugs, in the privacy of their own rooms; I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 88 lbs. less and I have gained wonderfully in strength." *Another says:* Last May I weighed 100 lbs., this May I weigh 126, and Oh! I feel *so well.*

its community. Service and dogged perseverance in all that is manly and broad minded are its chief manifestations thus far; and a student of Ya-li bears these fine marks as the ornaments which adorn his Yale democracy and his thoro training. One would go far to find a more inspiriting piece of reading than the eighth annual report of the collegiate and medical departments of this college. It is prophetic of an institution which will one day be to China all that Yale has meant to North America for more than two centuries.

WALTER L. WILLIAMSON
LISBON NORTH DAKOTA

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,208,429 80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

THE MARKET PLACE

THE CANADIAN GOVERNMENT AND WAR-TIME SHIPMENTS OF GRAIN

BY EDWARD PORRITT

Mr. Porritt is an English-born journalist and historical writer of long experience. His books include several titles on Canadian and British politics and a study of "Sixty Years of Protection in Canada."—THE EDITOR.

Should the war be prolonged into next year and supplies of wheat and oats in the British Islands run short, the Government of the Dominion of Canada is in a magnificent position to afford help in buying and storing grain and in transporting it to Montreal, Quebec, Halifax and St. John. It is in this strategic position owing to five or six helpful conditions, none of which was developed in anticipation of a great war. To begin with, there were more than fourteen million acres under grain in 1914 in the provinces of Manitoba, Saskatchewan and Alberta, exclusive of the area in Ontario and Quebec that was this year under oats. The Dominion government owns and operates the Intercolonial Railway—the line that connects Montreal with Sydney, Halifax, St. John and the other ports of the Maritime Provinces—over which much grain from the west can be shipped when the St. Lawrence ports are closed by ice. In the next place, in the grain year 1914-1915—the year that began on September 1st, when new grain began to come down the lakes from Port Arthur and Fort William to Montreal—of the elevator capacity on the national grain route from the prairie provinces to the seaboard, in all 154,765,000 bushels, nearly one-quarter was directly or indirectly controlled by the government at Ottawa, or by the governments of Manitoba, Saskatchewan and Alberta, which are working in close association with the Dominion government, in meeting the many problems with which the war has so suddenly confronted the largest and most important of Great Britain's oversea possessions.

Inestimable as is the value to the Dominion, at this crisis in the history of the British empire, of the ownership or control of 460 elevators in the west and at grain transfer or shipping points in eastern Canada, this is by no means the whole of the advantage enjoyed by the Canadian government. Since 1912 it has had power, which it can exercize by order-in-council, to take over any grain elevator anywhere in Canada—to take over its staff, and to operate the elevator as a public utility. Moreover, since 1912—the year when the government at Ottawa first embarked in the grain handling business west of the Great Lakes—the Canada grain commission has been organized and established at Fort William, with important and well-staffed outposts at Winnipeg, Moose Jaw, and Calgary.

The Canada grain commission, like the railway commission, can exercize quite wide powers. It is equally democratic in its procedure. It is an open court for all grain growers and grain merchants; and in the country beyond the Great Lakes, where everything depends on the grain crop and the grain trade, the grain commission is quite as much trusted and quite as much respected as the railway commission. Its functions are the supervision of all departments of the grain trade. At this crisis it has a new and unexpected importance for the Dominion and for the Empire; for at Fort William, Winnipeg, Moose Jaw and Calgary it has large staffs of exceptionally well-trained grain experts. These officials of the government, working under the Canada grain commission, which in its turn is a subdivision of the department of trade and commerce, are also thoroly familiar with rail, lake, canal and ocean transport; and if need be, these men, or as many of them as conditions may demand, can be drafted into an emergency corps, to purchase grain—oats for horses, wheat for the people of England or of Canada—and superintend its transportation to tidewater at Montreal, Quebec, Halifax and St. John.

Three transcontinental railways—the Canadian Pacific, the Canadian Northern, and the Grand Trunk Pacific—now carry grain from Alberta, Saskatchewan and Manitoba to the twenty-three elevators at Fort William and Port Arthur, elevators of which the aggregate storage capacity is forty-two and a half million bushels. Grain is received at 1189 stations on the C. P. R., the C. N. and the G. T. P. in the three grain-growing provinces, for shipment to Fort William and Port Arthur; and at 444 of these stations there are country elevators of a capacity of from 20,000 to 45,000 bushels that are owned or controlled by the governments at Winnipeg, Regina and Edmonton.

Government ownership in Saskatchewan and Alberta has been a distinct success. It has ended many grievances of which grain growers had continuously complained since as far back as 1887, when the prairies first became studded with country elevators to which the grain growers draw their crop.

Government ownership of both country and terminal elevators is extremely popular with grain growers in the

prairie provinces. The grain growers' associations, which have an aggregate membership of 42,000, have been working continuously for government ownership and operation of these public utilities since 1901. There was a demand for the enlargement of the government elevator at Port Arthur before the outbreak of war. With the first shipment down the lakes of oats for British army horses—a shipment that went from the government elevator under the supervision of the staff of the Canada grain commission—the demand for the enlargement of the elevator was revived; and before the next grain year opens in September, 1915, the storage capacity of the first of the Dominion government elevators west of the lakes will be brought up to seven million bushels.

The Dominion government elevator at Port Colborne is at present of two million bushels' capacity. There are three great elevators at Montreal — one owned by the G. T. R.; and two owned and operated by the harbor commissioners, who are nominated by the Dominion government, and whose loans for port improvement and port equipment since 1886 have been obtained thru the treasury department at Ottawa. At no port in the old or the new world are there elevators that can be compared with those of the harbor commissioners of Montreal.

At Quebec, where the harbor commissioners are also nominated by the Dominion government, there is a quite new elevator of one million bushels' capacity, which went into service at the opening of navigation on the St. Lawrence last April. The relations of the harbor commissioners at Quebec with the Dominion government are similar to those of the Montreal commission; so that the Dominion government can at any moment be in as complete control of the two elevators at Montreal, and of the new elevator at Quebec, as it is of those at Port Arthur and Port Colborne, or of those at Halifax and St. John, each of which are of the equipment of the Intercolonial Railway at these Maritime Province ports.

At the outbreak of the war the Ottawa government was thus in direct or indirect control of seven elevators—five of them of the most modern construction and equipment; and all built since 1904. There were also in building west of the Great Lakes, when Germany declared war on Great Britain, three great storage elevators and two tidewater port elevators for the Dominion government, to be operated by the Canada grain commission.

It was the persistent and well-organized agitation of the grain growers' associations from 1906 to 1912 that compelled both the Laurier and the Borden government to commit themselves to the ownership and operation of storage, terminal and port elevators in the prairie provinces and in British Columbia.

All over the Dominion there is an intense feeling of satisfaction that the Ottawa government controls so much of the elaborate machinery of the grain trade.

Hartford, Connecticut

STEINWAY

AFTER three-score years and one the Steinway today is unexcelled for exquisite tone and singing quality—recognized by master musicians and music lovers as the ideal piano. The enduring fame of the Steinway rests upon the supremacy of its basic principles. Four succeeding generations of pianoforte experts have faithfully adhered to these principles, and have made the Steinway the standard of piano perfection. Purchase a Steinway for your home and you have the assurance that money cannot buy a better piano.

If you are about to buy a piano, you will be interested in our literature. It will be sent free with name of Steinway dealer nearest you. Mention this magazine.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity bond issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

IN THE CHAUTAUQUA FIELD

The Chautauqua Association of Pennsylvania, which conducts week long Circuit Chautauquas in eastern states during the summer, has put on a series of three-day Chautauquas, called Festivals, runing from the middle of October to the middle of December. These are provided for the smaller communities where a week's program may be too expensive. Three festivals will be in operation at the same time in as many different localities.

Most Circles of Chautauqua Course readers still have the habit of meeting at the homes of the members. Current reports, however, indicate an increasing use of the public library and the modernized school building for Circle meetings. Obviously the parents and teachers Chautauqua Circle may fitly demonstrate one of the practicable "wider uses of the school plant" as a social center. A California Circle, by the way, meets in the rooms of the Chamber of Commerce.

Programs of the Brooklyn Institute of Arts and Sciences and the Columbia University Institute of Arts and Sciences for this winter season contain many names of persons identified with the popular educational work of Chautauqua Institution. Both programs announce courses of lectures by Earl Barnes, head of the Chautauqua Summer School of Pedagogy; literary courses by Richard Burton, Stockton Axson, Leon H. Vincent; interpretative readings by Bertha Kunz Baker; story telling by Mabel C. Bragg; sculpture, Lorado Taft. The Columbia Institute list also announces President George E. Vincent, Professor F. J. E. Woodbridge and Francis Wilson. Other Chautauquan names on the Brooklyn Institute list include: Edward Howard Griggs, I. B. Stoughton Holborn, Bliss Perry, Mr. and Mrs. Walter L. Hervey, Thomas Whitney Surette, Jerome H. Raymond, Anna Barrows, Clara Z. Moore, Vida Sutton, Anne E. George.

In college extension work Pennsylvania State College now offers lectures and entertainments to organizations of every kind in the state devoted to public education and social improvement. The regular teaching and experimental force of the college is available; a large number of illustrated lectures is offered. Single addresses may be secured at the cost of traveling expenses where no admission fee is charged. Series of lectures on special topics or mixed courses of popular character may be secured. This division of extension work "seeks to meet what is believed to be a growing demand for more serious lectures and entertainments—those that are really worth while. Thru its staff of teachers it aims to bring to the public attention the latest word in scientific investigation, in literary criticism, in public service and in the practical affairs of life." President Edwin Erle Sparks is a Chautauquan of long standing, well known to Chautauqua audiences and a popular author of Chautauqua Home Reading Course material.

THE PUBLIC BUSINESS

Following a referendum vote of two to one in favor of the plan, Maine is now to have a State Public Utilities Board.

Colorado has no state health department. The Colorado Medical Society has begun an active campaign for a law establishing one.

The Park Department of Brooklyn, New York, has offered to plant free and take care of street trees for any property owner who desires them.

Baltimore, Maryland, city officials claim that they are breaking all records in road building. The city is improving streets at the rate of a mile a day.

The city of Newark, New Jersey, is spending $2,000,000 on reclaiming its marshes and building a ship channel, docks, piers and a railroad distributing system.

Salt Lake City, in connection with the University of Utah and the United States Bureau of Mines, is to make a systematic investigation of the smoke nuisance in that city.

Wilmington, Delaware, is considering the establishment of a municipal coal yard to sell fuel to the poor at cost during the winter. Coal has been distributed by the city for some years past.

A committee of one hundred, representing all the important business and social organizations, is preparing a new city charter for Springfield, Massachusetts. All previous plans for charter making have failed because of factional disputes.

San Francisco has filed plans for its proposed twenty-eight new municipal street railroads, which are to cost $9,000,000. Approximately eighty-nine miles of lines are to be built. The municipally owned roads already in operation are proving to be very profitable.

New York City is to have the first real exhibition of modern street cleaning and refuse disposal methods. Every phase and method of cleaning, collection and disposal will be demonstrated to the citizens in order to explain the possibilities of the recent appropriation of $250,000 by the city for modern cleaning of a "model district."

Joseph Hartigan, Commissioner of Weights and Measures of New York City and secretary to Mayor Mitchel's Committee on Food Supply, has developed and proposed a plan for the establishing of a city department of commerce under a separate commissioner and administrative staff. The plan means practically the municipalization of work at present done in almost every town in the country by the local boards of trade and chambers of commerce. Among the many functions of the proposed department would be the compilation of commerce statistics; maintaining a bureau of information for manufacturers, dealers and consumers and a press bureau for attracting trade to New York; developing profitable relations between railroads and shippers and encouraging farmers. It will cooperate with existing commercial organizations of the city.

JUST A WORD

A LITTLE TRAGEDY IN FRANCE

The old woman was busy feeding her chickens as we rode up. "You must come, *vite, tante*," says the officer in charge of the rounding-up party. "We will give you a lift."

"But I cannot leave my pullets," says the old countrywoman, aghast. "They will starve."

"You must come, *tante*," repeats the officer, inflexibly. "I am sorry for you, *ma mère;* but this bitter time we must make sacrifices. Get your clothes, old lady. We cannot wait now." . . . .

But the old woman backs up against the coop and fiddles a moment behind her with her left hand. Abruptly she has the door open, and with a movement wonderfully quick for so old a body she steps inside, among her beloved poultry, and slams to the wire-covered door. . . .

The officer looks at me and laughs gently, yet with a queer little look of unexpected understanding in his eyes. "Ah, Monsieur," he whispers, "the poor old body! It breaks their hearts. But how many hearts are breaking these days! I have seen them thus many times these last days."

Then he dismounts and goes forward himself to the coop. He does his best to persuade the old woman to listen to reason and come out; but she is too old and too frightened and too rooted to year-long customs and habits.

"No, no! I will not come. My pullets —they will starve," she says, reiterating endlessly.

"But the Germans will come, *ma mere*," he says, patiently. "They will kill your pullets and eat them."

"Never!" screams the old woman. . . .

She stands in there, backed rigidly against the far side of the coop, with the chickens crowding away into the corners, cackling uneasily. Outside the officer stands, silent; for he has ceased to expostulate. The sergeant, a big, black-bearded man, is crying quite frankly, and I see that several of the other men are in tears. It is an extraordinary moment, but I am getting used here to seeing these Frenchmen show emotion like a woman one hour and fight like the incarnate spirit of war the next. I comprehend their tears, tho I am very far from tears myself only full of a great pity for the old woman. . . . . .

The officer turns quietly and says three brief words to the sergeant. The sergeant and two of the men step forward and around the front and sides of the coop. There is a sudden crashing of woodwork, and the coop is torn apart. Then—an old woman screaming wildly, insanely, and a vast fluttering and clucking of outraged chickenhood!

They lift the old woman, fighting and kicking, out of the ruins of the coop, and the soldiers catch the chickens as they come soaring and clucking out in all directions.

The sergeant and his helper take the old woman into her little house, and there, I presume, help her to pack, for a few minutes later she comes out, very white-faced and rigid, carrying a small bird cage and a clock, while the sergeant carries a bundle on his broad back, tied up in a bed quilt.

The old woman is not allowed to pass near the coop, but is taken to the rear and put aboard a light wagon along with a number of other unfortunates.

The sergeant comes back and the officer whispers something to him, and I notice that he passes him a couple of twenty-franc pieces.

The big sergeant mutters something, nodding toward the disrupted coop, and after a moment the officer nods.

"Very well, Jean," he says. "Just one, but no more. We can't cart all the live stock on the countryside!"

Five minutes later we were ready to move on, and I went to the rear to see one of the loaded wagons start off to the southward. In the tail end of it the old woman sat upon her big bundle, done up in the old bed quilt. In one hand was her bird cage. The other was gripped on (I doubt not) the lieutenant's two gold pieces. In her lap reposed snugly two things—her clock and one of her hens, which I guessed the big black-bearded sergeant had begged for her.

The wagon went away to the southward, and we moved forward on our errand of mercy and pain; for we had to see that all the country for a certain area was empty of non-combatants.—New York *Times*.

WHAT BOMBARDMENT MEANS

When I saw it for the first and last time it was a place of death and horror. The streets thru which we past were utterly deserted and wrecked from end to end, as tho by an earthquake. Incessant explosions of shell fire crashed down upon the walls, which still stood. Great gashes opened in the walls, which then toppled and fell. A roof came tumbling down with an appalling clatter. Like a house of cards blown by a puff of wind, a little shop suddenly collapsed into a mass of ruins. Here and there, further into the town, we saw living figures. They ran swiftly for a moment, and then disappeared into dark caverns under toppling porticos. They were Belgian soldiers.—New York *Times*.

COMMENDED TO HISTORIANS

Reuter's Petrograd correspondent says that in the recent fighting near Przemysl two generals reported to their commander, the Bulgarian general, Dimitrieff, commanding the Russian forces about the fortress, that they were unable to hold out longer in certain positions because the enemy was in overwhelming numbers.

According to the correspondent General Dimitrieff replied:

"Don't count the enemy. Beat him."—New York *Sun*.

THE GROWING THREAT AGAINST LONDON

AT FRIEDRICHSHAFEN, DUSSELDORF, COLMAR, AND BERLIN GREATER AND GREATER ZEPPELINS ARE BEING RUSHED TO COMPLETION. THE GERMAN GENERAL STAFF IS WORKING TO BRING THE FLEET TO A TOTAL OF 100. "TO LONDON!" IS THE CRY WHEN A NEW DIRIGIBLE IS LAUNCHED

The Independent

VOLUME 80 MONDAY, NOVEMBER 9, 1914 NUMBER 3439

ENTER THE TURK

A NEW scene in the great drama of the war is opened by the entrance of the Sublime Porte on the stage. The first blow is struck at the same point where just sixty years ago England, France and Turkey joined forces for an attack upon Russia. But England later realized that she had made a mistake in allying herself with decrepit Turkey instead of young and rising Russia. "In the Crimean War," said Lord Salisbury to Parliament, "we put our money on the wrong horse." If he were now living he would probably confess with equal frankness two later blunders in British policy for which he was personally responsible. One was when he ceded Heligoland to Germany in exchange for Zanzibar and so unwittingly gave her a naval and airship base within striking distance of London. The other was in 1878 when at the Congress of Berlin he made that unfortunate proposal that Bosnia and Herzegovina should be placed under Austrian control. It was of course anticipated even at the time that the two provinces would, like the other Balkan states, eventually sever their nominal connection with the Sultan and would become part of the Austrian empire. This final stage in the process of annexation was, however, postponed until 1908, and then it was too late to be accomplished peaceably. The puppet principalities had been created by the powers with little regard for geographical or ethnographical conditions, merely for the purpose of serving as a temporary stage in the transition from Moslem to Christian ownership. But once in existence these artificial nationalities surprized their makers by showing signs of independent life. They developed not only a nationalistic spirit but imperialistic aspirations. Each wanted to annex all of the circumjacent territory which contained members of its race or had been at any time in history under its domination. Obviously the Balkan peninsula was all too small for a Greater Servia, a Greater Bulgaria, a Greater Rumania and a Greater Greece to exist simultaneously. These conflicting ambitions, involving as they did the interests of the Greater Powers, threatened at any moment to start a conflagration that would sweep over all Europe, and everybody felt nervous when he heard the annual warning "there'll be trouble in the Balkans in the spring."

THE long impending peril was precipitated on October 3, 1908, which future historians are likely to take as the beginning of the Great War. On that date the Emperor of Austria announced his intention of formally annexing Bosnia and Herzegovina. Two days later Prince Ferdinand of Bulgaria threw off the last semblance of the Sultan's sovereignty and proclaimed himself Czar. Two days after that Crete declared its independence of Turkey and its union with Greece. Great Britain, France and Russia protested at the action of Austria as a violation of the Treaty of Berlin, but when the Kaiser in his characteristic grandiloquent phrase declared that Germania "stood with shining armor by the side of her ally" they acquiesced in the accomplished fact.

The European war had been again postponed, but the Triple Entente was now definitely aligned against Germany and Austria and all the powers began actively to prepare for the general conflict which seemed inevitable but which the swift march of events brought about sooner than was anticipated. The capture of Constantinople by the Young Turks, the deposition of Sultan Abdul Hamid and the revolt in Albania revealed the weakness of the Ottoman empire, and in the fall of 1911 Italy, with the tacit approval of the Entente and in opposition to the wishes of her nominal allies, Germany and Austria, carried out her long cherished ambition of an African empire by the conquest of Tripoli. On October 15, 1912, by the Treaty of Lausanne the war between Italy and Turkey was brought to a close and two days later war against Turkey was declared by Bulgaria, Greece, Servia and Montenegro.

THAT war was not over when a second war broke out between the Balkan states over the division of the spoils. This time Rumania, at the instigation of Russia, entered in and took a slice of Bulgarian territory. The intervention of Austria and Germany deprived Servia of her coveted port on the Adriatic and if King Nicholas of Montenegro had not surrendered Skutari within three weeks after he had captured it, Russia and Austria would have been at war and Germany, France and England drawn in as now. The irreconcilable opposition between the Alliance and the Entente had become clearer than ever, but the evil day had been once more and for the last time postponed.

The Serbs had tripled their territory, but were more incensed against Austria-Hungary than before and renewed the agitation for the purpose of wresting Bosnia and Herzegovina from the Dual Monarchy. This movement culminated in the assassination of the Austrian Crown Prince by a Servian youth in the capital of Bosnia and this time there was no holding back the flood of war.

The Balkan wars had the effect of bringing Turkey to regard Germany and Austria as her only friends, but at the same time the poor showing made by the Turkish troops and fortifications had impaired German prestige in the eyes of Europe, for the Turkish army had been trained and her defenses planned by German officers under the personal direction of General von der Goltz, now military governor of Belgium. The French were

encouraged to believe that now they were a match for their antagonist because it appeared that their artillery as used by the Balkan states was superior to the Krupp guns used by the Turks.

The Kaiser has in recent years embraced every opportunity to pose as the protector of Turkey and of Mohammedans under British domination in Egypt and India and under French in Algeria and Morocco. It was in Asiatic Turkey that he saw the fairest hope of German commerce and colonization. The Bagdad railroad concession gave the Germans access to the rich lands and mines of Anatolia, the port of Alexandretta and the Mesopotamian valley, which under irrigation promises again to become as prosperous as in the days of Babylon and Nineveh. But Great Britain and Russia thwarted these plans by virtually dividing Persia between them and so barring the way to the Persian Gulf. This leaves the Bagdad railroad to end in the desert instead of gaining an outlet on the Indian Ocean or forming a link in a grand trunk route from Constantinople to Delhi.

Since Russia has contributed to the war more soldiers than all the rest put together and has made such effective use of them the Allies could hardly in case of victory interfere with her cherished ambition for an open port to the south. "The path to Constantinople lies thru Vienna" is an old Russian proverb and the soldiers of the Czar are making good progress along that road. Evidently the Turks thought that they were bound to lose anyway if Germany was defeated and that by taking an active part in the war they would at least be in a better position to make terms than if they remained neutral.

The United States is particularly interested in this decision of the Turkish Government, not so much because of any large commercial relations, but because we have undertaken a religious and educational reform for the empire. The flood of Armenians and Syrians in this country are the outcome of our schools. Our missions are spread over all Asia Minor and Syria. We have planted a dozen large schools and colleges in Turkey, of which two, Robert College in Constantinople and the Syrian Protestant College in Beirut, may properly be called universities. War may endanger even the life of hundreds of Americans in Turkey, and the maintenance of their beneficent activities, for it would not be surprizing if a wave of murderous passion should sweep over the country, such a holy war as the Mohammedan religion has often excited against infidels. The Armenian massacres are too fresh in memory to be forgotten. A few weeks ago our Ambassador at Constantinople asked President Wilson to send a vessel of war to the neighborhood for the protection of American interests, and two vessels have been put at no great distance from the Turkish coast, but they are for moral effect at the Porte and will not be known of in the interior.

The only danger we see as yet for America to be involved in this general war comes from possible complications in Turkey. To send a cruiser to another country for the protection of our citizens may at times be necessary, but there is a peril in it. It seemed to threaten war with Mexico when we sent a fleet to Vera Cruz. We have sent our navy to Haiti to protect American interests, and it would easily mean war if Haiti were not so inconsiderable a nation. Turkey might resent our interference and resist or even declare war, which might involve us in the universal struggle. We shall not make war with Turkey, but even President Wilson could not keep the peace if Turkey should open war on us. Germany, however, is not likely to allow Turkey to commit so insane an act.

Christian America may confidently expect that President Wilson will aim for peaceful protection of our Presbyterian educational and religious institutions in Syria, and those of Congregationalists in Constantinople and Asia Minor. We want a watchful yet not ineffective inactivity.

WANTED: A NEW ORIENTAL POLICY

NOW that Mr. Roosevelt and other lesser Americans are urging upon the country a universal military service and a great and ever greater navy to hit the enemy "and not softly," it is refreshing to learn that there is one great power which is willing here and now amidst war's alarums to limit armaments.

The East and West News Bureau has just received a cable from Tokyo announcing that Japan is not going to build any new battleships this year. This is news indeed, and should do much to dispel in yellow circles the Japanese War Scare bogey.

Still this encouraging action of the Japanese Government does not make less serious the unsettled difference which Japan has with this country growing out of California's unfriendly discrimination against Japanese citizens. From the full text of the correspondence between the two countries over California's anti-alien legislation it appears that in this matter President Wilson may have to face what will prove the supreme test of his statesmanship.

The Japanese Government not only claims that the Webb bill is unfair, discriminatory and unconstitutional, but insists that the United States assume full responsibility for California's action. Her comprehensive argument is presented with a cogency that to our mind is irrefutable.

Mr. Bryan makes no attempt at any detailed rejoinder, but enters a general denial of the unfriendliness of the American people toward Japan. He suggests that if Japan feels she has been deprived of any rights guaranteed under the existing treaty she can appeal to the American courts. This answer naturally is unsatisfactory to Japan. She declines to continue the attempt to negotiate with us a new treaty and asks Mr. Bryan to revert to the further exchange of notes "hoping that in a renewal of the study of the case a fundamental solution of the question at issue may happily be found."

Thus the case stands. What is to be done? We have given at length our opinion of the solution of the question in The Independent of November 6, 1913. We see no reason now to modify our views then exprest that we should permit the Japanese to own land in this country pending the granting to them of full rights of naturalization.

Now, however, we prefer to raise the larger aspect of the case. It is clear that the time has now come for the United States to proclaim a new Oriental policy. If the Pacific Ocean is to be the theater of the world's future civilization then there is no nation on the face of the globe whose friendship deserves more assiduous cultivation on our part than Japan's. The

failure of the United States to hold Japan's friendship means a growing distrust of us which might unfortunately rise to indignation and enmity.

That will mean the increasing armament of Asia, for China will side with Japan in any vital issue between the white and yellow races. But as Asia arms, we shall be increasingly suspicious and afraid of her and shall increase our own armament for protection. Thus East and West will enter upon a vicious armament rivalry whose logical end is either bankruptcy or war.

When will our statesmen and leaders of public opinion learn that such disgraceful disregard of the consequences of our actions as now characterize our Oriental policy will in time involve us in serious international complications? The Orient is awakening. Let us show ourselves the friends of Japan and China and in so doing promote both their welfare and our own. Has Europe no lesson for us now?

HOW TO READ WAR NEWS

THE American people have suddenly been summonned to serve on a grand jury in the greatest case in the world and are having thrust upon them several times a day voluminous folios of most conflicting evidence. Whether as the only important neutral power in the world they will ever be called upon to render a verdict on the causes or conduct of the war, they naturally have an intense desire to get a correct knowledge of the great events of which they are the witnesses. The average American started in at the task with the best of intentions, reading diligently several pages of "war news" in his favorite daily and perhaps buying two or three "special extras" besides. He began reading this contemporary history of the war with that unconscious confidence which he had, in spite of his ostensible skepticism, always placed in newspapers. But he soon found himself baffled by unsuspected obstacles. He was accustomed to the conflicting reports of a political campaign. He could make allowances for wild rumors and confused detail in the case of a "Titanic" disaster or a San Francisco earthquake. But here was something different, the deliberate suppression and intentional falsification of news by the highest authorities. He was slow to realize that lying is, like arson, burglary, mayhem and manslaughter, one of the crimes that in wartime are regarded as pardonable or praiseworthy. He felt then the embarrassment of the historian who from just such crude material as this has to extract a correct and coherent narrative of events.

This news is mostly from the following sources: First, the official statements given out every day by the various governments, generally correct as to facts but often misleading by inference. Second, the expansion and commentary of these texts by the various hands thru which it passes, sometimes expert, sometimes absurdly incompetent. Third, the reports of such few correspondents as have been permitted to get near the front in France and Belgium, usually censored and dealing with minor engagements and personal experiences. Fourth, information gathered from conversations with fugitives, wounded soldiers, unwary officers and the people of a place; the source of the wildest rumors as well as the most picturesque details. Fifth, the stories of returning Americans, uncensored but telling little except about the condition of the country where they were. The news from all these sources is bandied about from country to country, amplified, condensed, combined and re-echoed so that often the same event appears at different times in half a dozen distorted forms.

Fortunately our dailies are much more careful, since the war began, to put the correct date and place on their news than they used to be. The discreditable custom of faking cablegrams out of foreign newspaper clippings is in abeyance, and let us hope, abandoned. If we should classify the sources of the news according to their presumptive reliability we should arrange them in this order: Berlin, Paris, London, Petrograd, Vienna, Nish, Rome. That the dispatches which come direct from Berlin by wireless thru the Sayville station contain fewer canards than the news from elsewhere is partly due to the fact that they are so scanty. They consist of a few brief statements of things actually accomplished and these have generally been verified later. The chief exception is the claim that when the Germans in East Prussia defeated the Russians August 30 they took 70,000 prisoners. This is still disputed. The truth of the Berlin wireless that Maubeuge was captured on September 7 is generally accepted, altho according to the London papers the French Minister of War several days after that date sent messages of congratulation to the heroic garrison of Maubeuge and promised speedy relief. As late as September 27 the French Government had not conceded the loss of the city.

The censorship in England is more strict than that in France or Russia and the English papers are loud in their complaints that they are not allowed to reprint what has already appeared in the French and Russian journals. During the first weeks of the war the English people were led to believe that their troops on the continent were offering a stedfast resistance to the advance of the Germans and the first inkling of the fact that they had suffered a continuous defeat was given in a letter from the *Times* correspondent at Amiens. Premier Asquith denounced the publication of this in Parliament and threatened official action, but the *Times* was able to show that the letter had been approved by the head of the censorship board, Mr. F. E. Smith, who had himself amplified it and urged its publication. Even the official reports from the continent are not to be relied upon if they come thru London. For instance, an official message of September 10 from General von Stein claiming a successful engagement on the Marne was altered in London to an admission of defeat.

We hear very little from the Austrian side about the fighting in Galicia, but from the Russian capital we get long and circumstantial accounts of a series of Russian victories which presumably are no more accurate than the news that used to come to us from the same source during the Russo-Japanese war. We learned how little we could trust Servian statements from the investigation of the Balkan war by the Carnegie Commission. The custom of the Serbs to claim the killing of ten thousand Austrians in every battle does not inspire confidence. Rome emanates or disseminates extravagant stories of all sorts.

No one can understand military movements without constant reference to a map. History is animated geography and it is often more important to know where an event took place than when. Since the official statements

are apt to be misleading even when perfectly truthful the only way to get at their real significance is to plot the movements on the map. Thus we sometimes see that the implication of the dispatch or of the headlines put over it was altogether false. We did not know that the Germans had got beyond Paris until the French reported their own victories south of the Marne. The first we learned of the rapid advance of the German left was an accidental reference in a French cable to the Germans "passing Rheims." The reader of German papers must still be puzzled to understand why the "Ever-Victorious Army" of the Kaiser refrained from entering Paris when it got to the gates. We had no reason to suspect that the Germans had occupied half Poland until Petrograd announced their defeat "eight miles from Warsaw." Of course not every retirement is a defeat, but it may be assumed that an army does not yield ground unless it has to, so the reader who patiently sticks his colored-headed pins into the map day by day according to such clues as he can gather from the cables will have the best idea of the ebb and flow of the campaign.

AN OLD TRADING PORT

THE people of the town where we live have been making a big fuss over themselves. For a week they have had processions and pageants and speeches and sermons in honor of their own greatness. The streets are arched with many colored lights and the buildings hung with bunting. The occasion of it all is that three hundred years ago the United Netherlands gave to the New Netherlands a trading charter. A Dutch letter of the times tells how the town site was purchased: "Our people . . . have bought the island Manhattes from the wild men for the value of sixty guilders." This amount, some $24, was a fair price as real estate values ran then, and if the property is worth more today it is due entirely to the fact that the people who came to live on it knew how to make better use of it than the wild men. The island has not grown much since 1614 and the soil is not so good, having been clogged up by asphalt and cobblestones on top and burrowed out underneath.

But somehow New York has managed to become in the course of three centuries the largest city in the world if you permit us to count in adjacent New Jersey. It is the greatest seaport in the world. Next to it before the war came Hamburg, and third Antwerp, fourth Rotterdam and fifth London. Nobody knows what will be the relative rank of these ports after the war, but if we keep out of it, New York will still be in the lead.

There has been much speculation as to why New York got ahead of its rivals in international commerce. The German geographers have gone into the question very thoroly since Germany started into the business of building big ports of her own and have come to the conclusion that the natural advantages of its position do not altogether account for New York's prosperity, but that it is due largely to the hospitality and liberal mindedness of its people. Boston under the Puritans and Philadelphia under the Quakers were rather particular whom they took in. They wanted no undesirable citizens. New York, on the other hand, welcomed all comers without regard to race, religion or character. Seafaring men from all countries, pirates and adventurers, the refugees and outcasts of other and more select cities here found a welcome. In the early days there were said to have been eighteen languages spoken in the settlement. There are more languages than that spoken here now.

Rival cities have said for the last thirty years that such indiscriminate hospitality would be the ruin of the place. But somehow it hasn't, yet. On the contrary each of these foreign elements has been a channel thru which commerce has flowed to a different part of the world, has added a thread to the radiating network of influence. If we had excluded any one of them we should have lost something. Hospitality as an urban policy has demonstrably paid. It is not every virtue of which as much can be said. That's why we say it.

I SAW A SHIP COME SAILING IN

WHEREVER Christmas is kept little children have held precious the legendary vehicle of delightful things—the sleigh of Santa and the stockings by the chimney, the three ships a-sailing in thru the lines of the quaint old song. Today, while so much responsibility for maintaining the Christmas spirit seems to rest on the one great nation where peace and good will are not cruelly shattered, we have the Christmas Ship. It carries gifts of all descriptions from America to the children of Europe orphaned by the Great War. But it represents, too, a widespread coöperation which smacks strongly of the Christmas idea. The Child Federation of Philadelphia, the Christmas Ship Society, and the New York *World* organized the collection of good things; the railroads of the Trunk Line Association carried them free; the Bush Terminal Company at Brooklyn omitted terminal charges; Secretary Daniels designated a United States collier to take them across the Atlantic; the Red Cross will distribute them.

The Christmas ship—U. S. S. "Jason"—sails from New York on the tenth of this month. But those among our readers who did not share in providing her cargo have still an opportunity to send a bit of Christmas to the Belgians. Committees are at work in conjunction with the consuls of that unhappy kingdom, and goods marked "Gifts for Belgian Sufferers" may be billed to Pier 28, New York, and consigned to Mr. Pierre Mali, Belgian Consul, 25 Madison avenue, New York. The Pennsylvania Railroad has announced that it will carry free up to November 30 such gifts from organized societies.

Then there is the War Children's Christmas Committee, of which Mrs. John Hays Hammond of this city is president, and which is being largely supported by the Women's Clubs of America. This committee especially wants useful and practical gifts from American children, such as stockings, hoods, mittens and money in small amounts. All gifts should be sent before December first to 31 West Thirty-ninth street, New York. We are pleased to learn that not a cent will go toward office expenses. All will reach the children. Even the steamship lines will carry the gifts free, and they will be distributed to the orphaned and suffering children in all the belligerent nations thru the American embassies.

So there are Christmas ships, and Christmas freight cars, and Christmas transport of every sort that the New Age can provide, and there will be a little happiness in war-swept Europe on the twenty-fifth of December for which Americans will be directly responsible.

THE STORY OF THE WEEK

THE GREAT WAR

October 27—Germans driven back over Yser in Flanders. Russians defeat Germans north of Pilitza River in Poland.

October 28—Russians pursue Germans beyond Radom, south of Pilitza. Prinzip and twenty-one conspirators found guilty of assassinating Archduke Francis Ferdinand June 28 at Sarajevo.

October 29—Allies retake Lille. Russians defeat Austrians at Tarlow. Poland. Turkish warships attack Crimean ports.

October 30—Germans gain on Aisne. Russians again in possession of Czernowitz, capital of Bukowina. Colonel Maritz, leader of Boer rebellion, defeated.

October 31—Germans still retreating from Warsaw. Turkish warships destroy Black Sea merchantmen. Italian Cabinet resigns over war question.

November 1—Allies push forward within four miles of Ostend. Heavy bombardment of Tsing-tao forts at Kiao-chau by Japanese and British.

The Fighting in Flanders

For another week the strongest efforts of Germany and the Allies have been focussed in that little corner of Belgium by the sea, but neither side has gained ground or given way perceptibly, and the only visible result is the slaughter of men by the ten thousand. It is war of the old-fashioned sort; trenches within talking distance, bayonet charges and hand-to-hand fighting among villages and farmhouses by day and night thru fire and water. Before Nieuport, where the trenches were less than sixty yards apart, the Germans charged the Belgian lines eight times in one night, and each time the advancing troops were mowed down by the mitrailleuses. The bodies scattered thick upon the ground were mostly boys of sixteen or seventeen, fresh from the universities and gymnasiums of Germany. At another point Indian troops creeping up in the darkness and killing off the sentries without raising an alarm succeeded in setting fire to the thicket where the ammunition wagons were parked and the burning wood set off the cartridges and shells. The dikes have been cut and at high tide the sea water covers the fields of sugar beets to the depth of two or three feet and fills the trenches.

It is useless to record in detail the shifting of the lines back and forth from day to day. Only the main points may be indicated. Lille has been taken again by the Allies. Roulers is held by the Germans; Ypres by the Allies. At La Bassée the Germans have gained ground; at Arras they have lost.

The Germans succeeded in crossing the Yser River where it turns toward the sea between Dixmude and Nieuport, but they were not able to hold their positions on the other side and were driven back a few days later with great loss. The pontoon bridge was destroyed and many of the German soldiers were drowned or left behind and captured. The Belgian army, which cannot number over 40,000, lost about 10,000 in nine days. The German losses are much greater, some say 150,000 since October 15, but all estimates are guessing, for there has been no armistice for the burying of the dead or rescue of the wounded. Two Belgian batteries on the Yser have fired 8000 rounds, or a thousand shells apiece. These guns had previously fired about 3000 shells apiece, and yet are in good working order. The Germans have not been able to use their big howitzers so effectively in this land of canals and tide-marshes as they did where they had solid ground and good roads. Against the French and British warships they have also been ineffective, while the twelve-inch guns of the fleets cruising along the coast have played havoc with the German entrenchments within range of the sea.

The Germans have been bringing many trainloads of their heavy guns thru Brussels to the front, but these, it appears, have been placed in position at Zeebrugge, the port of Bruges, between Ostend and the boundary of the Netherlands. This is interpreted to indicate that the Kaiser has given up hope of taking Dunkirk or Calais and will make Zeebrugge his North Sea port for the attack on London by air and water.

Little is heard of the line of battle in France between Belfort and Lille except that the Germans claim to

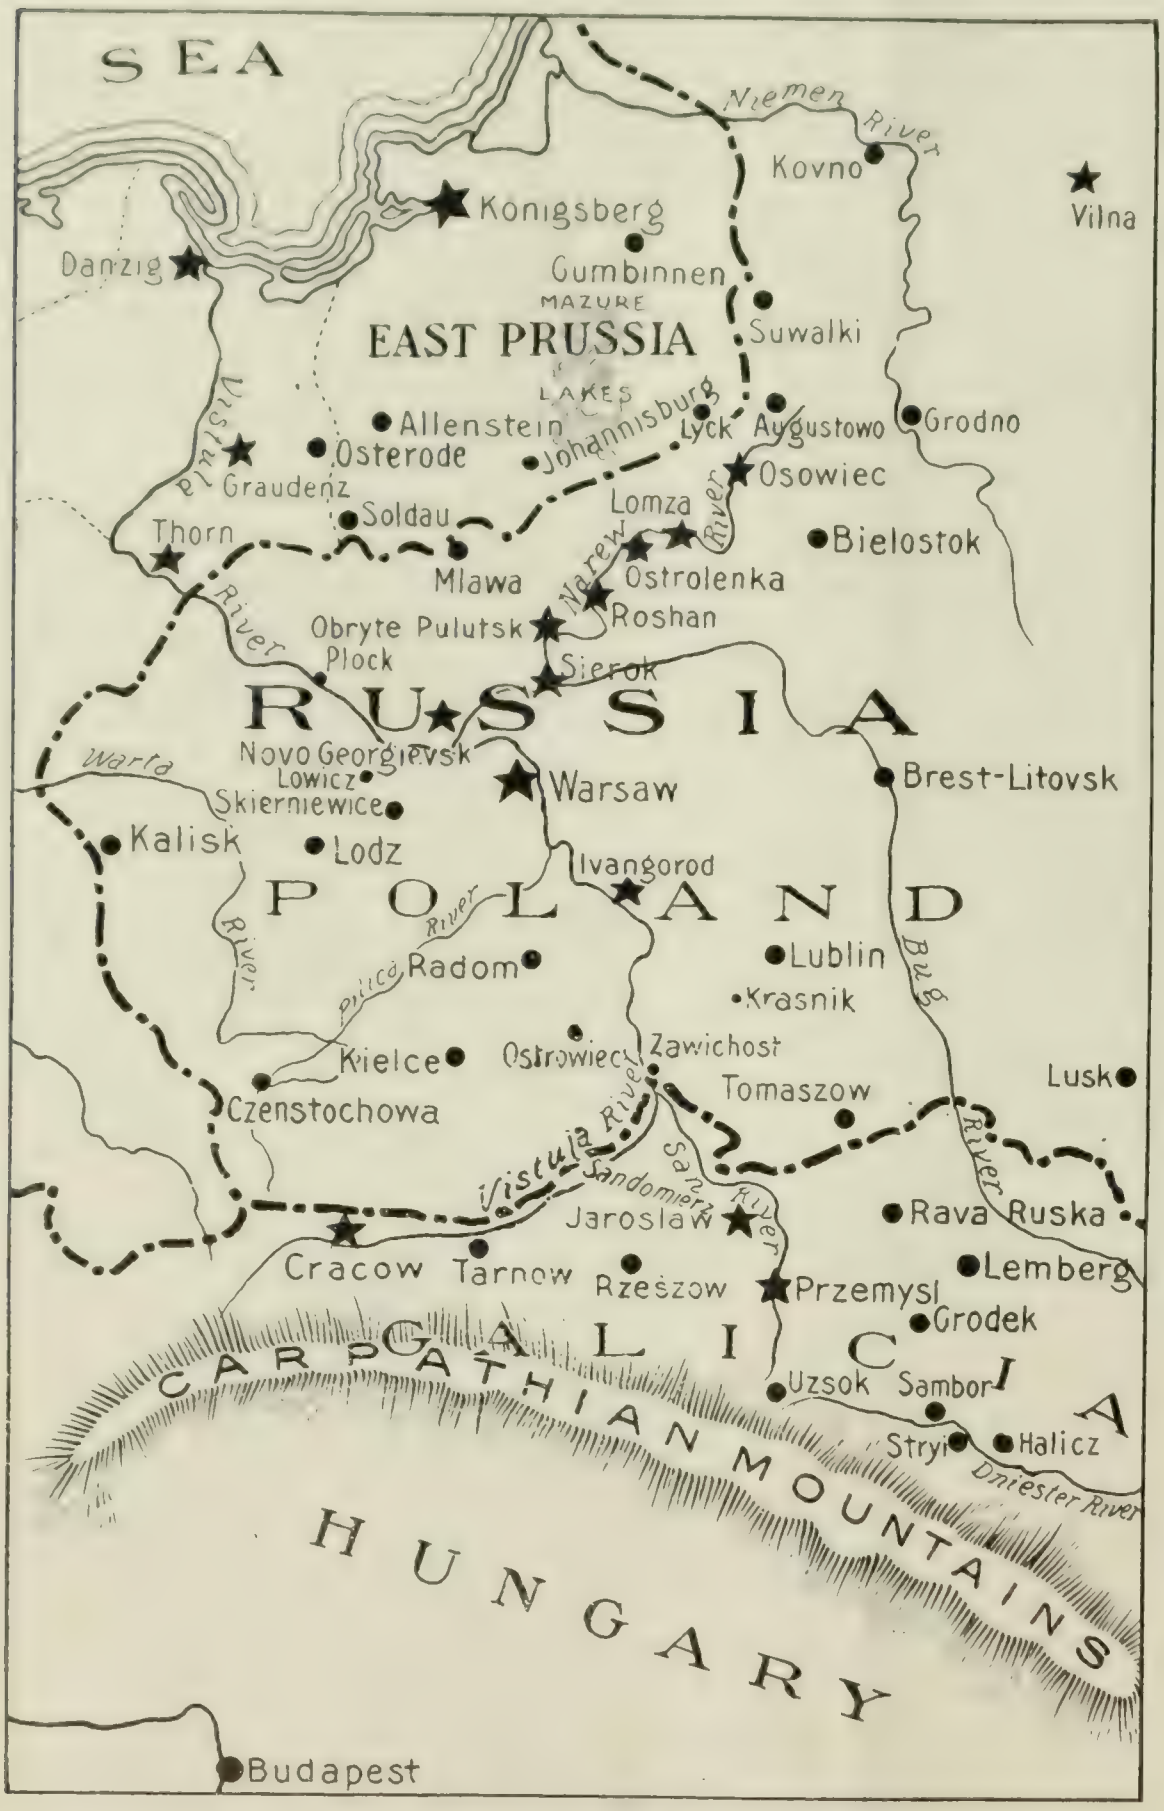
THE BLOODIEST OF THE BATTLEFIELDS

After the capture of Antwerp the Germans pushed forward thru Ghent, Bruges and Ostend with the determination to reach Dunkirk, but at Dixmude and Ypres they encountered the combined Belgian, British and French troops, against which opposition they have made no progress after three weeks of desperate fighting

have made progress in the siege of Verdun and also to have driven the Allies back across the Aisne River near Soissons.

Defeat of the Germans in Poland

German pride has received its heaviest blow in the failure to take Warsaw after they had come within gunshot of it. Postal cards found on German prisoners had been dated in advance "Warsaw, October 15." But by October 15 the Germans were in rapid retreat toward their own land, hotly pursued by the Cossacks. It is said that the Kaiser had been in negotiation with the Poles of various parties and had promised them an autonomous and reunited Poland if they would rise against Russia. The signal for the rising was to be the capture of Warsaw—but the signal was not given.



The German retreat was almost a rout in some directions and many of the fugitives were captured, but no considerable body of troops was cut off. Between October 22 and 25 the Russians took 17 officers, 4000 men, 11 machine guns and 22 cannon. The total losses of the Germans, are, according to Petrograd figures, over a hundred thousand.

At the time when the Russians turned the tables the German forces were divided by the River Pilica (Pilitza), which flows across Poland from the west and empties into the Vistula about thirty miles above Warsaw. The river in its lower reaches is wide and now swollen with the rains. So the two wings of the German army could not get together, and the farther they retreated up the river the farther they got apart. So the Russians had a chance to bring their overwhelming numbers to bear upon each section separately. The northern wing, under General von Hindenberg, containing the Bavarian troops which had come close to Warsaw, was attacked in the rear by Cossacks from Novo Georgievsk and driven back beyond Lodz to the entrenched position behind the Warta River.

The honor of leading the center in the advance on Warsaw was reserved for the German Crown Prince, in the hope perhaps that he might retrieve his military reputation, which suffered in France, where his army got so far behind that General von Kluck had to turn away from Paris to go to his aid. His experience in Poland, however, proved to be still more unfortunate. His army, consisting of the flower of the Prussian troops, was reinforced with Austrian infantry and furnished with the siege guns for the reduction of Ivangorod, the only fortress on the Vistula above Warsaw. But he had barely reached the Vistula when the enveloping movement of the Cossacks from the north compelled him to retire with such precipitation that he left thirty-six of the heavy howitzers stuck in the mud, and some of his personal attendants and equipage fell into the hands of the enemy. The fighting took place in thick forests, unfamiliar to the invaders, and more suited to the guerrilla warfare of the Cossacks than to the systematic science of the Germans. By setting fire to the timber they threw the German troops into confusion and caused great destruction of life and munitions. The Germans were not able to make a stand at Radom, but withdrew to Kielce.

The German troops which had advanced up the east side of the Vistula from Mlawa and Thorn have retired beyond Plock.

The right wing of the invading army, composed of Austrians under General Dankl, crost the Vistula about thirty miles south of Ivangorod and, according to Vienna re-

WHERE THE RUSSIANS HAVE WON

According to the German plan five armies were to advance simultaneously on Warsaw, the Polish capital; one up and one down the east bank of the Vistula and three from the west. The Russians encountered these singly and drove them all back, so now they occupy positions respectively behind Plock, Lodz, Kielce, Ostrowiec and Zawichost

THE BALKANS AND THE BLACK SEA

The attack by the Turkish cruisers on Russian ports and shipping on the Black Sea is likely to involve all this region and more in the Great War. Greece has invaded southern Albania. Italy has occupied Avlona. Montenegro is attacking Cattaro, the Austrian port nearest Cetinje. Servia has invaded Bosnia and Hungary. Roumania is likely to join with Russia. Bulgaria may be drawn into the conflict on the Turkish side

ports, captured 8000 Russians and 19 machine guns. But when the Russians turned upon them they were caught among the windings and islands of the Vistula and severely punished before they could retire.

In Galicia there is little change of position, altho the fighting continues along the San River and near Sambor and Stryi. On the East Prussian frontier the Germans claim to have made progress. According to Berlin reports they captured in the last three weeks of October 13,500 Russians, 30 cannon and 39 machine guns.

Turkey Enters the War

Without any previous declaration of war or even notification to her representatives abroad the Ottoman empire began active hositilities on October 29 by an attack on Russian ports. Two Turkish destroyers entered the harbor of Odessa and without warning torpedoed the old Russian gunboat "Kubanets" and fired upon the city and shipping. Three Russian and one French merchant steamers were hit. The same day two Russian steamers were torpedoed by the dreadnought "Goeben," which was transferred from the German to the Ottoman navy to escape capture in the Mediterranean, August 11. The "Goeben" is in charge of the German Admiral Sorchon, now Commander-in-Chief of the Turkish navy. The Turkish army is also under the command of German officers with General Leman von Sanders, who was sent to Constantinople before the war, at their head.

The reason given for the Turkish attack is that the Russians were discovered laying mines in the Bosphorus. The Russian mine layer "Prut," carrying 700 mines, was sunk by a Turkish cruiser. Sevastopol, the stronghold which held out for nearly a year against the French, Turkish and English forces in the Crimean war, was shelled by one of the Turkish vessels. The "Breslau," a light German cruiser which came into Turkish hands with the "Goeben," appeared before Theodosia, a Crimean seaport, and threw some shells into the cathedral, the bank and railroad station. The same day, October 29, the Turkish cruiser "Hamidieh" appeared before the port of Novorossisk on the northeast coast of the Black Sea and bombarded it for three hours.

The land campaign of the Turks will probably be directed toward Egypt, which is still nominally under the suzerainty of the Sultan, altho actually a part of the British empire. Turkish cavalry are said to be concentrated at the head of the Gulf of Akaba, which is separated from the Gulf of Suez by the Sinai peninsula. Three thousand Bedouins have already crost the Egyptian boundary. Turkey can put into the field from 500,000 to 800,000 troops, good fighting stock but indifferently trained and imperfectly equipped.

Italy and the Balkan States

One serious aspect of Turkish participation in the war on the German side is that it is likely to drag in Italy and all the Balkan states. As it is Greece and Italy are at odds over Albania. The Greek Government has announced its intention of occupying northern Epirus for the purpose of putting a stop to Albanian raids, altho holding it subject to the later decision of the powers. This is the territory which was taken by the Greek forces in the Balkan war and relinquished with great reluctance when the powers decided that it must be included in the new Albania. A force of 1200 Greek troops has already been landed at Santi Quadranti, which gives Greece the control of both sides of the Corfu channel.

Not far above this on the same coast is Avlona, where Italian marines have occupied both the town and the island of Saseno. This is only about forty miles from the Italian coast, just across the Strait of Otranto, and Italy has long had aspirations for territory on the other side of the Adriatic. It is assumed that Italy as the only neutral among the powers which guaranteed the independence of Albania is acting in behalf of the guardian powers in taking possession of Albanian territory.

The Italian Cabinet has resigned and it seems likely that it will be replaced by a ministry less peaceably disposed than that of Premier Salandra.

Carrying the War into Africa

The insurgent movement led by Lieutenant Colonel Maritz has been nipped in the bud by the action of the Government of the Union of South Africa, which promptly sent a force under Colonel Brits to the northwest part of Cape Province. The rebels were defeated with considerable loss and Colonel Maritz wounded. He escaped with the remnants of his band into German Southwest Africa, leaving their tents and stores behind.

This defeat did not, however, put a stop to the Boer revolt, for the movement has been taken up by two leaders of greater prominence, General Christian De Wet, the most formidable of the enemies of Great Britain in the Boer war, and General Beyers, who was commandant of the

By special arrangement with the London Sphere. (N. Y. H.)

THE LOW-LYING TERRAIN OF FLANDERS

Here, where the photograph was taken, three separate actions were in progress. In the center Andogen, being shelled by the Germans, is on fire. Terconde, on the left, was an artillery base from which the Germans were shelling Grembergen, and a cross-river action was taking place at Balaere, on the right

Union Defense Force when the present war broke out but resigned his commission rather than invade the German possessions in Africa.

Premier Botha has taken the field in person with a commando formed on the old burgher lines and overtaking General Beyers' men routed them and took eighty prisoners.

A small party of German cavalry is reported to have crost the border into Angola, the Portuguese territory in West Africa and to have come into conflict with the Portuguese soldiers. An expeditionary force of Portuguese left Lisbon on September 10, in part on British transports, for the protection of Angola or the invasion of German Southwest Africa. The report that there are 25,000 Portuguese serving with the Allies in France has not been confirmed, altho the Portuguese Government has declared its intention to furnish such aid whenever needed in accordance with the Anglo-Portuguese treaty.

The Belgian troops are reported to have defeated the Germans in an engagement on Lake Tanganyika on the eastern side of the Belgian Kongo.

The War on the Sea

The German cruiser "Emden," which has been preying upon British commerce in Indian waters and has sunk or captured more than twenty ships since the war began, is becoming bolder and on October 28 she entered a fortified British port in the daytime and destroyed a Russian and a French warship. The "Emden" was disguised by the addition of a fourth and fictitious smokestack and she flew the Russian flag as she entered the harbor of Penang by the south channel under the guns of the fort. Approaching the Russian cruiser "Zhemchug" at anchor undergoing repairs, the "Emden" launched a torpedo which missed its aim, then another which took effect and sank the vessel. The "Zhemchug" replied with her guns, but not having up steam was not able to maneuver. Out of her crew of 250 eighty-five lost their lives and 112 were wounded. As the "Emden" past out thru the north channel into the Strait of Malacca she encountered and sank the French destroyer "Mousquet."

The use of a false flag for the purpose of slipping up upon an enemy's vessel is a permissible ruse under the international code of naval warfare provided the ship displays her true colors before firing as the "Emden" did. In the Russo-Japanese war the "Zhemchug" escaped to Manila after the Russian defeat in the Sea of Japan and was there interned till the end of the war.

The German cruiser "Geier" arrived at Honolulu from Kiao-chau on October 15 and two weeks later was still there. A Japanese warship has been watching for her just outside the three-mile limit. It is not permissible for a belligerent vessel to remain in a neutral port longer than necessary for coaling and repairs, but Japan has so far made no official protest.

The British ships have been making their way around the north of Ireland, believing this was a route safe from German interference, but the sinking of the freighter "Manchester Commerce" twenty miles north of Tory Island showed that the Germans had planted a mine field on the northwest coast. Another steamer was sunk north of Malin Head.

Colorado's Labor Controversy

James Lord, of the Federation of Labor, accompanied by "Mother" Jones, the strike leader and agitator, had a talk with the President last week and urged him to close the mines in Colorado if the owners should persist in rejecting the mediation plan which the strikers have accepted and the President has approved. He said he was not sure that he had authority to do this. It seemed to him, also, that such action would be more to the disadvantage of the miners than to the owners. It is said that he asked the Attorney-General for an opinion as to his authority.

Governor Ammons, of Colorado, said he could not see why the mines should be closed at a time when the greatest demand for coal was beginning to be shown. In his opinion, the Federal troops could safely be withdrawn. The president of the leading company asserted that the mines were employing 11,000 men, with whom the owners had no controversy, and that there were less than 1000 of the strikers in the state. On the other hand, the president of the miners' union said that 8000 were drawing relief; that the companies and the state authorities were recruiting the militia from strike-breakers and mine guards, and that withdrawal of the troops would be followed by a renewal of the labor war.

On the 30th, the President's secretary said: "It is not true that the President has in contemplation any plan for the closing of the mines in Colorado."

EAST PRUSSIA—WHERE HEAVY GUNS ARE WHITE ELEPHANTS

In this marsh and lake country much fighting between Germans and Russians has taken place. The roads between the many lakes are few and treacherous. Bogs, forest and water cover the whole region

The Convention in Mexico

After the arrival of Zapata's delegates and the return of the committee which had been sent to Carranza, the convention at Aguascalientes took up its work again. The twenty-eight men who came from Zapata had been met at Guadalupe by Villa, who greeted them with marked cordiality. It was soon to appear that in the convention they were his allies. But they were not needed to make a majority against Carranza, for many of the First Chief's generals no longer gave him their support. There was abundant evidence that the convention was controlled by a combination of Zapata's men, Villa's representatives, and those who had turned against Carranza. The latter's message was read. His retirement, he said, must be conditioned upon Villa's resignation and retirement to private life, and the resignation of Zapata, who should turn over his command to a general named by the convention.

It was not expected that a convention controlled in the interest of Villa and Zapata would accept these terms. The delegates turned from them to plans for a distribution of the land included in great estates. The platform of Zapata's bandit army has been the plan of Ayala, adopted in November, 1911, which is generally regarded as one that calls for virtual confiscation. It was defended in the convention by Zapata's men, and when a vote was taken all of Villa's representatives supported it, being a part of a decisive majority. Several articles of the Ayala plan were formally approved. It would give the great estates to the "common people," allowing payment of two-thirds the value where the titles are good, and calling for confiscation if resistance to such terms is offered.

The final action of the convention cannot be satisfactory to Carranza. At a point twenty miles from Aguascalientes he has placed 15,000 soldiers of his army. On the other side, and within twenty-five miles, Villa has 18,000. There has already been a collision of parts of these two forces. The Carranza men were routed, with the loss of twenty killed and 150 prisoners.

Carranza and Villa

In his message to the convention, Carranza denounced both Villa and Zapata. He had already attacked Villa in a remarkable statement sent to Washington by Roberto Pesquiera, his personal representative. Villa's real name, he said, was Doroteo Arango, and what crimes the assumed name was designed to conceal he did not know. While professing friendship for the United States, Villa had been threatening to invade this country and to conquer it "in a few months' campaign." He was now, Carranza said, assisted by Cientificos and Huerta men, and was supported by "the special interests that have played such an important part in American politics and sustained the corrupt Administrations of the past." Accredited representatives of our Government, he added, had sold out to Villa and were working servilely for him. Reference was here made to Consular Agent Carothers.

A plot for the assassination of Villa was discovered. Francesco I. Mugia confest his guilt in the presence of Mr. Carothers, was tried, sentenced and put to death. A resolution denouncing the conspiracy and expressing approval of the execution of Mugia was adopted by the Aguascalientes convention. According to a report from Villa's secretary, Mugia said he had been commissioned by General Robelo, Carranza's chief of police at the capital, and paid by General Pablo Gonzales. The latter, a trusted supporter of Carranza, says the story is false. He is warmly defended by Carranza himself. Mugia fired one shot at Villa.

In a reply to our Government's request for guarantees concerning taxes at Vera Cruz and the residents of the city, Carranza does not give them but asks that a date for the withdrawal of our troops be definitely fixed. It is understood that until the guarantees are given the troops will remain. He had been instructed by the Aguascalientes convention to comply with the request from Washington. The suspension of hostilities at Naco, on the northern border, continues, but while his delegates are attending the convention which ordered an armistice, Zapata has permitted his followers to fight within fifteen miles of the capital. In a town in the State of Jalisco, the churches were recently closed and the priests expelled by the Carranza authorities. Whereupon the garrison was attacked by the people. With the help of reinforcements the uprising was checked. Many of the civilians were killed.

Killed in a Coal Mine

In a mine owned by the Franklin Coal and Coke Company and situated about a mile from Royalton, Illinois, 51 miners were killed, on the 27th, by an explosion of gas. Twenty minutes before the explosion, 336 miners

had entered the mine to begin the day's work. The bodies of the dead were recovered with great difficulty, because fire prevented the rescuing parties from reaching the lower levels. On the following day two women whose husbands lost their lives were found dead at their homes. They had not committed suicide, but had died of grief and shock. For more than twenty-four hours they had waited at the mouth of the mine, only to learn at last that they were widows.

On the day of the explosion the superintendent of the mine said that he was unable to account for it, as the mine had been worked continuously and no gas had been discovered. On the second day, however, it became known that in the night preceding the explosion the mine inspector had found a "pocket" of gas and set up a warning notice. This gas was ignited in the morning by a miner's lamp. It is said that a majority of those who died were sacrificed by a reversal of the air pumps, to save the 285 who escaped, and who were in parts of the mine at some distance from the "pocket" of gas.

Republican Convention Delegates

The new plan of representation for national conventions of the Republican party which was submitted to state conventions has been approved by the the party in states which cast a majority of the votes of the Electoral College. As this was the condition attached to the proposition, the plan has been made effective. The new basis of representation will reduce the whole number of delegates by eighty-nine, and nearly all the loss is in the southern states. The old plan, based upon the electoral votes of each state, gave excessive representation in states where the number of Republican voters was small. As a member of the national committee said, when one state sends a delegate for every 447 Republican votes, and another a delegate for every 11,633, a change is required. The new plan is based in part upon the number of Republican votes cast.

The losses are as follows: Alabama, 8; Arkansas, 3; Florida, 4; Georgia, 11; Louisiana, 8; Mississippi, 8; New York, 2; North Carolina, 3; South Carolina, 7; Tennessee, 3; Texas, 16; Virginia, 8; Hawaii, 4; Porto Rico, 2; Philippine Islands, 2. New York shows the only reduction in the North. Among the states which voted in convention for the change were Arkansas, North Carolina and South Carolina. The only state thus far counted against it is Texas, the number of whose delegates is reduced from 40 to 24.

MR. MICAWBER WAITS FOR SOMETHING TO TURN UP

"TOMMY ATKINS" IN THE TRENCHES

BY ALFRED STEAD

SPECIAL CORRESPONDENT OF THE INDEPEN DENT AT THE FRONT

"GIVE me a British army and I will conquer Europe," wrote the great Napoleon.

When one sees the men who are engaged in beating the German masses, one knows the great fighter was right. In or out of the trenches, marching or fighting, bayonetting or being shelled for hours at a time, the British Tommy is unique. He is cheerful, full of good spirits and knows what he is doing.

"You cannot wear out their spirits, even if you walk them off their legs . . . they will crawl somehow, anyhow," "they will never stop." That is what their French comrades think of our men. The Germans know that it is not easy to stop them.

If you want to know what a soldier has to do, bar fighting, just load yourself up with all his kit, put on regulation boots and walk steadily some fifteen miles a day for a week on end—not as and how you wish, but as some one else wishes. In peaceful England a walk of fifteen miles is a thing to talk about, without any sack on the back or rifle or ammunition. And it is wonderful what a soldier does carry on active service. If his load did not balance nicely he would never be able to carry it at all. But the muscles of the British army are developed in a way that makes marching with their heavy load even preferable to marching unencumbered. As one man put it, "When we have the safety of Europe on our shoulders, what does it matter if we carry a few more pounds?"

The British army marches much more silently than do the Russians, for instance, at least in war time. There is some whistling, but little singing. The wonderful songs of the Russian regiments are things apart; no other army can compete with them.

The Germans sing, but nobody sings much during war marches. These are generally carried out at night and in the utmost silence. You may meet masses of shadowy forms in regular column suddenly emerging from the darkness and hear nothing but the thud, thud of their feet as they go along to take up a new position in the battle line.

Brown Brothers

THE BADGE ALL TOMMIES WEAR

An identification tag bearing the soldier's name and number is always worn

Once near the firing line Tommy Atkins is principally in and out of trenches. He has to be and remain alive—for this is an artillery war.

The voluntary service system does make real soldiers, intelligent and bright-eyed, hard to beat, easy to lead to victory. But when one sees Tommy at work in the field one is inclined to think he should be called Thomas at least, he is so grown up. And yet with it all he remains young; even the most veteran N. C. O. has a fount of youth.

"The army is always smiling and always washing," that is what the French population say. The smile may be a little more grim after a long retreat or when the nerves are on edge after days and nights unrelieved in the trenches, but it is there all the same. And water and soap are the first things asked for when a column arrives in a village.

I have often seen crowds of men surrounding a local barber's, clamoring to be shaved, and the good barber, often just back in his pillaged house, unable to find any of his tools, nearly distracted with emotion and excitement. He has to work for his money, too, because campaigning brings out good, stubborn beards. The army razors are somewhat below par, "dragging it off" rather than cutting. But they are used all the same. In the trenches under heavy shell fire it is customary to see men shaving—using anything for a mirror, a pail of water, a bit of a petrol can. That is in the deep trenches, where troops have time on their hands. For there are trenches and trenches, just as there are hovels and palaces.

In every fight the infantry makes itself little local trenches, to cover the head; not easy work this to grub up enough soil often hard as rock lying flat on your stomach.

Then there are the more serious continuous trenches, which are often the outcome of the preliminary work, if the troops have to dig themselves in pending nightfall. These are not much shelter against shell fire or shrapnel, but the palatial trenches are those which now line the banks of many French rivers,

THE MANLY ART—ANOTHER OF TOMMY'S RELAXATIONS

permanent trenches six feet deep, half covered in, practically bomb proof, with a ledge on which a wearied man can sleep. In some of the German trenches, prepared beforehand, there were rooms for the officers dug out, and furnished with pillaged furniture, even a candelabra was hanging from the ceiling.

The wet is the greatest discomfort in these trenches and that despite the gutters made to carry water away. The trenches may be good, but life in them under heavy shell fire is apt to be monotonous. It is all right to be a mole, but it is a little wearing after the first few days. The troops remain day after day in the trenches with hardly a sign of the enemy, waiting, just waiting.

Everything possible is done to relieve the strain upon the men. As one miner who had been in more than one accident in a coal mine put it, "we are waiting all the time for the roof to fall in or the coal damp to fire." It needs all the noted phlegm of the British Tommy to stand up. The supplies of food and tobacco are brought up with unfailing regularity; the army newspaper and others are distributed, letters come and go —the latter perfunctorily censored sometimes, because it is a little difficult for the censor to read closely with heavy shells bursting overhead and around—and the men's families must have news. But when everything possible has been done, there remain long hours in which the men can only sit and talk and talk, while over their heads flies a constant stream of shells.

The humor which develops in these human rabbit warrens is wonderful. New games are played, often under difficulties. It is more difficult playing shove halfpenny along an earthen uncertain ledge than a table in the village institute, but the chances are the same for all. Packs of cards would need to be of resisting metal to stand the wear and tear—nap is the favorite game, but sometimes one or more cards go astray and then new and strange variants of the game "according to Cavendish" are developed.

I remember one trench being furious and bitter because one of their number had gone on a sortie with the ace of clubs on him, and never came back—"the only ace we had left in the pack, too." I saw the truant two days later. Alas, he had no use for the ace of clubs, nor for any pack of cards—he was lying blown to bits by a German shell.

I asked one man what the soldiers did all day in the trenches. "We talk about home and wonder what the Fleet is doing." What an epitome of England! Can we not imagine the stories of village friends, of sweethearts—and the efforts of those with more nimble imagination not to be left behind in the the race of gossip? But the Fleet always is asked after —many of the men have friends on board one or other of the vessels—all expect it to smash the German Fleet when it comes out. "But the beggars stay in their trenches on the sea, just like they do here on land," as one Tommy put it. A crack marksman he was, and had been under shell fire for days without seeing anything to loose off at.

That is the maddening thing of it, to do and die and never have a chance of getting your own back. It is all very well for the gunners, they do see something and can believe they are doing damage, but the unfortunate infantry are denied that privilege.

An infantry attack by the enemy is a godsend; the word past down by the observers that the German infantry is on the move, is like the declaration of war in the barracks of an Irish regiment. Wild excitement fills the trench—all the emotion of days of shelling are to be released. Careful aim is taken—"when you really have a chance, it would be a crime to miss it,"—and bets are made as to the number of soldiers brought down.

There is no animus; it is just relief. Often when the Germans used to advance in close formation and be mowed down again and again, there was actual pity for them in the trenches. "I suppose we *must* let them have it again," remarked a first class shot at his loophole, as the shattered Germans came on again, game but terribly cut about. And they did "let them have it," for that is the only way to finish this war.

Bayonet charges are rare and only the envied few really get this chance. A bayonet charge is the only real survival of old hand to hand warfare, in which the real joy of fighting comes to the surface. The rest of modern warfare is just digging yourself in, being shelled, and night marching in order to outflank the enemy. Much of the time the infantry are protecting the guns, and get the full benefit of shell fire because the guns always attract guns. And sometimes when the opposing trenches have crept nearer and nearer and an attack with the bayonet is possible, they find, as a Scottish Borderer said, "there are not enough of them left to make the charge."

The French troops and especially the Africans, are much more restive in the trenches. Many times a Zouave regiment or Senegalese troops have taken matters in their own hands after a few hours' shelling and "gone for" the enemy, only to suffer terrible losses.

In the trenches there is none of the comfortable ease and leisure which marked life in the blockhouses in South Africa. There it was possible, with your stores list before you, to indulge in the game of seeing how much you could purchase for a given sum—having neither money nor means of reaching the stores. This was a good rival to the excitement of working out quickest times between two railway points in the British Isles with a Bradshaw. In this war there is none of that possible. Shells are too frequent, things are apt to be too rushed.

It is wonderful how little details become of importance. In one trench, where a German sharpshooter regularly opened the day with a shot thru a certain loophole, the trench amused

itself by ensuring being waked up for the fighting by hanging a strip of metal back of the loophole. The clang of bullet on metal woke them up—an alarm clock "made in Germany." "It is more pleasant than long marches," writes a private in his diary of life in the trenches. "One would finish by becoming accustomed to this existence if the corpses of men and horses did not smell so badly, and if the flies did not multiply so rapidly. . . . We could not sleep because we were too wet, but plenty are worse off than we. . . . All night long there are shells every ten minutes, so that no sleep is possible. When it rains in torrents we can have no fire. Afterward we cook tea and tinned food with rainwater . . . sometimes on our knees for hours . . . Very grateful for rum served out at night; nothing warms so well and we need it. . . . At 800 to 1000 yards we can see the heavy works hiding the German lines. . . . Today I had my first shot, a German in a tree. I made no mistake."

And so it goes. There is no repining, some grumbling, but not much.

It is astonishing how little fear there is, how fatalistic everyone becomes under fire. Bravery has become a habit; nobody thinks to be agitated at shells and bullets. Friends and pals are killed close by and there is not much more comment than "Bill's gone."

"The only time when anyone can be afraid," said another man, "is when we are far off from the Germans. When we are near we are too busy and too keen to fight."

Dead bodies call for small comment among those in a firing line; only those in curious attitudes are remarked . . . There are so many and since the beginning of the war there have always been so many.

If there is indifference to the dead there is wonderful devotion to the wounded. V. C.'s are won or deserved every day, almost every hour. Men will do the most astonishingly brave things for wounded pals or officers. "In humanity there is no rank," as a British officer said to his men in the initial retreat. "We have only one rank—that of British soldiers."

The spirit of the men may be seen by this extract from an officer's letter: "Our little trumpeter came back after the charge with a German helmet on his head, wild with excitement, crying, 'I've got it.' He is an extraordinarily brave boy."

The British soldier likes his meals; he would like his beer, but as one put it, "The Germans have drunk it all. What wouldn't I give to have a 'pub' 'round the corner." In the advanced trenches under heavy fire it is impossible to have hot food. Brave men of the A. S. C. dash up and bring tinned food . . . sometimes the men have to fall back on their emergency rations. These are good, but do not compare, in the men's minds, with a good hot meal. This he gets whenever he can. And what memories I have of a stew prepared by an Army Service man of bully beef, tomatoes and potatoes, eaten hot from the billy in which it was cooked. Frozen mutton and beef are welcome variants to bully beef.

On the march tinned meats are the rule and one can follow a British army by the trail of opened tins left behind; the German trail is bottles. Jam and biscuits are much eaten—in some of the villages of France there are stores of these commodities, left in rapid marches, which will last the thrifty housewife for months and leave her with a taste for British jams.

In the Park Lane trenches, food comes so regularly that the men are grumbling if there is any delay. In one trench under heavy fire a Highlander was very voluble in his disapproval of an hour's delay in his morning meal.

"I do not mind being shot," he said, "nor shelled, but I do not like going without my breakfast!" A very good commentary upon the regular efficiency of the supply columns.

In Africa we had the "greatest transport office since Noah"; here in France there are the most efficient commissariat officers since quail and manna came from the skies to feed the children of Israel in the desert. It has made possible British victories, it is the strength of the army above other armies. If victories are won on full stomachs, then the British army has a good chance. For it is a standing joke in the trenches that the Germans are starved—many have

Chorus

It's a long way to Tipperary,
It's a long way to go;
It's a long way to Tipperary,
To the sweetest girl I know!
Good-by, Piccadilly,
Farewell, Leicester Square!
It's a long, long way to Tipperary,
But my heart's right there!

I TAXICABS

DASHED INTO THE TOWN OF SENLIS, HELD FOR THREE DAYS BY THE GERMANS, BY TAXICABS, BURST OUT IN THE MIDST OF THE ASTONISHED STARTLING INFORMATION FURNISHED BY A LONDON DAILY NEWS CORRESPONDENT

Above: A M Y H

been altho now there seems some question as to whether these were not outposts and outlying bodies left out of range of food supply.

To catch a German, Tommy has an excellent recipe. "Go outside a wood with some toasted cheese on the bayonet, whistle "God Save the King" —first one will come out to see if it is really British soldiers and not French, then he brings out the rest."

It is certain that the Germans for all their hatred of our country prefer to be prisoners of the British Tommy than of the French troops. They are well treated—some think too well—it is probably a survival of the old idea in native warfare, that good treatment of prisoners leads to more rapid surrenders, but I doubt whether it works here.

When Tommy is able to leave the trenches he indulges in football behind the lines. This led to the amusing report of a German air scout that there was great confusion in the British army, men running about in all directions, evidently a panic. Every opportunity is seized for football, and a ball is one of the most treasured possessions of a regiment. Scratch matches are got up, and before the war is over we shall probably have an army challenge being competed for on the field of battle. The difficulty is, however, as one football devotee explained, that "you can never count on getting your team together—only the other day I was talking to four of our best men when bang came a big shell and when I picked myself up I couldn't see a trace of them—blown to atoms like that."

Football is difficult in such circumstances, but think of the spirit which makes football possible!

Another amusement, or sport rather, is the finding of spies. Some of these go even into the trenches. One day a sergeant major saw what looked like a British officer in the trenches, talking to the men, giving them cigarettes, etc. Not recognizing him as one of the regiment, he called his officers. The man was found to be a spy, with a French uniform under his British great coat.

He was shot at once—there are no delays in the field and in the trenches the men may often be heard discussing with wonder the fact that in England thousands of potential spies are allowed to go and come as they please, with at worst only a few months' imprisonment to fear. There, spies are shot; "if we weren't so busy, we would do worse," said one man who had just taken his share in a firing party.

Ever and again, in the trenches, one is struck by the fatalism of the soldier; even chaplains and Salvation Army men with the troops become fatalists while losing none of their power to comfort. Mahomet knew what he was about when he made his religion for his fighting men; now the fighting men have made a religion very similar to the teaching of the Koran for themselves, molded and thought out to the accompaniment of the ceaseless roar of the guns, the shriek of the shells, the whistle of the bullet.

Tommy in the trenches has little to do with his French comrades; for a considerable time at the beginning of the war he never saw them; now they are always somewhere to the right or to the left. In modern warfare, in the trenches especially, one's view is strictly limited. But when behind the lines or in the way up and down, Tommy makes himself quite at home with all the world. The population of France admire him, they try to spoil him. Nothing is too good for him. His baths and his shaves are going to make life much harder in the future for Frenchmen.

"Why do you not get shaved like a British soldier?" their womenkind ask them now. There should be a boom in razors after the war!

International News

TOMMY MAKES FRIENDS IN FRANCE

With all his qualities the British soldier is not a linguist, and so there is growing up a sort of Pigeon English for use in France, or as one officer put it, the British army is speaking "Frenglish," a new language, the golden bridge between allied armies. The African troops of the French are the source of much amusement to our Tommies because of their colored uniforms, while he admires their courage if slightly contemptuous of their methods of fighting. "Colored fellows in Turkish Delight Hats and big trousers from Morocco," as one man put it, adding, "they fight in lumps like the Germans."

As I have said, in the fighting line Tommy sees little of the French *pion-pion*, with his red trousers, blue coat and indomitable courage and rare dash—but he knows and likes him in hospital or in the streets. Never any fear of disputes or brawls such as occur between Prussians and Bavarians in the enemy's ranks. There mutual admiration and comprehension of the task before them knit firmly together the soldiers of the two lands.

The Indian troops, *les Hindous*, as the French call them, rapidly ousted the African troops from the first place in the French hearts. For are they not come from afar to be the saviors of France?

After the first month Tommy began to find that the spreading belief in his mission "to save France" began to lead to demonstrations of affection embarrassing to a sober-minded British soldier. The only grievance against the French which he has is their tobacco. There are no "Woodbines," that fag beloved above all others by the British army, to be had in France. And as for French tobacco, altho it is smoked, it is not the same thing. "I never could like it; it is too much like kissing one's own sister, no taste to it." But soon doubtless "Woodbines" will be obtainable and then all will be wonderful—the last cloud removed, and then if there would only be a little less trenches and a lot more hand to hand fighting, Tommy will be in his element. For Tommy is a fighting man, and a good-natured one as well.

He is a fine man, and everybody says so; he knows it himself and in that knowledge lies security for the British Empire.

THE DIRECT VISION OF GOD

WHAT I BELIEVE AND WHY—FOURTEENTH PAPER

BY WILLIAM HAYES WARD

THE evidences from God drawn from nature, from matter, life and mind, the things visible to us and experienced by us, are those that appealed to the author of the biblical poem which summoned all the forces of nature, the lightning and the cloud, Orion and the Pleiades, the horse that snuffeth the battle afar off, Behemoth and Leviathan, to testify of God, and who asked, "Who knoweth not in all these that the hand of the Lord has wrought this?" It was to this argument that Paul looked when he said: "The invisible things of him since the creation of the world are clearly seen, being perceived thru the things that are made, even his everlasting power and divinity." These are the arguments which have convinced the world, and on which I would chiefly depend. They are based on the presumption that if, as has usually been believed, God made the universe, marks of his handiwork will be visible. They do not command utter conviction as does a mathematical demonstration, nor as would a direct vision of God, such as we are told was granted to Moses. But there have been, and still are, not a few who do not need and may properly disdain arguments and proofs for the existence of God because they have, they believe, seen him in their souls as truly as Moses saw him on the mount.

But does it follow because one does not possess the power to recognize the consciousness of God, that he cannot have any comfort in prayer, nor any assurance that God is present with him to hear and answer? Certainly he can. Faith is not sight, but it is the assurance of things hoped for, the proving of things not seen. One can believe in an invisible God, in his presence, in the influence of his Spirit, in guidance and inspiration. That is the lesson of the whole eleventh chapter of Hebrews. Such faith can give peace and even joy in him whom not having seen we love; in whom tho now we see him not, yet believing we rejoice greatly with joy unspeakable and full of glory: receiving the end of our faith, even the salvation of our souls.

If direct vision were generally given no other evidence would be needed. But it is given to comparatively few of us. I have never had it, and in my younger days I used to seek and pray for it. It did not come, and I gave up the effort, believing that if God wanted me to have it he was good enough to give it without my straining further in prayer for it. But others say they have it, and if their testimony is to be accepted that ends the matter. But that needs consideration, for there are chances of error. Meanwhile we hear the common petition in the pulpit and prayer-meeting that we may be conscious of the presence of God in our hearts. I never make that prayer.

THE PRESENCE OF GOD

What is it to be conscious of the presence of God? It is not to have faith in God, to believe he is present with us by his Spirit in our souls helping our infirmities and answering our prayers. Faith is not sight. But consciousness of God is to feel in the soul such a touch of his action on the soul that one will know that it is not the working of his own imagination, but an external appulse, as surely external as when we know that a friend is seen or heard. It is something more and other than feeling happy or exalted. It is the soul hearing the voice which we know is not our voice but God's voice.

I do not think this is a very common experience, not nearly so common as is a peaceful reliance, trust, in the goodness of God. When it is found it is evidential; but is it really found?

The seeking and finding of such spiritual experiences is what is called mysticism, and theology has made much of them of late. In past times it has taken the form, very much, of the effort to identify one's self with, to sink one's self in, the infinity of God. This is not an active but a passive form of religion, and has had its widest vogue in the Hindu *Yoga*, in which absorption in God induces indifference to the world and asceticism. The more usual form of mysticism is that which is less tending to Pantheism, and seeks to know God as one knows his neighbor, by recognizing God in his assured presence in the soul.

THE CHECK OF REASON

While such a consciousness of God is evidence enough of God to him who believes he has it, it can be no evidence to one who does not feel it, and who thinks the subject of it is mistaken and has simply imagined that a response had come from God to his desires. In dreams and in insanity alike one imagines what is not true, and there is with many an imaginative soul a stage midway between the two. We have had multitudes of cases in revivals of those who, after much excitement, have sought and found, they believed, the positive, recognized voice of God forgiving their sins, and they have fallen to the ground in an ecstasy of joy. Just as much the American Indian goes into the forest and fasts for days and nights till he has his response from the Great Spirit. Indeed, such experiences are most frequent with those, whether ignorant or cultivated, who have less of the rationalizing nature and more of the imaginative temperament. I am very suspicious of such supposed experiences. I am myself a complete rationalist in my religious faith, and desire to believe nothing that I do not understand and find a good reason for. One of my valued friends was a clergyman who in his old age developed the power of recognizing the response from God, and equally from his deceased wife, with whom he talked freely at night and whom he consulted on various personal matters. He had no doubt of her presence. I doubted; and equally I doubt in the cases of those who have this easily responsive, mystical nature. I do not envy their facile assurance; I would rather trust cold, suspicious reason.

I suppose religious mysticism is closely allied to a philosophical idealism which reduces even reality to thought. The world is God's thought; he thought it into existence. All we know is our thinking. We can think ourselves apart from anything material and into God. So in a new sense the world passes away and the fashion thereof. Hence the so-called New Thought, the Christian Science, Hindoo swamis, and any religious philosophy which can think suffering and sickness out of reality and God in us and us in God.

COROLLARIES OF MYSTICISM

The assurance of the existence of God which comes out of first assuming God, and then by vigorous willing convincing one's self that one has a conscious experience of God, appears to me an abuse of reason and a fallacy, and may be dangerous. By its claim to an immediacy of vision, its union of the soul with the Source of all being, it creates a superior class, a religious aristocracy, above the rest of us who can reach no higher than loving submission and obedience to the Heavenly Father, and with it have often come strange delusions to believe a lie.

Closely allied to this mysticism, if not identical with it under a different name, is the teaching of the immanence of God, with its certain assurance, direct and unmistakable, of the existence of God. Yet under the teaching of immanence God is assumed as the substratum of all that is, the supporter and active agent in all nature, and particularly in the soul of man, so that in him we live and move and have our being in a very literal sense. I have heard intelligent people use its language and defend it when all they really meant by immanence was the old doctrine of the divine omnipresence and providence. Yet one can persuade himself in using its language to believe that he has reached a real personal touch of his spirit with God. To me all this has no evidential value, and it is mainly, if I am not mistaken, an assumption rather than an experience.

I can see that the assumption of the immanence of God in one's self and in nature may give comfort to certain souls who are ready to believe that they are a fragment of God, like a little island peak rising out of a vast, invisible, submarine mountain range. In such presumed immanence, or idealistic monism, or whatever it may be called, there may such a relation with God be assumed or imagined that the individual may seem to recognize somehow that larger something of which he is a part. It is beautiful thus to discover one's self to be a little uprush or outburst of God. But what of the criminal man? It seems profane—it is nothing less than profane to think of a criminal as a small disfigurement appearing on the visage of God. But what else is he?

THE CONSCIOUSNESS OF GOD

There are many who would say that consciousness of God is the strongest proof of God. Then the great multitude who have no such consciousness can have no proof. Consciousness would be for the individual the final, conclusive proof. I never could cheat myself into feeling it. We must remember what such consciousness is. It is the recognition that you apprehend, feel, grasp God as something which you are sure is not yourself, which touches you from the outside; just as when a person touches you you recognize his touch as something exterior to yourself, or when you hear your friend's voice you instantly recognize its otherness; you did not make that sound, it came to you from the outside. Now I have never felt clear that I could recognize an exterior stroke appinging on my mind which I instantly perceived was not of my own mind's origination. That is what I mean by saying that I have never been conscious of God, and the great multitude of common people have never had this proof of God, and are as incapable of having it as I am. It is the supposed possession of those only who either blunder in terms, or who simply repeat a formula of words without knowing their meaning, or who identify their own mental processes with the voice of God, or who are a genuine sort of mystics that have a mentality and a reach into the Infinite above and about them which is special to them and beyond the reach of the common mortal of this generation of objective reality and rational common sense. Theirs is instinct rather than reason.

So I have no interest in the argument of consciousness, consciousness of a perception, which is itself the direct apprehension, grasping, laying hold of God, and which needs no other argument. That the world begs for argument of God is evidence that the world has no consciousness of God. I would not say it is impossible that any one should have immediate and real consciousness of God. There may be rare souls which have transcendental and transcendent power. Yet I doubt if they really have a gift not given to others. I know that imagination plays strange tricks. In some perfectly sane children imagination is next to reality. And there are imaginative people who see visions and have experiences which are purely subjective, but which to them seem objective. I shrink from much of the stock phrases in religious conferences and prayer-meetings about our communion with God, practising the God-habit, the consciousness of the divine presence, which would be dangerous and fanatical, if it were not to be reduced, and practically is reduced, to its lowest terms of simple faith and love.

IS THE IDEA OF GOD INHERENT IN MEN'S MINDS?

Closely related to these doctrines of mysticism, tho not itself mystical in spiritual experience, is the teaching of some that the idea of God is one of the fundamental principles of thought. They simply assume God as something bound up in the mind itself, so that whenever one thinks, he thinks with God in the background. If so, we need nothing further, but so far as I know it is not so with me, and the testimony of others will, I think, agree with mine. Nor do I see that the mind is so constituted that men must necessarily think on the basis of God, as they think on the basis of the axioms of geometry. Indeed, some people do not believe in God.

Nor will I burden myself with trying to understand what is meant by Absolute Being, and asserting the necessity of Absolute Being, and declaring that Absolute Being is God. If Absolute Being means nothing more than Being which exists of its own necessity of being, the term is a needless mystification of thought. That there is being that exists by its own necessity of being I believe; but I believe it because I know of finite, dependent, contingent existences, and there must be back of all something which is not dependent, on which they depend. But this has been considered in previous chapters.

Another form of this argument is the claim that the mind possesses an inherent sense of truth, goodness and beauty, and that there must be a perfect objective standard of truth, goodness and beauty by which they are measured, as length is measured by a yardstick. These ideas certainly are inherent in the soul, but why that should involve the objective existence of a Being who is the standard of perfection in these attributes I fail to see. I imagine a perfect or an imperfect being, but one fancy no more than the other assures its existence in reality. The argument is too much like those for the Platonic ideas that exist realized in heaven, the substantive generic patterns of the things on the earth, or such as the Lord showed to Moses on the mount, copying which he was to build the Tabernacle.

THE MORAL ARGUMENT

Neither am I convinced by the moral argument, which asserts that there must be a great Being who in another world will correct all the inequalities and injustices of this present life; that the righteous man who has been buffeted all his life here will find, must find, that a great and infinite Ruler and Judge will by and by straighten all this out, that only thus can final justice be reached. So I believe and hope; but I fail to see why, in the nature of things, final equal justice must be victor. Of course, after we have reached the conclusion that there is a God we will then say that he will righten there the wrongs here; but before we have found a God to exist I do not see why it is necessary to assume that the present sufferings and defeats of the righteous, these miserable, often horrible inequalities and injustices here, must find a future vindicator; any more than I can

see why the inferior man, given the handicap of a low mentality, unable to be a Bacon, a Newton or a Shakespeare, should and must perforce in another world be given in justice an intellectual equality with the favored geniuses of this life.

The arguments for theism considered in this article appear to me to rest mainly on the wish to believe. But the fact that we wish to believe in God, or immortality, or anything else, is no weighty evidence or none at all, in favor of such belief. It is of that fallacious pragmatic sort which holds that a belief is proved true by proving that it would be a good thing to have it proved true. Science ever "refuses to regard our own desires, tastes or interests as key to the understanding of the world."

I have no hesitation in writing this chapter caused by any fear of disturbing the faith of those who have been pleased to repeat the arguments which to me seem of little or no validity. They already believe, and nothing can disturb their faith. They ask no reasons; their power to need or ask questions was long ago aborted. They rejoice in their inability to question. They are glad hearts without reserve or doubt, who, to change a word of an earlier mystic, may be described in his language: "Jam non consilio *credens*, sed more eo perductus ut non tantum *credere* possim, sed nisi *credere* non possim."

No proofs henceforth I seek for my belief;
For to such mind God's grace has lifted me
That I not only can believe, but now
Not to believe is quite impossible.

THE MIGRATION OF A NATION

HOW ENGLAND IS MEETING HER OBLIGATION TO HER LITTLE ALLY, BELGIUM

BY LOUIS LIVINGSTON SEAMAN

SPECIAL CORRESPONDENT OF THE INDEPENDENT

THE curtain has fallen on the first act of the terrible tragedy in Belgium, and the heroic people of that unhappy land are today without a country or a home. Seventy days ago the 7,000,000 people of Belgium were among the happiest, most industrious and contented to be found in the world. Thru no fault of their own their land has been devastated, their fortresses shattered, their people killed or terrorized and driven by thousands to seek shelter on foreign shores. But their little army is still intact despite its losses, and the courage of the people is still undaunted even against such enormous odds as they were suddenly called upon to face.

Their splendid failure is but temporary. Of this they are fully confident. It echoes from every line of the proclamation as issued from Havre on the fourteenth of October, in the following language: "The Belgian services will continue to work in full measure where the local circumstances enable them to do so. The King and Government will rely on your prudence and patriotism. For your part, you may rely on our entire devotion, on the valor of our army and on the assistance of our allies to hasten the hour of our common deliverance. Our dear country, so hatefully betrayed and ill-treated by one of the powers which had sworn to guarantee her neutrality, has aroused increasing admiration all over the world, thanks to the union, the courage, and the clear-sightedness of all her children. She will remain worthy of this admiration which is her comfort today. To-morrow she will issue from these trials, greater and more beautiful for having suffered for the justice and honor of civilization. Long live free and independent Belgium."

I have just returned from Folkstone, where the Belgian refugees are arriving daily by thousands, and in most pitiable condition. The little collier "Kennilworth" from Ostend had just docked with 2263 so closely huddled on deck and in gangways that it was almost impossible to move. All were famishing with hunger and thirst, cold and wet, for the rain had fallen in torrents during the crossing; many had not tasted food or water for forty-eight hours. They presented a picture of abject misery difficult to exaggerate.

Thousands more braved the Channel in fishing smacks, tugs, pilot cutters and other small craft. In all about 5000 reached Folkstone yesterday; 8000 more came by way of Dover, and the day previous 5000, mostly women and children from the peasant class, many bringing all their earthly possessions in little handkerchief bundles. Among them were some who a week ago were considered rich, but today are penniless.

Of the refugees who arrived in England yesterday 2000 were sent direct from Dover to Glasgow, 500 to Liverpool and 200 to Manchester. Six thousand reached London Wednesday, many of whom were absolutely destitute. Large numbers were distributed to Woolwich, Bethnal Green, Holborn, Marylebone, Edmonton and other sections of London. Some three hundred fishermen and their families were sent to Milford Haven and Swansea. Among the refugees are numerous Jews, large parties of whom have been sent to Poland and Leman streets, where the better class of Jewish residents assist in their care.

Nearly 5000 of the refugees past thru the headquarters of the Belgian Relief Committee in Aldwich yesterday. The old skating rink was crowded to overflowing as the refugees were being registered, fed and distributed to various destinations. Many were given boots and garments at the emergency clothing department, which is under the management of the Red Cross nurses, assisted by voluntary workers.

Among the refugees were wounded Belgian soldiers, artillerymen, infantrymen, chasseurs and others, some with bandaged arms and heads; also marines from the Congo force and black soldiers in uniform, together with several priests. One of the latter, who wore a Red Cross badge, had been with the Belgian army since fighting began.

From the beginning of the war the Belgian army has played a splendid, but costly game. In their heroic battles, from Liège to Antwerp, they bravely contested every foot of territory, often driving back the enemy's advances, thereby frustrating his plans and *for weeks* checking his progress. To this fact the people of France owe the city of Paris, and Great Britain owes an equal debt of gratitude. The delay cost Belgium more than half her army and all her territory—a sacrifice unsurpast in history. But it enabled the Allies to mobilize their forces and to check successfully the Prussian advance in France. A part of England's gratitude is being shown in her generous welcome of the expatriated Belgians, but the numbers are so overwhelming that America's coöperation is much needed in this great work of humanity.

London

BOTH SIDES A DEBATE

MOTHERS' PENSIONS

RESOLVED: That allowances or pensions should be paid from public funds to needy mothers of dependent minor children.

The first "mothers' pension" law was past in Missouri in 1911. Now twenty-one states, including Oklahoma, have similar laws. Their purpose is to prevent separation of children from their mothers because of poverty. Tho differing in detail, most of the laws have the following general provisions: need must exist, the mother must be a fit person physically and morally to care for her children, she must not be employed regularly outside her home and she must maintain certain standards of living if the allowance is to continue. "Mothers' pensions" laws have been strongly advocated and have also met strong opposition.

BRIEF FOR THE AFFIRMATIVE

I. Pensioning mothers is wise public policy.

A. Need exists and no other remedy is adequate.

1. Support of the family at home by the mother's labor results in: (a) Overwork of the mother for insufficient wages, (b) tendency to run in debt, (c) lack of proper nourishment and proper housing, (d) lack of intellectual stimulus, (e) frequent delinquency of the children.

2. Placing children in institutions results in: (a) Heartbreaking separations, (b) lack of normal home atmosphere, (c) tendency to uniformity.

3. Boarding children out in private homes results in: (a) Unnecessary separations, (b) difficulty of finding homes to give good care.

4. Social insurance will not meet present needs. (a) Years are required to start it. (b) Insuring against desertion is impossible. (c) In the countries which have gone farthest into social insurance we still see the development of special measures of aid and protection for the children of widowed mothers." *Survey* 32:3.

B. Pensioning mothers meets the need.

1. It is just. (a) Prevents separation. (b) Relieves relatives of unfair burdens. (c) "Pensions" are salaries earned by mothers who serve the state in giving all their time to rearing good citizens.

2. It is advantageous socially. (a) Makes better citizens. (b) Raises standards of living. (c) Makes child labor unnecessary.

3. It is advantageous economically. (a) Is the cheapest way to care for both mothers and children. "A mother would raise a child for one-half, or even one-third or one-fourth as much as the state. . . ." *Delineator*, 80:86. (b) Would eliminate much of the expense caused by delinquency and crime.

II. "Mothers' pensions" should be paid from public funds.

A. It is a proper function of the state.

1. Prevention of needless poverty is as much so as prevention of disease.

2. Without children's physical well being state education fails.

B. Private funds are inadequate.

1. They are irregular.

2. They are insufficient for all cases.

3. They generally give only partial relief in any case.

4. They can not do preventive work as public funds can.

C. Private relief is charity.

1. Destroys self-respect of recipients.

2. Often those in great need will not accept it.

D. Adequate funds can be raised by taxation.

E. The difficulty of administering "mothers' pensions" should not prevent their adoption.

1. This is no objection to the principle.

2. The difficulty is overestimated. (a) Supervision will prevent extravagance and fraud. (b) Desertion will not be encouraged. (c) Work of investigation and administration will improve as it continues.

3. So important a social experiment should be given time for a thoro trial.

F. "Mothers' pensions" are working successfully in many states. "I consider the law a pronounced success."—Judge Hulbert, of the Wayne County (Michigan) Court. Independent, 78:425.

BRIEF FOR THE NEGATIVE

I. The principle underlying "mothers' pensions" is wrong.

A. Money alone will not make good homes.

B. The need for relief is overestimated. Few families are now being separated because of poverty alone.

C. Pensioning mothers would be harmful socially.

1. Would lessen the interest of private charities.

2. Would relieve parents and relatives of responsibility they should feel.

3. Would destroy self-respect because "pensions" are charity. Education is offered to rich and poor alike; "pensions" are offered only to the needy.

4. Would increase desertion and divorce.

5. Would rob mothers of interest in outside work which is often a safeguard.

6. Would discriminate against the provident.

7. Would tend to increase the proportion of population derived from the poorest stock.

8. Prohibition of outside work would increase sweatshop work.

D. Pensioning mothers is at best relief. It would delay the following constructive measures which, if adopted, would make relief unnecessary:

1. Better industrial education with its better wages.

2. Better conditions and hours of work.

3. Better safety laws.

4. Better employer's liability laws.

5. Laws decreasing insurance rates.

6. Better enforcement of laws on desertion and on support by relatives.

7. Social insurance.

E. Pensioning mothers would be expensive.

1. Would create a new and constantly increasing class of dependents.

2. Expense of actual pensions would be small compared with enormous expense of investigation and administration.

II. If "mothers' pensions" are needed for temporary relief, they should neither be raised nor administered from public funds.

A. The question has not been studied thoroly enough to warrant legislation.

B. It is harder to annul laws than to pass them.

C. Public pensions would advance socialism.

D. Pensioning mothers would reëstablish public outdoor relief.

E. Public pensions are liable to abuse by applicants.

1. Public funds are considered inexhaustible.

2. Application would be made merely because pensions exist.

3. Children would be committed to institutions unnecessarily by disappointed applicants.

F. Private charity can administer relief better and at less cost.

1. Administrative machinery and experience already exist.

2. Effort can be made to raise more adequate funds.

G. Administration of public pensions is open to insurmountable difficulties.

1. Administration of public funds by private societies is impossible.

2. The juvenile court, the only public agency qualified to administer "mothers' pension" laws, can not do so without curtailing its regular work.

3. Sufficient funds are seldom appropropriated to do the work properly.

4. It is difficult to secure competent workers when they are needed. (a) Civil service causes delay. (b) Without civil service there is danger of political influence.

H. In many states "mothers' pension" laws have not worked so well as their advocates expected.

WEARING DOWN THE BRITISH NAVY

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

A BATTLE line 300 miles long with the left flank of one belligerent supported by a fleet including three "British monitors" is something unusual. It is unusual for warships to be thus intimately combined with a battle line, and somewhat surprizing fifty odd years after the "Monitor" demonstrated its efficiency in Hampton Roads to find the British Navy reversing its adverse opinion of Ericsson's "cheese-box on a raft." Whether the "Monitor" in its original form is coming back to stay is perhaps a question, but its peculiar advantages have always been plain. No other vessel of equal offensive power presents so small a target, nor offers an unobstructed circle of fire around the whole horizon, nor is of such light draft. Used as Ericsson meant it to be used, the "Monitor" retains its pristine efficiency; but sent to make long cruises, and encounter heavy seas, or reconstructed out of all semblance to his original design, it loses. We might do worse than again build monitors after the original pattern for coast defense, but with modern guns, modern armor and modern engines. After the recent quick destruction of supposedly impregnable fortresses, fortifications—at the Panama Canal, for instance—do not look quite as dependable as they did. To withdraw sea-going battleships from the fleet in order to keep them ready at hand to support these defenses is to weaken the mobile fighting line. A few single-turret monitors armed with fourteen-inch guns and permanently stationed at the Canal terminals might prove very useful hereafter. And even if never called upon to oppose an attack on the Canal itself, they would be distinctly handy to send to Mexican ports or other points of trouble in Central America, in place of battleships. In fact, we are already keeping some old ones at Vera Cruz, but these are antiquated, and hardly to be compared with what we could now produce without materially departing from Ericsson's first design. If the British monitors of today should get into action with modern German cruisers, or even battleships, it would be most interesting and instructive to observe what they can do, and the results might well be astonishing to those who believe that they are as obsolete as Noah's ark.

Two sources of trouble still continue, the first being the elusive German cruisers from which "the seas" have not been "swept," and the second, mines. The "Emden's" present score of British merchantmen destroyed in the Indian Ocean has now reached twenty-seven. Out of fifty vessels lost by Great Britain she has disposed of twenty. Her latest exploit has been to disguise herself as a Japanese, make her way into the harbor of Penang, and there sink the Russian cruiser "Jemtchug" and a French destroyer. Disguise is a perfectly proper ruse provided the false ensign is hauled down and the right one hoisted before a shot is fired. In the Civil War, our ships hunting for the "Alabama" or "Florida" often displayed British colors.

The "Karlsruhe" in the South Atlantic has made fifteen prizes. None of the free German cruisers has as yet been caught, to the openly exprest discontent of the British public. The Admiralty's explanatory manifesto recurs to the bigness of oceans and the consequent difficulty of finding fast ships in them which do not wish to be found—a consideration which has not altogether escaped other people—and by way of further palliation it is announced that a great many more German than British merchantmen have been destroyed or captured, and that no less than seventy warships—French, British, Japanese and Russian—are hot on the trail of the audacious raiders. This would be more satisfying if a list of the "seventy" ships were given. As there are assurances that it has not been desirable to withdraw cruisers from the blockading fleet in the North Sea to do this sort of work, and as about all the Russian navy is shut up either in the Baltic or in the Black Sea, it is not clear from an inspection of the French and Japanese navy lists how, even allowing for converted merchant auxiliaries, so large a searching force can be available.

The mines continue their destruction of neutral ships, fishermen, and even vessels carrying refugees from France and Belgium, and are appearing in very unexpected places, such as north of Ireland. How the Germans could go there and plant a whole field all unbeknown to the British Admiralty remains to be explained. It is a queer kind of coast patrol that lets the enemy's minelayers get near enough to put down so many mines as to warrant the Admiralty's warning that "ships should not pass within sixty miles of Tory Island," without the Admiralty finding it out until after the "Manchester Commerce," on her way from Manchester to Montreal, is blown up. It is now questioned whether the Oceanic did not meet the same fate. How the Germans ever got to the west of England is a mystery, but they seem to have done so about as easily as Paul Jones did. If the British navy cannot protect that coast now any better than it did in revolutionary days, it might ask the French navy, which has plenty of destroyers and small cruisers, to lend a hand. War risk insurance soared skyward in 1778 after Jones's exploits. It has doubled on voyages to America since the Canada boat went down. Matters look now as if the Germans were trying to mine the paths of the transatlantic steamers in the effort to stop the transport of troops from Canada and to block the all important food route. If they can succeed in forcing the British to send ships to distant seas to hunt commerce destroyers, and ships to the coast of France to assail the German right wing, and ships to prevent mine-laying around Ireland, and meanwhile keep up steady and successful submarine attack, it will be very plain that the process of "wearing down" the British fleet is in full swing without any imperiling of German ships in decisive actions against superior numbers.

Except for the report that the North Sea trawlers have discovered that to pull up mines for a reward of ten dollars each is more lucrative than catching herrings, and the sharp tho pacifically received demand sent by Italy to Austria, to take her mines out of the Adriatic, no systematic effort at mine destruction seems to have been made. We bought the "Vesuvius" before the Spanish War for exactly that purpose, the intention being that she should use her air-guns to throw dynamite projectles into mine fields in order to blow up the mines and so open a channel for an attacking fleet, but we never used her for intended object. The plan or some modification of it might still be worth trying out.

Meanwhile Mr. Simon Lake calls attention to his submarine provided with wheels to travel on the sea bottom, from which a man in diving armor can emerge and walk on the bottom for quite a distance around the, vessel, his path being illuminated by electric lights. Mr. Lake now suggests that this explorer could easily find the mine anchors and cut the retaining cables of the

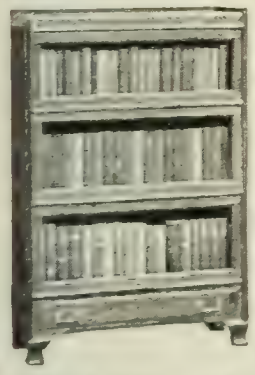
What 15c Will Do! **You have wished for a paper that gives all the news of the world, and that tells the truth and only the truth.** The **Pathfinder** is just the paper you have been longing for, and the little matter of **15c** in stamps will bring it to you every Saturday for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, **printed from large, easy reading type,** published at the Nation's Capital, for the Nation; now in its **22nd** year of increasing success. This paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box M, Washington, D. C.**

mines, so that the latter would float to the surface and either be gathered or carried away by the currents. A channel thru the mine field could thus be opened by which submarines might get into harbors or surface vessels traverse otherwise closed straits. Of course, there remains the objection that if the mines did not happen to be gathered as soon as they were freed their subsequent wanderings might prove troublesome for both friend and foe.

The bartered "Goeben" and her consort, the "Breslau," now under Turkish colors, have attacked the Russian navy in the Black Sea. The Russians have the numerical advantage in vessels, but nothing to match the "Goeben." As the Dardanelles are mined, the task of forcing an entrance will quickly confront the French admiral unless the "Goeben" is to be permitted to work unchecked havoc. Meanwhile a British admiral has been recalled to answer for not having tried conclusions with her before the Turks bought her out of the arena. The law of "the utmost" is not construed so strictly nowadays as it was in the days of Admiral Byng, a hundred and fifty-seven years ago. The death penalty is still enforceable in the British navy—as well as in our own—against him who fails to do "his utmost" to capture and destroy the enemy, but the brutal tragedy which ended in Byng dead on his quarter-deck riddled by the bullets of his own marines is not likely to be repeated in these gentler days, for governments know better how to *encourager les autres* than by the aid of a firing party.



As for the high strategy of the campaign, the British censor cuts off information and the German reports merely indicate that the Kaiser's navy continues to do exactly what it has been saying for the last three years it meant to do. Admiral Mahan, in an interview in the London *Daily Mail*, is reported as declaring: "I should expect the British fleet to win." Also that "Germany's hope is to strike immediately," and that "the suggestion that Germany might demonstrate with her fleet in the Baltic is not tenable.'

Nevertheless Germany not only does not "strike immediately," but clearly prefers slow attrition and gradual disintegration—and "tenable" or not it seems quite well established that she has a sufficient fleet in the Baltic to dispose of the Russian vessels whenever she decides to do so. Still it may be that His Majesty's admirals will derive from Admiral Mahan's "I should expect the British fleet to win" an electric encourage-

Sectional Bookcases
For Home, Study or Office

You will admire the handsome design, the substantial construction, the durable finish of these expansible bookcases. You add a section at a time as you need additional book space. **Dust Shield** in each section protects your books. **Door Guide** or equalizer controls the action of the door so it cannot stick or bind.

You make your selection from either Standard or Mission designs in four woods and a wide choice of finishes to harmonize with your furnishings.

Get Catalogue "H"—we will help you make a choice to suit your purpose and purse. These demand-filling bookcases are sold by progressive dealers.

ment not incomparable with Nelson's "England expects every man to do his duty."

Of course, absence of information does not imply that the profoundest strategy may not be in play. This seems to be overlooked by those who are asking why Great Britain's two hundred hydroplanes are not put to some use, and why the bomb-dropping experiments conducted by these aircraft before the King two years ago cannot be repeated against the German fleet. So also there may be strategy or merely coincidence in the presence of British cruisers as close to New York as international amenities permit and the hoisting of signal flags said to be indicative of the ship's name on every American vessel leaving the harbor. Perhaps the American coasters going peacefully from one of our ports to another prefer to hoist those flags—perhaps they do not: but if the information they afford is intended for the British cruisers it might be better manners if the giving of it were begun not in, but out of, sight of the city of New York. One does not like to have his family scrutinized by policemen sitting on the doorstep.

The industrious and enterprising Weddigen has run into port to mention that not only did his "U-9" sink the "Cressy," "Aboukir" and "La Hogue," but also the "Hawke." Four British cruisers to the credit of one German submarine and the latter ready for more work! Weddigen in addition to the Iron Cross gets the Order "pour la merite," the appropriateness of which depends on the point of view.

It was stated in last week's article on the flying-fish torpedo that an expert torpedo officer can strike a battleship with a fish torpedo every time at a distance of one mile. The reports of our own torpedo trials in Gardiner's Bay, since published, show that the fifteen destroyers taking part made seventy-five per cent of hits against a target *two* land miles distant and that if that target had been the size of a battleship they would have struck it every shot. As a matter of fact, six out of the fifteen boats did make 100 per cent of hits against the small target used. Those finished horsemen, the Portuguese cavalry, some fifty years ago were famous for possessing spurs and riding-whips, but no horses. This is mentioned merely incidentally because we have only one torpedo to each tube in our destroyers, and so far we have been unable to get any money from Congress to provide anything beyond this glaringly inadequate supply.

THE NEW BOOKS

OUR MUTUAL MIND

WHEN a science becomes old and respectable it tends to fix its habits and fall into a sort of routine. Whether this is due to the growth of a conventional technical vocabulary or the class-room necessity of splitting human knowledge along definite lines of cleavage so that each slice may accommodate one professor with no fraction left over, is hard to say, but the fact remains that a new science must be created from time to time unless we wish a great many valuable facts to escape our text-books. Thus, after psychology had settled down in the laboratory to study reaction times, and anthropology went out in the fields to look for flints and totem poles, and sociology turned its attention to the further complication of an ingenious terminology, another science called "social psychology" had to be invented because the other sciences of man left us in the dark about so many of his actions and institutions. Social psychology, having no traditions, is free to treat any subject that happens to interest and in any manner that happens to be interesting, as can readily be illustrated on any page of Graham Wallas's *The Great Society*.

Mr. Wallas touches upon many current topics in the course of his book, but not solely to illustrate his arguments. Rather does he seem to use his more abstract discussions to explain the phenomena of our civilization that press themselves upon his attention. The author is, for example, greatly concerned about the prospect of a general European war "which so many journalists and politicians in England and Germany contemplate with criminal levity," and so he devotes a large part of the chapter on "Love and Hatred" to a discussion of the subject. First the arguments of the militarists, who include, says the author, "probably more than half of the professed historians and psychologists in Europe," are duly given:

> The biological statement that War is necessary for the improvement of the race by the survival of the fit; second, the psychological statement that War is, owing to the existence in Man of warlike dispositions, inevitable, and that wise nations should concentrate all their resources on preparing for it; and, third, the further psychological statement that peace, even if it could be secured, would leave the warlike dispositions permanently unstimulated, and would therefore produce the nervous condition which I have called balked disposition, and that man in such a condition cannot live a life which any one would call good.

Then the author considers each of these arguments in turn from the standpoint of his science. Most people will agree that modern war means the survival of the least fit among individuals. But Mr. Wallas goes a step further and denies that a victorious war will give the victorious *race* the upper hand: "A decisive victory in south-eastern Europe of the Germans and Magyars over the Slavs would not mean that a hundred years hence there would be more Germans alive and fewer Slavs than if the war had not taken place. It only means that the Slavs would be less free and less self-respecting." To the argument that war is inevitable, and no court of arbitration could have the coercive power among sovereign nations that the police court has among individuals, he replies that "as a matter of historical fact, the irresistible force by which men are now compelled to resort to the law-courts in their private quarrels is the result of custom arising from thousands of free decisions to do so," and traces the history of law in northern Europe from the days when each head of a free family was a law unto himself and could levy private war at will. The third contention, that war meets a psychological need for dramatic crisis and struggle that the routine of peace can never afford, Mr. Wallas considers, as did William James, the strongest of all. But he remarks, very pertinently, that to burn down civilization to "warm our souls" is no more rational than the old Chinese custom of which Charles Lamb has told us of burning down dwelling houses in order to cook roast pig.

As the reader will gather, Mr. Wallas cannot keep his ethics apart from his sociology. Indeed, one of the most interesting discussions in the book is that in which the author outlines his ethical theory which can, perhaps, best be stated in his own words:

> If I try to make for myself a visual picture of the social system which I should desire for England and America, there comes before me a recollection of those Norwegian towns and villages where every one, the shopkeepers and the artizans, the schoolmaster, the boy who drove the post-ponies, and the student daughter of the innkeeper who took around the potatoes, seemed to respect themselves, to be capable of Happiness as well as of pleasure and excitement, because they were near the Mean in the employment of all their faculties. . . . But I recollect also that the very salt and savor of Norwegian life depends on the fact that poets, and artists, and statesmen have worked in Norway with a devotion which was not directed by any formula of moderation. When I talk to a New Zealander about the future of his country, and about the example which she is creating of a society based upon the avoidance both of destitution and superfluity, I sometimes feel that she may still have to learn that the Extreme as a personal ideal for those who are called by it is a necessary complement of the Mean in public policy.

The Great Society, by Graham Wallas. The Macmillan Co. $2.

BOOKS OF THE WEEK

The Modernizing of the Orient, by Clayton Sedgwick Cooper. What industry and commerce is doing to reawaken the Far East from its dreams of the past. Vivid and intimate pictures of the conflict between the old cultural and religious institutions and these new utilitarian forces.
McBride, Nast. $2.

Drift and Mastery, by Walter Lippmann. A cocksure, tho brilliant analysis of our social ills, and a new scheme for making over the world—just what is to be expected from an ambitious man but four years out of Harvard.
Kennerley. $1.50

Beauty for Ashes, by Albion Fellows Bacon. The story of the regeneration of Evansville, Indiana, when one woman discovers that "slums" can exist in small towns as well as in cities. A manual for civic reformers.
Dodd, Mead. $1.50.

Christianity and the Social Rage, by Adolph A. Berle, D.D. Much vigor in utterance but confusion in aim. Voices a desire to the church lead in social effort, but presents no positive methods. Stirring, but unsatisfactory.
McBride. $1.50.

The Pan-Angles, by Sinclair Kennedy. A consideration of the federation of the seven English speaking nations of the world. Exaggerates outside racial dangers and minimizes interior national differences.
Longmans. $1.75.

Modern Values and Their Christian Sources, by Philip C. Walcott. Clear and logical in thought, simple and forceful in style. The best in modern life traced to religious faith.
Pilgrim Press. $1.

A HISTORY FOR EXPORT

Professor William Milligan Sloane's *Party Government in the United States of America* is misleading in its title and dry in its contents. It is not an analysis of the workings or the development of political parties, as might be thought, but an arid summary of American history from the Revolution to the Wilson Vera Cruz incident, with emphasis on the influence of politics in causing the events. But as Professor Sloane says, by way of introduction, his volume is practically a translation of lectures delivered in Berlin as Roosevelt Exchange Professor, allowance may be made for a certain degree of elementary information. Professor Sloane pleasantly alludes to Bryce's "American Politics," an unwritten book, states that the Convention of 1787 met May 5th, whereas it convened May 14th and kept adjourning until May 25th before it organized, asserts that the first Congress "proposed ten amendments," tho it proposed twelve, and gives (page 55) the dates on which the states ratified the Constitution quite wrongly and quite at variance with the table on page 408. That American politics has made the President progressively dominant is the conclusion of the volume.

Party Government in the United States, by W. M. Sloane. New York: Harper & Bros. $2.

BENNETT ON NOVEL WRITING

When Mr. Arnold Bennett is not a novelist and a conscientious artist he is somewhat of an iconoclast, and for the sheer joy of idol smashing, apparently, he wrote *The Author's Craft*—a curious

blend of wisdom and folly. It contains four short papers.

Thus we learn in the essay on "Writing Novels" that Dickens is losing place because the "texture of his mind was common," while Thackeray's mind also was "somewhat incomplete for so grandiose a figure, and not free from defects which are inimical to immortality"; only Turgeniev, of all the great novelists of the world, properly understood technic. "Balzac was a prodigious blunderer"; Guy de Maupassant and Flaubert "are both now inevitably falling in esteem to the level of the second-rate," and last but not least Mr. Bennett confides to us that in his opinion Shakespeare was "amateurish!" Truly Shavian is this tribute to the author's own greatness.

Again in "The Artist and the Public" Bennett makes a bold-faced argument for the worldliness of authors, obviously an attempt to justify his own practise of alternating a worth-while novel with several trashy ones. He quotes the example of George Meredith, a poet who wrote excellent novels to earn his living. "Meredith," he says, "wrote potboilers, because he was a first-class artist and a man of profound common sense." How Meredith might have envied this incomparable study of a superegoist.

The Author's Craft, by Arnold Bennett. George H. Doran Company. 75 cents net.

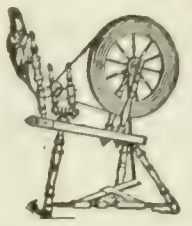
THE SUMMIT OF LIFE

Achievement, by E. Semple Thurston, is a sequel to "Richard Furlong," and follows the further fortunes of that artist hero, whose etchings were marvelous in their delicacy and spirit. It drops into melodrama at the end, but after much that is worthy of praise, for its sincerity and its belief in the power of man and woman alike to be unselfish to the last toward those unworthy of their supreme sacrifices.

Appletons. $1.35.

WHEN ANNAPOLIS WAS IN FLOWER

It is little enough time that the average American has had to give to the political annals of his country, much less the social history of his early forbears. But around the *Colonial Mansions of Maryland and Delaware* John Martin Hammond, besides depicting the best of the pre-revolutionary architecture, has pieced together, with legends and bits of anecdote from family archives, a fascinating story of the leisurely planter-life which found its particular flower at old Annapolis.



Lippincott. $5

A LITERARY WEED

The demand for ugly excitement seems to be a bottomless pit into which men and women of imagination throw the products or by-products of their pens. Rex Beach, author of *The Spoilers*, has joined this throng with the contribution of his last book, *The Auction Block*. An age-old skeleton of plot, a woman's soul bartered for gold, decked in the usual frills of wealth and coarseness, is past redemption even by occasional humor and a righteous finale.

Harper Bros. $1.35.

McCutcheon's *Handkerchiefs*

Reg. Trade Mark

Those who know the delights of shopping at McCutcheon's Handkerchief Department never go elsewhere.

Year after year they come, always expecting to find the most wonderful assortment in the world—and they are never disappointed. Every land that produces Handkerchiefs is fully represented. Everything that is new is usually displayed here first. Everything that is old, yet staple and desirable, is also carried in stock. Nothing is missing that good taste demands—and at McCutcheon's "pure linen" means *pure linen absolutely.*

We quote below for two popular lines.

Ladies' Handkerchiefs, 25c. and 50c.—Including Irish and Swiss hand-embroidered goods, Armenian lace trimmed, and Madeira hand-scalloped Handkerchiefs, as well as other staples and novelties in an almost bewildering assortment of designs.

Men's Hand-embroidered Initialed Handkerchiefs, 25c. and 40c.—An unapproached collection, including different weights, medium, narrow and broad hems, some with the popular corded effects, all beautifully hand-embroidered with script, block or Old English letters.

Mail orders receive our prompt attention.

James McCutcheon & Co.

29 Broadway New York City

THE MARKET PLACE

THE COTTON SITUATION

With the adjournment of Congress the ill-considered efforts of congressmen and senators from southern states to commit the Government to a scheme for valorization of the cotton crop came to an end. They may attempt to revive them when the short session opens in a month. For it is an interesting phenomenon that those who are loudest in their denunciation of special privilege in general fail to recognize the hated principle when it is a question of benefiting their own constituents in particular. But the opposition to their schemes is too solidly founded to let them get far.

As time goes on, furthermore, the situation continues to improve so that their case, weak as it was from the beginning, languishes more and more.

Progressive steps toward the solution of the great cotton problem are being taken steadily. The two most important things to be accomplished are the financing of the cotton planter, who has raised his crop on credit; and finding him a market for his cotton.

The plan for a Cotton Loan Pool, proposed by St. Louis bankers to meet the financial needs of the planters, is well under way. It has received the sanction of the Federal Reserve Board and is to be carried out under the direction of the members of the board acting as individuals. The central committee, so constituted, is to appoint a Cotton Loan Committee to have the actual administration of the fund.

This committee is to be composed of W. P. G. Harding, chairman, Washington; Paul M. Warburg, Washington; Col. E. M. House, Austin, Texas; Albert H. Wiggin, New York; James S. Alexander, New York; James B. Forgan, Chicago; Festus J. Wade, St. Louis; Levi L. Rue, Philadelphia; William A. Gaston, Boston.

Each cotton producing state is to have a central committee subordinate to the Cotton Loan Committee, and local committees subordinate to the state central committee.

A fund of approximately $135,000,000 is to be raised—$100,000,000 from the states which do not raise cotton and about one-third as much from Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Texas and Tennessee. The banks of New York have pledged themselves to subscribe $50,000,000 to the fund, provided the same amount shall be subscribed by banks in other non-producing states within a reasonable time. The subscriptions from the cotton producing states are to be made by particular banks only when loans are made from the fund thru those banks. Without such subscription no bank may obtain a loan for a customer from the fund; and when such a loan is made the bank thru which it is made subscribes an amount equal to one-fourth of the loan. Thus, in effect, in each individual case the local bank lends to the planter one-quarter of what he desires and the fund lends him the other three-quarters. But the whole loan passes thru the fund and is subject to the committee's requirements and safeguards.

Loans are to be made from the fund for one year at six per cent. They are to be secured by cotton stored in approved warehouses and fully insured, on the basis of six cents per pound for middling.

In addition to the six per cent interest, the borrower is to pay into a guarantee fund three per cent of the face of the loan. This guarantee fund will serve to pay the expenses of administration—estimated not to exceed one-eighth of one per cent of the loan fund, and to protect the subscribers to the fund from loss.

The Secretary of the Treasury has addrest a circular letter to the clearing house associations of the leading financial centers, urging their coöperation in making up the fund. In the course of his letter Mr. McAdoo thus describes the gravity of the situation:

The cotton situation in the South presents a problem of the most urgent character. It is imperative that some intelligent financial measures shall be immediately adopted to relieve that situation. The problem is not local, but national, because a serious hurt to the South affects the entire country. To help the South in this emergency must appeal, therefore, not only to our better instincts, but also to our material interests.

He appeals to the banks of the country in these words:

I wish earnestly to urge upon you the importance of the banks in your city and in your Federal reserve district promptly subscribing the amount allotted to you. New York has already led off with a $50,000,000 subscription, and I sincerely hope that there may be no doubt whatever about the raising of the remaining $50,000,000 in the other leading financial cities of the country. I am sure that we may confidently count upon the loyal and patriotic support of the bankers of your city in this emergency. The Federal Reserve Board itself, notwithstanding the onerous duties which now devolve upon it in the organization of the Federal reserve system, has, nevertheless, consented to constitute itself a voluntary committee for the purpose of supervising the administration of the proposed fund, because of the seriousness of the emergency and the necessity for unselfish service on the part of every citizen who wants earnestly to help his country.

He further announces that the certificates received by the banks of the non-cotton producing states in return for their subscriptions will be accepted as security for the issuance of emergency currency. This, as he says, should greatly facilitate the banks in making and taking care of their subscriptions.

The purpose of the fund is, of course,

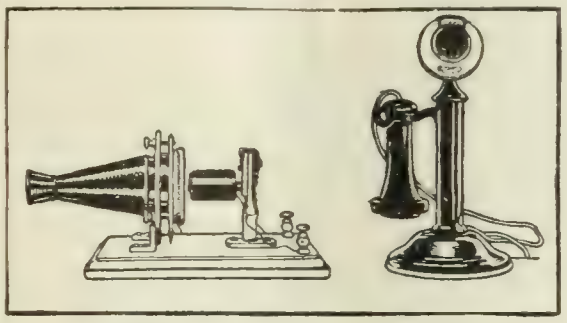
to enable the planter to carry over his cotton to a more convenient season rather than to dump it upon an overstocked market in order to realize cash upon it. It should do much to meet the problem of the planter's financial necessities. The next thing to do is to find him a market for his crop. For a market is what he must have for his ultimate safety; the best loan plan in the world would be of use merely to bridge over an emergency gap.

The announcement of the policy of Great Britain in relation to contraband of war has helped to clear the sky in relation to the foreign market. Cotton is under no circumstances to be regarded by Great Britain as contraband, and may therefore be shipped with impunity to Germany and Austria, provided of course it goes in neutral bottoms.

In making this announcement, Great Britain is doing no more than should have been expected. The Declaration of London puts cotton unconditionally upon the non-contraband list. Altho the Declaration was not ratified by several of the great powers, including Great Britain itself, it represents the most advanced international sentiment on the subject of contraband. Nevertheless it is a distinct relief to have the matter made unequivocally clear by England's express declaration.

It is reported that purchases of cotton for Germany have already been made amounting to several hundred thousand dollars and the cotton shipped, and others are expected to follow. The difficulty to be confronted lies in the lack of neutral ships to carry the cotton abroad. So long as the Allies retain their present command of the sea, no German or Austrian merchant vessel dare sail from American ports. Shipments whether of cotton or other commodities must go in neutral bottoms if destined for Germany or Austria. The cotton shipments now being arranged are to be made in vessels clearing for Italian ports.

It is expected that an early opening of the Cotton Exchange can probably be arranged. A syndicate plan is under consideration for the relief of cotton brokers who may find themselves embarrassed when the Exchange opens. It is said that New York banks are prepared to lend $1,500,000 for this purpose. This should bring the reopening nearer.

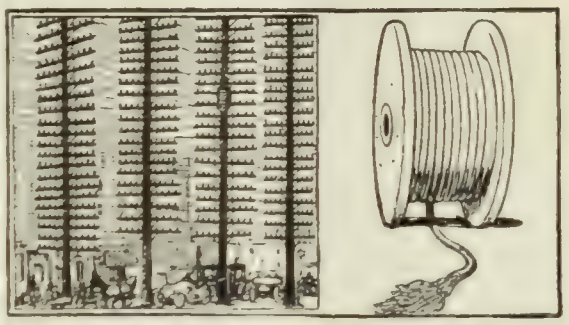


From many directions come word of big orders from the belligerent nations for American products. Orders for two and a quarter million pairs of boots are reported of New England factories. Increased demand for leather, to be made into boots in England, have set one big concern running its factories day and night at 125 per cent capacity. Before the war they were running at forty per cent capacity.

From Chicago it is reported that the meat packers have enough orders to keep them running on full time for a year. Over $7,000,000 of orders for clothing, trucks, harness, tinned meats and the like have already been placed in the Chicago markets.

A packing company of Oklahoma City has received an order for fifteen million pounds of canned meat to go to Europe.

How the Public Profits By Telephone Improvements



Here is a big fact in the telephone progress of this country:

Original Bell Telephone 1876 — Standard Bell Telephone To-day

Early Telephone Exchange — Typical Present-day Exchange

If City Wires Were Carried Overhead — 800 in Underground Cable

Hand in hand with inventions and developments which have improved the service many fold have come operating economies that have greatly cut its cost.

To appreciate these betterments and their resulting economies, consider a few examples:

Your present telephone instrument had seventy-two ancestors; it is better and cheaper than any of them.

Time was when a switchboard required a room full of boys to handle the calls of a few hundred subscribers. Today, two or three girls will serve a greater number without confusion and very much more promptly.

A three-inch underground cable now carries as many as eight hundred wires. If strung in the old way, these would require four sets of poles, each with twenty cross arms—a congestion utterly prohibitive in city streets.

These are some of the familiar improvements. They have saved tens of millions of dollars.

But those which have had the most radical effect, resulting in the largest economies and putting the telephone within everyone's reach, are too technical to describe here. And their value can no more be estimated than can the value of the invention of the automobile.

This progress in economy, as well as in service, has given the United States the Bell System with about ten times as many telephones, proportionate to the population, as in all Europe.

LISTERINE

Use it every day

AS a wash and dressing for superficial cuts and wounds, Listerine, in the proportion of one to ten or twenty parts of boiled water, will be found very efficacious. Physicians use Listerine as the *safe*, non-poisonous antiseptic.

Do not accept an imitation. The original Listerine is safest and best. Other uses given in folder wrapped around the bottle.

All Druggists Sell Listerine

LAMBERT PHARMACAL COMPANY, St. Louis, Mo.

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,219,045,826.00
Received premiums thereon to the extent of	282,298,429 80
Paid losses during that period	141,567,550.30
Issued certificates of profits to dealers	89,740,400.00
Of which there have been redeemed	82,497,340.00
Leaving outstanding at present time	7,243,060.00
Interest paid on certificates amounts to	22,585,640.25
On December 31, 1913, the assets of the company amounted to	13,259,024.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

COMPULSORY INVESTMENTS

Five or six years ago the Legislature of Texas enacted a law requiring all "foreign" life insurance companies transacting business in that state to invest seventy-five per cent of the value of all reserves maintained under policies issued on the lives of the citizens in Texas securities. The term "foreign companies" is used in the laws of each of our states to designate companies incorporated by other states. This provision in respect of investments is one that the financial managers of most companies object to as one which deprives them of the discretionary powers essential to success. The result was that some twenty-odd life companies, including the leaders in that line, retired from Texas; and have continued to remain out.

Sentiment in the state is divided on the question. Business people generally are against it and, as we see it, correctly insist that the effect has been to reduce the amount of invested money from outside sources and to raise the average rate of interest. On the other hand, the politicians and their followers insist that the principle is a just one and that it has resulted in the organization of a number of local life insurance companies. In matters of this kind, southern and western states are radical. To them, insurance companies, particularly those of the East, are rich financial institutions, one of the objects of which is to drain the remainder of the country of cash and concentrate it in and around New York City. It is therefore gratifying to find one insurance commissioner in that section with a wider horizon.

Hon. T. M. Henry, Commissioner of Insurance of Mississippi, read a paper at the recent convention of insurance commissioners held at Asheville, North Carolina, utterly disapproving of compulsory investments and congratulating two successive Legislatures of his state on defeating persistent attempts to enact such a law there. He analyzed the conditions which had been set up in Texas by its law and proved that the state was a loser. He cited life company investments in Oklahoma, a free state on this point, and showed that the companies held mortgages there for $22,176,000—a sum equal to 147 per cent of the total Oklahoma reserves.

Mr. Henry observes that it seems to be undisputed that the farmers of Texas cannot get six per cent money. He quotes the Texas Welfare Commission to the effect that for several years prior to the enactment of the compulsory investment law there, the rate of interest on both farm and city property was steadily declining; and that since that time it had risen one-half of one per cent and one per cent. An examination of the loans on real estate mortgages owned by foreign life companies on Texas property for the year 1907 reveals an average interest rate of 6.46 per cent, as against 7.20 per cent in 1911. In Oklahoma the rate was 6.18 in 1907 and 5.93 in 1911.

Mississippi is securing, says Commissioner Henry, a constantly increasing amount of outside money as investments, and he expects to see it grow by a few million each year. "I am not going to put a premium on one kind of investment securities and blacklist another," he adds. In conclusion he said:

"I will stand for a free field and no favor among all kinds of investments and among all insurance companies. I want every reputable, solvent company that wishes, to do business in my state; the state wants them; and we are not going to spoil our welcome by insisting on impossible, illogical and uneconomical legislation such as this. . . . Until the policyholder, the most vitally interested party, is unmistakably heard from affirmatively, my conscience will not permit me to endorse any legislation so materially affecting him."

This is sound doctrine, and one regrets it does not prevail more widely South and West. Applying a familiar Jefferson maxim, that insured community is governed best that is governed least.

SECURITY VALUES

The financial departments of all insurance companies are concerned over the conditions which, as the result of the European war, affect the security market. The laws require that company assets shall be valued at date of annual statements, that is to say, at market prices on December 31. The stock exchanges have been closed since early in August and may so remain indefinitely. Abnormal conditions have prevailed and will continue long after peace has been concluded.

The insurance commissioners of the various states recognize the difficulties of the situation, and for some time past have been conferring among themselves in an effort to find a satisfactory solution of the matter. The heads of the departments of several states having heavy insurance interests incline to the opinion that the prices at the close of the stock market on June 30—the end

of the first six months of 1914—should be allowed in making up accounts for the year ending December 31. These prices are said to range from one to three points higher than those on December 31, 1913, and from two to seven points higher on bonds and five to sixteen points higher on stocks than at the close on July 30—a few days prior to the commencement of the war.

These fluctuations are not particularly important to the great life and fire companies, which compose the minority as to number of corporations, but it may be somewhat inconvenient to many companies of small and medium size with limited surpluses. In our opinion, however, there are few companies the financial condition of which would be seriously affected by the price reductions indicated.

In view of the fact that there will probably be no official exchange quotations for use on the last day of the year, it is eminently proper in the state commissioners of insurance to agree on a rule and to promulgate it for the guidance of companies, many of which will soon be engaged in the preliminary work of balancing their yearly accounts.

NOTES AND ANSWERS

V. B., Dallas, Tex.—Established in 1809; authorized capital, £6,000,000; entered the United States in 1866; United States branch assets, December 31, 1913, $8,787,077; surplus to policyholders, $3,380,216.

R. S. B., Pittsburgh, Pa.—There are two companies of that name, one in Chicago and the other in Des Moines. The Chicago company has $100,000 capital and $637 net surplus; the other has $175,000 capital and a net surplus of $16,000.

L. R., Brooklyn, N. Y.—There are many life companies, entirely worthy of confidence, which I would pass over in making a selection; but only because there are others I prefer. There are many factors to be taken into consideration in choosing a policy and the company writing it. Every man must choose according to his needs or desires in both cases.

R. S. M., Cleveland, Ohio.—The Provident Savings Life Assurance Society of New York retired from business January 1, 1911, after a varied career of thirty-six years. Its capital stock and assets were acquired and all its obligations assumed by the Postal Life Insurance Company of New York. The Provident Savings' fortunes commenced to decline in 1906 and despite the efforts made to retrieve them it finally surrendered to the inevitable. The trouble seems to have been due to the extravagance of the management in charge from 1897 to 1906.

At the annual meeting of the Western Union, an association of fire insurance companies, held at Niagara Falls recently, the announcement was made that the loss ratio in the West had increased this year, and that, as the result of the troubles in Europe, the premium income of the companies were substantially reduced.

Learn How to Read these Faces

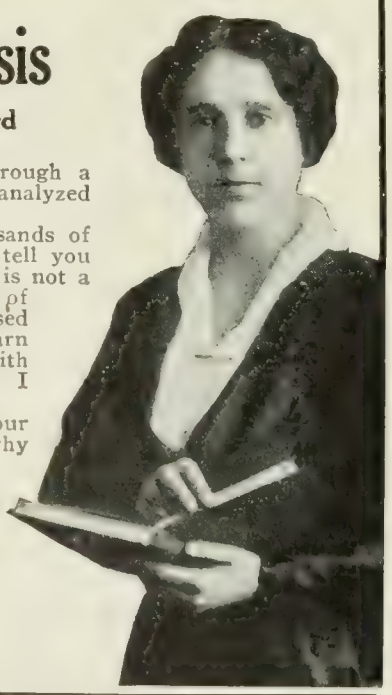
If you are a good judge of character —I can make you a better one

IN spite of your ability to judge men you have made many a mistake during the past year. These mistakes were costly, maybe. You could have avoided them. You will avoid them in the future if you learn from me the accurate.

Science of Character Analysis

Taught by mail by Dr. Katherine M. H. Blackford

I HAVE saved large firms thousands of dollars in selecting men. I have trained assistants who are now earning large salaries as employment experts with great corporations. For years letters by the thousands have come in demanding instruction.



At last the Review of Reviews Company suggested that I put the science in such form that you could study it by mail.

Send the coupon promptly and you will be in time to be enrolled.

I have spent years in studying and analyzing character. I have been a practicing physician. From sciences of psychology, physiology, biology, anthropology and anatomy, I have evolved a new Science. I have put this Science through a most rigid test. I have analyzed over 100,000 people.

I have "sized up" thousands of prospects for jobs, and I tell you that the judging of people is not a gift, or a special talent of my own; it is a science based on facts that you can learn and that you can apply with just as much success as I can.

I will teach you why your eyes are blue or brown; why your face is convex; why the texture of your hair is coarse or fine, and how all these things affect you in the choice of your business.

What You Learn from the Course

How to judge all people.

How to understand yourself, and decide what you are best fitted to do.

How to sell goods by understanding your customer.

How to judge the aptitudes and abilities in your children.

How to have social ease.

How to read the secrets that men reveal in eyes and face and hand.

I can teach you to judge your client, your jury, your congregation, your assistant, your employer, your employee, your guests, the man you meet casually at a dinner table, and the man, who, as your partner, may make a success or a failure of your business ventures.

Only a limited number of students can be taken. Send coupon for whole story FREE before the rolls are filled up.

JUST A WORD

A subscriber of long standing, in renewing for himself and three friends, writes: "At first I rather resented the changed make-up of The Independent, partly from natural conservatism and partly because it came folded rather than flat, and with many of the pictures marred by the folding. But the improvements both in printing and substance have been so marked and so thoroly satisfying that I now look upon The Independent as the one indispensable magazine."

"The Independent is going to be alive and alert to the things that are about to happen, as well as appreciative of the immediate results of those that have happened." Such was our announcement in the first issue of the present year. Confirming the success of our efforts, a correspondent in California writes: "I have tried several times to send The Independent a timely article on some happening away out here. The Independent is so up-to-the-minute that it keeps me gasping. I could send a timely article only by writing about it a week or more before it happened, and Tolstoi is the only one I know of who has been really successful at that sort of writing."

The need for Red Cross contributions for the relief of the sufferers in Europe is increasing rather than diminishing and we are especially glad to record the fact that Independent readers have already contributed $4181. Further contributions are urgently needed and cordially invited. Every contributor of Two Dollars, or more, is entitled to membership in the Red Cross for the current year, and will receive from The Independent a Red Cross button, an evidence of participation in this great work of mercy.

An extraordinary group of contributions will appear in the special Efficiency Number of The Independent bearing date November 30. Following the first article in the series by Edward Earle Purinton under the general title "Efficiency and Life," there are shorter articles by Judge Elbert H. Gary, Chairman of the United States Steel Corporation; Hon. Frank A. Vanderlip, President of the National City Bank of New York; Hon. Louis D. Brandeis, Efficiency Counsel for the Great Railroad Systems; Dr. Charles W. Eliot, National Educator and Former President of Harvard University; Harrington Emerson, President of the Emerson Company and Efficiency Counsel for the United States Navy; F. C. Henderschott, Founder of the National Association of Corporation Schools; Hon. John Wanamaker, Former United States Postmaster General and Leading American Merchant; Hon. William Russell Wilcox, President Efficiency Society, former Chairman of New York Public Service Commission. Orders for a large number of extra copies of this issue have already been received, and it is certain therefore to be very widely read.

How can we admire the poets when they are so contradictory?

A Book of Verses underneath the Bough,
A Loaf of Bread, a Jug of Wine and Thou.

Such are the essentials for Omar, but Shakespeare says, "Good wine needs no bush." Where I was raised the saying was, "A good bush needs no wine." Good bushes were rare on the Kansas plains.

FROM A GERMAN DIARY

AN OFFICER IN POLAND

Sept. 21.—The roads are beyond belief. When we are compelled to diverge from a so-called *chaussée* it is impossible to think about progress. . . . It is awful. No one can imagine the filth on which humans and horses live here. In one house were crowded fourteen persons. The houses in the villages are all the same, covered with dirty straw. The people have nothing to eat, and how they live is a puzzle. The cattle are fearful and the horses so small that they almost remind one of kittens. One is obliged to sleep on straw. At each cross-road instead of sign-posts there are crosses.

Sept. 22.—Still we have not seen the enemy. Only forty kilometers away appeared cavalry patrols. Tomorrow we meet Austrian Landsturm troops. It is amazingly dull here. We have received newspapers, but they tell us nothing new. I spend my time in reading wretched detective novels. I feed on eggs, abominable butter, and abominable bread. The only thing which it is possible to dream of is not to penetrate too far into this extraordinary country.
—From the London *Times*.

THE UNIVERSITY OF CHICAGO PRESS
Periodicals—Domestic and Foreign

Published by authority of the Board of Trustees of The University of Chicago

Religious

The Biblical World

A journal of the awakening church. Edited by Shailer Mathews, Dean of the Divinity School, University of Chicago, and President of the Federal Council of the Churches of Christ in America. Monthly, $2.00. Foreign postage, 68 cents; Canadian postage, 35 cents.

The American Journal of Theology

Ernest D. Burton, Gerald B. Smith and Shirley J. Case, Managing Editors. Quarterly, $3.00. Foreign postage, 41 cents; Canadian postage, 20 cents.

Educational

The School Review

Edited by Rollo L. Lyman and other representatives of the School of Education, University of Chicago, in co-operation with the Society of College Teachers of Education. Monthly, except in July and August, $1.50. Foreign postage, 52 cents; Canadian postage, 30 cents.

The Elementary School Journal

Edited by the Faculty of the School of Education, University of Chicago, in co-operation with the Faculty of the Francis W. Parker School. Monthly, except in July and August, $1.50. Foreign postage, 46 cents; Canadian postage, 30 cents.

Scientific

The Botanical Gazette

Edited by John M. Coulter. Monthly, $7.00. Foreign postage, 84 cents; Canadian postage, 35 cents.

The Journal of Geology

Edited by Thomas C. Chamberlin and Rollin D. Salisbury. Semi-quarterly, $4.00. Foreign postage, 53 cents; Canadian postage, 30 cents.

The Astrophysical Journal

Edited by George E. Hale, of the Mount Wilson Solar Observatory; Edwin B. Frost, of the Yerkes Observatory, and Henry G. Gale, of the Ryerson Physical Laboratory, University of Chicago. Monthly, except in February and August, $5.00. Foreign postage, 62 cents; Canadian postage, 30 cents.

Social and Economic

The American Journal of Sociology

Edited by Albion W. Small, in co-operation with the officers of the American Sociological Society. Bimonthly, $2.00. Foreign postage, 43 cents; Canadian postage, 30 cents.

The Journal of Political Economy

Edited by the Faculty of Political Economy of the University of Chicago, in co-operation with the officers of the Western Economic Society. Monthly, except in August and September, $3.00. Foreign postage, 42 cents; Canadian postage, 30 cents.

Philological

Classical Philology

Paul Shorey, Managing Editor. Quarterly, $3.00. Foreign postage, 23 cents; Canadian postage, 15 cents.

Modern Philology

John M. Manly, Managing Editor. Monthly, except in August and September, $3.00. Foreign postage, 45 cents; Canadian postage, 25 cents.

The American Journal of Semitic Languages and Literatures

Edited by the Faculty of the Department of Semitics, University of Chicago. Quarterly, $4.00. Foreign postage, 26 cents; Canadian postage, 15 cents.

The University of Chicago Magazine

Edited by James Weber Linn and Horace Spencer Fiske, under the control of the Alumni Committee on Publications. Published nine times a year. $1.50. Foreign postage, 27 cents; Canadian postage, 18 cents.

Do You Speak as One Having Authority?

Ex-President Roosevelt used to astonish callers at the White House by his intimate knowledge of *their* business. With the new Encyclopaedia Britannica you can equip yourself to be the peer of the most intelligent men and women. It is the means to comprehensive, accurate knowledge upon any subject—religion, geography, politics, science, history, invention, manufacture, commerce, finance, art and literature.

Why Did the European Cauldron Boil Over?

The Kaiser declared war on France because Russia refused to let Austria make war on Servia. This is a true but very superficial answer as to the cause of the greatest war of all times.

Ask the man who knows how to find the truth of things quickly to tell you the whys of things, and he will turn straight to the one book of complete, condensed, authentic information, the New Encyclopaedia Britannica—29 volumes, 41,000 separate articles.

The reader who owns this famous work is not content with mere newspaper reports of the fighting. He gets at the causes of the war—the story of the personal ambitions, intrigues, national fears and racial hatreds that brought on this catastrophe. He turns to the article on Germany and reads of the federation of the German states and the birth of the Empire; of its war with Austria, now its ally, and how the sudden rise of Germany under Bismarck's leadership upset the balance of power on the Continent. He learns how Austria got its foothold in the Balkans. He learns all about the Czar's aspirations in the Black Sea area, and England's long diplomatic effort to maintain the political equilibrium among five envious powers.

The Independent

VOLUME 80 MONDAY, NOVEMBER 16, 1914 NUMBER 3440

THE ELECTIONS OF 1914

THE result of the elections was surprizing. The Democrats did not expect such reverses. The Republicans did not expect such success. In the House of Representatives the overwhelming Democratic majority of 141 has been cut to the slim margin of 23. The great state of New York, in spite of a four-cornered fight for the Governorship, has gone Republican with a rush. In the great state of Pennsylvania, in spite of a three-cornered fight hotly waged, the Republicans have reëlected Penrose as senator and elected their state ticket.

Everywhere the Democratic vote has fallen off, while the Republican vote has swelled. The turnover has been largest in the East, but decided all along the line.

The prestige of the Wilson administration has received a severe blow.

What is the reason? Why has the country manifested this sudden purpose to repent and return to Republicanism?

Good and sufficient reasons are given by both sides. The partizan will accept those that jump with his convictions or his prejudices. But it is the task of the unprejudiced commentator to weigh them all and apportion to each as best he may its particular measure of merit.

The principal Democratic explanations are these:

1. It is really a victory for the Wilson administration, for on several similar occasions in the past—halfway thru an administration—the dominant party's majority in Congress has been wiped out.

2. The Progressives have largely returned to the Republican party and this is normally a Republican country.

3. Hard times are always bad for the party in power, entirely regardless of its responsibility for bringing them on.

The Republican contentions run about like this:

1. The Democratic tariff and Democratic interference with business are responsible for the low level of prosperity.

2. The President's foreign policy, which has been picturesquely described as "hiding under the bed," is a mistaken one.

3. There has been too much legislation.

4. It has been proved again which is the party of prosperity.

IN estimating the value of these contentions, it must be remembered that their essential truth is not the question at issue. It does not matter at all, in determining why people voted as they did, whether the record of the Wilson administration has been good or bad, its policies wise or foolish. It only matters what the people think about its record, how the people judge its policies.

If any large number of voters had come to believe that the hard times were due to the administration's deeds or to its negligences, they would vote for the opposition even tho the administration were in reality no more responsible than the man in the moon. It is not facts that decide elections; it is what the voters think about the facts.

Keeping this distinction clearly in mind, the situation may be interpreted with some approach to fairness and accuracy. There is truth, in varying proportions, in most, if not all, of the divergent contentions of Republicans and Democrats.

The Progressives, by and large, have returned, at least for the moment, to the Republican party. We have had times of reduced prosperity, and hard times are bad for the party in power. There has been a steadily growing feeling that the time has come to stop legislating for the restraint of business. This is normally a Republican country, and when the impetus of a successful attack against Republicanism, like that of the Democracy under Wilson at the last election, begins to die away, the Republican party naturally tends to return to power. Each of these influences undoubtedly had its part in bringing about the unexpected result.

PERHAPS the most surprizing thing about the outcome is that it naturally looks like an expression of dissatisfaction with President Wilson—and Mr. Wilson has been, indeed he is, a popular President. The country has seemed to like the strength of character which he has displayed, the singleness of his purpose, the fineness of his nature, the tone of high disinterestedness and sincerity which has marked his public utterances, his unremitting devotion to the public business, his firm leadership of his party. One would have said that the Democratic managers could not do better than to make Wilson the single keynote of their campaign. The words on the title page of their campaign handbook, "Thank God for Wilson," looked like a good campaign slogan. It was a cheap and meretricious phrase, of course, but unfortunately that would not disqualify it for use in political campaigning. But the thought underlying it, that President Wilson had rendered good service to the country, was apparently Democracy's biggest asset.

But the vote of confidence, which it would not have been unnatural for the President and his associates to expect, has not been given. If the result of the election should be interpreted as meaning anything in regard to Mr. Wilson, it comes close to a vote of lack of confidence.

But we do not believe that dissatisfaction with the

President was a considerable factor in the voting. The President is still popular. He has still the general approval.

But it must be remembered that Mr. Wilson was not elected by a popular majority. Mr. Roosevelt and Mr. Taft together received considerably over a million votes more than Mr. Wilson, while the Socialist and Prohibition candidates increased the discrepancy by a million more. In other words, Mr. Wilson was elected by a popular vote more than a million less than a majority.

A consideration of these figures throws into special prominence as a controlling factor in the result the return to the Republican ranks of the Progressives. This fact, combined with the inevitable effect upon the voter's mind of the empty dinner pail, the slender pay envelope and the shrinking salary check, will go far toward providing all the explanation that is needed. The other factors which we have set down were undoubtedly accessories in the result. In point of fact, the outcome of the elections of 1914, like many another event in human affairs, is much less surprizing in retrospect than it would have seemed before the event.

THE RETURN OF THE PROGRESSIVES

THE Progressive vote has vanished. Even in New York state, where Mr. Roosevelt led the campaign in person, the Progressive candidate for Governor ran fourth in the race. It is true that in California Governor Johnson, the Progressive candidate for Vice President in 1912, was reëlected by a large majority. But this was evidently a personal victory, for other Progressive candidates in the state were soundly beaten.

The Progressive rank and file have evidently returned to their old allegiance. The widespread victory of the Republican party is the sufficient evidence of the fact. What is the explanation?

The Progressive party, in its origin, was composed of four elements. There were those Republicans who revolted at what they believed to be the unfair acts of the Chicago convention. There were those, comprised in the wing of the party that in many states had worked together as Progressive Republicans, who rebelled at what they considered the domination of the party by the reactionary element in it. There were a considerable number of social reformers, attracted by the radical program put for the first time into the platform of a leading national party by the second Chicago convention. There were the personal admirers of Mr. Roosevelt. Some, of course, belonged to more than one group, some indeed to all four.

It is easy to see why voters of each of three of these groups should drift away this year; the second group probably furnished more largely than any other the handful that remained faithful.

As far as the first group is concerned, time was all that was needed to obliterate the scars left by the action of the majority at the Chicago convention. As a foundation stone of a new party edifice, the issue of the "stolen nomination," as Progressive called it, was sure to crumble in time.

For the third group, many items of the famous Progressive platform have been adopted by other parties. Even the phrase "social justice," essentially a Progressive phrase at the start, has been adopted by President Wilson and used in a message to Congress. The social justice group in the Progressive party were primarily interested in their program of social reforms. They are in a fair way to get much of it no matter which party is in power.

From the fourth group Mr. Roosevelt has undoubtedly lost some personal adherents. How large the loss has been it would be futile to try to estimate. But laying aside the question how many followers have left him for some other leader, there is a wide difference between voting for the leader whom you admire, and voting for some one else at his request. Mr. Roosevelt in 1912 could command four million votes for himself. How many he could command today no man knows. But even in 1912, when the issue was new and the interest keen, he could have commanded nothing like four million votes for another.

It is natural, in the circumstances, that each of these three groups in the Progressive party should dwindle. In addition, voters—unless they are fanatics, and few are—like to win. Party leaders and party workers must win or lose their political lives thru starvation. A new party which does not achieve success at the start is bound to lose strength from these causes.

It is natural that the Progressives should return to the Republican party. Most of them were originally Republicans; and the division between Republican and Democrat is one that it is not easy for any one but the constitutional independent—the mugwump—to cross.

The return of the Progressives furnishes renewed evidence that the American people prefer the two-party system. It further demonstrates, what observers even among the Progressives saw from the beginning, that there was not sufficient fundamental difference between the Progressive and the Republican parties to keep them permanently apart.

Whatever the return of the Progressives in this election means as to the future existence of the Progressive party, it does not mean the destruction of progressive principles. To them the American people are committed by profound conviction. No party which persistently rejects them will permanently succeed.

WOMAN SUFFRAGE AND PROHIBITION

THE most striking feature of the election is the continued progress of two great American reform movements, woman suffrage and prohibition. More than one-sixth of the electoral college, more than one-fourth of the Senate, will hereafter come from the twelve states where equality reigns. In nearly half the area of the United States women now have the same rights as men. The cause of woman never loses in an election; at most it merely fails to gain. The addition of the two great states of Montana and Nevada shows that it is in the West, where the actual workings of woman suffrage are best known, that it finds the most friends.

The only serious organized opposition to woman suffrage comes from the liquor interests, which shows that they fear the women's votes. Yet the two issues are quite distinct both in origin and progress. In Wyoming where women have been voting for forty-five years there has never been any strong tendency toward prohibition, and in California where the women vote the election went "wet." On the other hand, the South, where prohibition

has made its greatest gains, seems likely to be the last to adopt equal suffrage. This shows that each movement makes its way independently of the other on its own merits, as it ought. The addition of four more states, Arizona, Colorado, Oregon and Washington, brings about a fifth of the population of the country under state-wide prohibition, or more than half if we include local option areas. Or if we count by acres instead of heads the fourteen states under prohibition form not far from a third and the total "dry" territory more than two-thirds of the United States. The rapid progress of both movements is due to our elastic federal system by which any state can try new experiments while the other states can watch and, if they approve, follow.

ENTER, NOISELESSLY, A NEW REFORM

FOR the first time in the history of the United States a group of Senators have been elected by the direct vote of the people.

The skies have not fallen. Neither has the millenium dawned. No miracle of political regeneration has been wrought by the innovation. No pillar of the temple of representative government has been shattered.

Both the ultra-enthusiasts for the method of direct election and its rabid opponents have reason for surprize at the outcome. But no reasonable student of public affairs will be either surprized or disappointed.

No ingenuity of political machinery can avail to raise the waters of popular government higher than their source. If the people of Pennsylvania have used their new opportunity to send Boies Penrose back to the Senate, it is because they wanted him there. Neither direct election nor the direct primary, nor the initiative, nor the referendum, nor the recall, nor proportional representation, nor any other piece of machinery will give the people better representation, better legislation, better government than they really want. Their value—and they are not all equal in value, by any means—lies in the power which they put in the people's hands to secure what they really want with the least danger of having their will thwarted.

On the other hand those who fear—or who profess to fear—to transfer power and responsibility from the few to the many, are no less in error. The people, on the whole and in the long run, are to be trusted. The remedy for the evils of democracy is more democracy. The direct election of senators is a step in the direction of more democracy.

Soon we shall all be wondering that we ever elected our senators in any other way.

THE EFFECT OF WAR ON LITERATURE

WITH the first whiff of cannon smoke the old world vanishes. Settled habits of thought are broken up; new emotions arise and former interests sink into insignificance. A comparison of the books most in demand at the stores and libraries before and since the war began shows this sudden shifting of public attention. To the average American the storm burst from a clear sky. He looks up startled and demands: "What does it all mean?" "What is the cause?" "Who is to blame?" Books that purport to answer these queries leap into the rank of the "best sellers." Books on geography, military and naval strategy, national characteristics and European politics, which three months ago were appreciated by few, are now in such request that the presses cannot turn them out fast enough, and the bookseller and librarian have to keep a waiting list of their patrons. In particular demand are books on Germany, whose phenomenal development and vaulting ambitions have not been sufficiently understood in the United States. The polemical pamphlets, the hasty compilations of data for reference, serve a temporary purpose and enjoy a brief popularity, but there will be a permanent gain thru the increase of interest in history and foreign affairs. The sale for example of such a book as Hazen's *Europe Since 1815*, an excellent but by no means sensational compendium of history, is an encouraging sign. There's no denying that we Americans have been too self concerned, somewhat parochial in attitude, disposed to look on the Old World as an interesting place to visit for the ruins and all that, but otherwise hardly worth consideration. This limitation of outlook was the natural result of our comparative lack of the extensive shipping, the foreign investments and the colonial possessions which keep the Englishman in vital touch with all parts of the globe. But we must now realize that the United States is, whether we wish it or not, a world power and has a responsibility that it cannot evade in the settlement of the questions that lie at the bottom of the present conflict.

Besides the new interest in foreign politics and peoples, there is aroused a greater interest in the art treasures of Europe. People did not appreciate Mona Lisa until she was stolen. They had no desire to see Louvain until they heard that it was destroyed. Rostand in his fine sonnet on Rheims showed a realization of this point. The Germans, he says, have robbed us of a cathedral but given us a Parthenon.

The book trade in America suffers like every other business from the general depression, but perhaps less than other business. For when people are less busy than usual and more inclined to economize, they are apt to sit at home and read rather than frequent theater and restaurant. We must not suppose that the greater interest in serious books or an absorption in the horrors of war will distract attention from light literature. It may, indeed, have the opposite effect. Moltke, upon whom rested the fearful responsibility for the conduct of the war in 1870, used to relieve his mind by the trashiest of detective stories.

In France and Germany of course book publishing is at a standstill. England is almost as bad except for war books and poetry. Three volumes of war poems have already appeared in England this last month. It must be said that the quality of these poems is by no means commensurate with their quantity, but this lyrical enthusiasm shows at least a rousing of British patriotism and emotion that is likely to produce later some really great literature. Such has been the effect of wars in the past. A writer in the October number of the *Edinburgh Review* has studied the war of 1870-71 from this standpoint and comes to the following conclusion:

> We may say that the war caused a suspension in France of all literary composition of the higher kind during sixteen or seventeen months. But it is important to observe that this was a suspension, not a determination. On the face of a history of French literature in the nineteenth century the war of 1870 71 makes scarcely a scar. Even in the biographies of men of letters it is discovered only as a halting place, not as a break in continuity. . . . Those who had private re-

[illegible] withdrew very carefully to their shelters, and sucked their paws like bears till the long winter of their discontent was over. In many cases the war stored up their talents, and concentrated their powers. In particular, it intensified their capacities. People who had loved the fatherland coldly in times of piping peace, blew the coals of their hearts up into a living flame, and the enchantment of France reasserted itself. When the enemy was gone, they took up their work, on the old lines, but with threefold and fourfold zeal. . . .

We trust that history may repeat itself and that a revival of letters may follow in France and Belgium. Says Kipling in a couplet that is unintelligible to the grammarians but not to others:

Two things greater than all things are:
The first is Love, and the second War.

All thru history these two forces, the creative and destructive, have been strangely intertwined and to them we owe most of the world's great literature.

GOOD SPORTSMANSHIP

THE student athletic authorities of Harvard and Princeton have taken an important step in the interest of good sportsmanship. They have agreed that any member of their respective football teams intentionally indulging in unnecessarily rough play shall be excluded from the game during the rest of his college course.

Football is a strenuous game. Therein lies its value and its danger. It cultivates the hardy virtues of courage, self control, and endurance. It inculcates the subordination of the individual to the good of the group.

But it has the defects of its qualities. Its very strenuousness offers temptation to unfair play and brutal roughness. It is a splendid game when it is played in a spirit of good sportsmanship. But it is easily degraded by bad sportsmanship.

Not only the men of Harvard and Princeton are to be congratulated on the step they have taken. The whole college world will be the gainer thereby. For it cannot fail to follow the example they have courageously set.

GERMANY, CANADA AND THE MONROE DOCTRINE

GERMANS are protesting that Americans are not sympathetic with their cause in the Great War. They will do little to increase our sympathy for Germany by raising the question of a hypothetical invasion of Canada.

Probably the Monroe Doctrine, interpreted literally, would not call upon the United States to interfere if Germany chose to attack Canada. But the Monroe Doctrine is not a formal document, to be taken at the foot of the letter. It is rather a state of mind in which the American people long ago found themselves and in which they have persisted, remodeling and reshaping it to fit conditions changed by the passing of time. President Monroe and his advisers had no thought of such a situation as would arise if a German army were marching upon Quebec. But American public opinion, if it become aroused on the question of a German fleet in the St. Lawrence, would not hesitate an instant in making itself heard.

The American people admire, respect and honor the German people. The American people dislike and disapprove German militarism. The people of the United States welcome with warm comradeship German immigrants to their shores. But the people of the United States would view with alarm and resent with indignation the approach of German militarism to the American continent.

But no one need bother himself about the fine points of the Monroe Doctrine. No one need get worked up over the matter.

So long as the German armies are so thoroly engaged as they find themselves at present, and the German navy sails on such restricted seas, the question remains an academic one.

ON BURNING LEAVES

THE leaves are falling. For days they have been dropping, now silently one by one, now rustling down in hurried companies. Across the open spaces they scurry before the wind. They drift into corners and snuggle into hollows. With a pageant counterpane of red and yellow and orange and brown they cover the garden beds and tuck themselves in about the bushes and the shrubs.

It is time to burn the leaves. If we were provident, like Mother Nature in her prodigality, we should not burn them. We should heap them together to lie, wet by rains and snows and warmed by the sun, till they melted slowly down into a fine humus to feed new leaves, new branches, new blooms. But we lack the leisure, we have not the patience. So we burn them.

With slow sweeping strokes we rake them into piles. The iterated swing of the rake, the hissing rustle of the leaves as they roll themselves in a gay wave before it and curl into an iridescent foam over its back, are soothing, hypnotic, somniferous. This is such stuff as dreams are made on.

Then the burning. Then the fire. Why do we pretend to have forgotten what the Parsee knows? We are all fire worshipers in the inmost heart of us. With fire we warm us; with fire we cook our food; with fire we drive our engines, turn our wheels of industry, mold intractable materials to our uses; with fire we soothe our nerves, kindle our imaginations, cheer our hearts. Fire worshippers? An we are not, we are false to the chief god of the household hearth.

A spitting match—alas that we are too sophisticated to strike flint on steel, too civilized to rub wood on wood—is thrust deep into the leafy pile. A moment—it is out. We have smothered it. But no. A thin gray thread steals out and climbs curling and twisting. It thickens, spreads out, broadens. A woolly mass of smoke wells up thru the pile and whitens the air above it. A darting tongue of crimson flashes in the cloud, the flame bursts forth, the pile is alight. The rake slackens idle in the hand as we watch the mounting billows, as we breathe in the haunting fragrance. Smoke, wood smoke, leaf smoke, white smoke, is good to look upon. Smoke, vegetation smoke, nature's smoke, pungent smoke, is good to smell. Ruddy with the flame it glows. White in the air it drifts and rolls. Spicy in the nostrils it vivifies and quickens.

There was a poet once who wrote,

The melancholy days are come, the saddest of the year.

Melancholy indeed! Saddest forsooth! What manner of poet man was he? Had he never raked leaves and burnt them? Had he never piled an altar to the year that was passing? Never burnt his incense to the new-risen year that was to come?

THE STORY OF THE WEEK

THE GREAT WAR

November 2—On Sunday evening the German fleet defeated the British fleet off the Chilean coast, sinking the cruisers "Good Hope" and "Monmouth." Russians and Turks fighting in Armenia.

November 3—British squadron bombards Dardanelles forts. German warships reported near Yarmouth.

November 4—Turkish cruisers bombard Batum on Black Sea. Russian troops invade Turkish Armenia. Germans lose Mlawa, Russian Poland.

November 5—Great Britain declares war on Turkey and annexes Cyprus. Russians regain Jaroslav on the San in Galicia.

November 6—Fighting about Ypres continues indecisive. Germans in Poland retreat toward Posen frontier.

November 7—Tsing-tao, German port in China, surrenders to Japanese and British. British take Turkish port of Fao, at head of Persian Gulf.

November 8—Russians invade Germany from Poland. Allies gain ground north of Soissons on the Aisne.

The Deadlock on the Yser

It is more than a month now since the two great armies locked horns on the Belgian border by the North Sea, and still the map remains unchanged. A gain of a hundred yards is proclaimed as a victory, and the capture of a hamlet among the sand dunes requires the sacrifice of more men than the taking of Antwerp. The only thing accomplished is destruction: the demolition of churches and gild halls that were the pride of ancient Flanders, and of the farms and factories which support the modern Belgium; and, greater loss than this, the strong young men from all parts of the world whose bodies clog the canals and lie unburied on the beet fields.

It is impossible to say which side, if either, is gaining the advantage. The Germans, it appears, have still a foothold on the left bank of the Yser, between Dixmude and Nieuport. They have retaken Roulers and Lille and are bombarding Ypres. Their efforts to reach Dunkirk by attacking the Allied line between La Bassée and Arras have been frustrated. Further to the south along the Aisne between Laon and Soissons there has been a renewal of activity, but the net result is in doubt. The French claim to have dislodged the Germans from their entrenchments on the hights above the river; the Germans claim to have repelled the attack.

Germans Lose Possessions in China

The first fortress taken by the Allies is not in Alsace, Galicia or East Prussia, but in China, and it is Japan which has the chief honor of the exploit. When the war was declared, the London *Times*, in what was presumably an inspired leader, announced that it would be the duty of the Australasians to expel the Germans from China and the Pacific islands. This task was willingly undertaken and an expedition from New Zealand took possession of German Samoa, while one from Australia seized the Bismarck Archipelago and the German territory in New Guinea.

But the Japanese assumed the major part of the task and have not only dislodged the Germans from the Asiatic continent, but captured the islands of Jap and Jaluit, in two other German archipelagoes. The British declaration of war was followed in less than a week by an ultimatum from Japan to Germany demanding the evacuation of Kiao-chau, and a Japanese expedition which had been dispatched in advance landed on the Shan-tung peninsula. The Chinese Government protested to Japan against this violation of neutrality by an armed invasion of Chinese territory a hundred miles away from the German port, but did not attempt to resist by force. Another protest was lodged against the seizure by the Japanese of the railroad from the port of Tsing-tao into the interior, but no attention was paid to this, either.

The territory of Kiao-chau comprises 193 square miles and was leased to Germany by China for ninety-nine years in 1898 as compensation for the murder of two German missionaries. France, Russia and Great Britain immediately demanded and obtained from China similar concessions of territory in order to preserve the balance of power in the Far East. The railroad from Tsing-tao to Tsinan-fu, 246 miles, cost $13,000,000, and altogether the Germans are said to have spent a hundred million dollars on Kiao-chau. They had started an elaborate system of afforestation for the

THE PLACE OF FRUITLESS SLAUGHTER

There has been no substantial alteration in the battle front. The Allies still check the German drive toward the coast and the battle line is almost straight

reclamation of the sandy peninsula, and they were developing the mines. Tsing-tao, the seaport of the German enclave, was designed to be a model city, and was provided with handsome buildings, scientific sanitation and excellent docks. It has attracted both Chinese and foreign residents, and it threatened to rival Hongkong in its commerce.

The Fall of Tsing-tao

The Japanese expedition landing on the north side of the Shantung peninsula marched across without serious opposition. The ciy was then invested from the land side, while the Japanese fleet took up a position outside the harbor. British and French warships also took part in the bombardment, and Indian troops and bluejackets in the assaults on the fortifications. The defenders consisted of the garrison, reinforced by the Germans who were engaged in business in Kiao-chau and other parts of China, perhaps four or five thousand in all. Considering that they had no opportunity to prepare for a siege, it is remarkable that they should have been able to hold out for seventy-four days against ten times their numbers.

The siege of Tsing-tao will stand in history as the first instance of the simultaneous employment of modern weapons of warfare, the aeroplane, the submarine, the torpedo, the dreadnought and the big howitzer. The defenses on the hills dominating the harbor had been admirably planned, but only partially constructed. The Japanese lost heavily, but their courage was undaunted. Five hundred Japanese bluejackets signed a round robin in blood begging for permission to make a dash into Kiao-chau Bay and attempt to capture the Governor, Captain Waldeck, who was wounded, but their petition was refused. After most of the defenses had been silenced by the long bombardment from land and sea, an assault was made on the outer ring of forts early in the morning of November 6. The Japanese infantry and engineers dashed forward with their yell of "Banzai!" and carried five of the forts. Then the white flag was hoisted on the astronomical station.

The Austrian cruiser, "Kaiserin Elizabeth," and the big floating dock in the harbor of Kiao-chau, had been blown up and sunk by the Germans a few days before to prevent their falling into the hands of the enemy.

The heavy sacrifices of life and money made in the capture of the German enclave have made the Japanese people reluctant to give it up to China, and the Government is non-committal on the question. Vice-Minister of the Navy Suzuki says: "While the European war continues Tsing-tao will be administered by Japan. At the conclusion of the war Japan will open negotiations with China."

Russian Gains in Poland and Galicia

The Germans and Austrians continue to lose ground all along the line from the Baltic to the Carpathians. In the north the Russians have again invaded East Prussia and taken Lyck. They have also regained the Russian frontier town of Mlawa, the gateway to Poland east of the Vistula, by which the Germans a few weeks ago were trying to make their way

WHERE THE BATTLE FRONT IS CHANGING

The outstanding feature of the fighting in Europe is the Russian advance almost to the German frontier, before which the Germans have been driven out of Poland

THE NEW BATTLEFIELD IN THE NEAR EAST

Now that Kiao-chau has been taken the focus of the war outside Europe shifts to the Russo-Turkish frontier, east of the Black Sea. There has been fighting on both sides of the border and Batum has been bombarded by Turkish warships

to Warsaw. In Russian Poland west of the Vistula the Germans have retired behind the Warta River, where they have prepared strong defenses, with the evident intention of making this region their winter quarters and protecting their frontier on Russian ground along a line between Kalisz (Kalisch) on the north and Czenstochova on the south. The Russians, however, are pursuing them closely and claim, by the capture of Kolo, on the Warta, to have made this river untenable as a defense of the German position.

In the south of Poland the combined Austrian and German forces have been driven beyond Kielce nearly to the Vistula, which here forms the boundary between Galicia and Russian Poland. The Russians claim to have taken 15,000 men, 200 officers and 100 guns near Kielce.

In Galicia the Austrians, who a few weeks ago thought they were about to regain Lemberg, are now forced again to retire from the San River and fall back toward Cracow. The Russians have captured Jaroslav for the second time and will soon have Przemysl again invested.

Turkey in the War

Even after the Turkish warships under German officers had bombarded the Russian ports of the Crimea, on October 29, it seemed possible that Turkey might still be kept out of the war. In fact, the representatives of the Ottoman Government showed at first a disposition to disavow and explain away the attack, but soon it was evident that the belligerent Young Turk party, under the leadership of Enver Pasha, were in control and determined to force Turkey into the conflict on the German side. On November 4 Turkish Ambassadors were recalled, and on the following day war was formally declared by Great Britain and France. Russia had taken this action immediately after the Turkish attack on the Black Sea ports.

Accompanying the declaration of war the British Government announced the annexation of the island of Cyprus, in the Mediterranean. This action, like the annexation of Bosnia by Austria, is merely the formal registration of an act virtually accomplished in 1878, at which time Great Britain took over Cyprus as her reward for saving Turkey from the clutches of a victorious Russia.

The immediate grievance of Turkey against the Allies is twofold: first, the blockading of the Dardanelles by the French and British fleets and the planting of mines in the Bosporus by the Russians; second, the seizure by the British Government, at the outbreak of the war, of the dreadnought "Sultan Osman," which had been purchased by the Ottoman Government and was nearing completion in a British shipyard. The Young Turk papers denounced the act as piracy, and were not placated by the offer of the British Government to pay for it. They need the battleship badly to match the two cruisers which the United States has sold to Greece.

On November 3 the British and French cruisers bombarded the forts of the Dardanelles, and according to their own report, demolished them. According to the version of the other side very little damage was done, altho 240 shells were fired. The Turkish warships have bombarded Batum, the most important port of Russia on the Black Sea side of the Trans-Caucasus. The Turks also claim to have sunk nineteen Russian transports which carried 1700 mines for blockading Turkish ports. All of the British, French, Russian and Belgian steamships in the port of Smyrna, on the Mediterranean, were seized by the Turkish authorities.

The Turkish troops which have been massing in Palestine in preparation for an attack on the Suez Canal are said to have already crost the Egyptian frontier into the desert of Sinai. Their left flank is threatened by the British force which has been landed at the head of the Gulf of Akaba, the eastern branch of the Red Sea, corresponding to the Gulf of Suez on the west.

An expedition from India has taken possession of the Port of Fao, where the waters of the Tigris and Euphrates reach the Persian Gulf thru the River Shatt-el-Arab.

The Russians and Turks have come into conflict in the vicinity of Kars, Erivan and Erzerum, and both sides claim a victory in the enemy's territory. The Russians invaded Turkish territory from the Trans-Caucasus in two columns, one to the east and the other to the west of Mount Ararat. They claim that the Armenians welcomed their troops and are actively assisting them against the Turks.

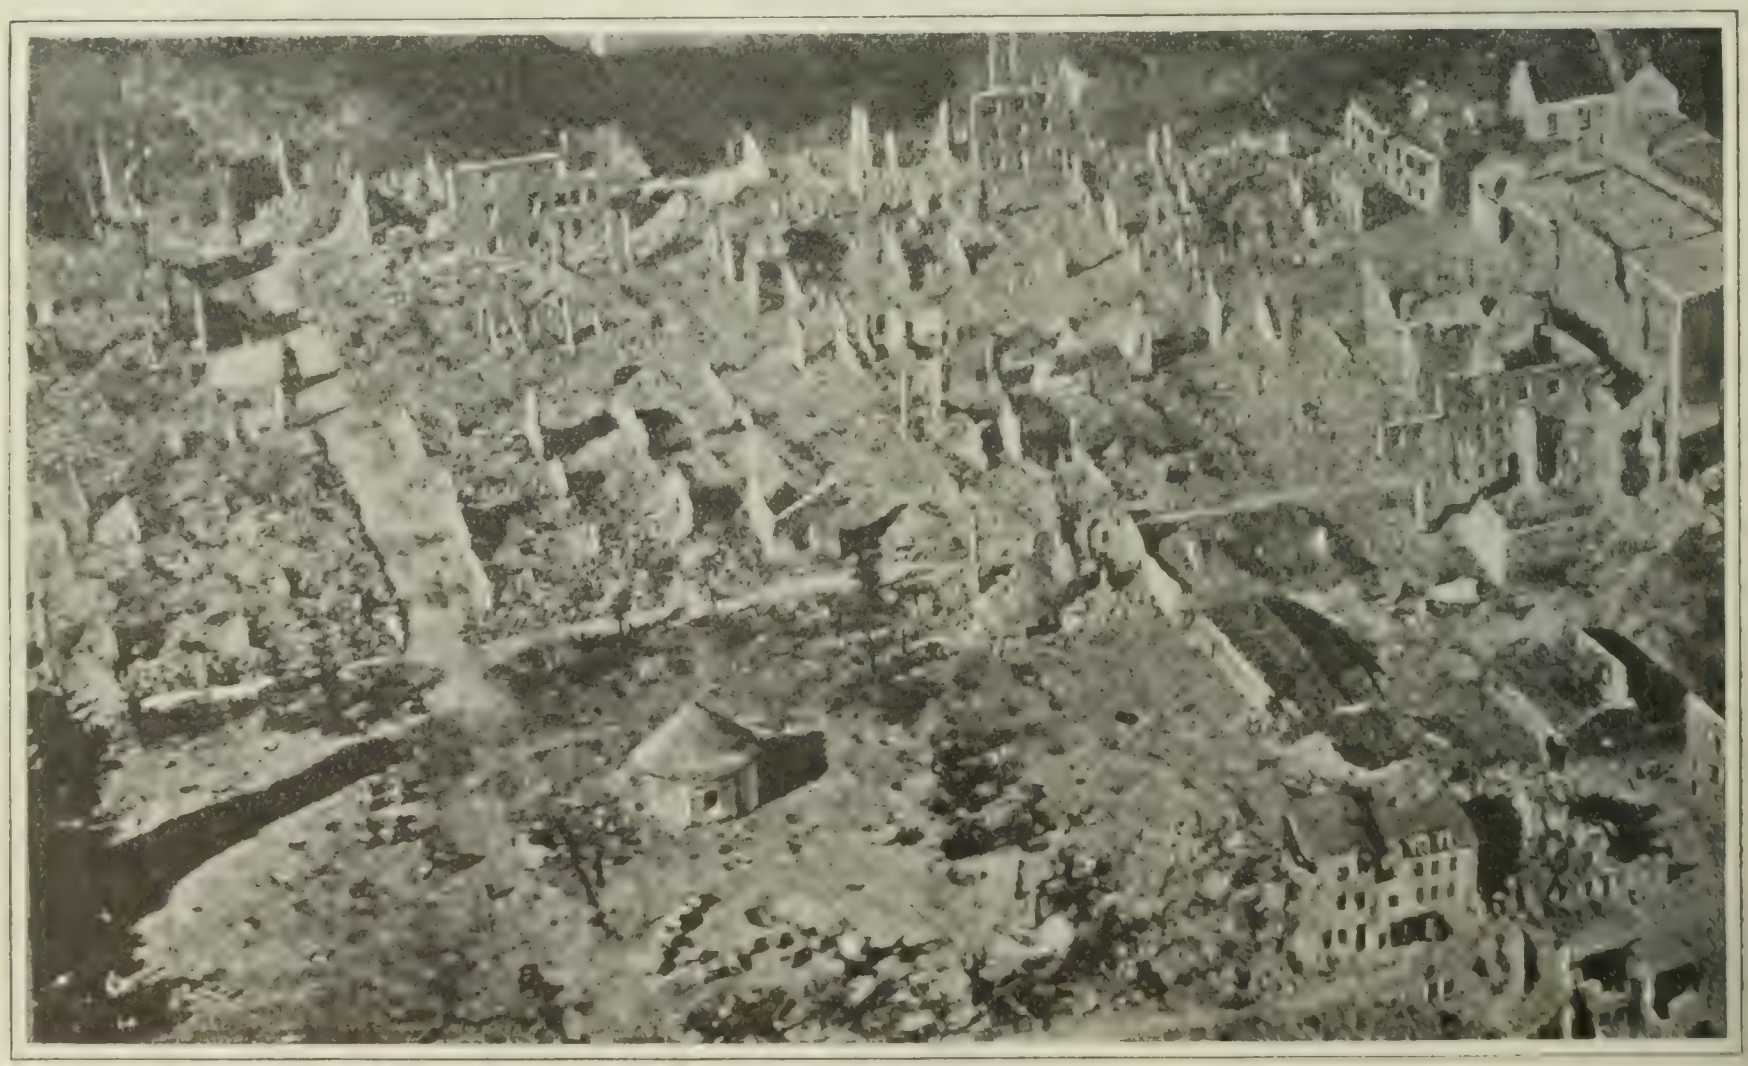
The War on the Sea

The disaster to the British fleet off the Chilean coast, which is discussed on another page, appears more serious as fuller details come in, for the British vessels were both outclassed and outmaneuvered. The twelve 8-inch guns of the German cruisers began to take effect at a distance of six miles, while the British cruiser "Good Hope" could not reach over four miles with her

two 9-inch guns and her eight 6-inch guns were unusable because of the heavy sea. The engagement began at 6.40 Sunday night and was virtually decided in half an hour. The German armored cruisers "Scharnhorst" and "Gneisenau," which had early in the war bombarded Papeete, on the French island of Tahiti, and were last heard from on October 14, when they called at Easter Island for coal and provisions, succeeded in making a junction somewhere with the third-class cruisers "Leipzig," "Dresden" and "Nürnberg," and the combined squadron, under Admiral Count von Spree, met the British squadron under Admiral Sir Christopher Cradock, off Coronel, Chile. The British squadron, which was sent to the Pacific around South America, consisted of the cruisers "Good Hope," "Monmouth" and "Glasgow," and the transport "Otranto." The "Good Hope" and "Monmouth" were probably sunk with all on board. The "Glasgow" escaped with slight damage.

In Europe the Germans seem disposed to take the offensive on the water. A fleet of four battleships and four cruisers from Wilhelmshaven were discovered off Yarmouth within ten miles of the English coast, where they fired upon the British torpedo boat "Halcyon." A British submarine, "D-5," was sunk by a German mine in the North Sea, with the loss of twenty-one lives.

New Haven Directors Indicted



A Federal grand jury in New York has indicted for criminal conspiracy in violation of the Sherman Anti-trust law twenty-one men who are now or have been directors of the New York, New Haven and Hartford Railroad Company. Among those so accused are William Rockefeller, brother of John D. Rockefeller; George F. Baker, chairman of the First National Bank in New York; Charles M. Pratt, of the Standard Oil Company; Theodore N. Vail, the head of the American Telegraph and Telephone Company; Lewis Cass Ledyard, T. De Witt Cuyler, John L. Billard and Edward D. Robbins, the company's general counsel. In the indictment, which relates to the transactions of the company during the last twenty years, are named forty-five men who are called co-conspirators. Some of these are dead. The list includes the late J. Pierpont Morgan, Alexander J. Cassatt, William D. Bishop, John M. Hall, Nathaniel Wheeler, Governor Luzon B. Morris, George J. Brush, Frank W. Cheney, H. McK. Twombly and Charles S. Mellen. Mr. Rockefeller and several others who are indicted have entered pleas of not guilty, and each has been released on a bond of $5000.

The indictment relates to all the original company's acquisitions of steam railways, trolley lines and steamship companies since 1890, and in respect to each acquisition or alliance the defendants are charged with conspiring to monopolize the land and water transportation of the New England States, and to suppress competition. Under the Sherman act the penalty is one year in prison, or a fine of $5000, or both. It is asserted that the representatives of the Department of Justice, if the defendants are found guilty, will ask the court to send them to jail.

Troops to Arkansas Mines

President Wilson has sent to the Hartford Valley and Prairie Creek mining districts, in Arkansas, four companies of Federal cavalry, to assist the civil authorities in enforcing the orders of the United States court. This action is due to the miners' strike and to the destruction of a mining company's property by the strikers. The labor controversy began in April last. When the company undertook to have an "open shop" at its mines, there was forcible interference by members of the union. Such interference was forbidden by a court order. Then the company went into the hands of a receiver. While it was under his control, the property was attacked. The buildings connected with five mines were burnt, the receiver's guards were driven away, and two were killed.

custody of the United States marshal by their friends. The court is unable to enforce its orders. Therefore the troops have been sent, and the President has issued a proclamation of warning addrest to the residents of the mining districts. Judge Youmans, of the United States District Court; who sought to prevent disorder by an injunction, and who appointed the receiver, has repeatedly been threatened with assassination, in anonymous letters. The Government has given him a bodyguard.

Railroads in Alaska

The bill which provides for the leasing of coal lands in Alaska, signed only a day or two before the adjournment of Congress, may be regarded as supplementary to the earlier act, which authorized the construction of railroads in the territory by the national Government, under the direction of the President, and appropriated $35,000,000 for the work. The new roads will touch the coal fields.

J. P. Morgan, as the head of the New York banking house of J. P. Morgan & Co., which is interested in the syndicate that owns the Copper River and Northwestern Railroad, in Alaska, called upon Secretary Lane and offered to sell or lease this road to the Government. It is 196½ miles long and extends northeasterly from Cordova, on Prince William Sound, to Kennicott, where the Bonanza copper mine is situated. Short branch lines would connect it with the Bering and Matanuska coal fields. It was pointed out that the road might be useful as part of the Government's projected railway system. Mr. Lane said to Mr. Morgan that he would not be able to consider the offer until after receipt of a report from the engineers who are now surveying routes for the Government lines.

Mexico's Convention and Generals

The Aguascalientes convention ordered that Carranza should give up his office and that Villa should resign as commander of the Division of the North. It then appointed General Eulalio Gutierrez Provisional President for a short term, and assumed the powers of a Congress. Believing and saying that the convention was dominated by Villa, Carranza declined to obey the decree, but offered to retire if both Villa and Zapata should resign and leave the country. Villa and a part of his army had taken possession of Aguascalientes, at the request of the convention, for the protection of the delegates. He published his approval of the convention's order and of the appointment of Gutierrez. He did not desire to be President, he said, but would like to be national Chief of Police. Carranza evidently believed that, as a result of the order and appointment, Villa would gain an office of that kind. The convention sent to Carranza an ultimatum, warning him that he must respond to the order on or before the 10th. The First Chief declared that if his generals would stand by him he would "fight till death." Villa had his army ready to move southward, and there was a little fighting.

Stories were published to the effect that Gutierrez had repudiated the convention and gone over to Carranza; also that Villa was holding him in prison because he was not tractable. But evidence to support these tales was lacking. There were indications of bitter anti-American feeling at the capital, fostered and encouraged by the Government. Posters demanding expulsion of our troops from Vera Cruz were reprinted in newspapers which the Government controlled. Some attention was given at Washington to reports that Carranza was planning an attack upon our troops, believing that in this way he could gain popular support which he no longer commanded. Perhaps because he foresaw attack from the north, he began to remove his government to Puebla, which has natural advantages for defense.

Hayti's New Government

The revolt against President Oreste, in Hayti, was led by Davilmar Theodore and Oreste Zamor. It was successful, but when Oreste abdicated, soon after the beginning of the present year, the two revolutionary leaders quarreled. Each desired to be President. Hayti's Congress elected Zamor. Then Theodore led an uprising against the Zamor Government. He gained control of the northern towns, and a few weeks ago his forces captured the port and city of Cape Haytien. At that time 100 marines were landed there from the United States cruiser

THE SENATE

Thirty-two senators elected. The new Senate will have

Democrats—55, a gain of 2

Republicans—40, a loss of 2

Progressive—1, continuing in office

Democratic majority—14. In the last Congress 10*

Penrose won in Pennsylvania; Sullivan lost in Illinois. Underwood leaves the House for the Senate

**May be increased by one*

"Tacoma," to protect the consulate and the interests of Americans.

A few days after the capture of Cape Haytien, Zamor and his brother Charles made a final effort to retain possession of Port au Prince, the capital. But they were beaten by Theodore's revolutionists, and the President fled on a Dutch steamship. On the 7th he arrived at Curaçao. Theodore has now been elected President by Hayti's Congress. At the time of the fighting in Port au Prince, our Government sent to that city the transport "Hancock," with 800 marines, and also the battleship "Kansas." Foreign residents were calling for protection. It does not appear that any of the marines were landed. Hayti is bankrupt and its Government is no longer able to borrow. Our Government has been ready to consider a proposition for such a fiscal protectorate as was established in Santo Domingo, but objections were raised, a few months ago (before the beginning of the war in Europe) by Germany, France and Great Britain, each of these nations desiring to be represented.

The Elections

In the present House of Representatives at Washington the Democrats have a majority of 141. At last week's elections they lost nearly 60 seats, and in the new Congress their majority will be about 23. In two or three districts a final decision must await the official count. This change was the most important result of the elections. It was due mainly to a return of Progressives to the Republican party. The Progressive vote was greatly reduced. In New York it fell from 393,000 to less than 50,000. In several states it was very small. There were Democratic gains in the Senate, and it is claimed that the present Democratic majority of 10 will be increased to 15, but in at least two states where the reported margins are small a recount may be ordered. One of these is Wisconsin. The Republican gains for the House were notably large in New York, Pennsylvania, Connecticut, Massachusetts, Ohio and Illinois.

Mr. Cannon, formerly Speaker, comes back. This will be his twentieth term. There is one Socialist, Meyer London, from an East Side district in New York. In the state of Pennsylvania, Senator Penrose was re-elected by a great plurality. Roger C. Sullivan was defeated in Illinois by Senator Sherman. Victor Murdock, of Kansas, lost his seat in the House by making an unsuccessful fight for the Senate.

At the state elections many questions were set before the voters in constitutional amendments and referendums. Seven states voted on woman suffrage, which was adopted in Montana and Nevada. Statewide prohibition was an issue in six states. It was rejected in Ohio and California. But Washington, Arizona and Oregon gave affirmative majorities. At the end of the week the reports from Colorado were not conclusive. California banished prize-fighting. Missouri rejected a railway full crew law past by its Legislature. In Arizona the rejection of an amendment abolishing capital punishment will cause the execution of fifteen murderers, condemned and sentenced, for whom there had been reprieves because this issue was pending. Commission government was ordered by the voters of Buffalo, Niagara Falls and three small cities in Kentucky. We show in accompanying tables the most important results of the voting thruout the country. In New York, Mr. Whitman, noted as a prosecutor of criminals, was elected Governor by a plurality of 136,000 over his Democratic competitor, Governor Glynn. There was an irresistible Republican movement in the state, but he was aided by the independent candidacy of the deposed Governor, Mr. Sulzer, for whom about 120,000 votes were cast, mainly by those who believed that he had been punished with too much severity thru the influence of the Tammany organization.

REFERENDUMS

Commission government adopted in Buffalo (population 423,715)

Full-crew railroad law defeated in Missouri

Recall of state officials (except judges) adopted in Louisiana

Prize-fighting prohibited in California

Eight-hour day defeated in Washington and California

GOVERNORS

WOMAN SUFFRAGE

Adopted in Montana and Nevada

Rejected in Missouri, Nebraska, Ohio, North and South Dakota*

There are now twelve suffrage states, Arizona, California, Colorado, Idaho, Illinois, Kansas, Montana, Nevada, Oregon, Utah, Washington and Wyoming, with an aggregate of 91 electoral votes

**In doubt*

PROHIBITION

Arizona, Colorado, Oregon and Washington voted "dry"

California and Ohio voted "wet"

There are now fourteen "dry" states: Arizona, Colorado, Georgia, Kansas, Maine, Mississippi, North Carolina, North Dakota, Oklahoma, Oregon, Tennessee, Virginia, Washington and West Virginia

MILITARISM IN GERMAN SOCIAL LIFE

BY THE AMERICAN WIFE OF A TITLED GERMAN

The author of this article—whose name we are, naturally, unable to announce—has lived in Germany thirty years and as the wife of a Prussian of high rank has had a unique opportunity to observe in intimate daily experience the working of the militaristic régime. It is an unusual view that she presents, and one that will find a quick response among American readers—that of an unsympathetic participant in the life of a caste which has brought down upon itself the condemnation of half Christendom.—THE EDITOR.

SO long as I remained a schoolgirl and foreign visitor in Prussia, the novelty only of customs and sights imprest me. A German saying runs to the effect that "for foreigners we have soft gloves." Upon marrying, however, and becoming German, I met immediately with shocks of surprize that caused the eyes of my understanding to open to the fact that the Fatherland is not only a novel land but a strange one.

Take for instance the occasion of a dinner party, the date of which, in my inexperience, I had committed the *faux pas* of fixing on the evening of an election day. Two guests were very late. When Herr von W. arrived at last he explained with animation that just as he was about to start his steward had ridden up alongside his coach to say that a cottager he had evicted was protesting, and it looked as if the village was inclined to take the fellow's part. He had simply had to stop in order to settle the affair. Luckily he could make it brief. The one argument of the fellow, that the socialistic book the steward had picked up from his window sill did not belong to him at all but must have been put there in his absence in the fields, by an agent, couldn't hold water for a minute. All he had had to do, to crush it, was to tell the fellow that if a book agent selected his cottage window to lay a socialistic book in it was because the agent had reason for knowing he harbored anarchistic leanings; none of the other cottagers had had books laid in their windows. How was he going to explain away that fact, huh? It could not be explained away. He was guilty and out he should go.

"That is my way of handling democrats," he boasted jovially to a fellow landlord standing by. "Quick, prompt. What! Not a tenant dared to murmur at me."

"But it may not have been a book agent who laid the book in the man's window. It may have been an enemy," I expostulated. "Was it uncut?"

"Huh! I didn't look at the thing. But what if it was a trick of some neighbor harboring a grudge? That is not the point. The point, Baroness, is to seize a chance of cowing people by showing them what comes of so much as being touched by socialism."

The tardiness of the Landrat was meanwhile being elucidated by the company in the comment: "He has to see how the voting went." "But how," I asked as he took his seat at my side at last, "How can you know so early the way the election went?"

"It is not the general vote that concerns me," he replied, "but those of the citizens of my Circle. By the way, Countess," he interrupted himself to say to the dowager sitting opposite to us at table, "your favorite grocer, Blum, cast a ticket for the National Liberal candidate." Countess von D. looked up.

"How dare the man vote against us, whom he is dependent on! My 'favorite' he shall be no longer. Did Scheffer vote with us?"

"Scheffer voted with us."

"Well, then; from tomorrow on, our orders cease to be sent to Blum and go to Scheffer instead. Shall they not?"

The ladies present had paused to listen. Now, as she directed her glance at them, up and down the table, they all acquiesced.

The foremost grocer of the town, their caterer for years, was to be boycotted, "disciplined," as they would say, for voting as they disliked.

"And you, little Baroness," exclaimed the wicked witch, noticing the silence I observed, "you, too, intend to withhold henceforth all patronage from Blum?"

"But Scheffer's *vinaigres d'estragon* are so awfully *grünwalderisch*," I objected with a mock air of petulance.

The men burst into a laugh. My hit at their pet butt for ridicule (the raw, sour vintage of an adjacent Circle) failed, however, to divert Countess von D. She went on in a tone of mixt persuasion and command: "I have heard before that Scheffer's vinegars are not always genuine. But we must be willing to make sacrifices for our cause. Must we not? Besides, we can always order from Berlin." Mention of Berlin restarted the chatting. I escaped the necessity of making a reply to her. "But how is it possible for you to know the way individual citizens vote?" I persisted of the Landrat. "I thought the Reichstag had put thru the measure for securing secrecy of ballots."

"The Reichstag, Baroness, proposes, but we dispose."

"What did he mean?" I demanded later of my husband. "Does the Landrat have the ballot boxes opened? I never could have conceived of such conspiring as went on in our house tonight. Did you hear the Landrat tell the men he had information for each of them; to come to see him soon? And I can't understand Herr von W. being so pitiless. Just think of a good-natured gentleman turning a tenant out of his home at nightfall only because a book had been laid on his window-sill!"

"You don't understand," lectured my husband. "In America everybody does as he likes. Here we have order. There *must* be order. It is our duty to see that order is maintained. God put the duty upon us. No landowner may allow a suspicion of social democratism tainting his villagers without exposing himself to suspicion by the Government. And a Landrat that fails to keep down Liberal voting in his Circle (district) will wait long, I tell you, for a decoration or promotion. How does he find out the way citizens vote? He probably orders the policeman that guards the box to look and see before he lets the next voter enter the booth. I don't know."

"And you call that 'order'—for the chief governor to command the police to break the law? For I know the law says balloting shall be secret."

"But does it say it shall remain secret? And you don't hold the correct idea of order at all. Order implies obedience by the inferior to his superior."

"Oh! I see perfectly the whole situation," was my American retort. "A landlord is cruel to a cottager out of a sense of self-preservation, which he dubs with the name of 'duty.' A governor betrays the citizens from an identical motive. And society approves and abets them, for the selfsame selfish reason."

"What a democrat you are!" laughed my husband. "Supposing it were my duty to report you to the Landrat?"

"You would not surprize him. He knows how I feel. They all know."

My republican fervor always remained ineffectual, as a matter of course. I was only a woman! And a woman's individuality counts no more with them than citizens' or cottagers', or the rights of any other class of weaklings. Their fixed composure of mind corresponds with what they know to be the immobility of their position, linked as that is with the throne. While aware of the common and civil laws founded on

right, its members possess and observe a code of their own, the articles of which are based upon expediency combined with might. The caste, in a word, represents the court martial of social life.

But other aristocracies tend to foster the same spirit. Why is the Prussian especially remarkable? The question rises in one's mind till it finds a solution in the origin of aristocracies. Language affords proof that this was military. The words "Knight," "Ritter," "Chevalier," were appellations that distinguished the "riding" fighter from the poorer mob of fighters on foot; the title "Prince" indicated the principal leader; that of "Count" the military protector of a county. With these military titles and their accompanying privileges, military, aristocratic ways of handling and thinking survived as a matter of course; indeed, political development, since feudal days, has consisted of little else except progress obtained in ousting them and their modern imitations from their entrenchments behind custom and law. The peculiar thing about Prussia is the bigger amount of crude militarism that still survives there.

In Prussian society men still measure the standing of one another by army rank. Governors, for instance, are paired with colonels, judges with captains; and not vice versa. A prince, not of royal blood, in the comparatively low position of lieutenant, may not expect to be given a colonel's wife as a dinner partner. Strangest of all to an outsider, almost every man actually possesses a military title; for the reason that every man has served in the army or navy, during a longer or shorter time, in the capacity of an officer. Together with his social title he bears therefore a military one. It is seldom mentioned if it is low; but, whatever it may be, it is remembered by his acquaintances and is silently reckoned with until he dies.

But men of high or low rank go to the Landtag or the Reichstag with identical sympathy with military measures. There are all those youthful memories of theirs to inspire such sympathy; and, besides—profoundest reason of all—there is the necessity felt by both of providing careers for their sons. Only one son may inherit; all the others must look to the army or navy for support. The national institution of universal military service is wont to be extolled as a pure measure of patriotism; the country squire and aristocrat extol it as such likewise and with genuine honesty. But, at the same time, they continue the hereditary practise of counting upon the service to supply permanent posts for their male offspring. The peasant serves his two or three years and goes; the officer stays. The modest pay of the profession is outbalanced by the extraordinary social prestige it gives; and salary increases with every step of promotion, while retirement is accompanied with a pension for life.

Such universal participation in militarism being the rule, who can wonder that Prussians think in military terms, which is to say, that they are acutely sensible of individual authority—individual authority in contradistinction to abstract authority? Further, that they carry in mind the idea of higher and higher degrees of chieftainship, all within the caste, the degrees leading up necessarily to that of commander-in-chief, who is the King? But, the King himself has been bred in the same idea, and shares the like sensibility. To whom shall he look up to, unless it be to the ultimate authority or chief? And who can that be except God?

The American press ridiculed the Kaiser not a little for speaking of "God and me," and took the spirit to be aberrant that could suggest such a form of speech. As a matter of fact, however, it concurs in the mind of the society I am trying to depict—the society which was and is the breeding place of Prussian militarism—with such an expression as a colonel might use: "The general and me." The general and I are both leaders, runs the underlying thought; he a bit higher than me in rank; for which reason I buttress my authority sometimes with his.

Years thru I endeavored to convert a dear friend from that tenet of her religion which gives over to eternal damnation infants dying unbaptized. In vain. Then a nephew of hers died, as it happened, before the pastor could reach the castle to perform the rite of christening. When the long lamentation over the death of a *majorats erbe* (heir to an entailed estate) had subsided, I said one day: "Tell me. Do you still hold to the idea that the innocent little being must suffer eternal fire?"

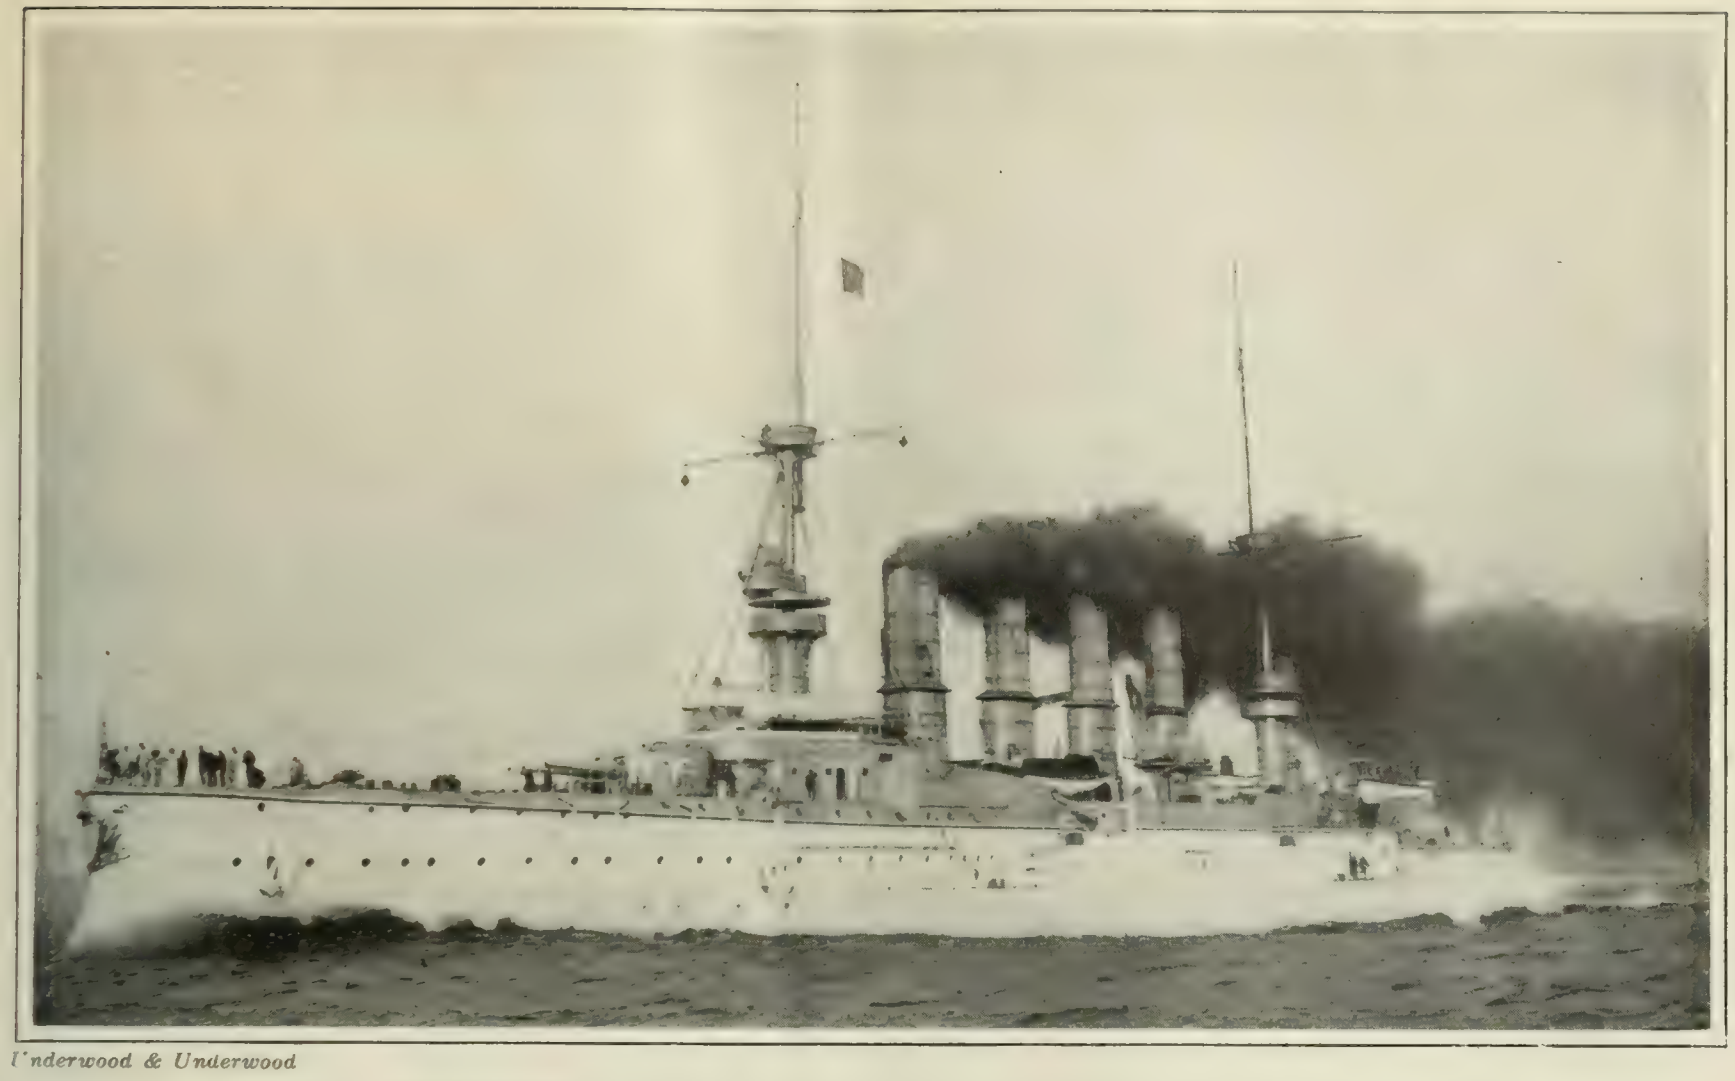
"My religion has remained unshaken," was her reply. "We trust that God out of consideration for our family has made an exception of the sainted child."

Now there are historical analogies to this belief in the partiality of Omnipotence; nevertheless in this case it was due, at least in part, to a habit of regarding God as chief of her caste.

One morning Countess zu H. was reading me a letter which she had just received from an aunt attached to a royal court, giving details of the suicide of the heir to the crown, when the visit of the minister's wife was announced.

"What a tragedy is that which has occurred in M.!" she exclaimed. "My husband said the first thing on reading of it in the paper: 'What a tragedy! The Prince will be barred from a Christian burial. A Christian burial is prohibited by the Church to all suicides.'"

"'Suicide!'" expostulated Countess H. "I beg of you, Frau Pastorin, be careful how you risk committing lese-majesty."



"But it was in the paper," pleaded the pastor's wife.

"Newspapers!" ejaculated the Countess with an accent of contempt and wrath. Then, changing her voice to a confidential tone: "The Prince died a natural death, tho sudden. I know it upon highest authority." And she smilingly showed the postmark of the letter and the royal letterhead. "My aunt is mistress marshal of the household of His Highness. Here she writes all. You and our dear pastor are privileged to contradict the public report and spread the truth; tho of course your good taste will omit all mention of my name." The *Pastorin* took her departure quite full of importance.

"How could you?" I remonstrated, upon our being alone again.

"It is not for the people to know what transpires amongst us," she said with acrimony. "Ask rather how could I fail in doing. To think of a public newspaper presuming to publish the affair, even to mentioning the name of the high party. It has been a city paper. The local daily is too well aware of propriety to so much as hint suicide in connection with the Prince's death. I must say, the new lieutenant colonel is showing himself to be most excellent in such matters. So far more energetic and alert than was Colonel K.! Hardly a month since his appointment, and twice already has he forestalled possible publications by walking firmly into the editor's office and prohibiting them. He merits promotion; all of us agree. The new fervor of the pulpit we enjoy is likewise due to him. At the close of the first service he attended he went into the vestry and told the pastor he wanted sermons much more patriotic. You must have remarked the difference."

I had, indeed. Before the advent of the new lieutenant colonel the peasants and soldiers who listened to the sermons might have mistaken the Almighty and Kaiser Wilhelm for mere equals; later they must have become confused as to there being any difference at all between the two identities.

S. M. S. "SCHARNHORST," WHICH HELPED TO DEFEAT THE BRITISH SQUADRON OFF CHILE

THE BLUNDERING BRITISH ADMIRALTY

BY PARK BENJAMIN

THE reports of the action between the English and German cruisers off the Chilean coast so far received make it clear that the British defeat was due primarily to the stupidity of the Admiralty in sending so small a squadron as that commanded by Admiral Cradock to meet the German force existing in the southern Pacific; and secondarily, to the overwhelming superiority of the German gun fire. The Admiralty is now seeking to escape the blame, by asserting that the battleship "Canopus" had been sent to strengthen Cradock's squadron—when, not stated. But this only makes its plight worse, since it thus admits that it knew what Cradock had to meet and failed to ensure the arrival of the reinforcement before a battle could take place. The consequence was that the British were outgeneraled from the start, and opportunity given to Admiral Von Spee to perform within less than thirty days the astonishing feat of bringing five ships, separated by thousands of miles, to the proper spot, at the proper time, ready and cleared for action with the vessels which the Admiralty had widely trumpeted were going to sweep him from the sea.

In the latter part of September the "Scharnhorst" and the "Gneisenau" were shelling Tahiti. Since then they have been reported in the vicinity of Australia. Altho it is now said that the "Leipzig" coaled in San Francisco on August 17, and that the "Dresden" was then in Honolulu, there have been reports from English sources from time to time that both of these ships were in the South Atlantic dodging English and French cruisers. The "Nuernberg," in a South Sea Island port under repair, was blockaded by both British and Australian ships, from which it was insisted she could not possibly escape. But she did. To any one unaware of the high efficiency of the wireless system installed in the German navy (a year ago the "Nuernberg" succeeded in transmitting signals over 6600 miles), Admiral Von Spee's strategy may well seem almost miraculous.

To make the situation still more extraordinary, the action was fought just before nightfall in a gale of nearly hurricane force. The British have always insisted that to their seamen such conditions would be the most favorable. They have steadily maintained that the German marine personnel is nothing but "an army corps afloat," which would speedily show its nautical inferiority under stress of wind and weather. But there was nothing resembling nautical inferiority—on the contrary, there is every inference of better seamanship on the part of the Germans in this, the first naval engagement ever fought in the open sea in a great storm. Elaborate explanations, however, are not necessary. The result is amply accounted for by the fact that the Germans delivered a crushing fire, to which the British ships were unable to reply until after they had been badly hurt. Excluding the light guns of the secondary batteries, which probably had little if any decisive effect, there were sixteen 8.2-inch German guns against but two 9.2-inch British guns. Of 6-inch guns the Germans had twelve to the British thirty-four, and of 4-inch guns thirty-two to the British ten. Or, in other words, the actual number of the smaller caliber guns was the same for both sides, but the British had great preponderance in 6-inch. The Germans however obviously had a far greater weight of gun fire per ton of displacement and besides they have always claimed that their Krupp guns are as good, if not better, than the corresponding British guns of somewhat larger caliber. They appear to have opened fire at 9000

ranges. The British, some reports say, did not respond until the range had decreased to 6000 meters, by which time they were much battered. Other accounts state that they opened fire at the long range with their 6-inch guns, but that the projectiles fell short or lacked penetration. Whatever the causes may have been, the "Monmouth," according to German reports, was sunk in less than thirty minutes. English reports say she was driven ashore. The powerful "Good Hope" escaped at nightfall apparently a wreck and on fire. Her loss is conceded by the Admiralty. The "Glasgow," severely injured, found refuge in a Chilean port, together with the "Otranto," an armed transport which played little or no part in the engagement. Altho the two 9-inch British guns could have penetrated the German armor at 9000 meters and the 6-inch guns could certainly have been effective at 5000 meters, the German ships were practically unhurt, and there were but seven casualties in their crews. On the other hand, the Germans delivered a smothering hail of no less than 400 shots in the single hour which the engagement lasted. The British casualties have not been published, but they include the loss of Admiral Cradock and all on board the "Monmouth" and "Good Hope."

At the present time the tactics of the contending squadrons can only be surmised. As the vessels having both wind and sea against them would be at material disadvantage in aiming their guns, there was probably maneuvering, as in the old days, for the weather gage. The darkness and the storm must have rendered ordinary means for determining range useless or inefficient and have seriously interfered with good marksmanship on both sides. The "Good Hope's" two 9-inch guns were in separate turrets, so that the best she could do with them was a single shot either fore or aft and two shots in broadside. Her heavy rolling is said to have greatly hindered the working of her 6-inch guns. The British hit-percentages for 6 and 4 inch guns — as reported for 1913—were not particularly high in proportion to the number of shots fired, and if high waves troubled the "Good Hope," of 14,100 tons, they might well have been much worse for the German ships, the two largest of which were each over 2500 tons smaller. As to how far speed differences may have affected the result, we know only the trial speeds of these vessels at the time they were launched, and have no knowledge as to their capabilities at the time of the conflict. The German ships had been at sea for many months and their bottoms must have been foul with marine growth. It is not known whether Admiral Cradock was forced to battle against a plainly superior enemy or whether, as is altogether likely, with characteristic gallantry he accepted it, believing that traditional British seamanship would make up any deficiencies.

From a military point of view, the loss of British fighting force is inconsiderable. Even with the eighteen cruisers already destroyed, the overwhelming superiority of the British navy has not been materially reduced. In fact, its strength is greater now than it was at the beginning of the war, owing to the addition of the two great Turkish battleships, the Brazilian monitors and the completion of vessels then unfinished. But the blow to British naval pride is even more severe than that which followed the frigate duels with ourselves in the war of 1812. In fact, the circumstances are in many ways similar, for the weight of the broadsides of the "Constitution" and "United States" was much greater than that of their respective antagonists.

Great Britain is now distinctly not "mistress of the seas" in the southern Pacific Ocean. The Germans there hold sway. For how long depends upon whether they meet the Japanese fleet which is said to be hunting them and the sequel of that meeting. Unconfirmed British reports of November 7th give rumors of the capture of the "Scharnhorst" and "Gneisenau" while coaling.

The responsibility for the present staggering defeat and consequent loss of prestige must be laid at the door of the Admiralty, which has already been receiving plenty of recrimination for permitting the recent German mine-laying operations close to the British coast. In fact, its explanation of its blundering sacrifice of Admiral Cradock interrupts its even more futile attempt to account for the mines north of Ireland by saying they were put there "by submarines" or by enemy's vessels disguised as neutrals. Submarines do not lay mines, and a proper defensive patrol can keep off minelayers that can be seen. There was no need of explanation anyhow. The Germans furnished it by calmly laying more mines within ten miles of the British coast off Lowestoft until they were detected by a British destroyer, which they afterward blew up by dropping a mine in its way as they leisurely retreated.

The return of Admiral Lord Fisher to his post as First Sea Lord of the Admiralty, even at seventy-three years of age, seems just at present to be singularly opportune.

New York City

London Times History of the War

ADMIRAL SIR JOHN ARBUTHNOT FISHER

First Sea Lord of Admiralty from 1904 to 1910, who has resumed that office upon the resignation of Prince Louis of Battenberg, whose German birth gave rise to popular criticism

A LITERARY WAR MAP

THE ROMANTIC BACKGROUND OF THE WAR IN BELGIUM AND FRANCE

BY EDWIN E. SLOSSON

THE war of the ten nations is being fought on historic ground. Their armies are tenting tonight on the old camp grounds. They are battling on the battlefields of their ancestors for innumerable generations, and one may imagine, with the artist, that the clouds above them are filled with the wraiths of those who died there in past centuries and now are awakened to fight again. A 42-centimeter shell from one of the new Krupp howitzers may dig thru twenty feet of war strata, throwing out strange relics of earlier combats, first, perhaps, a chassepot cartridge of 1870; then one of the iron cannonballs used in the battle of Crécy to frighten the horses, or one of the four thousand golden spurs left by the French knights on the field of Courtrai; below this the bronze helmet of a Roman soldier; and finally —for the Krupps plow deep—an eolithic flint, the first weapon made by man for the slaughter of his fellow man.

The names that throng our daily news are full of meaning for every reader; scarce one of them but sets vibrating some chord of memory or sends us searching for some illusive association. It may be a bit of biography, a snatch of old song, a medieval legend, an historical romance, a page of history or an automobile novel. I knew by heart the opening campaign of this war from A to Z when first I learned my letters:

An Austrian army awfully arrayed
Boldly by battery besieged Belgrade
Cossack commanders cannonading come
Dealing destruction's devastating doom
etc., etc.

Here "doom" is obviously and appropriately to be rimed with "dum-dum."

When the scene shifted suddenly to Belgium we all began to rattle off the first Latin we learn and the last we forget:

Gallia est omnis divisa in partes tres, quarum unam incolunt Belgae. . . . . Horum omnium fortissimi sunt Belgae.

That is as far as most of us carried the quotation, not of course because our memory failed us, but because it did not seem appropriate to add that the reason why, in Cæsar's opinion, the Belgians were the bravest of the Gauls was because they were farthest from the culture and refinement of the Romans. Neither did we find it convenient to recall the 39th chapter of *De Bello Gallico*, wherein the Gauls frightened the Romans by declaring that the Germans were big of body, incredibly bold and practised in arms, and so fierce of aspect that in battle they could not bear to look them in the eye.

A later and less illustrious writer of Latin than Cæsar has characterized the Belgian towns in this manner:

Nobilibus Bruxella viris, Antwerpia nummis,
Gandavum laqueis, formosis Bruga puellis,
Lovanium doctis, gaudet Mechlinia stultis.

Which may be Englished in this wise:

In noble men rejoices Brussels,
While Antwerp after money hustles,
And Ghent has halters and to spare,
And Bruges is rich in maidens fair;
The learned man in Louvain rules,
The while Malines delights in fools.

Ruskin accounts for the bravery of the Belgians on geologic grounds, for he had great faith in the superior qualities of Cretaceous civilization. In one of his polemic epistles, aimed at an English geologist, he says:

The English geologist may be pardoned for dimly appreciating the structure of a district in which a people strong enough to lay the foundation of the liberties of Europe in a single battle was educated in a fissure of the Lower Chalk.

Longfellow coming to the Old World from an unhistoric land felt the penumbra of the past which covers these Belgian towns displayed in the headlines of the war extras. We are all glad to learn that the belfry of Bruges did not share the fate of the Louvain library, but still watches o'er the town:

In the market place of Bruges stands
the belfry old and brown;
Thrice consumed and thrice rebuilded,
still it watches o'er the town.
As the summer morn was breaking, on
that lofty tower I stood,
And the world threw off her darkness,
like the weeds of widowhood. . . .
Visions of the days departed, shadowy
fantoms filled my brain;
They who live in history only seemed to
walk the earth again;
All the Foresters of Flanders—mighty
Baldwin Bras de Fer,
Lyderick du Bucq and Cressy, Philip,
Guy de Dampierre.
I beheld the pageants splendid that
adorned those days of old;
Stately dames, like queens attended,
knights who bore the Fleece of
Gold;
Lombard and Venetian merchants with
deep laden argosies;
Ministers from twenty nations; more
than royal pomp and ease.
I beheld proud Maximilian, kneeling
humbly on the ground;
I beheld the gentle Mary, hunting with
her hawk and hound;
And her lighted bridal chamber, where
a duke slept with the queen,
And the armed guard around them, and
the sword unsheathed between.
I beheld the Flemish weavers, with Namur and Juliers bold,
Marching homeward from the bloody
battle of the Spurs of Gold,
Saw the fight at Minnewater, saw the
White Hoods moving west,
Saw great Artevelde victorious scale the
Golden Dragon's nest.
And again the whiskered Spaniard all
the land with terror smote;
And again the wild alarum sounded
from the tocsin's throat;
Till the bell of Ghent responded o'er lagoon and dike of sand,
"I am Roland! I am Roland! there is
victory in the land!"
Then the sound of drums aroused me.
The awakened city's roar
Chased the fantoms I had summoned
back into their graves once more.

Surely no one ever got more history into nine couplets without spoiling the poetry than Longfellow did here.

The siege of Antwerp was familiar ground to all of us. We had been over it more than once with Motley, who lived in the days when it was the fashion to write readable histories. But when the Germans began the siege by bombarding Malines and Lierre it brought to mind one of Chesterton's *Tremendous Trifles*. In "The Ballade of a Town" he tells how he took a tramcar for Malines and by mistake discovered "the lovely city of Lierre," now doubtless most unlovely looking. The skit is one of Chesterton's delightful mixtures of nonsense and insight, and ends with a complete summary of his philosophy of life in two quatrains:

Happy is he and more than wise
Who sees with wondering eyes and
clean
The world thru all the grey disguise
Of sleep and custom in between.

Yes; we may pass the heavenly screen,
But shall we know when we are there?
Who know not what these dead stones
mean,
The lovely city of Lierre.

Boom stood next to Lierre in meeting the brunt of the German attack upon Antwerp, and from Boom Stevenson started on his *Inland Voyage*, which is better than Baedeker as a guide to the seat of war. After crossing the frontier, Stevenson, like the Germans, found in Maubeuge his first French fortress. To "La Fére of Cursed Memory" he devotes a whole chapter; then becomes enamored in turn with the Cathedral of Noyon and the town hall of Compiègne, both of which we trust have survived their capture and recapture. A cathedral is Stevenson's "favorite kind of mountain scenery," but Edith Wharton, in her *Motor Flight Through France*, devotes more atten-

[illegible] to the town hall of Noyon and that of St. Quentin than to their churches.

The Bible of Amiens still stands, tho many of its sculptured pages have been too mutilated for even a Ruskin to read. He would not have minded so much the rough handling of Rheims. I wonder how many of those who have been raving of the incomparable beauty of Rheims cathedral ever read what Ruskin said about it: "Nothing but disgusts and disappointments"; "a mass of weakness and confusion"; "confectioners' Gothic"; "grotesque and frightful in design." But Ruskin would have been the last to condone the destruction of a work of art on the ground that it was bad—unless, indeed, it were a modern work of art.

The defects of early training are irremediable. If people had been brought up as they should be on the *Ingoldsby Legends*, they would know that Rheims rimes with dreams, and they would stop trying to Frenchify the name. I should like—no, I mean I should not like to hear them read "The Jackdaw of Rheims" and call it, as they usually do, "Rants."

The lines about the nice cake of soap are too familiar to quote, having been repeatedly published in the back pages of our magazines at the expense of some philanthropist, but we can, without being accused of surreptitious advertising, recall that:

A nice little boy held a golden ewer,
Embost and fill'd with water as pure
As any that flows between Rheims and
Namur.

The great day of Rheims, when Joan of Lorraine stood beside the king she had enthroned, has been a favorite theme of painters and writers. It is interesting to compare the opening lines of three of the best known poems of this occasion:

The morn was fair
When Rheims re-echoed to the busy hum
Of multitudes for high solemnity
Assembled. —*Southey.*

Rheims scarce can hold the crowds that
roll this day
Like ocean's billows thru each echoing
way. —*Schiller.*

That was a joyous day in Rheims of old
When peal on peal of mighty music
rolled
Forth from her thronged cathedral.
—*Felicia Hemans.*

The novels of the Maid are too many to mention, but we must not forget that Mark Twain wrote a life of *Joan of Arc* that he never forgave the American people for not properly appreciating.

The romance reader hardly needs to refer to the war maps. He has fought over this region so many times in the course of centuries. He has been personally conducted thru the country by the best authors, from Froissart to Zola. But war seems to have degenerated — or literature, for it is more fun reading of a battle in the *Chronicles* than in the *Downfall*. That handy guide to the geography of literature, *Everyman's Atlas*, contains maps of the places named in the novels of Dumas and Balzac that would serve well for war maps.

The papers told us that Namur had been fortified so as to be impregnable to attack, and then a little later we learned that Namur had fallen owing to the employment of siege engines of unprecedented size by the enemy. This is interesting, but it is not news. It is 1971 years old, for Cæsar told how Namur was "fortified with a very high double wall, besides which they had placed heavy stones and sharpened stakes upon the walls," but that the Romans "were able to move forward machines of such hight with so great speed" that the defenders thought it must have been done thru the help of the gods.

Did we hear that the Germans had captured Peronne? Well, we knew that it was the English who showed them how a hundred years ago. Scott told us that in *Quentin Durward:*

Peronne, situated upon a deep river, in a flat country, and surrounded by strong bulwarks and profound moats, was accounted in ancient, as in modern times, one of the strongest fortresses in France. Indeed, tho lying on an exposed and warlike frontier, it was never taken by an enemy, but preserved the proud name of Peronne la Pucelle, until the Duke of Wellington, a great destroyer of that sort of reputation, took the place in the memorable advance upon Paris in 1815.

Nor were we novel readers surprized when they told us of the brave defense of Liège. We knew that there would be bloody work when so fiery a sovereign as the Kaiser encountered so fierce a population as the Liègeois. They haven't changed much since the time of Louis XI, for, said the chaplain in *Quentin Durward:*

You do not know the men of Liège, of whom it may be said, that, not even excepting those of Ghent, they are at once the fiercest and most untamable in Europe. Twice has the Duke of Burgundy chastised them for their repeated revolts against their Bishop, and twice hath he suppress them with much severity, abridged their privileges, taken away their banners, and established rights and claims to himself, which were not before competent over a free city of the Empire. Nay, the last time he defeated them with much slaughter near Saint Tron, where Liège lost nearly six thousand men, what with the sword, what with those drowned in the flight; and thereafter, to disable them from further mutiny, Duke Charles refused to enter at any of the gates which they had surrendered, but, beating to the ground forty cubit's breadth of their city wall, marched into Liège as a conqueror, with visor closed and lance in rest, at the head of his chivalry, by the breach which he had made. Nay, well were the Liègeois then assured, that, but for the intercession of his father, Duke Philip the Good, this Charles, then called Count of Charleroi, would have given their town up to spoil. And yet, with all these fresh recollections, with their breaches unrepaired, and their arsenals scarcely supplied, the sight of an archer's bonnet is sufficient again to stir them to uproar. May God amend all! but I fear there will be bloody work between so fierce a population and so fiery a sovereign.

"Our army swore terribly in Flanders," said Uncle Toby. Doubtless the British are using the same bad language in the same place as they fight along the Lys and Yser to keep the Germans from getting to Calais and Dunkirk. Calais might be found written on the Kaiser's heart as well as Bloody Mary's. Dunkirk the British did not succeed in holding when they had it spite of Jonathan Swift:

Spite of Dutch friends and English foes
Poor Britain shall have peace at last;
Holland got towns and we got blows
But Dunkirk's ours, we'll hold it fast.

For a bit of the background of Arras which now the Germans hold against the allied armies we have but to refer to Stedman's "Death of Philip the Bold":

Mailéd knights and archers stand
Thronging in the church of Arras;
Nevermore at his command
Shall they scour the Netherland,
Nevermore the outlaws harass.

The Flemish tales of Hendrik Conscience cover many centuries and most of the battlegrounds of this "cockpit of Europe." *The Lion of Flanders* is laid in Ypres, Namur and Lille; it tells of the massacre of Bruges and the bloody victory of Courtrai when Philip the Fair sent 60,000 men to lay waste Belgium and only 7000 returned to France, a worse record in proportionate fatalities than the present war for all our high explosives. Here I must also mention Stanley Weyman's *The House on the Wall*, a story of Spanish Flanders in 1706; Ouida's *Dog of Flanders;* Miss Everett-Green's *Shut In*, dealing with the siege of Antwerp in 1559; and Maurice Maeterlinck's early and only attempt at a story, *The Massacre of the Innocents*, a translation of the biblical story wherein the babes of Nazareth are Flemish and the soldiers are Spanish. Nor must we forget that Lohengrin, the Swan-Knight, sailed into Brabant up the Scheldt from Antwerp way. The Germans started from Aix and have got to Ghent. We are familiar with every step of that road, for we know *How They Brought the Good News* in the reverse direction, tho we never shall know what the "Good News" was, for Browning himself could not tell.

The lair of "The Wild Boar of Ardennes," William de la Marck, has again become the seat of war. Probably many a German soldier march-

ing thru the Ardennes from Luxembourg to Namur, footsore and hungry, shot at by snipers and hit by the flat of an officer's sword whenever he stopped singing, has said with with Touchstone: "Ay, now I am in Arden; the more fool I; when I was at home I was in a better place; but travellers must be content."

George Wharton Edwards gives some of the legendary lore of this region in his latest book, *The Forest of Arden*, as in his earlier volume, *Some Flemish Towns*, he told of the former splendors of Ypres, Dixmude, Alost and other places unknown to most of us a few weeks ago, but now household words.

Of course, it seems silly to our historian friends that we should be content to absorb our history and geography thru the medium of song and story, and so get mere scrappy knowledge, diluted with romance and contaminated by fiction, when we might and should drink at the fountain of pure truth, namely their own works. No doubt we might, perhaps we should, but then, would we? In the geometry of the mind, the shortest distance between two points is not always the straight line that joins them. One who takes the roundabout road often has the pleasanter walk and sometimes gets to the destination first. If he does not, may he not console himself with the thought that a pleasant walk is in itself a destination? Anyhow, we may quote Lowell in self defense: "To read a classic is to read a commentary on the morning paper."

WHAT THE FILIPINOS WANT

BY WINFRED T. DENISON

SECRETARY OF THE INTERIOR OF THE PHILIPPINE ISLANDS

The preamble to the Philippine Government bill, whose final consideration was postponed to the next session of Congress, has raised in definite form an important question. Shall the United States declare now its purpose to recognize the independence of the Philippines "as soon as a stable government can be established therein"? The article which we here print from the pen of Secretary Denison only by indirection throws light upon this question. Indeed Mr. Denison specifically declares himself unprepared to answer it. But his article, which contains the substance of an address delivered before the City Club of Manila, throws a great deal of light on the practical question of the spirit in which we shall approach our great and continuing task in the Philippines. Mr. Denison was appointed to his present office by President Wilson. But he is not a Democrat. He is a Progressive. A sketch of his personality, with a portrait, appeared in The Independent for December 18, 1913.—THE EDITOR.

ON the question of immediate independence I have not at present the audacity to express an opinion, having been here so short a time, and having seen so little of the country. Neither am I qualified to answer many related questions.

The subject which I do wish to discuss and upon which I have opinions which I wish to express, is my own point of view toward the questions which daily come before me in the administration of my own department.

In substantially every matter that comes to me, the first question is: Whose money is this I am about to spend?

Is it the money of the American people, or is it the money of the Filipino people?

Surely no one can have any real doubt about the answer.

Some may undertake to say: "We paid twenty million dollars to Spain for these Islands, and therefore their revenues are our revenues. True, we have this stake here and we have added to it sundry millions of expense, but the total all together—is it not a mere bagatelle to the stake which the Filipino people have here? What of the taxes they have paid for centuries? What of the toil they and their ancestors have invested here? It is they who are the vitality of these Islands, and the beneficial interest is in them. Our money we gave freely as a grant of aid to them. It gave us the mere legal title under the letter of the law of nations, but we hold it as trustees for them, and so we have again and again declared in the most solemn way.

Therefore it follows that we must spend these moneys for them and not for ourselves.

MOLLUSCS OR TEACHERS?

To be concrete: Within the last few days the question has come to me whether I would authorize the expenditure of $500, more or less, for the photographing of molluscs.

Now, it happens that I have just returned from the Mountain Province, where I found a deep necessity and a great demand for school teachers, and no money to provide them. I had this choice: Should I spend $500 for photographing these molluscs, or should I spend it for a school teacher? I could pay the whole share of the Insular Government in one teacher, and a half of the share of the Insular Government in another teacher for the cost of these photographs. I am not unaware that the world outside of the Philippines may possibly prefer the photographs of the molluscs to teachers in the Mountain Province, but can there be any doubt in the mind of any one that my duty is to spend that money for the interest of the Philippines, rather than to further what may be considered the interest of the scientific world at large?

This is a type of the questions which are constantly arising. It is an extreme one, and one that is unusually ridiculous, but, nevertheless, it serves to make the point.

Every requisition for expenditure involves a choice of the purpose proposed as against all other possible purposes, and it behooves an alien administrator to have a care lest he give the hobbies of his own nation priority over the interest of the people whose money he is spending.

ETHNOLOGY OR DOCTORS

A similar thing happened in the first month I was here. I had been to Palawan, and had found there forty thousand people without a doctor. This gave me a shock which I shall never forget, and which has not been minimized by my having subsequently found the same thing on a still larger scale in the Mountain Provinces. I had visited the Moros in the southern end of Palawan, and had found them eager for a school teacher, even grown men petitioning for leave themselves to go to school. I had been to the Culion Leper Colony, and had received the petitions of those six Sisters of St. Paul de Chatres, who were doing all the nursing for 250 hospital patients and caring for the whole out-patient and dispensary service besides; and they had asked for two more nurses and $50 a month for extra delicacies for the more desperate among their cases.

With these things in my mind I returned to Manila; and there the very

first thing that came to me was an application for leave to spend $14,000 for printing the results of ethnological research into the habits of the Bukidnons and other non-Christian tribes, and I said to myself: Is it for the interest of the Filipino people that these manuscripts should be printed at such a cost, rather than that school teachers and doctors should be sent to Palawan, and more help to those weary Sisters of St. Paul de Chatres and the lepers in their care?

Is it for the interest of the Filipino people to make such researches and to print their results in order to inform the American people and the outside scientific world about the ways and habits of the Bukidnons, rather than to send school teachers to teach the Bukidnons the ways of the outside world?

It was urged that these expenses for printing were a mere bagatelle compared with the cost of collecting the information, and that it was a pity to lose the results of these researches for a sum so small when compared with the vast total of cost already incurred in collecting the information.

But for $14,000 I could either cover the Mountain Province with school teachers, or cover Palawan with doctors, or fill Culion with nurses; while the outside world, if it finds itself in peremptory need of this knowledge, may possibly be able to find the money somewhere, outside the pockets of the Filipino people.

Then it was urged that the administrative officers of the Mountain Province, the governor, the lieutenant-governors, and all the Americans who have to deal with those people up there, needed these researches to guide them in their work. That might possibly to my mind be a justification for the expense, so I set that question aside until I could visit the province, and then I asked every one of these officers the question, and I found that not one of them had ever made any practical use of any of these things. "Interesting," they said, "from the point of view of the advancement of the science of the world, but of no actual practical use to the Mountain Province."

THE "OUGHT TO WANT" IDEA

Then in all these matters there always arises a second question:

Is the object of the expenditure a thing which the Filipino people themselves want in exchange for their money, or is it merely a thing that I, as an American, might think they *ought* to want?

Upon this question, it is of not the slightest importance to me what I, as an American, might think they *ought* to want, excepting only where the subject affects the international obligations which we have assumed—the primary essentials of order and of sanitation to prevent injury to the other nations of the world. For these things we are ourselves morally responsible to the outside world, so long as we permit ourselves to stand as sponsors here.

In all matters, however, in regard to which our responsibility is exclusively to the Filipino people and not to the outside world, it is our duty to spend their money for things that they want, whenever there is a difference between what they want and what we might think they ought to want.

It is their money which is to be spent. The thing to be acquired is for their use. Why should they not themselves make the choice whether they prefer the money or the thing?

For example, a few days ago I received a letter which had spent perhaps two weeks, or more, coming down to Manila from the Mountain Province. I mentioned the fact to a friend, and he said, "Yes, this is the sort of thing you will get constantly if you Filipinize the post office service of these islands." I replied, "Even if that is true, what of it? If the Filipino people prefer to have their letters arrive in three weeks and do it themselves, why haven't they the right to do it that way?"

Not every man in the world is always anxious, as we Americans are, to have everything done hot-foot on the instant. Why should we insist upon "hustling the East" against its will, and at its expense, if the East itself wishes to lie placid, murmuring "Mañana!" The Oriental people have the quality of patience. They are serene about these things. Isn't it conceivable that they would prefer to do these things themselves, even if it should cost them more, and even if they should do it less efficiently? Isn't it in human nature for people to prefer to do a thing themselves rather than to have an alien people do it for them?

Let us put ourselves in their places. We all know the scandalous maladministration and wasteful inefficiency which for so many years characterized our city governments in the United States,—a thing which Mr. Bryce, for instance, in his book on the American Commonwealth, pointed out with such amazement. Suppose the Germans, acting upon his book, should come to America and say, "We are the acknowledged experts in the world in the operation of municipal governments. We have proved to the world that we can manage our municipal governments more efficiently than you Americans can. Therefore we have come to do it for you." Would we welcome them? Would we be grateful to them?

I believe that all men in the world, civilized or uncivilized, wise or ignorant, would prefer to manage their affairs in their own way rather than to have aliens do it even more efficiently and more cheaply in an alien way.

CALICO, CANAOS, DYNAMITE AND SCHOOL TEACHERS

I have been told that, next to the Negritos, the Ilongots are the least civilized people in these Islands. On my recent visit to their mountains I had a little experience, trifling in its way, which sheds a light on precisely this thing. I took up large quantities of calico of many colors for the usual annual gifts from the apo. The people were gathered by their various chiefs in long groups of single file, eager for their presents. I had the pieces of each pattern put in a separate pile on a big table, and as each Ilongot approached to receive his present I asked him to choose which pattern he preferred. He never had any doubt what he wanted. He never hesitated a second. He began to point long before his turn had come. When it was all over the interpreter came to me and said, "The people are astonished that you should have allowed them to choose which color they should have. They are very happy about it."

Then I resolved to test this thing in Ifugao, and at a council of the people I said to them: "The meat for this cañao costs every year as much as it would cost to send you a doctor (or two doctors, as the case might be), or one or two school teachers. Next year I will do whatever you wish. I will either bring the meat for the cañao, or I will bring a doctor, or I will bring a school teacher, or, if you prefer, I will bring dynamite for your irrigation ditches." We put it to a vote, and we found that they knew what they wanted, and they were very discriminating about it. On the question whether they would prefer dynamite for irrigation ditches to the meat for the cañaos, they divided practically evenly. On the choice between doctors, school teachers and the cañaos, they were absolutely unanimous for the school teachers.

Then I put them to a further test, which I think very few civilized officers, even American, would stand. At each place there was a great demand for salaries. The cabecillas said: "The presidente has a salary. We have our official duties to do. These

duties take time. We ought to have salaries." I said: "There are so many cabecillas. The salaries that you ask are so much. The total cost will be so much. That would provide so many school teachers for your children. Which would you rather have me do: Spend that money for salaries or for school teachers?" And they declared always, without hesitation, for the school teachers, and I heard not another word for salaries, tho the salaries were to have been for themselves.

So I say, and every day of my experience in the Mountain Province and elsewhere in these Islands proves it to my absolute satisfaction, that even the most uncivilized people in the mountains know what they want, and also (at least with a little leadership) are quite certain to want advantageous things; and if we only consult their wishes as to how their money shall be spent we can at least be certain that it will not be spent in printing things even about themselves, and much less in photographing molluscs.

These two principles: first that the money is theirs, and second that, excepting only in regard to our international responsibilities, we shall spend it for what they want—these principles are to my mind essential to the honorable performance of our pledge to devote our administration here to the training of these people in the art of self-government.

I believe that with a nation as with an individual, the only effective method of education is leadership and inspiration, and that you get nowhere in educating anybody to do a sum by merely doing it for him.

In whatever part, therefore, I have to play in the administration of the affairs of these people, I propose to consult their wishes to the utmost extent and to spend none of their money in any way which they are not willing to vote that it should be spent.

I have no fear of the result of such a policy, because I believe that my Filipino colleagues in the Commission, and my Filipino colleagues in the Assembly, as well as the mass of the Filipino people, are just as desirous as we Americans can possibly be to spend the money for the main great purposes which underlie the problem here: namely, the proper development of the public lands;. industrial and agricultural education; the extension of agriculture; medical education; medical care thruout the Islands; sanitation; the knowledge of English as a common language; a sound general education, and the fusion of the Christians with the non-Christians.

Manila

THE BOOK YOU WANT BY RETURN MAIL—IN WISCONSIN

WISCONSIN, that state from which there have come many new departures in government, has launched upon what some would call another experiment in democracy.

The free library commission, which twenty years ago initiated the traveling-library plan as an aid to rural communities, recently announced its intention to circulate its books by parcels post. By this plan almost half a million volumes in the great libraries of the University of Wisconsin and the State Historical Society are to be made accessible to any citizen of the state, whether he lives in the shadow of the capitol dome or in a settler's cabin on the shore of Lake Superior.

While the use of parcels post is a new departure in library extension work, it nevertheless is the consistent outgrowth of the traveling-library idea. M. S. Dudgeon, present secretary of the commission, developed the plan for circulation of library books by mail. Like Mr. Hutchins, he would furnish books to those who need them most. This plan does for country folks by mail what the city dweller does for himself direct. When the city man wants to draw books from the city library he gets some property owner to sign his application as guarantor. When the country man wants to draw books from the Wisconsin Free Library Commission by parcels post he sends a letter enclosing the proper amount of postage and giving the name of the book he desires. At the bottom of the letter there is a statement signed by the school teacher, postmaster or librarian which says that the writer of the letter is a responsible citizen.

The country people, who may be unfamiliar with library lists and library methods, are not left entirely to their own devices. The commission recommends a list of books under various classifications from "The Farmer and Farming" to "European War Countries."

MAILING BOOKS TO ALL WISCONSIN

Parcels post and free rural delivery carry books from this office of the Free Library Commission to individuals and, in the form of traveling libraries, to groups of readers

© Pirie MacDonald

THE FIRST REPUBLICAN GOVERNOR OF NEW YORK SINCE HUGHES

CHARLES SEYMOUR WHITMAN WAS ELECTED BY THE GREAT PLURALITY OF 136,000 OVER MARTIN H. GLYNN. AS DISTRICT ATTORNEY OF NEW YORK COUNTY SINCE 1910, HIS WORK IN PROSECUTING CORRUPT POLICE OFFICIALS—NOTABLY CHARLES BECKER, CONVICTED OF THE MURDER OF HERMAN ROSENTHAL—BROUGHT HIM PRESTIGE. HIS ELECTION IS INTERPRETED AS A FRESH REBUKE TO TAMMANY, DISASTROUSLY DEFEATED LAST NOVEMBER AFTER THE REMOVAL OF GOVERNOR SULZER FROM OFFICE. SULZER RAN AGAIN, RECEIVING ABOUT 120,000 VOTES, MORE THAN DOUBLE THE PROGRESSIVE VOTE. GOVERNOR GLYNN HAS BEEN AT BEST A LUKEWARM OPPONENT OF TAMMANY, AND ENCOUNTERED A VIGOROUS ANTI-CATHOLIC CAMPAIGN. REVELATIONS OF MISMANAGEMENT AT SING-SING PRISON JUST BEFORE ELECTION HELPED TO DISCREDIT THE DEMOCRATS

Harris & Ewing

THE ONLY SUCCESSFUL PROGRESSIVE LEADER

GOVERNOR HIRAM JOHNSON, ROOSEVELT'S RUNNING MATE IN 1912, WHO WAS RE-ELECTED IN CALIFORNIA BY A PLURALITY OF MORE THAN [illegible], DUE TO THE FACT THAT CALIFORNIA WAS FROM THE START MORE SOLIDLY PROGRESSIVE THAN ANY OTHER STATE, GOVERNOR JOHNSON'S PERSONAL POPULARITY SECURED HIM THIS DECISIVE VICTORY IN THE FACE OF GENERAL REDUCTIONS IN THE PROGRESSIVE VOTE THROUGHOUT THE COUNTRY. HE SEEMS TO HAVE RECEIVED NEARLY TWICE AS MANY VOTES AS HIS REPUBLICAN OPPONENT, JOHN D. FREDERICKS, AND FOUR TIMES AS MANY AS THE DEMOCRAT, JOHN D. CURTIS. THE PROGRESSIVE CANDIDATE FOR THE SENATE, FRANCIS J. HENEY, RAN THIRD, THE SEAT GOING TO A DEMOCRAT, JAMES D. PHELAN. JOHNSON, LIKE WHITMAN, MADE HIS REPUTATION IN THE PROSECUTION OF GRAFT CASES

BOOKS OF THE AUTUMN

BRIEF APPRAISEMENTS FOR INDEPENDENT READERS

WE have heard of people who "read every new book as it comes out." We have never met one. Let us see what it would involve to make good the boast. There are twelve thousand new books published every year in the United States. A reader who started in on January first with the devout intention to read them all and kept at his task faithfully at the rate of three books every day including Sundays (only religious books on Sundays of course) he would come out at the end of December some eleven thousand books behind and no chance of ever catching up this side of eternity. Obviously nobody can read all the new books; obviously nobody wants to. Even the so-called "omnivorous reader" must exercize his selective faculty to some extent or he would ruin his mental digestion. Here then is where the reviewer comes in. Few readers are so fortunately situated as to be able to examine for themselves all of the new books as they appear. He must then depend upon what he hears about them from others, mainly from his friends, from the publishers and from the reviewers. The first is often the best and probably more books are sold by personal recommendation than any other way, but sometimes the taste of our best friends fails to coincide with our own at all points of the circle of our interests. The publishers are nowadays giving in the advertisements, circulars and slip-covers very reliable indications as to the character and contents of the new books, but it is no discredit to say that they are sometimes a bit too enthusiastic over their value and neglectful of the claims of rival publications. Consequently with the rapid increase in the number of new books the task of the literary editor has become at once more necessary and difficult. He must primarily be a book-sifter, for space will not allow even a mention of all the volumes sent in for review. Then after rejecting those that he considers least worthy of notice he begins to pick at the other end and decides which are of sufcient importance to require detailed criticism. The rest of the new books, the bulk of them, he must briefly appraise, telling what they are about, what they amount to and whom they are for. His opinion, tho exprest briefly and dogmatically, must nevertheless be as carefully considered as when he has a column to devote to a book. In the following pages we have picked out some seventy of the recent books in various fields that seem to us noteworthy. A few of them will receive further consideration in later issues.

THE GREAT WAR

Germany and the Germans, by Price Collier. (*Scribner. 75 cents.*)

A new half-price edition of a popular book giving in an interesting way just what the average reader needs for an understanding of the virtues and defects of the German character. Those who are suspicious of snapshots at national psychology can confine themselves to the statistics that are unobtrusively interlarded.

Great Britain and the Next War, by A. Conan Doyle. (*Small, Maynard. 25 cents.*)

The author of *Sherlock Holmes* was one of the few Englishmen who read Bernhardi before the war and his comment here reprinted reads well in the light of later events. His theory that a Channel tunnel would be necessary if England were to give any aid to Belgium was laughed at a year and a half ago, but is now seen to be sound.

How Germany Makes War, by Friedrich von Bernhardi. (*Doran. $1.25.*)

For those who feel the need of refreshing their knowledge on the methods of modern warfare, there is no better book than this less technical version of General Bernhardi's great work. Written in 1911 he anticipates the possibility that Germany single-handed without the help of Italy or Austria would have to meet the combined attack of France, Russia and Great Britain and explains how these odds might be overcome. The strategy and tactics employed by the Germans in the present war follow closely the principles here laid down.

The Real "Truth About Germany," by Douglas Sladen. (*Putnam. $1.*)

A reply point by point to the pamphlet issued by a committee of prominent Germans. Whatever may be said of the argument the Germans have the advantage over their opponents in the matter of temperate language. The charge that the Germans "took pains to prevent *The Truth About Germany* from reaching England" is amusing considering that our American tourists have been complaining that the British authorities took their copies away from them.

The Clash of Nations, Its Causes and Its Consequences, edited by Rossiter Johnson. (*Nelson. $3.*)

It is an astonishing feat of bookmaking to bring out this large and imposing volume so quickly. Here are numerous pictures of arms and armies, portraits of all the prominent persons, maps of the countries involved, and a history of the events leading up to the present conflict, in short, the preliminary information needed by the reader who wants to understand the real meaning of the momentous events he finds in his morning paper.

The Great War, by Frank H. Simonds. (*Kennerley. $1.25.*)

Among the thousands of editorials on the war none have attracted more attention than those appearing in the New York *Evening Sun*. In book form they form a very handy record of the war from the assassination of the Archduke to the fall of Antwerp as it appeared to contemporaries. They stand being brought together and considered as a whole better than might have been expected, for few editors would find less to correct or modify in what they have written from day to day than Mr. Simonds.

FRANK H. SIMONDS
Author of "The Great War"

The War in Europe, by Albert Bushnell Hart. (*Appleton. $1.*)

This is not only the biggest but it is also the most complicated of wars and it is difficult to get an understanding of the many factors and diverse interests involved. This is just what is explained in a readable way by the Professor of the Science of Government at Harvard and the most widely known of American historians. He discusses in turn the strength and purposes of the various nations at war and makes some sensible suggestions, not likely to be adopted, as to terms of peace.

War's Aftermath, by David Starr Jordan and Harvey Ernest Jordan. (*Houghton Mifflin. 75 cents.*)

This gets at the real heart of the matter. The great evil of war is not the destruction of property or of lives because both will be replaced. It is the permanent and irreparable injury to the race thru the elimination of a large part of its better elements. The authors prove this as nearly as it can be proved in the case of our Civil War by a study of present conditions in the South.

Who Is Responsible? by Clondesley Brereton. (*Putnam. 50 cents.*)

The English side of it. Better than the average of the new war literature. Hastily written, but well. The author makes an earnest tho not altogether successful effort to appreciate the German point of view.

What Germany Wants, by Edmund von Mach. (*Little Brown. $1.*)

This is by far the most persuasive of the pro-German pleas before the bar of American public opinion. Dr. von Mach repudiates Bernhardi and the Pan-Germanists and instead quotes from Rohrbach a ten

GERTRUDE ATHERTON
Author of "Perch of the Devil"

perate statement of the reasons why Germany is convinced that England is out of jealousy trying to crush her. He shows that England and France have been expending more for army and navy than Germany and that the legal evidence for Belgium's neutrality is not so plain as has been assumed.

FICTION

Night Watches, by W. W. Jacobs. (*Scribner. $1.25.*)

Another delightful collection of the author's inimitable sketches of quaint English seafaring men and the humbler circles of village society. These sketches are not, as a whole, as crisp and strong as usual, but they are still intensely humorous and cleverly done. Unhappily, Will Owen does not illustrate them.

Perch of the Devil, by Gertrude Atherton. (*Stokes. $1.35.*)

By many Mrs. Atherton has been rated as our best woman novelist, and certainly this story of the evolution of the character of the simple, oval-eyed, shallow-voiced wife of a "successful" Western miner is not far from justifying the distinction. From that earlier tale, *The Californians*, her power has grown unmistakably, and the creation of Ida Compton is an achievement worthy of a Wells, told with the narrative skill of a Conrad.

Pierre Vinton, by Edward C. Venable. (*Scribner. $1.*)

A delightful, whimsical romance with the charm of W. J. Locke's *The Morals of Marcus*, which in literary style it resembles. One is also reminded of De Morgan in these sparkling pages and, at times, of James M. Barrie. This does not mean, however, that the author is not wholly original, for he is. These "adventures of a superfluous husband" are most wittily and gracefully narrated; delicate comedy, sentiment and light philosophy being deftly interwoven with true literary art.

The Blind Spot, by Justus Miles Forman. (*Harpers. $1.35.*)

A character study of a zealous young reformer who, seeing social conditions all wrong and human affairs badly managed, tries to save wasted energy and bring about intelligent order. The people follow him till they discover that it was not for love of them that he strove but merely the impulse of a mind that disliked disorder. He fails because the saving grace of love was not in him. A well written and decidedly interesting novel.

The Clarion, by Samuel Hopkins Adams. (*Houghton Mifflin. $1.35.*)

This might be called the novelization of a man's life work. Mr. Adams has for many years waged relentless war against fraudulent patent medicines, dishonest advertising and the tendency of certain newspapers to allow their editorial opinion to be influenced by advertising patronage. In this strong and conscientiously written novel he portrays in the guise of excellent fiction many of the evils he has so valiantly and effectively fought.

The Mutiny of the Elsinore, by Jack London. (*Macmillan. $1.35.*)

A man of wealth embarks as the only passenger upon a round-the-Horn-going sailing ship. On board are a mate who had sailed in the clipper ships of the fifties, the captain's daughter and a nondescript crew. Here is a true Jack London setting and there naturally follows a stirring sea-tale with the author's characteristic realism, picturesqueness and dramatic force. Good reading!

The Trawler, by James B. Connolly. (*Scribner. 50 cents.*)

Theodore Roosevelt, Ida M. Tarbell and Mark Sullivan selected this story for the $2500 prize in Colliers' Story Contest. It is a big short story of the sea, human, heroic, gripping. It is as remarkable for the things it does not say but makes the reader feel, as for the skill with which it says the rest.

The Three Sisters, by May Sinclair. (*Macmillan. $1.35.*)

The surmise is irresistible that if Miss Sinclair had not been a lover of the Brontes she would not have written this story. The three sisters, the grim manse in its bleak setting, the strange and harsh man that was their father, it is all there. But the story is one of three temperaments, three characters, three individualities, with their diverse reactions to a single environment. Almost inhuman at times in its penetration of its insight. Quite so in its distortion of essential facts of human passion.

The Wife of Sir Isaac Harman, by H. G. Wells. (*Macmillan. $1.50.*)

Wells has never done better work in social analysis and character sketching than this novel, but he spoils it by a dubious ending. The lesson of it is the same as Barrie's play, "The Twelve-Pound Look," a wife's desire for autonomy. Wells diagnoses the disease admirably, but we are quite sure he has not hit upon the right remedy.

BELLES LETTRES

Appearances, by G. Lowes Dickinson. (*Doubleday, Page. $1.*)

Mr. Dickinson is an Englishman, but he is not English; which is another way of saying that he has a point of view that is charmingly different. Every man who values the candid opinion of a keen thinker about our own land and who wants another glimpse of the fascinating East will be delighted with *Appearances*. It is a mental stimulant.

Balzac, by Emile Faguet. **Gustave Flaubert**, by Emile Faguet. (*Houghton Mifflin. $2.*)

The publishers are to be thanked for giving to English readers these two thoro studies by the scholarly French critic. The biographical chapters are models of concise fullness. The personal characterizations are vivid. In the discussions of the authors' writings there is a precision of phrase, a clarity of idea and an acuteness of critical view that give immense value as well as charm to the pages.

Belshazzar Court, by Simeon Strunsky. (*Holt. $1.25.*)

Few have the power or the inclination to see in the complexities of modern city life the simplicity and kindliness of human nature, essentially the same everywhere, but that is the chief charm of these essays, originally printed in the *Atlantic Monthly*, best characterized, after all, in the author's own subtitle: "Village Life in New York City."

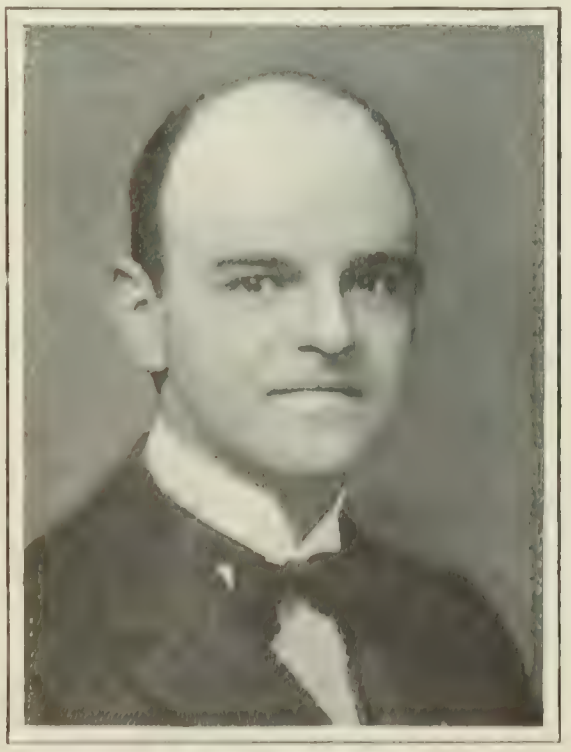
Essays on Books, by William Lyon Phelps. (*Macmillan. $1.50.*)

These thirteen papers include a criticism of Lessing; recollections of Mark Twain; a long study of Richardson; and a sympathetic treatment of Whittier. Whatever the particular topic, book talk by Professor Phelps is usually entertaining and always interesting and suggestive.

Impressions and Comments, by Havelock Ellis. (*Houghton Mifflin. $1.50.*)

Fugitive thoughts on literature and life by one of the most remarkable men of our time, one who has dug deeply into the muck of ages but has never mired his mind.

International Perspective in Criticism, by Gustave Pollak. (*Dodd, Mead. $2.*)



The author has hit upon the happy idea of collecting the literary opinions of the four great critics, Goethe, Grillparzer, Sainte-Beuve and Lowell, upon the great writers of England, France, Germany, Italy, Spain and of classic times. Thus one can compare the opinions of these four master minds on Scott, Byron, Shakespeare, De Stael, Moliere, Rousseau, Schiller, Lessing, Dante, Calderon, Cervantes and the classics of Greece and Rome.

Notes on Novelists, with some other Notes, by Henry James. (*Scribner. $2.50.*)

By no means all the interest and value of this volume of scattered essays lie in its thoughtful and acute appraisals of various writers. Its pages give much of the author himself, his tastes, his beliefs, his spirit, and, amusingly, since the dates run from 1895 to 1914, the steps that have brought him from the "silver speech" of the Stevenson essay to the turgid paragraphs of the Norton tribute.

Open Water, by Arthur Stringer. (*Lane. $1.*)

In his introduction, Mr. Stringer seems to think that because he has discarded rime and rhythm he has introduced a new form of poetic expression. But *vers libre* has been written for many years and, while the verse in this little volume is, on the whole, unaffected in style, the ideas exprest are not especially original.

EDWARD C. VENABLE
Author of "Pierre Vinton"

Songs for the New Age, by James Oppenheim. (*Century. $1.20.*)

Mr. Oppenheim thinks he is writing verse because he puts each sentence in a line by itself. If he put them in regular paragraphs he would find that he was writing prose—pithy, forceful and quite picturesque prose. "Songs!" No one under Heaven could ever sing these! A song moves melody and lilt and swing. These fragmentary revealings of human nature and semi-philosophical semi-emotional observations of life are tersely expressed rather successful in style and sincere enough, but they pose under a misnomer.

Trees and Other Poems, by Joyce Kilmer. (*Doran. $1.*)

The most characteristic of these verses are homely in sentiment and quaintly simple in form. They celebrate common things—the commuter's last train, trees, servant girls, lonely houses, delicatessen shops—but the author's gift of words, robust sanity and reserved humor lift them clear of the commonplace.

The King of the Dark Chamber, by Rabindranath Tagore. (*Macmillan. $1.25.*)

This, the third of Tagore's plays to be published here, carries a broader and more luxurious symbolism than *Chitra* or *The Post Office*, and gives new expression to subtly differentiated phases of that rapt mystical devotion to the Deity which motivated the *Gitanjali*. Occasionally, however, its detail may seem trivial to Western readers.

The Complete Poems of S. Weir Mitchell, (*Century. $2.*)

The famous nerve specialist will be remembered long in the world of letters for his prose. This collection of his verse is a representative and sufficiently complete one and comprises his dramatic poems and the best of his shorter ones. He is always the man of letters, but his poems, while scholarly, have little inspiration. They show in places the influence of much reading of Browning and Rossetti and were evidently mere literary pastimes.

The Unknown Guest, by Maurice Maeterlinck. (*Dodd Mead, $1.50.*)

The thought of the Belgian mystic has in recent years been turning toward the problems of psychical research and he has become convinced that there is experimental evidence for the existence of ghosts and supernormal powers of mind. He has even come to believe that the Eberfeld horses can extract the fourth root of 7,890,481. We fear that M. Maeterlinck has not the temperament for the weighing of evidence and detection of trickery as is required for such investigations.

H. G. WELLS
Author of "The Wife of Sir Isaac Harman"

THE DRAMA

Dramatic Works of Gerhardt Hauptmann. (*Huebsch, $1.50 per vol.*)

It is a fine thing that an American publisher has been found with the enterprise and courage to undertake a complete edition of the plays of the great German dramatist. While some of his naturalistic plays are unattractive to the American reader *The Weavers* is recognized as one of the most powerful plays on the labor problem that has ever been produced and *Hannele* and *The Sunken Bell* in Mr. Meltzer's version make fine reading.

English Drama, by Felix E. Schelling (*E. P. Dutton & Co. $1.50.*)

A new volume in the excellent series, "Channels of English Literature." It is a comprehensive and detailed study beginning with the medieval drama of England strictly, and closing with Sheridan in 1779, with whom came the parting of the ways, not yet reunited, between the play for reading and the play for acting.

Half Hours, by J. M. Barrie. (*Scribner. $1.25.*)

Four of Barrie's briefer and later plays; fine for reading because the stage directions are made interesting. "The Twelve-Pound Look" would make a good argument for the feminist cause. "The Will" is a pathetic satire on the "successful" man. "Rosalind" contains a clever character part. "Pantaloon" is unintelligible to those who have not been brought up on the English pantomime.

Romance, a play, by Edward Sheldon. (*Macmillan. $1.25.*)

Few successful dramas lend themselves more readily to enjoyable reading than this play, which Mr. Sheldon wrote for Miss Doris Keene two seasons ago. A true appreciation, and a happy blending of the "atmospheric" quality of the New York of the 60's, and characters, notably that of Mme. Cavallari, the opera star, ideal for lavender and old lace.

The Theater of Today, by Hiram Kelly Moderwell. (*John Lane. $1.50.*)

Ten years ago the theater was mainly an affair of gestures and spoken words. drama, the art of acting. Today, largely thru influences that have come from Germany and Russia, not only must there be acting, but there is a realization of its possibilities for the artist, for the architect and for the fine art of the dance or of music in its rhythmic spectacles or use of sound. Instead of one the modern theater is the abode of all the arts.

HISTORY

A Short History of the Canadian People, by George Bryce. (*Scribner's. $3.75.*)

A chatty, popular, opinionative biography of "Our Lady of the Snows." The author's characterization of the American immigrant is interesting: "The Americans in Canada at the loyalists' times were poor, lazy, illiterate, immoral; those coming to Canada now have their herds of cattle and horses, their implements and money, and will make superior citizens."

Political History of Secession, by Daniel Wait Howe. (*Putnam. $3.50.*)

A painstaking tracing of the causes, of which slavery, the chief, was not the only one, that led to the Civil War. The author, despite his own service as a Union soldier, maintains an admirable fairness. It will be of value as a supplementary work to textbooks less exhaustive.

ARTHUR STRINGER
Author of "Open Water"

The British Empire and the United States, by Prof. William Archibald Dunning. (*Scribner's, $2.*)

A study of the relationship subsisting between the two nations during the Hundred Years of Peace. Much fuller and more satisfying than Senator Lodge's well-written but inadequate outline of the subject. With all the patience of the historian and all the insight of the political philosopher the story of the century is related and the author's conclusion rendered irresistible, that "Everything seems to promise the absence of all but friendly rivalry in reciprocal benefits and in contribution to the welfare of the race."

The French Revolution, by H. Packwood Adams. (*McClurg. $1.*)

Based quite frankly upon secondary sources, but distinctly readable and on the whole very just in its conclusions. Like most of the recent histories of the Revolution the book is radical in its sympathies.

BIOGRAPHY

John Hay, Author and Statesman, by Lorenzo Sears. (*Dodd Mead. $1.*)

In the decade since his death John Hay has been the subject of no exhaustive biography. Mr. Sears has made a short, sympathetic study of the friend of Lincoln as an author and a statesman, in very readable, simple style.

King George of Greece, by Captain Walter Christmas. (*McBride, Nast. $4.*)

A vivid narrative of Greek national life from the time George, the Danish prince, became King of Greece until his death near the end of the Balkan war. Captain Christmas throws new light upon the Turko-Grecian conflict, the crisis of 1909 and the Balkan war which is important in view of the recent wars and the present cataclysm in Europe.

Reminiscences of Tolstoy, by his son, Count Ilya Tolstoy. (*Century. $2.50.*)

This book draws aside the curtain and gives the reader a glimpse of the intimate family life of Lyol Tolstoy. The reminiscences reveal a new side of the philosopher's life; they show the thinker passionately interested in his family and the stern

propagandist gambling and making puns. The letters included in the book are full of the philosophy which was later developed in "Confessions."

Social Life in New England, by Mary Caroline Crawford. (*Little, Brown. $2.50.*)

A well-illustrated account of such matters as the "Little Red Schoolhouse," "Tending Meeting," "Keeping a Diary," etc., in early New England. Drawn from many sources, much of the material is new and all interesting and skillfully used.

The American Crisis Biographies. (*Jacobs. $1.25 each.*)

The volumes, Raphael Semmes, by Colyer Meriwether; Daniel Webster, by Frederic Austin Ogg, Ph.D., with the twentieth now in preparation on the life of General Grant complete the biographical history of our great sectional struggle as contained in this series.

The Memoirs of Crispi, collected and edited by Thomas Palamenghi-Crispi. (*Doran. $3.50.*)

For seven critical years in the maintenance of the Triple Alliance, Francesco Crispi was Prime Minister of Italy and leading figure in world diplomacy. The third volume of his memoirs, dealing with international relations during the last years of the nineteenth century, is both interesting and important, giving, as it does, hitherto unpublished documents and interviews of the men who prepared for war while talking peace.

POLITICAL SCIENCE

A Theory of Civilization, by Sholto O. G. Douglas. (*Macmillan. $1.50.*)

Presents the eccentric theory that progress can only occur where an irrational religion, or "psychic illusion," finds general acceptance, and that the resulting civilization then destroys the beliefs which alone made it possible. Thus ages of rationalism and decadence necessarily alternate with ages of barbarism and belief. What would be the effect of a religion which was *not* irrational the author neglects to state.

Concerning Justice, by Lucilius A. Emery. (*Yale University Press. $1.35.*)

This timely collection of Storrs lectures delivered at Yale by a former Chief Justice of the Supreme Court of Maine, is a severe analysis of the basic principles of progressivism in politics.

Honest Business, by Amos Kidder Fiske. (*Putnam. $1.25.*)

Social movements and present conditions have been analyzed and described many times from single viewpoints. The author applies to them the standards both of economics and ethics.

The Dread of Responsibility, by Emile Faguet. (*Putnam. $1.25.*)

A good humored critique of modern French democracy by a member of the French Academy. M. Faguet believes that because the average judge is unwilling to shoulder the responsibility for his decisions, the average politician the responsibility for his policies, the average father the burden of a large family and the average citizen the risk of a speculative business; France is cursed with a subservient judiciary, governed by a routine bureaucracy, suffers from a declining birth rate and is overrun by place seekers who prefer a "safe" job to anything else on earth.

The Great Society, by Graham Wallas. (*Macmillan, $2.*)

A masterly presentation of the modern individual in his relation with our complex and many-stranded society. Neither technical or superficial but enriched with topical illustrations and enlivened with humor after the manner of such books as Professor Ross's *Social Psychology*. Of special interest at present is the author's discussion of the ethical values claimed for warfare by the militarists, in the chapter "Love and Hatred."

SCIENCE

Chemistry, by Raphael Meldola. The Exploration of the Alps, by Arnold Lunn. (*Holt. 50 cents.*)

The volumes of the Home University Library differ as widely in style as in subject, and Professor Meldola has by no means reached the high level of Soddy's *Matter and Energy*, but such a triumph cannot often be expected in any series. Mr. Lunn traces the history of Alpine adventure from the time when mountains were considered horrible to the time when they were considered fascinating and gives abundant references to the literature.

Chemistry in America, by Edgar Fahs Smith. (*Appleton. $2.50.*)

It delights the heart of a literary editor to find a book like this which opens a new and unworked field. We have biographies in abundance of every author, politician or soldier who are worth mentioning and of many who are not, but who knows anything about great scientists? Yet they also are interesting as human beings and deserve remembrance for what they did for the world.

Natural Law in Science and Philosophy, by Emile Boutroux. (*Macmillan. $1.75.*)

The French philosopher is known personally in this country as visiting professor to our leading universities and the translation of this work should extend his influence. Like James and Bergson he stands for the revolt against the mechanistic theories which were extended in the last century to cover life and the universe.

Prehistoric Man and His Story, by E. F. Scott Elliott. (*Lippincott. $2.*)

The "Missing Link," which in the days of our fathers was the chief argument against Darwinism, is missing no longer. This volume contains many of him, in all stages from the anthropoid ape to the modern savage. An excellent work for the reader who wants to become familiar with the recent discoveries in anthropology, as for instance the wonderful pictures found in cave dwellings of primitive man.

SIMEON STRUNSKY
Author of "Belshazzar Court"

The Mason-Bees, by Henri Fabre. (*Dodd Mead. $1.50.*)

One does not know whether to class the entomological studies of "the Homer of the insects" as science or belles lettres or social psychology. But no matter how classed they are delightful reading, for this naturalist of the old school loved to watch his bees, ants and caterpillars in order to get acquainted with them individually and perhaps in that way he got to know more about them than the biologist of the new school who merely dissects them or sticks them on pins with a long Latin name.

Water Reptiles of the Past and Present, by Samuel W. Williston. (*University of Chicago. $3.50.*)

Here is a chance to get information at first hand. Professor Williston has spent many years in digging out and putting together the bones of the mosasaurs, the plesiosaurs and the ichthyosaurs and he knows how to describe them and compare them with their diminutive descendants. A book for both specialist and general reader, well illustrated.

RELIGION—PHILOSOPHY

Hebrew and Babylonian Traditions, By Morris Jastrow, Jr., Ph.D. (*Scribner's, $2.50.*)

These lectures given on the Haskell foundation outline the relations existing between the ancient Hebrews and Babylonians and set forth by comparative study the superior worth of Hebrew ethical and religious ideals embodied in the folklore and other literature which is paralleled in Babylonia. The author is one of the greatest authorities on the subject and his volume is as judicious as it is scholarly.

Introduction to the History of Religions, by Crawford Howell Toy. (*Ginn. $3.*)

Great learning and skill in presentation make Professor Toy's volume an admirable handbook on a difficult subject. The ideas, customs and cults which underlie and permeate all religions are analyzed and illustrated with great effectiveness, and the development of the higher modes of religious manifestation outlined. It is a valuable and fundamental work for every student of religion.

Jewish Life in Modern Times, by Israel Cohen. (*Dodd Mead. $3 net.*)

A comprehensive, sympathetic consideration of the life and problems of the Jewish people in the many countries of its dispersion. Especial attention is given to the contributions of the Jews to modern progress; but the book is valuable thruout. It is well written, and contains several excellent pictures and a map.

The Working Faith of a Liberal Theologian, by T. Rhondda Williams. (*Scribner's.*)

This book is a dignified statement of the Christian fundamentals of religion, constructive in spirit, vigorous in thought, and lucid in style. It is fittingly closed by a stirring chapter upon Christianity and social ideals which calls for the realization of brotherhood in organized business, industry and international relations as well as in church and the prayer circle.

William Jamès and Henri Bergson, by Horace Meyer Kallen. (*University of Chicago. $1.50.*)

An admirable presentation of the philosophy of two of the most influential thinkers of the age; sympathetic personalities and strikingly alike in their attitude toward scholasticism as yet, as Professor Kallen shows, widely divergent in method and implications. Curiously enough he finds Bergson more orthodox in the religious sense than James.

Henry Holt and Company

CHARLES STEWART PARNELL: (A MEMOIR OF MY BROTHER) by **John Howard Parnell** is not only an intimate, sympathetic, authoritative biography; it reflects one of the most fascinating things in the world—the genius of the Irish people. *$3.00 net.*

Simeon Strunsky writes strictly for people with a sense of humor. In **BELSHAZZAR COURT: (OR, VILLAGE LIFE IN NEW YORK CITY)** he discovers plenty of cheer in the simple, homely lives of the big-city villagers. *$1.25 net.*

"If you make a resolution make a ceremony of it." Buy **William James's HABIT,** which tells how to build up good habits while killing off bad ones. *50 cents net.*

THE CHANGING DRAMA by **Archibald Henderson,** author of "George Bernard Shaw" and "European Dramatists," discusses the changes in the drama itself rather than the work of individual dramatists. *$1.50 net.*

Dorothy Canfield Fisher's MOTHERS AND CHILDREN, like her "A Montessori Mother," is neither a treatise nor a handbook. In the easy, half-humorous manner of a friend "just talking," Mrs. Fisher gives the clues to the answer of ten thousand questions about the most important business in the world—the rearing of children. *$1.25 net.*

Romain Rolland has become a world-figure. His fame rests upon his trilogy, **JEAN-CHRISTOPHE,** which Edmund Gosse pronounces "the noblest work of fiction of the twentieth century." *Each volume, $1.50 net.* "Jean-Christophe" has been a particular sensation in musical circles. These will welcome M. Rolland's **MUSICIANS OF TO-DAY.** *Just ready, $1.25 net.*

A new book by Professor **J. Arthur Thomson** is at once a scientific and literary event; his **THE WONDER OF LIFE** will delight students of natural history as well as lovers of belles lettres. *Profusely illustrated. $3.50 net.*

NEW FICTION

THE RAFT is a whimsical, fanciful, tender book by **Coningsby Dawson,** rich in the romance, not of yesterday, but of to-day. In general, the leading critics find it an advance upon Mr. Dawson's "The Garden Without Walls," which was the literary surprise of last autumn. *$1.35 net.*

Why not a **De Morgan** novel? **WHEN GHOST MEETS GHOST** is, says The New York Sun, "Another book like 'Joseph Vance' and 'Alice-for-short.'" *$1.60 net.*

THE LEGEND OF THE SACRED IMAGE by **Selma Lagerlöf** is a story of inspiring faith, in the manner of the author's other famous "Christ Legends." *50 cents net.*

MARTHA AND CUPID is by **Julie M. Lippmann.** Everybody knows—or ought to know, anyhow—the big, kindly, eternally cheerful heroine of "Martha By-The-Day" and "Making Over Martha." This new book tells her own love story. *$1.00 net.*

Published at 34 West 33d Street, New York.

THE BEST BOOK I HAVE READ THIS YEAR

The best of recommendations is an expression of personal liking for a particular book. Doctors are not always willing to take their own medicine. Employers have been known to give a "character" to a servant who had been discharged because he had none. Letters of introduction have been given to people to get rid of them. And reviewers are sometimes suspected of recommending to others worthy books that they would not read themselves unless they were hired to do it. But a book that somebody had read for his own pleasure and found worth reading is likely to be the book that somebody else wants.

It is with a view of helping the readers of The Independent in their choice of books that we have asked some friends of ours in whose taste we have confidence to say what is the best book they have read during the past year and they have kindly complied. Since no two of them have hit upon the same book the selection covers a wide field. We quote first from the professor of literature at Columbia University, who reluctantly turns aside from his own field of criticism to commend an historical work:

It is quite impossible for me to pick out any book that I have read in the past year and to designate it as the best, because there is no method of comparing writings as diverse in their appeal as Mr. Brownell's illuminating discussion of *Criticism* and Mr. Henry James's significant *Notes on Novelists*. Yet if you insist that I make a selection and say a few words about some one of the books I have read with pleasure and with profit, my choice falls upon Professor William A. Dunning's clear, candid, enlightening review of the relations of *The British Empire and the United States* during the century of peace following the Treaty of Ghent. This record of amity, again and again stretched to the breaking point and yet never broken, has an immediate significance for the two peoples that have English for their mother-tongue. This immediate significance Professor Dunning never disguises; and it is made sharper in the elucidating preface by President Butler and in the enlightening introduction by Lord Bryce. BRANDER MATTHEWS
Columbia University

Another critic of international reputation, Mr. More, once literary editor of The Independent and later editor of *The Nation,* commends to us the spirit of New England altho he was born in St. Louis:

To me the most important new book I have chanced to read in the past twelvemonth is the *Letters of Charles Eliot Norton*. I give these two volumes such a rank not so much for the intrinsic charm of Norton as a correspondent, nor even for the faithful portrait they present of a very rare character, but for the quintessential spirit of New Englandism, if the ugly word may be pardoned, instilled into them. I think that we are a little inclined in these days to underestimate the unique beauty and lasting value of that spirit as a national possession. This is partly due to the broadening complexity of our moral and intellectual life, which wears the outer aspect of cosmopolitanism and leads us to regard the intensely traditional and self centred point of view of the older Boston

as provincial, and is due also to certain obvious caricatures to which New Englandism lends itself. This is not the place to attempt to define the inheritance which we are in danger of throwing away; but any one who will read Norton's letters attentively will feel its force and understand its nature.

PAUL E. MORE

Princeton, New Jersey

Booker T. Washington, altho the recognized leader of the colored people, does not confine his attention to his own race but is interested in the uplift of the South as a whole:

The book which has interested me most during the last year has been Henry Sydney Harrison's *V. V.'s Eyes*. I have been imprest by this book because it represents the new and fast awakening of the South in reference to the application of education, culture and wealth in relieving and improving the social conditions in our southern communities. The writer being a southern man knows southern conditions and needs and he has by clear and incisive illustrations shown the South how to change conditions and at the same time indicated how public sentiment is growing in the direction of service.

BOOKER T. WASHINGTON

Tuskegee Institute, Alabama

The editor of the literary supplement of the New York *Times*, Mr. Kilmer, has a quick eye for good books. That he can write poetry Independent readers know, but this does not, as it sometimes does, prevent him from appreciating the poetry of others:

In making my selection, I am applying only the test of intensity and duration of enjoyment. I trust that you will not consider this too frivolous a critical standard. The work that I found most pleasure in reading is *Bread and Circusses*, a book of poems by Helen Parry Eden, published by the John Lane Company. In it are beautiful ideas beautifully exprest; poems that are imaginative, sincere and deftly wrought. I enjoyed my first reading of it; I now read it frequently, and never without delight. I am grateful for many of the books that appeared this year for Oliver Onion's *Gray Youth* and Alice Meynell's *Collected Essays* and Holbrook Jackson's *The Eighteen Nineties* and several others. But the book of Mrs. Eden's poetry is my favorite.

JOYCE KILMER

New York City

Professor Overstreet, of the College of the City of New York, selects a volume which has a similar aim to his own contributions to social philosophy:

I select J. A. Hobson's *Work and Wealth: a Human Valuation*, because it strikes a note of fundamental reconstruction for one of the master sciences of life. Many of us have long believed that there was something wrong with the classical and with the current political economy, particularly we who have been interested in the human side of economic organization. We went about talking somewhat vaguely and bitterly of the "dismal science", and yet, for the most part, we did not know how to escape its dismal conclusions. Mr. Hobson, eminent economist that he is, comes to our rescue. Economic science, he tells us bluntly, has been and is still "unfitted for the performance of any human interpretation of industry" because it has concerned itself with the *productive* aspect of wealth to the well-nigh entire exclusion of the *consumptive* aspect. It has thereby become mechanical, external; it has made man subservient to marketable wealth. Mr. Hobson issues a challenge to the new economics. But what is more important, he himself goes no small way in blazing the trail for economics that shall be in a true sense "a human valuation." In the midst of our social and industrial discontent, a book like this, the work of a master hand in economics, which digs down to the bed-rock of economic and social postulates, is full of promise for sane and wide reaching recon-

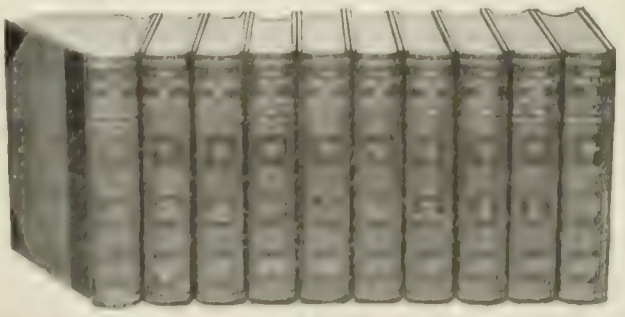
"War" on an Idiot Horse!

This grim figure, stony-faced and relentless, riding an idiot horse rough-shod over his victims, is Franz von Stuck's terrific arraignment of war. It is the side of warfare with which ordinary histories are filled—the side with which we have become satiated. But we know only too little about the *causes*, *the underlying facts*, *the existing conditions* which for ages have brought about the slaughter of countless thousands. In the remarkable work

The Library of Original Sources

you get these essential, bed-rock facts; the authentic, first-hand information; the glimpse behind the scenes, which is infinitely more valuable, more instructive, and more interesting to thinking, reading people than the mere accounts of battles given in an ordinary history. You get the inside facts which those books never even mention; *you go back to the sources of information themselves*, to the writings of men who were contemporary with the great events they described; to the first-hand accounts of the actual participants—eye-witnesses, thinkers, discoverers, inventors, etc., whose deeds and ideas wrought all the world-wide changes from the very earliest times *down to to-day*.

FREE BOOK thousands have written for our interesting FREE book of sample pages and list of curious "original records." Mail the coupon now and this book will be sent to you.



YOU CANNOT GET these records in any other work. Up to a short time ago they were not available in any form. Some existed only as hieroglyphics on monuments, tablets and rock sculptures, as curious characters on papyrus and parchment, and in more modern instances as half forgotten pamphlets and obscure reports widely scattered in museums, monasteries, and libraries. It took over 100 research specialists 10 years to gather and prepare this material for The Library of Original Sources.

Every account is in the exact language (translated) of the original manuscript, papyrus, clay tablet or inscribed cylinder. Everything is covered down to the events which happened almost yesterday. You'll be proud to have this marvelous work on your bookshelves; proud to have your friends see it and admire its beautiful appearance. As a reference work as well as a source of recreation it is positively unequalled—there is nothing else like it.

10 sumptuous, massive volumes, bound in rich, deep red leather; with many full-page illustrations, at a

struction. Hence, too, its value as a contribution to the *philosophy* of economics.

H. A. OVERSTREET
College of the City of New York

Professor Loeb is living proof that the vision of a specialist need not be limited to the field of his microscope. His brilliant experimental researches on the generation of life have led him to radical views in philosophy and sociology and he finds a congenial spirit in the great French mathematician. We are glad to be able to inform Dr. Loeb that we have a translation of part of Poincaré's *Last Thoughts*, which we hope to publish shortly.

I should like to call attention to two books which are prominent in regard to their contents and intelligible to a large number of readers. The one is the book by the late Henri Poincaré, *Dernières Pensées*, a collection of essays; and the second book is *Les Atomes*, by Perrin. I do not know whether there are English translations of these books.

JACQUES LOEB
Rockefeller Institute

From Professor Carver, economist of Harvard and director of the rural organization service of Washington, we have the recommendation of a work which treats, in a more systematic way, of the same subject that occupied Poincaré's last thoughts:

I think that the best book that I have read this year is Westermarck's *Origin and Development of Moral Ideas*. It seems to me exceedingly valuable because it is a final and complete refutation of the intuitionist theory of morals. That work was necessary, because until the ground was cleared of such rubbish, it was not possible to develop a rational system of morals. This work is, however, only a study of moral variations. It clears the way for a fuller study which must include a study of moral selections as well as moral variations.

There is probably no such thing as moral progress except thru moral variation and selection. The anthropologist can show us a great variety of moral ideals and practises. We need to be shown what variations are favorable and tend to strengthen and fit for survival the groups which practise them. This, Westermarck fails to do. We now need a study of moral selection, that is, a study of the effect of different moral ideals and standards upon the strength, prosperity and fitness for survival of nations. This must be the work of an economist. This, together with such a study of moral variations as Westermarck has made, will give us a complete theory of morals.

T. N. CARVER
Harvard University

The pastor of the Manhattan Congregational Church, Dr. Stimson, finds biography his most profitable reading:

I am especially fond of biographies and I find they stimulate me greatly. The most profitable one in connection with recent events was *The Memoirs of Francisco Crispi*, the Italian statesman. It is of especial value in taking up and supplementing Thayer's *Life of Cavour*, published several years ago. Cook's *Life of Florence Nightingale* I also found deeply interesting and very enlightening about the leading Englishmen of the Victorian period as well as inspiring in the line of personal devotion to the public weal and illustrative of the power of an individual and that a woman. I would add to these as of especial value to me as a minister the beautiful *Life of Francis Paget, Bishop of Oxford*, by Paget and Crum, Macmillan. He was one of the rarest spirits of our time and wise beyond most men, as a beautiful soul highly educated and taught of God.

HENRY A. STIMSON
New York City

The director of the National Geographic Society and the editor of its

popular magazine, Mr. Grosvenor, is the only one to mention a "war book." By strange luck or remarkable foresight, Professor Usher's volume was barely off the press when the Kaiser gave a striking demonstration of his interpretation of the spirit of *Pan-Germanism:*

Pan-Germanism, by Professor Roland G. Usher, impresses me as perhaps the most important book that I have read recently. I have often wished that historical books were more popular, for nothing is really more worthy of study than the past. History is continually repeating itself in the name of different peoples or civilizations. The birth, growth and disappearance of great civilizations, followed by the rise of others, has been recurring for thousands of years. The general public ought to read history more if men and women would understand the present. But few read historical books because they are usually too prosy and are crowded with unnecessary details.

Professor Usher's book is admirable. It is graphically written, very suggestive, and the reader leaves it with a desire to read further. If other writers would follow Usher's example we should find history much more popular than it has been. But the principal reason why I like Usher's book is that he realizes the importance of geographic conditions and of economic forces, such as the struggle for commerce, the blessing of inventions, etc., in the life of a nation. Usually historical writers are content to give the sequence of political events without explaining the causes which underlie the events. Geography has played a most important part in hastening or retarding the growth of every country of Europe. Usher has realized this and produced a book which is a real contribution to thought. GILBERT H. GROSVENOR

Washington, D. C.

The naturalist-hunter of the Rockies and of Africa and the explorer of the unknown Amazon receives the ballot of Mr. Hornaday, who has himself the rare faculty of writing readable zoology:

Beyond question, the best book that I have read for a year is Roosevelt and Heller's monumental work entitled *Life Histories of African Game Animals*. Among the books of its class it stands forth as a masterpiece and it looms up like old Cheops above the Libyan sands. As an exposition of the finest wild-animal life of the most populous big-game continent it is a work worthy of its subject.

It tells the reader what he wants to know, and it pictures and maps out for him the things that he wishes to see. Only the man who has tried to map the geographic range of a species can understand or appreciate the hard labor that has been involved in the preparation of the eleven maps that show the distribution of about two score of species of the finest big game of Africa. Few authors are willing to enter upon such laborious tasks as this. The illustrations have been chosen with excellent judgment; and from every point of view the two volumes make the most noteworthy and valuable book that I have seen during the past twelve months.

W. T. HORNADAY

New York City

Naturally the director of the Pan-American Union, Mr. Barrett, calls our attention to the volume that will best assist us in gaining an understanding of the countries south of us:

While it is difficult for me to specify "the best book that I have read for a year," I would lay particular stress upon the work of the Honorable James Bryce, entitled *South America: Observations and Impressions*. Inasmuch as the world today is awakening to the fact that there is a mighty development ahead of the Latin-American countries, it is most fortunate that so distinguished an author as Mr. Bryce should have made a journey around

A Wide Variety of New Books

J. B. LIPPINCOTT COMPANY

PUBLISHERS PHILADELPHIA

ILLUSTRATED HOLIDAY CATALOGUE MAILED ON REQUEST

THE PRACTICAL BOOK OF OUTDOOR ROSE GROWING

By GEORGE C. THOMAS Jr.

96 perfect reproductions in full-color of all varieties of roses. Octavo. Cloth. In a box. $4.00 net. Postage extra.

The rose-lover and the rose-grower should be keenly interested in this beautiful and comprehensive book on roses. The exquisite illustrations and general attractiveness of the volume make it a practical gift-book for any one engaged in flower-culture.

THE PRACTICAL BOOK OF PERIOD FURNITURE

By HAROLD DONALDSON EBERLEIN and ABBOT McCLURE

250 illustrations. Octavo. Cloth. In a box. 5.00 net. Postage extra.

A practical book for those who wish to know and buy period furniture. It contains all that is necessary to know about the subject. By means of an illustrated chronological key (something entirely new) one is enabled to identify the period to which any piece of furniture belongs.

OUR PHILADELPHIA

By ELIZABETH ROBINS PENNELL, Illus. by JOSEPH PENNELL

(Regular Edition). 105 illustrations from lithographs. Quarto. In a box. $7.50 net. (Autographed Edition). Signed by both author and artist, with ten additional lithographs. Special buckram binding in a box. $18.00 net. Carriage charges extra. (This edition limited to advance subscribers.)

An intimate personal record in text and in picture of the lives of the famous author and artist in the city whose recent story will be to many an absolute surprise. Mr. Pennell's illustrations, made especially for this volume, are the greatest he has yet accomplished.

ESSAYS, POLITICAL AND HISTORICAL

By CHARLEMAGNE TOWER, LL.D.

Former Minister of the United States to Austria-Hungary. Ambassador to Russia and to Germany. $1.50 net. Postage extra.

Essays upon vital subjects by one of our greatest figures in the diplomatic world will demand instant attention. Mr. Tower knows whereof he speaks when he treats such subjects as "The European Attitude Towards the Monroe Doctrine," etc. The book will be widely read for its important revelations in the light of the present disturbed conditions.

HEROES AND HEROINES OF FICTION

By WILLIAM S. WALSH

Half morocco. $3.00 net. Postage extra.

Mr. Walsh has compiled the famous characters and famous names in modern novels, romances, poems, and dramas. These are classified, analyzed, and criticised and supplemented with citations from the best authorities. A valuable, interesting reference book.

COLONIAL MANSIONS OF MARYLAND AND DELAWARE

By JOHN MARTIN HAMMOND

Limited edition, printed from type, which has been distributed. With 65 illustrations. Octavo. In a box. $5.00 net. Postage extra.

Uniform in style and price with others in the Limited Edition Series—"Colonial Homes of Philadelphia," "Manors of Virginia," etc., all of which are now out of print and at a premium.

THE TRUE ULYSSES S. GRANT

By GENERAL CHARLES KING

24 illustrations. Octavo. Buckram. $2.00 net. Half levant. $5.00 net. Postage extra.

This new volume in the True Biography and History Series is the work of a writer peculiarly fitted to deal with Grant. Not only Grant the general, but Grant the man, and Grant the president, are treated with the same regard for truth that characterizes all the volumes in the series.

From "Our Philadelphia"

TWO CHARMING CHRISTMAS BOOKS

BETTY'S VIRGINIA CHRISTMAS

By MOLLY ELLIOT SEAWELL

Four illustrations in color by Henry J. Soulen. Page Decorations. 12mo. Cloth, decorated in green and gold, $1.50 net. Postage extra.

A Southern story that carries the true spirit of Christmas to the hearts of young and old. To the tune of Dixie fiddles there is a rout of festive dances, early morning fox-hunts, and spirited feasts of turkey, egg-nog and the other delicious dishes for which Virginia cooks and Virginia farms are rightly famous.

OUR SENTIMENTAL GARDEN

By AGNES and EGERTON CASTLE

Illustrated in color by Charles Robinson. Head and tail pieces and decorative lining papers. Octavo. Cloth. $1.75 net. Postage extra.

This book is a sheer delight, filled with the whims and fancies of garden-lovers. The authors have caught the note of family life in a picturesque old English dwelling, where grown-ups and children live largely out of doors, and where birds and animals and bees and flowers become of a most human comradeship. If one cannot own such a sentimental garden the next best thing is to know all about one.

THE AMERICAN BEAVER

By A. RADCLYFFE DUGMORE

Illustrated with photographs. $2.50 net. Postage extra.

Few people possibly realize that the American Beaver is one of our most interesting native animals. Mr. Dugmore tells everything worth knowing about them, and this new work will delight the stay-at-home as well as the out-of-doors man.

"REVELL BOOKS COME TO US

AS FRESH AS THE FORESTS AND OF ABSORBING INTEREST"—*Baltimore Sun*

TRAVEL BOOKS

We have the most interesting and comprehensive list of travel and guide books in the world. Also books on Art and History. Write for catalog.

THE TRAVEL LIBRARY, Washington, D. C.

South America and written a book of this character. Altho there are some other works which possibly present a more extended and careful study of the political, economic and social conditions of South America, few have been written in recent years which have attracted more attention and which give more information upon such an important topic. Mr. Bryce's vast knowledge of world politics and his high position in the political and diplomatic life of the present time lend particular value to anything which he writes, and it is evidence of the rapidly growing importance of the South American republics that he should have undertaken this trip and made an instructive and interesting record thereof. There may be exceptions on the part of Latin Americans themselves, and of European and North American students of Latin-America, to some of Mr. Bryce's conclusions; but it can be stated that it is on the whole one of the most useful works of its kind which has ever been prepared regarding South America.

Washington, D. C. JOHN BARRETT

From Max Eastman, poet, teacher and critic, editor of *The Masses*, we should expect an original selection and we get it:

Perhaps I ought to preface my opinion by saying that I read almost no books at all, except text-books and books of poetry. And so a great work of literature may likely have past me by. But the book that came to my mind when I received your letter was Hart's *Psychology of Insanity* in the Cambridge Science Series. It is a very small book, and perhaps an odd book to consider so important. It is important, because it contains in brief and clear and popular form the best of the fruit of that new theory of the mind developed by Sigmund Freud and his followers. Perhaps it might be called "The Psychology of Insanity and of Those Who Consider Themselves Sane."

May I add, too, that the most inspiring books of life I have read for much longer than a year, is Marie Sukloff's *Life Story of a Siberian Exile*, just published by the Century Company. For those who are fatuously congratulating themselves that "Russia is not so bad after all," merely because Russia is on their side of a dog-fight, this book will be instructive. And for those who are sorrowful that so much heroism is being thrown away in Europe for no great end, it will be a profound joy and solace to read this story of heroic devotion to the highest hopes of man.

New York City MAX EASTMAN

The author of *The Stolen Story* and other stories almost as good, gives credit to the book which changed him from a passive believer in woman suffrage to an advocate of it:

Until this cataclysmic war arrived and upset all relative values as a tornado upsets cities, the book to make the deepest impression upon me during the past twelve months, as I recall it now, was *A General Survey of the Woman Movement* by Rosa Meyreder, tho by this time it has sunk so far into the background of my cogitations that I am not sure even of the title or the spelling of the author's name. It seemed to me when I read it a most important work, scholarly, comprehensive and refreshingly detached in its calm, philosophic "survey" of the movement, the only really big book on the subject yet written, by man or woman. Tho a suffragist of long standing and an amiable believer in the movement, I was made to realize for the first time its stupendous significance, not merely to women, but to men and to civilization.

Then suddenly the war broke and now it does not seem to matter very much. Such problems are for times of peace, and it seems impertinent to read or write or think about them now. Bernhardi and Cramb are on my table. I have sampled each, but have finished neither. It takes all the time I can spare and more to read the war articles.

"My name, your Honor is Ottiwell Wood, and I spell it O, double T, I, double U, E, double L, double U, double O, D."—*Ladies' Home Journal.*

VIERECKLESSNESS: OR POETRY ON THE DISSECTING TABLE

Attention, class! We will now read and discuss George Sylvester Viereck's poem, "Huerta."

A man of destiny. A sword.
No old maids' morals dulled his aim.
He nailed the cheat upon the board,
Then, stolid Indian, quit the game.
Nursed in men's blood by iron years,
Tho red his hands, tho short his span.
We raise our glass in silence: Here's
No text-book pedant, but a man.
—*The International.*

First, define the sentimental phrase, "a man of destiny." Then, explain how a four flusher like Victoriano got into that class. Take the passage: "A sword. No old maids' morals dulled his aim." What is an aim? How could it be dulled, even by old maids' morals? Incidentally, does one "aim" a sword? Now the passage: "He nailed the cheat upon the board." What happened—did he nail the cheater, or the cheating cards, or the act of cheating in the abstract? Why? "Then, stolid Indian, quit the game." Does it take a stolid Indian to quit a game? How does a stolid Indian differ from any other kind of quitter? Parse: "Nursed in men's blood by iron years, tho red his hands, tho short his span." Explain the meaning of the two "thos." What kind of nurse does an iron year make? "We raise our glass in silence." Where is the silence? "Here's." Does the poet mean "here's to," or "here is"? Illustrate the meaning of "text-book pedant" by contrast as dancing-master pedant. Note the originality of the final phrase—its stark simplicity, its quotidian grandeur: "but a man."

That will do for today. Pass out without crowding.—*New York Tribune.*

Appleton's Newest Publications

A Superb Holiday Gift Book

Washington
The Man of Action

Text by **Frederick Trevor Hill**
Pictures in Color by **Job (J. O. De Breville)**

A splendid holiday biography of George Washington, the Father of Our Country, by the well known American historian, superbly illustrated by the famous French artist, Comte Onfroy de Breville, known to art lovers the world over as JOB. There are forty-eight full page pictures (including several double-page pictures), printed in the French style without margins, and reproduced in five colors. Altogether the volume is the most attractive and probably the most interesting and authoritative pictorial life of Washington which has been made.

BOOKS OF TIMELY INTEREST

The Development of Modern Europe

By James Harvey Robinson and Charles A. Beard

Volume I. The Eighteenth Century: The French Revolution and the Napoleonic Period $1.50

Volume II. Europe since the Congress of Vienna 1.60

One of the best-known and most satisfactory treatments of modern European history available for American readers. It traces the development and growth of the states of modern Europe in a narrative in which accuracy, interest, and a just and discriminating sense of historical values are notable features. Perusal of these volumes prepares the reader for active appreciation of the causes and results—whatever the latter may be—of the present conflict in Europe.

Readings in Modern European History

By James Harvey Robinson and Charles A. Beard

Volume I . . . . $1.40 Volume II $1.50

A collection of extracts from sources to illustrate the important political, social, and economic phases of European history of the last two hundred years. The utterances of Bismarck, Garibaldi, Gladstone, Chamberlain, Karl Marx, Voltaire, and Mill are representative of the contents, while quotations from state papers and speeches and from newspapers are abundant. The volumes correspond in organization to the authors' "Development of Modern Europe," and with it furnish a detailed and colorful picture of European history as it appeared to those who had a hand in the making.

Outlines of European History . . Part II, $1.50

By James Harvey Robinson and Charles A. Beard

A condensation for briefer reading of the authors' two-volume "Development of Modern Europe." This book contains in its final chapter the most complete and illuminating account of European developments since 1900 to be found in any single-volume history of the period.

BOOKS FOR CHILDREN

Europe—Geographical and Industrial Studies 80 cents

By Nellie B. Allen

A fascinating account of the everyday life of the various European peoples. The book will prove of especial interest to the child at the present time because it pictures for him the customs and manner of living not only of the larger nations now engaged in war but of the lesser known countries like Belgium and Servia. The book is profusely illustrated from photographs.

The Friendship of Nations . . . . 60 cents

By Lucile Gulliver

What the great European struggle must mean to the whole world the child who reads this little book will realize. In it the author has treated history as the record of the progress of peace, and her story is full of interest, color, and individuality.

Heroes of Everyday Life . . . . 40 cents

By Fanny E. Coe

The virtues of everyday heroism dramatically emphasized by true stories of the bravery of firemen, engineers, divers, miners, and telegraph operators. The stories are told by such writers as F. Hopkinson Smith and Jacob A. Riis, and show that the heroisms of peace can be of even finer fibre than the heroisms of war.

THE LEAGUE OF PEACE

FURTHER COMMENT ON THE PROPOSAL OF THE EDITOR OF THE INDEPENDENT

In the issue of The Independent of September 28, Mr. Hamilton Holt contributed an article entitled "The Way to Disarm: A Practical Proposal," in which it was suggested that when the Great War is over those nations who are ready to disarm should form a League of Peace and reduce their armaments on a pro rata scale until the combined force of the League slightly exceeds the force of the most heavily armed nation outside the League. This proposal has excited widespread interest both here and abroad. The main idea has already been endorsed in our columns by Andrew Carnegie, Professor John Bassett Moore, Richard Olney, Theodore Marburg and David Starr Jordan. This week we print further comment on the proposal from a few of our friends who have written us and a few of our contemporaries.—THE EDITOR.

JAMES GROVER McDONALD

Assistant Professor of European History, Indiana University

May I express to you my complete agreement with your argument in your recent article, "The Way to Disarm"? The world should be made to see that the four steps in the evolution of private law, which have been so well pointed out by Professor Lawrence, have in a rudimentary manner been exactly paralleled in the development of international law. With this parallel in mind, public opinion will understand that international peace is not a hopeless ideal, but rather the natural result of a long development. With this understanding as a basis, pacifists should, following your lead, boldly advocate the creation of governmental machinery which will make possible the enforcement of peace among nations. Too much has been said and written about the horrors of war, too little has been done toward the working out of definite and tangible international institutions. Your suggestion for a League of Peace is an admirable example of the kind of constructive and positive suggestion which is so badly needed.

JOHN BARRETT

Director General of the Pan American Union, Washington, D. C.

Your discussion is so interesting and contains so much that is worthy of careful thought that I hope it will meet with general attention and possibly result in something good being achieved.

PARK BENJAMIN

Author of "The History of the U. S. Naval Academy," New York City

Mr. Holt's thesis seems to be that the time has gone by when any individual member of the family of nations should wield a military power equal to the aggregate military powers of at least any

two other members, and that such preponderating power should hereafter be lodged in all the members unitedly or in a collection of as many of them as can be got to unite. In other words—to use current Wall Street slang—he wants to "syndicate the proposition." This is certainly constructive and should be the approved plan until somebody can suggest something better. From a military viewpoint, the syndicate scheme would be the most economical of all, since it would save the multiplication of enormously expensive experiments, repeated over and over again by individual nations, and concentrate all into a series of crucial tests worked out to the end. Things like the present battleship, which are not true evolutionary products and which continue only by a sort of inertia, would very speedily be improved out of existence; and it would not be necessary, as now, to wait for a war to find out what is an effective weapon and what is not.

CASPAR C. GOODRICH
Rear Admiral United States Navy, Retired, Pomfret, Connecticut

Some years ago, in *The Nineteenth Century and After*, I advocated an International Police, since back of all court judgments must be the strong arm of the state, something now lacking at The Hague. Your League of Peace offers a possible solution of the problem of how to raise and maintain such an International Police. I think you will find, in this case, that "Ce n'est que le premier pas qui coûte." Let three, say, of the greater powers become charter members and other powers, great and small, will hasten to join. Can you secure those three? There is the crux of the matter. I hope you can, for if you do, the trick will be turned.

GEORGE PLIMPTON
President of Ginn & Company
New York City

The League of Peace seems to me an excellent suggestion. We must follow the trend of evolution. The fact that peace has been secured within individual countries warrants the belief that the next step will be peace between these countries, and the methods that have brought this internal peace must be adopted to obtain international peace. I do not think you exaggerate the importance of the part which the United States will play in the final solution of the problem. Our efforts will surely be disinterested.

WILLIAM I. HULL
Author of "The Two Hague Conferences," Swarthmore, Pennsylvania

Mr. Holt's article renders two signal services to the discussion of the great problem of international peace. First—it emphasizes the fact of fundamental importance that it is primarily a *political* problem, namely, the organization of a world federation and the substitution of law for force. Second—it emphasizes the competitive increase of armaments as one of the prime causes of the present war, and proposes a concrete method of reducing national armaments to a minimum.

As to the practical carrying out of

the plan suggested by him, I would urge that the League shall be agreed upon by *all* of the nations of the third Hague Conference and shall go into effect when ratified by three-fourths of the governments represented at that conference. This amendment would be in line with the precedent set in the adoption of the United States Constitution, and would have the great advantage of being based upon the twentieth century principle of a world-wide agreement and not upon the principle of partial alliances which has caused so much trouble in the past and which is the other prime cause (together with the competitive increase in armaments) of the present war.

SAMUEL BOWLES
Editor of the Springfield Republican
Springfield, Massachusetts

I have read with interest, sympathy and approval your plan for an international League of Peace.

WILLIAM J. SCHIEFFELIN
President of the Citizens Union of New York City

I was much interested in your article "The Way to Disarm." I inclose a copy of a plan for preserving peace which I drew up two weeks ago. Appropriations for armaments are voted thru fear of attack and as an insurance against aggression. To prevent this fear and to secure lasting peace will require an international, proportionately representative tribunal, having dominant power. To provide the force required each nation should be *taxed an amount equal to its expenditure for armaments* and should transfer to the tribunal half of its naval strength and munitions of war. This would provide and maintain an international police as strong as the total fighting force of all the nations. The nations would soon reduce their appropriations to a minimum and a moderate international force would remain.

The policy of requiring the nations to offset their menace of war would act as an automatic check on armaments, neutralizing the danger by providing the antidote.

L. A. GAVER
Los Angeles, California

In addition to the five articles of the constitution suggested in your article, "The Way to Disarm," so ably presented in The Independent of September 28, I want to suggest a sixth, in substance as follows: *Commercial boycott by all the countries joined in the Peace League against any country, whether a party to the League or not, that is undeniably preparing for war against any other civilized nation.*

WILLIAM H. SHORT
Secretary of the New York Peace Society, New York City

I believe that your article will attract widespread and favorable attention. In those far off times before the beginning of the Great War in August, 1914—far off as measured by the movement of thought on international affairs—we were told by those best acquainted with the governing classes of Europe, that such things as your article contains must not be said. We were assured that the nations of Europe were controlled

by governing castes which did not want to hand over any of their prerogatives to an international government. We were asked to draw a veil over the eyes of our seers and to curb the enthusiasm of our orators. We were assured that the unwillingness of Europe to have a meeting of the third Hague Peace Conference take place was due to the fact that they had been offended and had taken fright at the rash suggestions which had come to them from America looking toward the establishment of a world federation for peace. The diplomats were, no doubt, right at that time. A new situation, however, now exists, or will exist before the end of this awful war, in which projects hitherto impossible of accomplishment may prove to be within the realm of practical politics. We are, therefore, permitted to hope that at no distant day the nations may be ready to adopt the simple, practical and altogether desirable plan you propose for guaranteeing the possessions and the rights of the justice-loving nations by means of a non-burdensome, non-militaristic, international police.

JOHN L. HARRIS
President of Board of Education
Kelso, Washington

The able and timely editorial, "The Way to Disarm," has given new vigor to the peace movement and has again aroused to action many discouraged peace advocates.

Topeka State Journal

The proposal made by Mr. Holt is a distinctive and definite one, where generalities have been the order before, and one that merits the careful consideration of the peace protagonists. He has done a valuable service in its presentation.

New York Evening Post

That the world should go on, after the appalling experiences which it is now undergoing, upon the old basis of mere blind competition in preparedness for general destruction, is a prospect to which no thinking mind can reconcile itself. When the bloodshed and devastation come to an end, the best thought in every nation must be centered upon the possibilities of remedy. And it is not improbable that it will be along some such lines as those indicated by Mr. Holt that the remedy will be sought.

Buffalo Journal

Holt's firm principle is that the nations shall "mutually agree" to respect the territory and sovereignty of each other, but Germany, France and Great Britain are fighting today on the territory of Belgium which all three were pledged to respect.

What the world needs is something to make the word of every nation unbreakable. When the world discovers that it will have the confidence in unarmed safety that will permit and may bring about disarmament.

Christian Science Monitor

No doubt, like the federation of the colonies that shaped the first compact under which the United States began

THIS CHRISTMAS

THE GIFT OF GIFTS

is the New International Encyclopædia, Second Edition. Revised, Re-written and Enlarged by three whole volumes, it is the most recent and comprehensive encyclopædia in existence. This great work has always been a favorite holiday gift to those one wishes to *aid* and *honor* most.

This year, the unparalleled demand for latest authentic information makes it

AN ABSOLUTE NECESSITY

More things are happening now in a *week* than used to occur in a decade. The general reference works of yesterday are already *obsolete* on important subjects. Upon current *momentous* happenings, they are necessarily *silent.*

The New International Encyclopædia is being published NOW. In it are articles on live subjects mentioned in newspaper dispatches, and on its maps may be located cities, rivers and places made prominent by the present war. Its information is strictly impartial. Where questions are in dispute, both sides are presented. Then the

War-Created Opportunities and Responsibilities

must be handled with energy and the negligent dependent on exact and latest knowledge. The New International Encyclopædia will supply you with the latest facts on every subject, new and old.

Can you imagine a more splendid gift—for yourself or anyone else? And it may be paid for monthly

It will contain about 30,000 more articles than any other standard encyclopædia. With each important article is printed a list of the latest books on that subject, thus directing the reader to investigation of the subject beyond the encyclopædic province.

A Special Low Price if You're Quick

It is solely for introductory purposes, and you must subscribe immediately to get it. The increase cost of production will necessitate an

Early Increase in Price

So Order Promptly if you wish to purchase the encyclopædia at the lowest price at which it will ever be offered, and if you wish to insure delivery in time for Christmas.

24 Volumes 80,000 Articles 20,000 Pages
New Maps New Illustrations New Type Throughout

Additional Volumes Ready in December

Printed on Thin Paper made especially for this edition, light, opaque, strong. It won't crumple.

And a Special Library Edition on regular book paper bound in Three Volumes, printed in accordance with the recommendations of the Binding Committee of the American Library Association.

The Most Liberal Terms of Payment

can be arranged if you do not wish to pay cash

Free Research Bureau

Each subscriber to the Second Edition will receive a blank of the International Research Bureau and, without expense, consult the largest books on any subject of interest found in reading or conversation.

MAIL THE COUPON TODAY

for full information regarding this splendid offer, the very easy terms of payment, the cash discount, the unique character and scope of the great Second Edition.

national existence, the looseness of such a league would in time force action that would insure a more closely knit world-state pledged to peace. The point to be noted now is that, as a result of the present war, statesmen and publicists in all countries begin to talk about the end of militarism and about making a peace for peace's sake, and on a basis that will make another great martial conflict impossible. An alliance to conserve world stability, commercial prosperity and national fraternity comes to be talked of as the successor of recent triple alliances and ententes. Mr. Holt is using his liberty as a thinker to get his plan before the public; and for his enterprise and zeal deserves praise.

St. Joseph News

In The Independent, Hamilton Holt has a suggestion for establishing permanent peace after the present European war shall have been ended.

One is reminded of Tennyson's dream in Locksley Hall of

> The parliament of man,
> The federation of the world.

However, it is of dreams that all progress comes and who can say that the "League of Peace" may not come to pass some day. That it may, and soon, is the prayer of all Americans.

New York Globe

Hamilton Holt, editor of The Independent, prominent in the peace movement, has put forward for discussion a plan looking to a League of Peace that will be strong enough to impose peace on the world.

. . . This country has held aloof from what Washington called foreign entanglements. The Washington policy has been amply vindicated. But the time has arrived, if we are to have peace ourselves and escape injuries flowing from fighting elsewhere, when this country must go into an organization for peace.

Pittsburgh Post

In the current number of The Independent, Hamilton Holt has an article entitled, "How to Disarm." It is worth serious attention now, and the time may arrive, after this war's grand settlement day, when the nations will be eager to accept in principle the ideas he advances.

Kansas City Star

Doubtless Mr. Holt's suggestion will be dismissed as "impractical" by many European statesmen—perhaps by most of them. But is there anything less "practical" than the work of the "practical" statesmen which has resulted in the catastrophe of the present war?

Chatanooga News

For a group of nations to combine, as Mr. Holt proposes, to force other nations to be peaceful, is not in keeping with the movement which the United States is now leading—the movement for world peace thru the education of the world in the futility of war and in the profits of peace. The world will never consent to be forced into peace.

Only wise teaching and sympathetic leadership will do away with war.

Army and Navy Journal

Proceeding from certain false premises Mr. Holt naturally reaches mistaken conclusions and his scheme seems to us to go to the very limit of impracticability.

Syracuse Herald

If Mr. Holt's imaginary League of Peace had existed three months ago, and had embraced in its membership all the European powers, or the powers outside of the Triple Alliance, the war would have been an impossibility.

Wilmington Every Evening

Mr. Hamilton Holt, the able editor of The Independent, offers to the public a proposition of disarmament, as a prelude to abandonment of wars between nations.

Why not? It is evident from the bloody experiences that Europe has undergone during the past few years and is still groaning under, that modern war is a great slaughter, a tremendous destruction of property. It is admitted, also, that nations may, if they will, get along without resort to the arbitrament of cruel war.

Milwaukee Journal

When Mr. Holt or any other man proposes a plan for insuring world peace, he takes it out of the realm of visions for the future and puts it up to us now as our responsibility. And history shows us that once such a question is really raised it does not down until it is settled and settled rightly.

Concord Monitor

In the American colonies Mr. Holt finds the prototype of such a league. He does not see why President Wilson might not do, on a world scale, what Washington did on a smaller scale. Analogies are never perfect. We had the War of the Rebellion long after Washington had died. And we have had continuously a Supreme Court to perform a service which is not covered in the Holt League of Nations plan, and with an adequate force at its disposal, for which he offers no parallel.

THE OTHER FRANCO-PRUSSIAN WAR

From The Independent, November 17, 1870

The capitulation of Metz and the surrender of about a hundred and seventy thousand soldiers would be one of the most striking events in history had it not been preceded by Sedan and Strasbourg. This completes the captivity of nearly the entire military force of France—excepting what has fallen on the field of battle—with which Bonaparte set out on his promenade through Germany to Berlin. In all the wars recorded in history—which, unhappily, has not much else to record—there never has been an instance of such a complete annihilation of the whole of the regular army of a great nation since the invention of standing armies.

Books of Unusual Value

Go with Dr. Covert
INTO THE
Heart of the Mountain Woods

He makes his readers eager to go to the North Woods where he has used his ears and eyes to such good advantage; and satisfies the hunger of those who long for touch with the wild woods yet are unable to make the journey except by the aid of one who possesses the wonderful power to portray nature, as in this, his latest book.

Wild Woods and Waterways

By William Chalmers Covert

Author of "Glory of the Pines" Illustrated, $1.50 net

The little stream, with its gentle and artistic accompaniments, is a kind of microscopic masterpiece that while inviting our closest scrutiny, defies it. It presents us an alluring invitation to fellowship, all the while beguiling us with a beauty that is born of mystery and silence. The nerves of a tired man * * * * * will find more recreating rest in a little, vivacious stream that lures him with rod and creel down its noisy and shady length, than in any of the ordinary diversions sought by the weary.—*William Chalmers Covert.*

Living Bread from the Fourth Gospel

By William Hiram Foulkes, D.D. $1.25 net

The author, who is the General Secretary of the Presbyterian Board of Ministerial Relief and Sustentation, has written for his first book a unique devotional commentary upon the Fourth Gospel. A verse a day for every day in the year, taken in order, appears upon each page. The Scripture text is followed by a vivid epigrammatic and in many cases original exegesis, concluding with a brief devotional application and a prayer. The volume will be attractive as a gift book.

The Growth of the Christian Church

By Robert H. Nichols, Ph.D.

Professor of Church History, Auburn Theological Seminary

Two Volumes $1.00 each net

Volume I.—Ancient and Medieval Christianity Volume 2.—Modern Christianity

The writing of this history was undertaken at the request of the Committee on Religious Education of the General Assembly of the Presbyterian Church in the United States of America. It is a presentation of Church history suitable for the use of classes of young people of high-school age.

The completeness and authoritativeness of its treatment will commend the volumes to individual readers.

The Pew and the Pupil 75c net

By Rev. R. P. D. Bennett

Author of "What I Tell My Junior Congregation"

Here—in the thoughtful and convincing introductory chapters—Mr. Bennett speaks of the need of bringing the pupil into the church, and then—in thirty or more simple and suggestive object-sermons for children—he shows how he talks to the children of his own church.

By-Products of the Rural Sunday School 60c net

By John M. Somerndike

Viewing the Sunday school as one of the greatest factors in the building of Christian character, this narrative calls for a recognition of the far-reaching influence and results of this work. Scores of interesting illustrations are given in which the by-product of the rural Sunday school is seen in the permanent centers of religious education developed, the transformation of social conditions, etc.

The Triumphant Ministry 40c net

By "Timothy Kilbourn"

With an Introduction by Chas. R. Erdman, D.D.

A gripping presentation of the life of the devoted minister of the gospel written in the form of letters from a minister of experience to a younger brother, who is just beginning his work.

APPLIED ELECTRICITY

An electrical device for the curing of logs and timber in such a way as to prevent sap stains, the invention of J. P. Sullivan, of Memphis, is in successful operation at several mills at Inverness, Mississippi.

A new electric-lighted cash register, recently perfected, has on each side an upright arm to which is attached a miniature socket and incandescent lamp. A switch, mounted inside the case, is operated by the cash drawer, closing and so lighting the lamps when the drawer is opened, and vice versa.

Among new appliances recently approved by the Underwriters' Laboratories is an electrical furnace for heating soldering irons, marketed by a Chicago manufacturer. It is small, compact, easily portable, can be operated from any lamp socket (at 105 to 115 volts), and will heat two irons simultaneously.

When the Salinas River in California at flood some time ago washed out and carried away several poles of a telephone line crossing, box kites were successfully resorted to to supply the temporary circuits across the swollen stream. The kites supported the wires that served for a connection until a permanent cable could be laid across the river.

Various formalities which had to be arranged in connection with the transmission of electric current from Sweden to Denmark have been completed. The company which exploits the power of the River Lagan, supplying towns on the Swedish coast, will convey the current by means of two submarine cables to the Danish coast just above Elsinore. The current from Sweden will be transmitted at 25,000 volts to a large transformer station at Elsinore.

By the completion a few weeks ago of another long link in the chain of electric interurban railways radiating from Dallas, Texas, the Texas Traction Company of that place now has an electric railway system of approximately 250 miles—by far the longest in Texas and the longest in the whole South. Thruout the long Texas summer, which means about ten months of the year, people travel by electric lines, wherever possible, almost exclusively in order to avoid the smoke and dirt incident to steam railway travel.

An electrically driven ship cleaner was recently demonstrated at work on the cable-laying steamer Faraday lying in the Thames at London. It consists of a circular scrubbing-brush of coir, five feet long and twelve inches in diameter, mounted in a heavy frame and driven, thru enclosed gears, by a fifteen horsepower electric motor, the power from which also keeps the brush forced against the side of the ship. By this device a ship's hull can be scrubbed while the vessel lies in port loading or discharging cargo, thus saving the heavy cost of docking. An occasional scrub down with the electrical cleaner will keep a steamship clean, increase its speed by freeing it from foreign matter on its submerged plating, and so decrease its coal consumption.

Rev. Dr. Mottet has the opportunity of placing three students in a girls' boarding school, located in a charming suburb of New York, which has the highest reputation for scholarship and the right of certificate at all New England colleges. A reduction is offered to students taking the college preparatory course. Music, art, modern languages and all forms of physical training and sports. Address, Rev. Dr. Mottet, 47 West Twentieth street, New York.

FROM OLD COLONY DAYS

Samplers are patterns from which to learn needlework.

Pewter ware was made in China two thousand years ago.

Pewter plates chronologically succeeded wooden trenchers.

Most of the old American communion services were of pewter.

Buckles for the shoes and knees were frequently made of pewter prior to 1800.

One of the earliest and most important objects made in pewter was the candlestick.

Many of the old families cast their own pewter spoons from molds which they owned.

Pewterers' marks or "touches," as they were called, add much to the value of old pieces.

In the eighteenth century many benitiers, or holy water cups, were fashioned of pewter.

Pewter plates range in price from $1 to $10 each, according to size, condition, marks, and so forth.

As late as 1750 an outfit of pewter plates, dishes and spoons was a highly esteemed wedding gift.

The country place that makes any pretensions to modernity is now provided with some old pewter.

Some of the pewter of the olden time was American made. Other specimens originated in England, Scotland and on the Continent.

Flemish workmen fashioned pewter into church vessels, but the use of it for such purposes was subsequently forbidden by the Council of Rheims.

Pewter was extensively made in Boston during Colonial days and this city was also an important clearing house for the distribution of English pewter.

The commandments were frequently used as sampler motifs. They harmonize well with an age in which the New England Primer was the standard school book.

An interesting field of research might be found in the tracing of the authorship of the doggerel religious and moral verses which have been embroidered upon samplers.

Mantelpieces were effectively decorated with pewter in England during the nineteenth century. Many of these mantels were removed during the last sixty years, but not all of them were destroyed.

Many reproductions of pewter objects have been made in recent years, and one expert has expressed the opinion that more pewter porringers were made between 1900 and 1905 than in the preceding one hundred and fifty years.

The earlier samplers consisted of decorative designs thrown here and there without care upon the surface of a piece of canvas. The designs were subsequently placed in more orderly rows making in themselves a harmonious whole. Alphabets, figures and tapestry designs were afterward added.

"Any pianist or musician must admit the wonderful virtuosity of the ANGELUS. As a means of artistic interpretation it is, in my opinion, absolutely unique. The ANGELUS, with its wonderful devices for phrasing and emphasizing notes, should be welcomed by all true musicians."

Words of Praise for the

ANGELUS PLAYER-PIANO

from

EDWIN H. LEMARE

Official Organist

Panama-Pacific International Exposition

The appointment of Mr. Lemare is a fitting recognition of his extraordinary musicianship, and his praise of the Angelus likewise is a fitting recognition of the unapproachable qualities that have made the Angelus the only player capable of producing every possible musical effect.

Those most competent to judge are the most profuse in their praise of the artistic possibilities of the ANGELUS.

Josef Hoffman and Eugene D'Albert—Master Pianists; Kocian and Kreisler—Master violinists; Sembrich and De Reszke—Master vocalists; Mascagni—Master composer; Pavlowa and Lopoukowa—Premier danseuses; all who know music in its various forms and manifestations are of one mind as to the supremacy of the ANGELUS.

Knabe-Angelus—Grands and Uprights
Emerson Angelus—Grands and Uprights.
Lindeman & Sons-Angelus—Uprights.
Angelus Piano—An Upright made expressly for the Angelus.
In Canada—The Gourlay-Angelus and Angelus Piano.
Any of these instruments can be played by hand in the usual manner.

You Can Weigh Exactly What You Should

You can **I know** it, because I have **reduced** 32,000 women and have **built up** as many more —scientifically, naturally, without drugs, in the privacy of their own rooms; I can build up your vitality — at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh 83 lbs. less and I have gained wonderfully in strength." Another says: "I used May I weighed 160 lbs., this May I weigh 126, and Oh! I feel so well."

CHARLES L. CORNELL, Treasurer.

THE MARKET PLACE

THE INTERNATIONAL SITUATION

The views of Sir George Paish, Special Adviser to the Chancellor of the British Exchequer, and informal financial envoy to this country at this time, are set forth in an interview in the New York *Times Annalist*. Sir George was asked the usual question as to the possibility and the advisability of reopening the New York Stock Exchange, and the interview continued as follows:

"Our people will not be ready to buy American securities when the Exchanges reopen. It may be a very long time before they can think again of investing in anything but war loans. On the other hand, you need not fear any large amount of liquidation of the securities now held.

"You know there is a great difference between being ready to buy and ready to sell. We cannot think of taking more stocks and bonds, even at the low prices that were being made when the Exchange closed, but we do not have to sell what we have bought in years past. I think the United States is in a very fortunate position."

"Do you suggest the New York Exchange should wait until London reopens, Sir George?"

"I think they should open at about the same time. I won't attempt to fix a date, but I should say not before the end of this year."

"The current balance in Europe's favor is not of such size as to make it dangerous to risk a flood of foreign selling orders?"

"The United States owes us up to January 1 in the neighborhood of forty million sterling. The amount of that which will have to be paid depends largely on the extent of the renewals and extensions granted. It also depends on the rate at which your exports create exchange, and on the extent to which credits thus accumulated are offset by your participation in European financing. The recent French loan of $10,000,000, for instance, offsets that amount of exports.

"The United States is about the only important country in the world today that is making money. Your people are rapidly accumulating a big sum for investment. It is only a question of when this investment fund will be large enough to absorb such foreign securities as may be thrown upon the market. At the rate at which money is piling up it should not be a long time before the Exchanges can be reopened without fear of the buyers being swamped by the offerings."

This is reassuring, even if it may be surmised that Sir George's views are somewhat colored by his mission here. For a time there was mystery as to just what that mission was. But it becomes increasingly clear, without any definite statement to that effect, that the purpose of his "visit" is to request us politely to "pay up." We owe a great deal of money in Europe. Europe would like to have us pay in gold. But we need the gold as a basis for our own credit. We naturally want to pay in commodities, as we always do in normal times. If we have time enough we shall be able to do so, for the pendulum of trade balance is swinging with increasing momentum in our direction.

But how much more shall we owe, if American securities are dumped upon us by European holders? There's the rub! And the vicious circle brings us round again to the same familiar point—the railway rate situation. What will the Commission do?

THE RESERVE BANKS

The Federal Reserve Banks are to open on November 16. The date was set by the Secretary of the Treasury, altho the representatives of something like one-half the banks felt that they would hardly be ready for business before the end of the month.
